Another interesting occupation is "stringing." The colored beads that are sold now in the dry goods stores labeled "Kindergarten Beads" are very good. After the child has learned the mechanical part of the stringing, it is well to have him work always by some color or number scheme. If red is the color chosen, begin in the simplest way, and let him make a necklace of red beads alone. Then, to emphasize number, he can string *one red* bead and one bead *not red*, giving him two contrasting colors to work with. When he knows the color and the name *red*, the other colors may be taken up in the same way, and after he has done one and one, he may do two and two, three and three, two and one, etc. Of course, he should not have beads to string too frequently, or he will grow tired of them, but if they are given to him in the right way, in a real play spirit, he will care for them infinitely longer working with them definitely than he will stringing them aimlessly. Macaroni and cranberries make an attractive necklace, the macaroni broken into inch or half inch lengths. Acorns and acorn cups, horsechestnuts and small shells, too, are interesting to string, tho they must, of course, be pierced before they are given to the child. Then the real kindergarten beads the child loves. They are balls, cubes and cylinders in the six spectrum colors, and are strung on shoestrings.

The kindergarten occupation of sewing is interesting to children. The packages of cards already stamped and pricked can be bought at any kinder-

garten supply store, but it is cheaper to buy a sheet of white or gray cardboard, not too heavy, and cut it into cards the desired size, and draw on each card some simple design in outline, and prick, with a large sized needle, holes about a quarter of an inch apart. Split zephyr worsted (in bright colors) is the best thread to use, as it does not knot as easily as cotton or silk, and the needles should be large-eyed and blunt-pointed. The child can soon learn to thread his own needles if he soaps or waxes the end of the worsted.

We have all done folding when we were children; we have folded boats and soldier-caps if nothing more. If the folding is done accurately, it is a fine training for the hand and eye. Children soon learn that every fold "tells;" if one fold is carelessly done it spoils the whole. A child of seven or eight can make boats, soldier-caps, etc., of newspapers, but for the little child small sheets of colored paper are preferable. A book can be made with one fold of a sheet of square paper by placing the front edge of the paper to the back edge, and creasing through the middle. After making the book of two leaves, the child can fold, say, five sheets in the same way, four of white and one of colored paper. By placing the sheets together, the colored one on the outside, and taking two or three stitches through the middle a book of several leaves and a cover is made. There are many things to be made by folding; things that children are interested in; if the paper is cut as well as folded, and then pasted, solid forms, such as boxes, houses, barns and furniture, can be made.

Pasting is another occupation for the children. They like to paste the scrap book pictures, which are sold in stationery stores; or, better still, the pictures which they cut for themselves from old magazines. Leaves and flowers, too, can be pressed and pasted in symmetrical patterns; nasturtium leaves and buttercups are especially good for this work, because they press so well. They require delicate handling, of course, but if handled carefully can be used to make very pretty designs. Much of the flat folding as well as the cutting and tearing can be mounted and thus preserved.

All of the occupations mentioned in

this paper are for children under the school age. The little child at three years old can begin to use his hands in doing some definite work. He should never work for more than twenty minutes, or at the very most half an hour, at a time, and the work to him is play, and should be done in a play spirit; but if he works (or plays) definitely, according to some plan for a short time every day, he is forming habits of concentration and industry that will be invaluable to him al-

ways. The years from three to six are the formative years of life; this is the time when the impressions are made which color the whole life; when the bias is given which determines character; "as the twig is bent, the tree inclines." If, then, a child learns at this time that he must not wantonly destroy, if he learns to use his hands to make something, if he learns to feel the real joy of working, of creating, his whole after life will be fuller, richer, better.

LANESBORO, MASS.

The Zone System

By Edward Tregear

NEW ZEALAND COMMISSIONER OF LABOR

IT does not require one to be absolutely venerable in appearance and decrepit with age to remember the time when toll-bars could be met with on country roads. Even middle-aged people can recollect how, here and there, in some old-world corner of a rural district, the white toll-gate barred the passage of one's horses, and some gray-headed keeper held out his hand for the coin, without the production of which further progress was impossible. The system of toll-paying was intended to make the particular persons who used the road pay for it, while those who did not care to take advantage of its having been made contributed nothing to its expenses. So, for instance, the milkman coming into town from the country had to pay for his use of the road, and it was supposed that the people to whom he sold the milk had no interest in the road at all, altho it is probable that the milkman's toll-money was eventually paid by them in his increased charge for the milk. The idea of the direct user paying visible coin seemed fair enough to our forefathers, but it was too narrow for modern notions, and was superseded by the principle that as the roads are for the benefit of the whole community the community should in some way be taxed for road construction and repairs.

The promoters of the Zone system of

railway service assert that the ordinary way of charging passenger fares and goods freights by mileage is only the old toll-gate system of road charges applied to the faster means of transport. They declare that, altho invisible, every mile traveled over has a toll-bar, and exacts a coin from the passenger charged by mileage rates. Such a principle is obsolete, narrow, and opposed to modern ideas. The new conception is to average if possible the cost of travel over the entire country or State, and, while allowing the railway as a whole to produce as large or larger a financial return as under the old system, to promote traveling to such an extent that the burden may be equalized, the country benefited and an immense impetus be given to traffic and to general business.

This new system is best known as "the Zone system," because under that name it took practical shape. It was, however, first promulgated as a theory by Mr. S. Vaile, of Auckland, New Zealand, who for years tried to secure its acceptance by the Government of this colony. It was some years after Mr. Vaile disseminated his views widely at public meetings, and by printed pamphlets sent abroad to foreign Governments that the system received its first trial in Hungary. The inventor called it not the "Zone," but the "Stage" sys-

tem, and it will be found easier to understand if the idea of "stage" be substituted for "zone," as railways running at irregular angles from a center do not allow zones to intersect them at arbitrary fixed distances as the system requires.

No better introduction to the matter can be given than by at once describing in detail the process of charging by stages instead of by miles. For this purpose I will simplify a sketch given by the inventor in which a portion of a railway line in New Zealand is depicted. Even the native names of places will be more readable by English speaking people than Hungarian or Russian place-names, with their foreign money-charges for fares, etc.

The dark bars against certain names in the diagram are the "stage" limits. The stations are about 4 miles apart in the country districts, and the fare from one station to another within a stage is only the price charged for that stage. Thus for the stage price of 4 pence (8 cents) one could travel from Auckland to Penrose, that is 6 miles; but for 4 pence one could also travel from Puke-

kohe to Frankton, 54 miles. If a person wished to go from Auckland to Manurewa, that is two stages, he paid 8 pence, and if he wished to go from Pukekohe to Te Kuiti (95 miles) he paid two stages, or 8 pence. From Auckland to Te Kuiti (six stages) 2 shillings. Short stages of 7 miles each were set up outside of each town; a city of 6,000 inhabitants or over having four 7-mile stages; one of 4,000 inhabitants, two 7-mile stages; one of 2,000 inhabitants, one 7-mile stage. These stages would be redistributed if after a census it was found that a 2,000-inhabitant town had become one of 4,000, and it would then require two 7-mile stages, etc. As the country became settled and filled with towns the stage next each capital town would be taken away, then the next, and the next, till at last there was only one stage and one fare for the whole State. Special tickets are issued for stations just over the stage division, or close to a boundary.

It must not be thought because the description has been given from a theoretical plan that the Zone system is unproven or rests only on theory. It is in practical existence in Hungary, Siberia, Turkey, Bulgaria, etc., and the only reason that the "stage" system has been described is that it is the parent system, of which all others are variants, and not always to their advantage. Thus in Russia the Zone system only begins at a distance of 200 miles from a chief town; therefore it is only in partial existence and the financial results hard to separate from those dealing with mileage. Tickets are sold at post offices, or by tobacco-shops, etc., under the Zone system.

The only possible means of lowering the rates of fares so that they shall be cheap for the long distances and not dear to those using the short stages near towns is that there must be increased traveling and increased traffic. It was urged against the Zone system that the number of passengers could not be increased, since no one would make two railway journeys instead of one, whatever price the fare. Traveling is regulated (it was said) by other reasons than cheap fares, and if a man had business in a town 100 miles away he would go there, whether his fare was six dollars

or three. A similar argument was used in regard to cheap postage. It was urged that if one wished to send a letter it would be sent, whether the postage was four cents or two, and that no more letters would be dispatched than were absolutely necessary, nor writing letters be more popular for the sake of cheap stamps. The proof that the argument was fallacious in regard to letters is on record; the number of letters carried doubled and trebled.

The change from the old system of railway charges to the new resembles the conversion of the old postal system into its later and existent phase, from dear postage of letters to cheap. The Zone attempts to give cheaper rates by doubling or trebling the traffic. Sir Rowland Hill urged that if the English charge for postage was lowered to a penny the increased number of letters posted would immediately recoup the loss on the lower charge. Just as Hill's prophecy came true in regard to postage so the advocates of the Zone system say the facts are verified in railway returns. The nations which have adopted the system, instead of losing revenue by lowering rates have greatly increased their incomes, while benefiting the mass of the people by cheap transit. What was the effect in Hungary at the inception of the Zone system? The new rule started on the 1st of August, 1889, and we will compare the following four months with the corresponding months of the previous year in which the old rates were charged:

	Number of passengers, 1888.	Number of passengers, 1889.
August	434,859	1,112,440
September	427,673	1,146,197
October	413,586	1,059,602
November	342,432	971,617

The revenue for the same period increased in 1889 by 680,902 florins; the total number of passengers increased by 2,677,396 fares, and the long-distance travelers alone were 1,991,944, or 373,394 more than all the passengers put together during the same period at the old rates. This was only on the State lines, for in Hungary in 1889 out of 6,570 miles of railway open for traffic the State owned but 4,415.

In regard to the disadvantages of the present system, especially in regard to the goods traffic, Americans need not be told of the evils arising from differentiation of rates. There is, however, scarcely a country in the world wherein there is not a secret complicated tariff for the conveyance of freight. One district has to pay much more heavily than another for its traffic. Sometimes the rich man or wealthy company can get lower rates, and this causes unfair competition. Large users get drawbacks, discounts, allowances or other privileges. Sometimes it is arranged that 25 hundredweight shall count as a ton; sometimes that 100 miles shall be reckoned as 75, but, whatever the process, there is distinct "discrimination" in favor of some and against others. Where the lines are State property personal favors of this kind may not be granted, but even on some State railways, some reason, such as a costly piece of line, or a desire to cut out coastal-steamer competition, may give easy rates in one district and expensive charges in another. The benefit of the citizens as a whole is not studied; what is wanted is to make the railway pay. The great advantage claimed for the Zone system is its tendency to destroy that excessive congestion of population in towns which is one of the troubles of political economists in modern times. Poverty arises chiefly from the removal of the bulk of the people from the land and piling them up in cities. Factories and other productive (or rather transforming) works must at present be in or near towns, and their hands must live in towns, because every mile added to the carriage of goods adds to the cost of production. If the rate per ton per mile be 7 cents, it will at once be seen that while the man 10 miles distant from his market town pays only 70 cents per ton the man 100 miles away has to pay \$7, which at once puts him out of competition.

Under this mileage system the lands which lie more than 30 miles from a town are only suitable for grazing purposes or for growing grain in large areas; the market-gardener or the husbandman is too handicapped by distance to be able to

compete with suburban producers. The profit of the small farmer is eaten up by mileage, and if the produce of the fields could be brought at low rates into towns the artisans of cities would benefit directly and at once. But movement and freedom of intercommunication is almost as necessary for development of sparsely-settled districts as cheap freights. Of course, it may be said that in such case the ideal fare or freight charge would be a universal fare or charge, making all distances alike for an average payment. That can be kept as an ideal to be worked toward, but its sudden application would be disastrous for the following reasons: (1) Loss of revenue; (2) a ruinous rate for short distance people near towns; (3) loss of value to all city and suburban lands; (4) loss of value on all lands not at present served by railways.

To return once more to details, we will consider the effect of the Zone system in Russian Siberia. It commenced on the 1st of December, 1894, for all distances over 200 miles from a large center, and has been found exceedingly useful for a scattered population in a new country. The passenger revenue at a mileage rate the previous year had (in English money) been £8,061,754, and Russian experts reckoned that the first year of the new system would be at a loss, so they fixed their estimate at £6,167,552. The actual result was £9,183,333, or £1,121,579 more than the previous year, or £3,015,781 more than had been expected by the experts.

The Manhattan Company, of New York, made large profits by applying a Zone system for the whole or any portion of 38 miles. In 1885 their net earnings gave 41 per cent. on outlay. The Cork, Blackrock and Passage Railway in Ireland also instituted the system, reckoning all fares from Cork to Passage as in one Zone. The first month of the returns showed an increase of 2,005 passengers on that of the preceding month, but neither in this case nor that of the Manhattan Railway have I been able to procure late information.

In Hungary, after four years' work-

ing, there was a great discrepancy in the increases by financial results, as follows:

First zone.	Second zone.	Tenth zone.	Thirteenth zone.	Fourteenth zone.
Per cent.	Per cent.	Per cent.	Per cent.	Per cent.
600	12	6	120	294

But the average distance traveled by each passenger increased 83 per cent. Several years following the introduction of the Zone system show as follows:

Year.	Passengers carried.	Receipts in Austrian florins.
1888	Last year of the old system	9,056,500 14,112,000
1889	Seven months of old and five months of new system	13,054,600 15,021,500
1890	First whole year of new system	21,635,600 16,937,000
1891	New system	25,781,400 18,591,800
1892	" "	28,623,700 19,684,900
1896	" "	34,806,800 24,293,243
1897	" "	35,245,900 26,951,677

Thus the effect of the Zone system was to quadruple the traffic and double the revenue.

It may be asked why, if the system is of value, a country so fond of experiments as New Zealand has not adopted it? The answer is that the State Railways in New Zealand are in the hands of men who do not work them for profit. As soon as the returns rise above the sum that will pay the small interest on their construction large concessions are made. The passenger fares have been lowered so much that only two-thirds of the fare charged two years ago has now to be paid. Similarly, freights have been lowered and especially to meet the requirements of farmers a long way off. Some materials (for instance, lime for manuring land) are carried without charge at all, while only a nominal charge is made on fruit for any distance. This careful nursing by officers instructed to make the prosperity of the settlers a matter of more importance than profit to the railways has almost abrogated the necessity for a Zone system in the little colony, but probably it will some day be started and prove as great a blessing here as in Hungary or Siberia.

WELLINGTON, NEW ZEALAND

LITERATURE

Don Juan

It has often been a source of wonder to me that I was able to read and enjoy Byron's *Don Juan*, under the peculiar circumstances attending my introduction to that poem. I had been walking in the Alps, and after a day of unusual exertion found myself in the village of Chamouni, fatigued and craving rest. By chance I picked up a copy of *Don Juan*, and there in a little room, through a summer day, by a window which looked full upon the unshadowed splendor of Mont Blanc, I sat and read, and only arose when Juan faded out of sight with "the phantom of her frolic Grace." I have often wondered, I say, why the incongruity of that solemn Alpine scene with the mockery of Byron's wit did not cause me to shut the book and thrust it away, for I am in general fully sensitive to the influences of nature while reading. Only recently, on taking up Murray's new edition of *Don Juan*,* has the meaning of the riddle appeared to me, and with it a better understanding of the place of the poem among the great epics which might have seemed in finer accord with the sublimity and peace of the mountains on that memorable day.

In one respect at least it needed no return to Byron's work to show how closely related in spirit it is to the accepted canons of the past. These poets who have filled the world with their rumor, all looked upon life with some curious obliquity of vision, finding it a place of disappointment and grief. That they did so regard the world is a strange but indisputable fact. Who can forget the recurring *minynthadion* of Homer, in which he seems to sum up the vanity of our long hopes? So if we were asked to point out the lines in Shakespeare that seemed most completely to sum up his attitude toward life, we should probably quote that soliloquy of Hamlet wherein

the poet balances the evils of existence, and only in the fear of future dreams finds a reason for continuance; or we should cite that sonnet of disillusion: "Tired with all these for restful death I cry." And as for the lyric poets, sooner or later the lament of Shelley is wrung from their lips:

"Out of the day and night

A joy has taken flight:

Fresh spring, and summer, and winter
hoar

Move my faint heart with grief, but with de-
light

No more—oh, never more!"

This, I repeat, is a strange fact, for it appears that these poets, prophets who spoke in the language of beauty and who have held the world's reverence so long—it appears now that these interpreters of the fates were quite astray. Possibly, as Aristotle intimated, genius is allied to some vice of the secretions which produces a melancholia in the brain. More probably, they wrote merely from insufficient experience, not having perceived how the human race with increase of knowledge grows in happiness. Thus, at least, it seems to one who observes the tide of thought. Next year or the next some divine invention shall come which will prove this melancholy of the poets to have been only a childish ignorance of human destiny; some discovery of a new element more wonderful than radium will render the ancient brooding over man's feebleness forevermore a matter of ridicule; some new philosophy of government will convert the old poems of conflict into meaningless fables. Already we perceive the change at hand. To how many persons to-day does Browning appeal—tho they would not always confess it—more strongly than Homer or Milton or any other of the great names of antiquity? And the reason of this closer appeal of Browning is the unflagging optimism of his philosophy, his full-blooded knowledge and sympathy which make the wailings of the past somewhat silly in our ears, if truth

* THE WORKS OF LORD BYRON. *Poetry*. Vol. VI. Edited by Ernest Hartley Coleridge. Imported by Charles Scribner's Sons, New York. \$2.00 net.

must be told :

"As the bird wings and sings,
Let us cry, 'All good things
Are ours, nor soul helps flesh more, now,
than flesh helps soul!'"

It is necessary to think of these things before we attempt to criticise Byron, for *Don Juan*, too, despite its marvelous vivacity, looks upon life from the old point of view. Already, for this reason in part, it seems a little antiquated to us, and in a few years it may be read only as a curiosity. Meanwhile for the few who lag behind in the urgent march of progress the poem will possess an extraordinary interest just because it presents the ancient thesis of the poets and prophets in a novel form. Of course, in many lesser matters it makes a wider and more lasting appeal. Part of the Haidée episode, for instance, is so exquisitely lovely, so charged with the golden joys of youth, that even in the wiser happiness of our maturity we may still turn to it with a kind of complacent delight. Briefer passages scattered here and there, such as the "'Tis sweet to hear," and the "Ave Maria," need only a little abridgment at the close to fit them perfectly for any future anthology devoted to the satisfaction and the ultimate significance of human emotions. But, strangely enough, these disturbing climaxes, which will demand to be forgotten, or to be rearranged as we restore old mutilated statues, do, indeed, point to those very qualities which render the poem so extraordinary a complement to the great and accepted epics of the past. For the present it may yet be sufficient to consider *Don Juan* as it is—with all its enormities upon it.

And, first of all, we shall make a sad mistake if we regard the poem as a mere work of satire. Occasionally Byron pretends to lash himself into a little fury over the vices of the age, but we know that this is all put on, and that the real savageness of his nature comes out only when he thinks of his own personal wrongs. Now this is a very different thing from the deliberate and sustained denunciation of a vicious age such as we find in Juvenal, a different thing utterly from the *sæva indignatio* that devoured the heart and brain of poor Swift. There is in *Don Juan* something of the personal satire of Pope, and something of the

whimsical mockery of Lucilius and his imitators. But it needs but a little discernment to see that Byron's poem has vastly greater scope and significance than the "Epistle to Dr. Arbuthnot," or the spasmodic gayety of the Menippean satire. It does in its own way present a view of life as a whole, with its good and its evil, and so passes beyond the category of the merely satirical. The very scope of its subject, if nothing more, classes it with the accepted epics of literature rather than with the poems that portray only a single aspect of life.

Byron himself was conscious of this, and more than once alludes to his work as epic in design :

"A panoramic view of Hell's in training,
After the style of Virgil and of Homer,
So that my name of Epic's no misnomer."

Hardly the style of Virgil and of Homer, to be sure, but an epic in its own way the poem certainly is. That Byron's way is not the way of the older poets requires no emphasis. They

"reveled in the fancies of the time,
True Knights, chaste Dames, huge Giants,
Kings despotic;
But all these, save the last, being obsolete,
I chose a modern subject as more meet."

Being cut off from the heroic subjects of the older school he sought to obtain something of the same epic effect by the use of a modern theme. The task was not less difficult than his success was singular and marked. That is why it seemed in no way inappropriate, despite its occasional lapse of licentiousness, to read *Don Juan* with the white reflection of Mont Blanc streaming through the window. Homer might have been so read, or Virgil, or any of those poets who have presented life solemnly and magniloquently; I do not think I could have held my mind to Juvenal or Pope or even Horace beneath the calm radiance of that Alpine light.

I have said that the great poets all took a somber view of the world. Man is but *the dream of a shadow*, said Pindar, speaking for the race of genius, and Byron is conscious of the same insight into the illusive spectacle. He has looked with like vision upon

"this scene of all-confessed inanity,
By Saint, by Sage, by Preacher, and by Poet,"
and will not in his turn restrain himself

"from holding up the nothingness of life." So in the introduction to the seventh canto he runs through the list of those who have preached and sung this solemn, but happily to us outworn, theme:

"I say no more than hath been said in Dante's Verse, and by Solomon and by Cervantes."

It must not be supposed, however, because the heroic poems of old are touched with the pettiness and sadness of human destiny, that their influence on the reader is depressing; the name "heroic" implies the contrary of that. Indeed their very inspiration is derived from the greatness of the human spirit struggling to rise above the attack of little things and foiling despair. These poets believed in the association of men with gods and in the grandeur of mortal passions. So Achilles and Hector, both with the knowledge of their brief destiny upon them, both filled with foreboding of frustrated hopes, strive nobly to the end of magnanimous defeat. There lies the greatness of the heroic epos,—the sense of human littleness, the melancholy of broken aspirations, swallowed up in the transcending sublimity of human endurance and daring. And men of lesser mold, who knew so well the limitations of their sphere, took courage and were taught to look down unmoved upon their harassed fate.

Now Byron came at a time of transition from the old to the new. The triumphs of material discovery, "*Le magnifiche sorti e progressive*," had not yet cast a reproach on the earlier sense of life's futility, while at the same time the faith in heroic passions had passed away. An attempt to create an epic in the old spirit would have been doomed, was indeed doomed in the hands of those who undertook it. The very language in which Byron presents the ancient universal belief of Plato and those others

"Who knew this life was not worth a potato,"—

shows how far he was from the loftier mode of imagination. In place of heroic passion he must seek another outlet of relief, another mode of purging human melancholy; and the spirit of the burlesque came lightly to his use as the only available *vis medica*. The feeling was

common to his age, but he alone was able to adapt the motive to epic needs. How often the melancholy sentimentality of Heine corrects itself by a burlesque conclusion! Or, if we regard the novel, how often does Thackeray in like manner replace the old heroic relief of passion by a kindly smile at the brief and busy cares of men. But neither Heine nor Thackeray carries the principle of the burlesque to its artistic completion, or makes it the avowed motive of an epic action, as Byron does in *Don Juan*. That poem is indeed "prolific of melancholy merriment." It is not necessary to point out at length the persistence of this mock heroic spirit. Love, ambition, home attachments, are all burlesqued; battle ardor, the special theme of epic sublimity, is subjected to the same quizzical mockery:

"There was not now a luggage boy, but sought
Danger and spoil with ardor much increased;
And why? because a little—odd—old man,
Stripped to his shirt, was come to lead the van."

In the gruesome shipwreck scene the tale of suffering which leads to cannibalism is interrupted thus:

"At length they caught two Boobies, and a Noddy,
And then they left off eating the dead body."

The description of London town as seen from Shooter's Hill ends with this absurd metaphor:

"A huge, dun Cupola, like a foolscap crown
On a fool's head—and there is London Town!"

Even Death laughs,—death that "*hiatus maxime deflendus*," "the dunnest of all duns," etc. And, last of all, he turns the same weapon against his own art. Do the lines for a little while grow serious, he suddenly pulls himself up with a sneer:

"Here I must leave him, for I grow pathetic,
Moved by the Chinese nymph of tears,
green tea!"

I trust, however, it has been made sufficiently clear that *Don Juan* is something quite different from the mere mock-heroic—from Pulci, for instance, "sire of the half-serious rime," whom Byron professed to imitate. The poem is in a sense not half but wholly serious.

for the very reason that it takes so broad a view of human activity, and because of its persistent moral sense. (Which is no-wise contradicted by the immoral scenes in several of the cantos.) It is not, for example, possible to think of finding in Pulci such a couplet as this:

"But almost sanctify the sweet excess
By the immortal wish and power to bless."

He who could write such lines as that was not merely indulging his humor. *Don Juan* is something more than

"A versified Aurora Borealis,
Which flashes o'er a waste and icy clime."

Out of the bitterness of his heart, out of the wreck of his passions which tho heroic in intensity had ended in quailing of the heart, he sought what the great writers of epic sought,—a solace and a sense of uplifting. The heroic ideal was gone, the relief of sacredness was gone; by passing to the opposite extreme, by showing the power of the human heart to laugh at all things, he would in his modern way set forth the possibility of standing above and apart from all things. He, too, went beyond the limitations of destiny by laughter, as Homer and Virgil and Milton had risen by imagination. And, in doing this, he has written the modern epic.

We are learning a new significance of human life, as I said; and the sublime effort of the older poets to transcend the melancholia of their day is growing antiquated, just as Byron's heroic ridicule is turning stale. In a few years we shall have come by scientific and political investigation so much closer to the meaning of life, over which the poets bungled so sadly, that we can afford to forget their rhapsodies. In the meanwhile it may not be amiss to make clear to ourselves the purpose and character of one of the few, the very few, great poems in our literature.

P. E. M.

Science So Called

SUCH a treatise as we have here * it so well worth doing that it is worth doing well. There is a great need for just such a book as this aims to be—that is, an interpreter to the people of the most recent revelations of science. Mr. Snyder's

work is therefore welcome, and will no doubt interest many people in what scientific men are doing and thinking. But an interpreter of science should be an exponent of the spirit of science as well as give its facts, and it cannot be said that Mr. Snyder has the scientific temperament and scrupulosity for truth. One must make due allowance for the inevitable distortion of the formulas of exact science when expressed in popular language, and one might excuse a striking and picturesque way of putting things so far as that is necessary to get the attention of the casual reader, but Mr. Snyder is caught in the snare of sensationalism, and his numerous gross exaggerations become in many places mere absurdities. For example, it is true, as shown in this book, that many physiological processes, as they become better understood, are found capable of representation by the formulas of chemistry and physics, but there is nothing to warrant such a prophecy as that "in another twenty-five or fifty years, at the present rate of advancement [the purely physical explanation of life processes] will be complete. Molecular physics will have reduced all the phenomena of life to the play of mechanical forces." On the contrary, the purely mechanical conception of reactions as due to the motion of atoms is proving quite inadequate to explain even chemical and physical phenomena, to say nothing of biological. The current of scientific thought is setting now against mechanical conceptions—that is, in exactly the opposite direction from what Mr. Snyder thinks. Ostwald is almost willing to dispense with atoms and molecules altogether, instead of being, as here stated, one of the foremost in the development of the "mechanism of the atoms," and our young men are following him. We have no way of disputing the statement that "in the mind of the writer the evidence for the objective existence of the atom has recently gained a very solid support," but this only gives further proof that Mr. Snyder's mind is different from that of a modern scientist. It would be difficult to get more grotesque errors in a sentence than there are in this: "The atom of carbon, which is the nucleus from which all living things and products of

* NEW CONCEPTIONS IN SCIENCE. By Carl Snyder. Harper & Brothers. \$2.00 net.

vital activity are formed, is pictured as an asymmetrical tetrahedron." The chemist does not ascribe any shapes to the atoms at all, and while he conceives the valences, or points of union of the carbon atom, as being directed toward the apices of a tetrahedron, this must be symmetrical, not asymmetrical, as is proved by the non-existence of two mono-substitution products of methane.

Let us consider a single page, which is really not worse than some others:

"By a very simple experiment the chemist shows that, at ordinary temperatures, the molecule contains always at least two atoms. Here are two bulbs containing two different gases, say, hydrogen and chlorine. Mix them and explode them, and the resultant gas occupies the same place as did either one of two before; two volumes have been reduced to one. But the result is no longer a simple substance, but a compound—hydrochloric acid in the state of a gas. It is easy enough to show that equal volumes of all gases, at equal temperature and pressure, contain the same number of molecules. The chemist reasons, therefore, that the molecules of the hydrogen and chlorine must have been split in two. They must, therefore, have contained at least two atoms. If the average diameter of a molecule is about two-tenths of a micron, then the atom cannot be more than half as big. It is likely much smaller. This, tho, is pure guesswork. The very existence of an atom is simply an inference, a deduction. The molecule is something tangible and real; the atom is a hypothesis. But even of the molecules, we know, as yet, very little; and when we come to picture them, there is difficulty enough. For example, water is practically incompressible. We must, then, suppose its molecules touch each other."

One who has studied even elementary chemistry will detect such errors as the following: Many molecules consist of one atom, not two. When chlorine and hydrogen unite the volume is double that of either gas alone, not equal to it, and the whole proof which he attempts to give depends on this fact, which shows that he does not comprehend in the least the argument he is using. It is not possible to prove Avogadro's law—that is, to show experimentally that equal volumes of all gases, under the same conditions, contain the same number of molecules. The molecule is just as hypothetical and just as real as the atom, and there is no "guesswork" about either.

An hypothesis is not a guess, it is a mode of formulation. There is no reason to say that the "molecules touch each other" in water.

In the words of our American philosopher, Josh Billings: "It is better not to know so many things, than to know so many things that are not so." The truth is the book is very carelessly written by one who has not a thorough knowledge of the subjects treated, and even the mistakes, some of them mere errors in spelling, to which THE INDEPENDENT called attention when the articles first appeared in the magazine, are left uncorrected in the book.

Missouri River History

CAPTAIN CHITTENDEN writes his history of Missouri steamboat navigation* around the life of Joseph La Barge, the famous navigator and Indian trader, who for fifty-three years (1832-1885) was closely identified with the traffic of the American Yellow River. It is a careful and studious work, comprehensive, full and accurate in detail, and felicitously written. It loses no historical value from being cast in biographical form; rather, there is a distinct gain in historic interest. "It is not the bare narration of events," writes the author in explanation, "that gives history its true value, but those intimate pictures of human life in other times that show what people really did and the motives by which they were actuated."

It was not until 1831 that a steamboat ascended the upper river. The bullboats and dugouts of the Indians had been followed by the mackinaws, keelboats and improved bullboats of the traders, and in 1819 the steamer "Independence" had entered the river's mouth. But in the spring of 1831 the "Yellowstone" started on its first voyage for the upper river and made the beginnings of what in a few years became one of the most considerable industries in the United States. The "Yellowstone" reached Fort Tecumseh (now Fort Pierre, S. D.), and in the following spring ascended

* HISTORY OF EARLY STEAMBOAT NAVIGATION ON THE MISSOURI RIVER. By Hiram Martin Chittenden. [With map and illustrations.] New York: Francis P. Harper. Two vols. \$6.00 net.

to Fort Union, near the mouth of the Yellowstone River. This voyage, adding 1,700 miles to the internal navigable waters of the country, attracted great attention all over the civilized world. The number of steamboats rapidly increased, and further approaches were made toward the head of navigation. In 1834 the "Assiniboine" reached a point one hundred miles above the mouth of the Yellowstone, and in 1853 the "El Paso" went 125 miles further. In July, 1859, the "Chippewa" went within fifteen miles of Fort Benton, Mont., and in the following year, with the "Key West," attained the fort. Altho under exceptional circumstances vessels have occasionally proceeded further, this point has always been considered the true head of navigation.

The golden age of the steamboat on the Missouri is placed at between 1855 and 1860, tho for the following five or eight years the flourishing conditions in a measure continued. Traffic had increased greatly, and the profits were often enormous. The "Peter Balen" cleared \$65,000 and the "W. J. Lewis" \$40,000 in the trip of 1866, and Captain La Barge in the "Octavia" during the following year equaled the record of the "Lewis." But the railroads began coming, and as the region became girded with rails steamboat traffic declined. The Hannibal & St. Joseph reached its Missouri terminus in 1859, the Missouri Pacific entered Kansas City in 1866, and Council Bluffs was invaded by the Chicago & Northwestern in 1867. Road after road was built, and when the Great Northern entered Helena in 1887 the older method of traffic was annihilated. "The last commercial boat that ever arrived at Fort Benton left that port in 1890." The Missouri River Commission, which for many years had in charge the matter of clearing and deepening the channel and strengthening the banks of the Missouri, was abolished by Congress in June, 1902, thus abandoning the river as a commercial highway. Its future value rests with the probability of using its waters for irrigation.

The work is not alone a history of Missouri navigation; considerable space is given to a number of kindred subjects. The Indian question, as it applied to that region, is dealt with at length, under-

standingly and with justice. The Sioux uprising of 1862-64 is given with some detail as a part of the general Indian history of the region from the time (1851) of the Laramie treaty to the suppression of the revolt of the Northern tribes in 1877. There are interesting incidents attending the visits of noted travelers—such as Prince Maximilian, Audobon and Lincoln—to the Missouri region, and sidelights on the personalities of some of the great Indian fighters, such as Stanley and Custer. Altogether the work is a valuable addition to the history of the West.

Aaron Burr

No man sprang from better stock than did Aaron Burr, grandson of Jonathan Edwards, and son of the Burr who was President of Princeton College. Few had enjoyed greater educational advantages than he, not one could exceed him in personal magnetism, that power of attraction which is so-called for want of a better name and which, like electricity, while not comprehended is acknowledged and utilized. With all his gifts there was one great thing which he lacked. He knew not to be true. It was this defect that caused all the failures and disappointments of his career. Dr. McCaleb* seems to think that in Burr's early days this blemish was not manifest, for in speaking of his military life he says that "Burr's rise was rapid; his integrity, bravery, intelligence and withal his knowledge of military science, recommended him to his superiors." If the word integrity had been omitted here, as the quality was omitted from Burr's mental make-up, the above quoted statement would have been correct. In fact this serious defect in Burr's character was very early recognized by those who knew him intimately. His brother-in-law, Judge Tapping Reeve (not Tappan, as misprinted in Dr. McCaleb's book) wrote of Burr when the latter was but about seventeen years of age, in a letter hitherto unpublished:

"My wife's brother Aaron is a youth of extraordinary powers of mind. He will accomplish great things if he lives and if he shall

* THE AARON BURR CONSPIRACY: A History Largely from Original and Hitherto Unused Sources. By Walter Flavius McCaleb. New York: Dodd, Mead & Co. \$2.50 net.

not prove that he has the fatal defect of *some of his lamented father's maternal ancestors* of being unable to see *wrong* in anything which he *desires* to do. This is a source of much anxiety to his sister, whose affection for him is intense, and, indeed, his for her seems to be equally so. It is impossible to avoid loving him. May God grant that our forebodings prove false, for he is capable of doing great and good things."

Unfortunately Judge Reeve's forebodings were not without foundation. The brilliant Burr betrayed both friend and foe in turn, and sometimes both at once.

Dr. McCaleb has done a good work in searching carefully among long neglected documents in Mexico, as well as in our own State records, and has fully proved that it was not "on technical grounds alone," as asserted by Jefferson, and not "owing to the malignity of the Tory-Federalists against our greatest President," as stated in one of the administration papers of the day, that the famous trial of an ex-Vice-President of the United States for a treasonable conspiracy resulted in a verdict of acquittal.

The enterprise which Burr had attempted was one that offered many attractions, both to his ambition and his ardently imaginative temperament. The Spanish tyranny in Mexico was naturally hateful to him. He was sanguine, and radiant dreams floated before him; dreams in which he saw himself at once a liberator and a king of a happy people. He had no scruples to interfere with the use of whatever means of prosecuting any desirable adventure might present themselves. He needed money, and he hesitated at nothing that might enable him to secure it. But he was not insane enough to think it practicable to break up the Union. He merely wished to escape with credit from a country in which he had once hoped to fill the foremost place, but where he had come to be despised and hated.

Dr. McCaleb has cleared Burr's memory of having contemplated the crime of treason, and, what is of greater importance, has cleared the Southern and Western States of that day from suspicion of a readiness to be seduced into treasonable action, but in so doing he has established one more fact of damaging import to the memory of Jefferson.

Around the World Through Japan. By Walter Del Mar. Illustrated. New York: The Macmillan Co., \$3.00.

This is not exactly a guide book, and it has no claim to be considered literature. It is a product of the individual going-round-the-world habit, which seems to be on the increase among people who revolt against being "personally conducted." The author is an experienced traveler. He took the best routes, stayed longest in Japan, tells where to go and what to see under the guise of narration of what he did himself, and, in short, the book being filled with all sorts of practical suggestions is well worth reading by any one of the sterner sex who contemplates a similar journey. The restriction is necessary in view of the completeness of the information on topics not ordinarily discussed in the family circle.

A New Portrait of Shakespeare. By John Corbin. New York: John Lane, \$1.25 net.

This essay of Mr. Corbin consists of a fair and able review of the evidence for and against the genuineness of the Ely Palace Portrait of Shakespeare and the "so-called" Droeshout Original. As a result of his investigation, Mr. Corbin finally strikes a balance in favor of the former as against the claims of the latter. His conclusion rests partly on authority, or rather the lack of it; but, as a whole, the principal points on which he relies to establish the authenticity of the Ely Palace Portrait are its similarity with the Droeshout print and the Stratford bust, the nature of the mustache and the drawing of the costume, the character of the inscription, and rather more indefinitely what we may call the general harmony of circumstances—its agreement with the impression one has of Shakespeare and the like. On the other hand, Mr. Corbin infers the "spuriousness" of the Droeshout Original from the unusual lettering of the inscription together with the antecedent improbability that a painting so out of perspective as this is on the right side should ever have been drawn directly from life, to say nothing of the fact that like most imitations of the eighteenth century it is painted over another portrait. His strongest argument, however, is derived

from a comparison of the "Original," with the various stages of deterioration through which the plate of the engraving has evidently passed in the preparation of the successive folios. Obviously, if the engraving were a copy of the painting, the painting would most resemble the earliest and best impression of the engraving before the plate was debased by subsequent manipulation. On the contrary, Mr. Corbin finds that the "Original" resembles most nearly, not the early proof of the print, of which there is a copy in existence, but rather the impression of the fourth folio. Further, Mr. Corbin seems inclined to believe that the Ely Palace Portrait, or, at all events, some painting very like it, was the real original of the engraving. As a whole, the essay is a very interesting discussion of a question whose fascination is greatly enhanced by its insolubility.

Letters to M. G. and H. G. By John Ruskin.
New York: Harper & Bros., \$1.25.

This is a rather curious bit of book-making. It consists of a preface by the Rt. Hon. G. Wyndham, a brief set of extracts from a journal by an unknown hand concerning a visit of Ruskin to the Gladstones in 1878, some letters of Ruskin to Mary Gladstone and her sister to justify the title, a note on Ruskin and Gladstone and a paper entitled "The Dead Ruskin," both by Canon Scott Holland. The best thing about the whole miscellany is the light it throws upon Ruskin's state of mind in 1878 and thereabouts, immediately before and after the breakdown which marked the beginning of his decline. From the depression which had fallen upon him as the result of disappointment, ill health, and his unfortunate love-affair with Rose La Touche, he never really recovered. And it is significant for the study of the man's life to notice in this volume the evidences of his profound practical pessimism in contrast with his amiable personality and his enthusiastic theoretical idealism. In his total discouragement with life one may see, perhaps, if one is interested in such anatomy, the inevitable bankruptcy of the visionary who insists upon the literal realization of his ideals—who re-

fuses, in short, to think as a mortal. But whether in such a case it is the times or the character that is out of joint, there is no doubt about the agony of spirit which results from this incongruity between expectation and accomplishment, no doubt about the sweetness of nature that can support the sense of disillusion and failure without bitterness or cynicism.

A History of American Political Theories.
By C. Edward Merriam. New York: The Macmillan Company, \$1.50.

This is an excellent work, deserving to be widely read. It traces minutely, with a constant citation of contemporary statesmen and political writers, the drift of political theories from colonial times to the present. America has had no dearth of political theory, even from very early days; but of philosophic or scientific treatment thereof there has been surprisingly little. This book, a simple, expository handling of the subject, is thus a welcome contribution. Somewhat abruptly, and perhaps without due consideration of gradual changes in political thought, the author passes from the theocratic or aristocratic views of the colonial period to the sweeping generalizations regarding democracy characteristic of the revolutionary period. But thereafter he carefully follows the various transitions, leaving an unbroken narrative. It is particularly interesting to note his treatment of the general supposition that the Fathers, and particularly the radicals among them, drew their inspiration from the French political philosophers. There is little to show for this view, he rightly maintains; and he might have gone further and shown the indebtedness of the French to the pre-revolutionary speeches and tracts, to the Declaration and to the various State Constitutions, copies of which were sown broadcast throughout France. The Fathers may perhaps have propounded little that was original, but the principles which they applied to the new conditions on this continent came neither from Voltaire nor Rousseau. They were English, and their originals are to be found in Milton, Sydney and Locke, and in common beliefs and traditions that had grown up since before the English Civil

War. Even Jefferson, who is popularly supposed to have been inspired by the Encyclopedists, is shown to be clear of debt to them. The only French work which he cites with enthusiasm is De Tracy's *Commentary on the Spirit of Laws*, which did not appear until 1811. "Indeed," says the author, "it is unnecessary to go outside of the English theory of politics to find ample precedent upon which Jefferson might draw." The work is appropriately dedicated to Prof. William A. Dunning, whose admirable "*History of Political Theories*" appeared last year.

The Workingman and Social Problems. By Charles Stelzle. New York: Fleming H. Revell Co., 75 cents net.

These essays, written by one who was once a workman and is now a minister, are concerned largely with the attitude of the Church and the workman to each other. A sketch of social conditions in the poorer districts of New York and other great cities is given with sympathy and understanding, and certain proposed remedies are considered. The author has small faith in remedial legislation, and urges instead a closer obedience to the precepts of Christ. He acknowledges the great gap between the Church and the masses to-day, but hopes that the workers will see the error of their attitude and return to the fold. His exposition of current social theories is somewhat lacking in accuracy, and his remedy for prevalent evils is, to say the least, not novel. It is a slight book, both in size and merit.

The Sacraments in the New Testament. By the Rev. John C. Lambert, B.D. Imported by Charles Scribner's Sons, New York. \$3.50 net.

From the point of view of a moderate conservative, nothing could be more satisfactory than this volume of Mr. Lambert's. It is scholarly, fair, comprehensive and exhaustive, and will certainly take its place as a standard work of reference on the subject of the Sacraments. In it every scriptural allusion and every text bearing on the subject has a careful and separate treatment, and it should seem that from the standpoint of

the author, at least, nothing more could well be said. And, on the whole, that standpoint is well established and maintained so far as it can be established by a reasonable interpretation of our commonly accepted Scripture texts. Especially successful is the author in exposing the fallacy of all attempts to read into the words of Scripture a materialistic or a magical interpretation of the sacramental rites. Indeed, to one outside the field of controversy, it seems as if he were unnecessarily thoroughgoing in his disproof of all high sacramentarian doctrines. In meeting the attacks of the modern critical school, however, he is by no means so happy or successful. Here his position is much weakened by a too evident desire to harmonize conflicting Scripture statements and to accept the authenticity of disputed passages. Fair and reasonable as he is, he seems hardly to be at home in literary or historical criticism, and fails to feel the full force of the critical attack. As an interpretation of Scripture texts the book is masterly; as a defense of those texts it is weak and of little worth.

The Rise and Fall of the Anabaptists. By E. Belford Bax. New York: The Macmillan Co., \$2.00.

Interest in this book will be far wider than interest in its specific subject, for it takes us into a period of supreme historic importance, and while dealing directly with only one of the social and religious movements of that time it throws upon the whole period such illuminating side lights that we obtain through it a new and enlarged vision of the whole Reformation struggle. Most vividly does it depict the immense inner difficulties that the great reformers had to meet in their struggle for religious freedom. At war with the whole established order of things, they soon found themselves to be no less violently at war with a host of those who were preaching their own doctrines and carrying out what seemed to be the logical conclusions of those doctrines. The Anabaptists were, indeed, a harder foe to fight than the popes, for they were foes who, by their logic and by their practices, seemed to prove the utter folly of the principles

for which the reformers stood, and the complete moral and social chaos to which they inevitably led. In their case was made most evident the danger of a free interpretation of Scripture. Every excess, every absurdity of which imagination could conceive, found its authority in the Bible and its sanction in the direct intuition of the Spirit! Men would have no learned men as teachers, because the Scripture says that divine things are "hid from the wise and prudent and revealed unto babes!" They aped the speech, manners and conduct of children, because it is written that "of such is the kingdom of heaven!" Women went to the public assemblies unclothed—they gave themselves over to sensualism and lust, because the Bible says that publicans and harlots go into the kingdom of heaven before the righteous! That, in the face of such difficulties, the whole Reformation movement did not collapse is a tribute at once to its own invincible strength and to the wonderful balance and poise of the great reformers. The injustice of the charge, so often made against them, that they so soon proved false to their own principles of liberty, and themselves became guilty of cruel and unnecessary persecutions, is here seen in its true light. Against the forces making for moral and spiritual anarchy they were indeed stern, as stern as the popes themselves; but it was this sternness alone that saved their struggle for freedom from utter failure. The book is full of suggestions, and ought to have a wide reading.

Light Waves and Their Uses. By Dr. A. A. Michelson, Professor of Physics in the University of Chicago. The Decennial Publications, Second Series, Volume III. Chicago: The University of Chicago Press, \$2.00.

Professor Michelson has done more than any other living man to make possible the accurate measurement of light waves, and was selected by the International Committee of Weights and Measures to determine the exact length of the standard meter at Paris in terms of the length of light wave, in order that if this platinum bar, which is the unit of measurement for all the scientific and most of the commercial work of the world, should be destroyed, it could at any time

be reproduced. By means of his two marvelous inventions, the interferometer and the echelon spectroscope, light can be separated into its component rays of different wave lengths, and these studied with a facility and degree of precision once thought unattainable by man. The Zeeman effect, the multiplying of the lines of the spectrum in a magnetic field, when studied by these new methods, proved to be due to the constrained vibration of the electrical charge of the atom, and leads to a new conception of the constitution of the atom. These lectures, altho they lead to the very frontier of physical knowledge, are written in a style readily comprehensible to any one of average education in physics, and will be found very useful, not only to specialists, but to those who wish to keep informed of recent scientific methods and progress in this field.

Sinful Peck. By Morgan Robertson. New York: Harper Bros., \$1.50.

To "shanghai" thirteen respectable business men and authors on a vessel bound for Singapore, and, altho they were his friends, to keep them at hard labor before the mast for twelve months, is a practical joke which "Sinful Peck," the fat little Cleveland lawyer in this story, proposes to himself and executes with infinite nerve and diablerie. The zest of the story lies in the fact that the situation, while essentially humorous, is ever hovering on the edge of tragedy. The joke is worked out to the end, but it is worked out to the accompaniment of pistol shots, flying marlin-spikes, broken heads, lurid oaths and incipient mutiny. We have rarely read a more original and amusing extravaganza.

A Prince of Sinners. By E. Phillips Oppenheim. Boston: Little, Brown & Co., \$1.50.

The recent *ructions* raised in Parliament by the Hon. Joseph Chamberlain's plea for a British protective tariff give an opportune touch of verisimilitude to this tale of English contemporary life and politics. In the story the revision of the tariff bill is triumphantly carried, and John Bull is protected against German, French and American competition. But this is, in a way, incidental to the plot

and merely assists the hero (a severely conscientious and, if truth must out, somewhat trying young man) to accomplish his purpose of elevating the East-side masses through general practical co-operation, rather than selected, so-called Christian benevolence. A twelve-years' experience as a police court missionary drives Philip Ferringshaw into some measure of insanity, the horrors he sees and tastes preying upon his heart and brain until, at length, he deserts his wife and infant son and flies to Canada to escape the curse of memory; and there, in a natural or unnatural recoil from the shock of his "strenuous life" in the slums, he indulges in all manner of excesses and becomes "A Prince of Sinners." His ultimate return to England as the Marquis of Arranmore, an apparently cynical, case-hardened misanthrope, is the point at which the story opens and his regeneration through the influence of his son—the aforesaid priggish hero—and a woman of title who loves him, the point at which it closes. Between these two points stretches a not unfruitful plain, made interesting by some clever characterization.

Thompson's Progress. By C. J. Cutcliffe Hyne. New York: The Macmillan Co., \$1.50.

Take the advice of a friend and be introduced at the earliest opportunity to "Tom's Son," a Yorkshire collier lad, born-and-bred poacher and general genius, and to Clara, the dog of doubtful ancestry, his inseparable crony, for "by Goy," as he himself would say, they will lead you through merry adventurings to a triumphant finish. A determined, unscrupulous young rascal is the parentless, vagrant Tom, but, withal, so clean of body, mind and heart that he wins out in spite of his faults, and one loves him not alone for the dangers he has passed, but in spite of the inevitable advantages he gains. His *Progress* lies along social as well as commercial lines—from the coal pits through weaving mills to, presumably, the peerage. But the original capitivating Tom remains to the end the same, with all the defects of his qualities upon his head, just as one found him at the beginning, and it would be a prig that would wish him otherwise.

The Captain's Toll-Gate. By Frank R. Stockton. New York: D. Appleton & Co., \$1.50.

A posthumous work from the hand of an artist who has endeared himself to his public is always a disarming object, unconsciously making a pathetic plea for gentle treatment and tender leniency. Mr. Stockton's last book, happily, has no occasion to beg for special suffrage. On the contrary, its blitheness, whimsicality and thorough-going wholesomeness fairly defy indulgence at the start, and claim nothing more than a fair field and no favor; wherefore it is gratifying to be able to say of it that it takes its place easily as one of the best of its writer's stories, its delightful and much besuited young heroine, Miss Olive Asher, proving only a little lower than the angels, Mrs. Lecks and Mrs. Aleshine, of blessed memory, and quite as convincing in her own way as Pomona herself, the Great. An excellent Memoir by Mrs. Stockton prefaces the story.

The Spoilsmen. By Elliott Flower. Boston: L. C. Page & Co., \$1 50

Mr. Flower's characters do not uniformly "convince." Except on occasions, neither their speech nor their conduct is spontaneous or inevitable. Their rôles are cut out for them, and they speak and act to order. One of them, indeed—Jim Casey, drawn somewhat on the plan of Mr. Dunne's Dooley—has touches of reality, but he is exceptional. And yet, despite the characterlessness of his personages, the author has contrived an interesting and even vivid picture. The story deals with Chicago political life, not, it may be supposed, as it now is, since the reformers dominate the municipal Legislature, but as it was and had been for many years before the civic revolution. Circumstances compel the bosses to give aldermanic nominations to two reformers, both of whom are elected, and neither of whom the bosses can control. One term proves enough for both of them, and they are glad to retire from public life. The counterplay of forces in a municipal campaign; the devious methods used in whipping the recalcitrant into line, and the terrorism brought to bear on persons "in the way" of the bosses, are all cleverly shown.

Literary Notes

A NEAT pocket edition of "Silas Marner" is published by John Lane. (75 cents.)

....A new contribution to "The Carlyle Controversy" will be issued this month by John Lane. The title of the new book will be "The Nemesis of Froude."

....Saint Augustine's "City of God," translated by John Healey, occupies three volumes of The Temple Classics Library. (The Macmillan Company, 50 cents each.)

....Wycil & Co., of this city, announce that they will presently issue a series of hand books by specialists, beginning with works on motor-ing, bridge, solo-whist, invalid cooking, palm-istry and graphology.

....A new section of "The Oxford English Dictionary" contains words from *R* to *Re-active*. For curious reading one might turn to the history here given of *ragman* and a number of other words.

...."Westward Ho!" now appears in the Library Edition of Charles Kingsley's Works. As in the earlier issues, there is an Introduction by Maurice Kingsley. (Two volumes. J. F. Taylor & Co.)

...."Philip," in two volumes, is the latest issue in the new edition of Thackeray, edited by Walter Jerrold and illustrated by C. E. Brock. (The Macmillan Company, \$1.00 each.)

....The Grafton Press announces that its publication, "Republic Versus Woman," has been read in translation to the Empress Dowager of China, and that it is at present being translated into several foreign languages.

....It is a sign that poetry is not dead. We have a new and enlarged edition of Walker's "Rhyming Dictionary," with a copious introduction by J. Longmuir. One use of such a dictionary may not have occurred to many persons—its service in correcting telegraphic errors. (E. P. Dutton & Co., \$1.50 net.)

....Oliver Huckel, of Baltimore, who has made a special study of the opera "Parsifal" at Bayreuth, will publish his new poetic English version of this one of Wagner's works, through Messrs. Thomas Y. Crowell & Co. This fact is particularly interesting, in view of the discussion on both sides of the Atlantic of the project to bring this opera to New York. Special type designs in black and red, with illustrations by Stassen, will be incorporated in the book.

Pebbles

A NEW game called "Christianity" is played at Coloma Center. Here is how they play it: The Christians, who are the girls, get on one side, and the boys get on the other, and are the heathens; then the heathens cross over and embrace Christianity. They say it has created quite a commotion.—*Kingston (Wis.) Spy*.

....Johnny had come in with a story of a remarkable automobile he had just seen. He declared that it was "as big as a house!" "Now, Johnny," said his father severely, "you know it was not as big as a house. Why do you exaggerate things so? I've talked to you a million times about that habit of yours, and it doesn't seem to do a bit of good."—*Bombay Guardian*.

...."Rafferty," said Dr. Dolan, "are yez payin' attintion till the Trusts?" "I am that." "Do yez think they're goin' to swallow up the country?" "I had me suspicions. But I've been lookin' at the map. There's wather-melons in Georgia, an' peaches in New Jersey, an' California pears on the Pacific Coast, not to mintion the mineral products, such as coal, iron, copper, lead, an' prairie dogs. An' I've concluded that any wan Trust that tries to swallow the intire outfit is in line fur wan o' the biggest attacks of indigestion on record."—*Washington Star*.

....*The Catholic Citizen* tells about a negro in Chicago who, when he heard that the new Pope was a Catholic, exclaimed: "Good Lord, I thought he was an Italian!" He doubtless supposed all Catholics were Irish. Bishop Talbot tells of a sermon he preached in a Western settlement at which a local unbeliever had been persuaded to be present, much against his custom. He was afterward asked how he liked the Bishop. "Pretty well," said he; "and I learned one new thing. I learned that Sodom and Gomorrah was places. I always thought they was husband and wife."

....*Everybody's Magazine* tells a little story which shows the mixed feelings with which the Southerner regards Booker T. Washington. An old Florida colonel recently met Booker T. Washington, and in bibulous burst of confidence said to the negro educator: "Suh, I'm glad to meet you. Always wanted to shake your hand, suh. I think, suh, you're the greatest man in America." "Oh, no!" said Mr. Washington. "You are, suh," said the colonel, and then, pugnaciously: "Who's greater?" "Well," said the founder of Tuskegee, "there's President Roosevelt." "No, suh!" roared the colonel. "Not by a jugful! I used to think so, but since he invited you to dinner, I think he's a blank scoundrel."

A School of Journalism

It is not generous to question the wisdom of a liberal gift, nor is it always safe to criticise a project before its practical details have been fully declared; yet we observe that not a few men of experience in the matter look askance upon Mr. Pulitzer's donation of \$2,000,000 to found a School of Journalism connected with Columbia University. And we confess to our own misgivings as to the genuine utility of the scheme—we do not say, of the money.

The school is designed, as we understand it, to give instruction both in the technical management of a newspaper and in the various branches of learning which may be supposed to develop the art of newspaper writing. The distinction should not be neglected. As for the first part of the plan, we do not hesitate to call it perverse and doomed to failure. No newspaper would accept a raw graduate from a school of journalism and place him in charge of a department, or, indeed, in any position where such training would be demanded. The conduct of newspaper work, in its merely mechanical details, can be learned so readily that no academic instruction is necessary; and in its more general aspects, such as involve responsibility and the control of men, it can be acquired in the practical world and only there. Nor can we look with complacency on any plan which would curtail a young man's general education by diverting a portion of his time and strength to matters which can be learned so much more efficiently in the school of experience. There is altogether too much to learn.

As for the second part of the plan, the bringing together into one school of those branches of learning which will prepare the student for newspaper writing—here there may be more room for divergence of opinion. There is at least something very plausible in the design. Yet we observe, on reading the list of these studies as given by *The World* and other papers, that they one and all already exist in Columbia, as they do in

every great university. They are, indeed, merely those general studies which have long formed and will continue to form the common basis of culture. And how could it be otherwise? The journalist, at least in the beginning of his career, must be ready to write on a limitless variety of subjects, on life in its manifold aspects, the *quidquid agunt homines*; for what, after all, is a newspaper:

“What is it but a map of busy life,
Its fluctuations and its vast concerns?”

What the tyro needs is not a particularized training in some branch of learning, such as the lawyer and physician must carry with them into the world, but a wide knowledge of human history and achievement, with some emphasis on the art of self-expression.

Nor is any profit likely to arise from segregating these students from the rest of the university and directing their work to its immediate application in the newspaper office. The contrary is more likely to prove true. The inevitable tendency would be toward a shallow concentration on the passing concerns of the day, and these again can better be learned in the world than in the school. Moreover, what is wanted in our reporters and editors is not that their education should be more confined to present uses, but that it should go deeper into the past and strike stronger roots. Their language, too, requires less coloring of the journalistic style, and more of a saner and self-respecting manner.

And so it is in morals. We are inclined to think that the more firmly the student is grounded in the common code of honesty and uprightness, and the less he is troubled, during his college days, by the casuistry of the street, the better it will be for both university and newspaper. There is a story hereanent, which emanates from the office of a certain great daily whose name need not be mentioned. Some years ago, at the time of the great fire in Philadelphia opposite Wanamaker's, a writer for this paper received a report of the event by long-distance telephone. As he sat down at his desk to

write up the "story," the city editor, who had heard part of the conversation at the telephone, asked him what the loss was estimated to be. "Two millions," replied the writer. "Oh, —, make it five!" said the sapient editor; and so it stood in print. That is, perhaps, hardly a fair presentation of the average newspaper office, yet it carries its lesson. The thing most of all demanded in the education of the future writer is that his education shall be entirely severed from the methods of the press, that his mind shall be drawn away from

"The fresh-coined lie, the secret whispered last,"

to the long history of human experience, to the wisdom of a wider outlook, to the morality that is not codified to-day but is forever enduring. Out of the greater stillness of that period he will, we believe, come into the world with a broader understanding on which to engraft the knowledge of the hour, a firmer and finer style in writing, and a deeper insight into human experience with which to resist the attractions of a shifting casuistry. To this end, to the strengthening of those existing departments that make for such a training, it may be hoped Mr. Pulitzer's liberal foundation will in some way be applied, and not to the narrower purpose which is really less practical, however specious its direct appeal.

Colombia and the Canal

THE canal treaty negotiated at Washington by Mr. Hay and Dr. Herran has not been rejected at Bogota. In its present form it has been disapproved by the Colombian Senate, which, immediately after expressing its disapproval, undertook to show by what amendments it could be made acceptable. So far as we can learn from the meager and unsatisfactory dispatches from the Colombian capital, the unanimous action of the Senate was precipitated by official advices to the effect that any amendment whatever might cause a rejection of the treaty at Washington. There was no threat in the dispatches from our State Department, the substance or the exact text of which was given to the Colombian Government by Minister Beaupré,

but merely a friendly warning suggested by conditions here of which the Colombians have no adequate knowledge. They do not understand how difficult it was to procure legislation in favor of the Panama route, and how the treaty would be endangered if our Senate should be asked to accept substantial changes in the provisions of it. Their Senate Committee having reported several amendments of an important character, the cabled statement that these would meet with no favor here led the Senate to say that it would not accept the treaty as it stands, and then to take measures for authorizing President Marroquin to negotiate a new one that should contain the provisions regarded there as essential.

There is nothing extraordinary or inexplicable in this. Our own Senate has insisted upon the amendment of treaties. This treaty was accepted in Washington by a diplomatic officer representing a country which has never been governed in an orderly way, and which is now temporarily peaceful only because its warring factions have been exhausted in a bloody revolution of more than three years' duration, a conflict that has paralyzed trade and agriculture, and afflicted the people with a paper currency worth about a shilling a bushel. It could scarcely be expected that the acts of a distant diplomatic agent, who perhaps enjoys the confidence of no faction at home, would be approved without question. At all events, the Colombian Senate in setting out to amend this treaty is clearly within the limits of its power and is merely doing what other Senates have done. Possibly it would have demanded no changes if it could have understood the risk of its action and if it had been composed of fairly elected representatives of a self-governing and really civilized people.

But if it is an unwise and unreasonable Senate, still it is the Senate with which the United States must deal; and in dealing with it we should use patience and tact, because the end to be gained is one of such importance to our own country and the entire civilized world. We believe it would be a great blunder to make the canal, or to try to make it, on the Nicaragua route if the right to make it

in Panama can be obtained honorably and under reasonable conditions. These difficulties at Bogota will probably cause delay. Better delay, with a canal finally on the Panama line, than a hasty beginning on the inferior route, followed by regret and a waste of treasure there.

It may now be expected that the Conference Committee of the Colombian Senate and House will empower President Marroquin to make a new treaty within certain specified limits as to the pay, the courts and the preservation of Colombian sovereignty in the canal strip. The price which we have already agreed to pay at the beginning is high enough, but, in view of the revenue now received by Colombia from the isthmus, we could afford to make the annual payment something more than \$250,000. The present treaty's provisions concerning courts, altho somewhat complicated, are really not open to objection; but if Colombia should ask, as Dr. Herran originally suggested, for a judicial system under a joint commission, we might consent to that. But we could not agree to anything less favorable than the present treaty's virtually perpetual lease of territory, nor could we afford to concede a greater measure of sovereignty than Colombia would retain under the agreement which has been disapproved. It is reported that the Colombian Congress desires to adjourn. Therefore its instructions to President Marroquin may become known within a short time. His interpretation of them will be as favorable to this country as the conditions will permit, because the present treaty had his approval. The new terms, whatever they shall be, will deserve respectful and patient consideration. The requirements of the Spooner act will permit this to be given to them by the President and Mr. Hay. In all probability, it will be feasible to use the conditions at first presented by President Marroquin as a basis for negotiations designed to modify them.

The possible secession and independence of the State of Panama and the adjoining State of Cauca demand no consideration at the present time. It is quite probable that a final failure of the negotiations with Colombia would be followed by an attempt of the people of the isthmus

to set up an independent Government. This would be resisted, but it might be successful. If the people of Panama and those of the adjoining State, who would derive great benefit from a canal on the Panama route and suffer much and lasting injury by the construction of a canal in Nicaragua, should establish a government of their own and exhibit power to maintain it, the treaty of 1846 would not, in our opinion, necessarily and rightly be regarded as a bar to prevent the United States from making treaty agreements with that Government. Our guarantee of the sovereignty of New Granada (and, in succession, of Colombia) on the isthmus was made with reference to European aggression, and not to protect New Granada from the consequences of domestic revolution and secession. If, however, the independence of Panama should be accomplished by the aid of North American money, intrigue and arms, the world would say, unjustly, that our Government had connived to bring it about. Mr. Roosevelt and Mr. Hay would make no canal treaty with an isthmus republic so established. We sincerely hope that the success of the treaty negotiations with Colombia will prevent a consideration by our Government and our people of the questions and relations which the secession and independence of the isthmus would suggest.

An Infinitesimal Barrier

The Cumberland Presbyterians are warmly discussing the question of union with the Northern Presbyterians. The argument against union is thus put sharply by a Texas minister: "Our friends put election before faith; we put election after faith." Well, what of it? Both agree that they must have the faith, and that God must do the electing. Both further agree that the interval between the election and the faith is briefer than any chronograph could register. Why separate two great Churches for the sake of a metaphysical interval of time? Why not let brethren differ as to the order of the interval so long as both hold that they must have faith and that they must be elected? Why should not our Texas friends consent to be members of the same social fabric while differing on

social questions, of the same political fabric while differing politically, and of the same Church while differing as to the philosophy of their common religion?

This question of faith before election, or faith after election, illustrates the great principle on which Church union must rest, which is that of mutual tolerance. We want and must have a union of denominations; but this can never be accomplished by requiring a dead uniformity of belief. It can only come by recognizing the full and equal right to differ. One man may hold and teach as fully as he pleases that God will never elect a man to salvation until after he has exercised faith, whatever that may be; while another may hold and teach just as freely, within the same denomination, that no man will ever exercise saving faith until after God has elected him. Let both allow God to attend to his work in his own time and way, while both preach the duty of faith in their own way, and hold each other's hand in their common effort to persuade men to live the Christian life.

What keeps Christians apart in their several denominations is chiefly denominational pride and not Christian love. Love unites; pride divides. By a good fight for their more liberal philosophy the Cumberland Presbyterians have built up a strong denomination; but the elder body of Presbyterians has, at its last General Assembly, definitely allowed as legitimate the Cumberland philosophy, and nothing but pride of organization can now keep the two bodies apart. They ought to flow together like the Missouri and the Mississippi, in whose valleys their churches are so numerous. Then there are the Northern and the Southern Presbyterian Churches, kept apart by the simple pride of consistency over so small a matter as whether it is right for a religious body to express an opinion as to a supposed moral question arising in politics. Why not allow both sides to hold as they please, and vote as they prefer, and yet be good brethren? Are we Christians, in this age, to be like the South American republics in which if an election goes against people they start a revolution and establish a new Government; or like children who pout and won't play if they can't have their own way?

Liberty to differ is the one true basis of Church union.

If we can judge from the denominational press the proposal for the union of the Cumberland Presbyterian with the Northern Presbyterian Church is not very heartily received, even altho the Northern Church has really taken down the bars to union. And yet there seems to be some question raised as to whether the bars have really been taken down. Much is made by the opponents of union of Dr. Van Dyke's statement, received with applause by the last Presbyterian Assembly, that, in adopting the Declaratory Statement, the old Presbyterian Church had "not swerved one inch from her base as to the fundamental doctrine of grace." Of course she has not, but she has swerved as to the doctrines of election and reprobation, which are far from fundamental, allowing liberty to hold what was forbidden under her Westminster Confession of Faith; so that Professor Zenos is quite right in saying that the new Declaration approximately "conforms to the belief held by the Cumberland Presbyterians in regard to the doctrine of election." We may add that when a leading Presbyterian journal compares the action of the leading Cumberland Presbyterian paper, which had criticised some of its utterances, to a dog baying against the moon, the language is not conducive to friendly approach. As to union between the Northern and Southern Presbyterians no progress is being made, and, indeed, a Southern paper has discovered a new ground of difference, which it presents not too seriously, that the Northern Assembly has adopted a resolution against the use of tobacco, which the Southern Presbyterians could never stand.

Blunders About Immigration

AGAIN, as in prosperous times, there is a larger flow of immigration to this country, and again, as many times before, there arises a frightened cry that our institutions are in danger. We heard it fifty years ago, when it created a party whose pretext it was to put none but Americans on guard—in the offices—but whose real service it was to destroy the Whig party. Then every village had its secret lodge, and election day offered a

great surprise, when whole States elected Governors and Legislatures of a new party that had no name and no continuance.

One of the blunders of our present "know-nothings" is that the newcomers rob the older citizens by taking their employment from them. This is not true. The Irish immigration of fifty years ago did not rob the native Americans of work, but rather supplied the increased demand for work. So the Hungarian and Italian and Russian immigrants now find plenty of land and plenty of work in mines and roadways, and wages go up while immigration increases. Each new immigrant adds by his labor to the wealth and prosperity of the country. When that condition ceases immigration will cease.

It is more frequently complained, by those who would restrict immigration, that an uncontrollable mass of immigrants ignorant of our language, often unable to read, will become citizens and swamp our institutions. They would exclude all who are illiterate, and they approve the action of the judge who the other day refused the application of an intending citizen because he could not talk "the language of the country."

In reply to this counsel of fear and despair there is much to be said which we can here only indicate.

In the first place, it shows great unfaith if intelligence thinks it cannot, on the whole, direct and control ignorance. The ignorant members of any community are dependent on the others for their opinions and beliefs, and if intelligent people will take any proper pains to influence them the effort is sure to be successful. The idea is ridiculous that the comparatively few illiterate voters can so combine as to endanger our institutions. The danger comes from another source, from those who are both intelligent and corrupt.

Once more, what we are concerned about is not the immigrants themselves, but their children. They are themselves passing away by death; their children remain, incorporated in our body politic. These children we can and do assimilate. Our schools do it; our churches do it; our language does it; our newspapers do it; our political institutions do it. The

children of the immigrants of fifty years ago are good, enthusiastic American citizens; they are no detriment or peril to the nation. They fight in our wars, and they are indistinguishable from our best citizens. What has happened to the children of Irish and Germans will happen—is happening—to the children of Italians and Hungarians and Russian Jews. None could be more enthusiastic Americans.

Again, it is the pride, we may say the arrogance, of language and race which gives its vicious violence to the attacks on current immigration. Why should a man be refused citizenship who cannot talk the English language? He can talk one or two other languages of civilized peoples. Are we going to forbid citizenship to French Creoles in Louisiana, or to Spanish speaking people in New Mexico, whose ancestors settled there a hundred years before Plymouth Rock? And what is there to fear? Have they not scores of papers in their own language—French, Spanish, German, Hungarian, Greek—published in this country, that will give them as much information as they would need to get from English journals? And will not their children all talk the English language from preference?

Especially is this late Know-nothing attack made on the Italian and Hungarian immigrants, as if they were of inferior stock which would degrade the American race. There is, at present, no more progressive country in Europe than is Hungary. Its people are of fine physical and intellectual caliber. They introduce strength, health and energy. No people have more native genius than the Italians, or a truer sense of the beautiful side of life. We may expect a real advantage to come from that element in our population, despite the presence of a few cutthroats and anarchists. So of the Russian Jews. They are not illiterate; they learn English quickly; they are moral and industrious, and are enthusiastic lovers of their adopted country. Their children are quick scholars in our schools and ambitious of the best instruction of our colleges.

And we may raise the question, how much selfishness there may be in the noisy patriotism which would shut out

the less favored, perhaps the oppressed people of other countries, from the chance to better their condition here. Is there no such sentiment to be cultivated as international altruism? Have we not a duty to others than ourselves? Is it not just as well to consider the point of view of the Russian Jew or Finn or of the tax-ridden Italian as of ourselves? Can we not generously give them better opportunities and freer life, while doing ourselves no harm?

The Church as a Promoter

THE complaint is often made that the work of the Church is being taken from it by the state and other organizations. The statement has some justification; the complaint has not. One of the functions of the Church is to discover new duties, to develop new and startling extensions of old ethical principles, to apply them and to teach them to the world as a whole. In business circles the man who fills this office is called the promoter. He is a man well endowed with the commercial imagination, who has a deeper insight into conditions and possibilities, who discovers new openings in business and who starts new enterprises, demonstrates their practicability and places them on a sound financial basis.

What the promoter is in the business world the Church is in the ethical world. It has been and should always be the pioneer, the inventor. By the Church aggressive we mean, of course, that minority, that very small minority, which, led by religious zeal, undertakes tasks which seem to the world foolishness—for the first few hundred years. That any persons should devote their lives to the care of the sick and the permanently disabled; that buildings should be erected where the blind, the deaf and the insane were housed and treated; that defenseless women and children should be given a protecting refuge; that the criminal should find sanctuary; all these appeared very strange and vain proceedings when they were novelties. Now every civilized state provides for them on an elaborate and expensive scale as part of its ordinary duties. Asylums and hospitals, reformatories and humane prisons, all such were started by a few men of aspiration

and inspiration in the face of ridicule and contempt, but now maintained as a matter of course by ordinary men with no higher ideals than the average. Numerous fraternal and benevolent societies, composed and controlled sometimes by men who are not at all religious, are doing very efficiently the kind of work which once was confined to those of exceptionally altruistic nature. The Church is not designed to do all the good work of the world, but merely to show how it should be done, and the more it can get out of those not in sympathy with its newer and higher ideals the better. The greatest captains of war and industry have been those who could get others to do most of what they wanted done.

It is not merely in religious matters that the Church has been the leader. The world laughed at the Church for centuries because it hoarded books and wasted the time of those devoted to its service in copying and studying the writings of the Greeks and Romans. Instead of cultivating the ancient and honorable profession of fighting, these deluded creatures illuminated manuscripts, painted churches and composed music. But finally, when the time came, art, music and architecture burst from the monastic cell as a butterfly from its chrysalis, spreading its beautiful wings in the open. Schools and colleges are now supported by all the people. Everybody, whether fond of reading or not, recognizes the usefulness of printing houses and libraries. Once it was only the fanatical missionary who took any interest in barbarous races, who took down their language, observed their customs and preserved their primitive mythology. Now we have bureaus of ethnology and societies devoted to the study of folk-lore. It was the Church which first recorded and regulated marriage; now it is done by the state. Even our form of representative government, with its unique harmonizing of unity and adaptability, is a gift from canon law to civil law.

The Church has often fiercely objected to this taking over by other organizations of its peculiar functions, just when they become most profitable and fashionable, but this protest was wrong, and useless as well. Ideas cannot be patented and no form of trust can monopolize good

deeds. The Church must not object to rivals, nor expend much energy in getting credit for what it has done, but must go on conquering new fields, and so prove its reason for existence.

For the Church as a leader there is more demand than ever; for the Church as a follower there is no vacancy. As a duplicator, as a drag, the Church looks sadly out of place; but a Church with imagination, with ideals, will make its own place. The moral world is not finite; there are always new lands, new continents, to discover. The world will not listen to a Church which has only platitudes to teach; truths which everybody accepts, however little they may practice them. The living Church must have its school of prophets as well as its caste of priests.

At this point one would naturally pass on to the question of what are the kinds of beneficent activity and ethical ideals in which to-day the Church is as much in advance of the rest of the world as it was in the Middle Ages, but we prefer to leave the enumeration of these to the reader.

Liberal Socialism

THE word *Socialism* has an unpleasant sound to thousands of men and women who have no fear that collectivism would inflict material disaster. They admit that as much wealth would—or at any rate could—be produced as we produce now, and that it would be distributed with less inequality; but they believe that personal liberty could no longer exist under a Socialist order. A proletarian majority would be the State, and its walking delegates would boss everybody. Every man's task would be assigned to him; his daily round of duties would be fixed for him; no one could go or come at will. The whole population, self-enslaved, would toil under rigid orders like convict gangs, but without hope of pardon or escape.

Socialists have only themselves to blame that this forbidding notion of the Socialistic state is universally held among those who have no particular knowledge of the subject. The truth is that most Socialists themselves believe rather strongly in a program of coercion,

only they want to do the coercing. Most of them are descended from generations of peasants or artisans who have been bullied and kicked by their social betters until all the ideas that normally go with a manly independence of character have been extinguished. They are unable to picture a world in which there is neither dictation nor compulsion, and merely think it better that the many should coerce the few than that the few should coerce the many. What obedience is they know; they want to revel for a while in the joys of authority.

The whole labor movement as at present organized is suffering from this unhappy heritage from the ages of subjection. It is a truism of the department store and the factory that the most merciless foreman is the man who, before his promotion, was the most servile eyeservant. The psychology of his conduct holds true of masses of men as of individuals. The rank and file of the trade unionists have not enjoyed their measure of power long enough to refrain from using it "just for fun" or for "pure cussedness." There is nothing remarkable, therefore, in the fact that Labor and Socialistic literature generally depicts a kind of industrial reform in which individual liberty has no place; and we cannot suppose that a Socialistic world in which the working classes as now made up should have things altogether their own way would be an attractive one to men of original minds and individual character.

It is unfortunate that the Socialistic idea should thus be associated with the disposition to destroy liberty; there is no necessary connection between popular despotism and a collective ownership of the more important means of production. We can easily conceive of a community of intelligent and upright men, holding in common ownership their mines and forests, their mills and railroads, but leaving one another alone to live each in his own way. It is true that collective ownership to this extent would not in itself fully solve the problem of distribution, but it would go a long way in that direction. Those who would not work could not eat, under a Socialistic dispensation, more than now, and it would be necessary in dealing with them

to choose between compelling them to work or leaving them to starve. It is not necessary to the Socialistic plan that the first alternative should be adopted. Nor is the public management of industry an essential element of Socialism. Railroads and mills could be operated by private corporations on terms fixed by the State for the public advantage. The opportunity would be competed for as land is competed for by English farmers. A Socialism under which that measure of free competition which has hitherto worked beneficently would once more prevail is both conceivable and practicable.

Nothing reveals more clearly, more pathetically, the mental poverty of the accepted leaders of Socialistic thought than the childish devices which they have invented as the mechanism of a new social order. Committees to decide upon kind and amount of production and to assign work, labor time checks in place of money, public storehouses of food and clothing, these are the absurdities of minds that try to reconstruct a social system which they have not so much as observed with care. Not one of them bears a vital relation to any real law of social evolution, and not one of them will be a part of any Socialistic constitution that may yet be worked out in practice.

The essence of Socialism is a public policy making for an approximate economic equality, just as universal suffrage is a public policy making for an approximate political equality, and just as the jury system is an institution making for approximate equality before the law. It has become evident in recent years that corporate ownership of natural resources, means of transportation and the great industrial plants tends irresistibly toward an extreme degree of economic inequality. Whatever plan, accepted by the people and put in operation by their authority, brings about a turn in affairs and tends toward the establishment of equality, will be Socialism in essence, by whatever euphemistic name it may be called. Public ownership and control of the greater opportunities, with private initiative in actual management, would probably have such consequences. With such a scheme could be combined any

desired degree of individual liberty. It is our belief that along such lines the world will yet find the true solution of industrial and moral problems that now so sorely vex us.

Tips

THE Pullman porters of the railroads centering in Chicago are organizing a union for the purpose of raising their wages and abolishing the tipping system. This is a form of the labor union movement that will meet with almost universal approval from the public, for in so far as it is successful it will tend to raise the sleeping car porter from a menial servant to a self-respecting employee. The tip is essentially degrading. It is twice curst; it curseth him that gives and him that takes. It gives to the one a feeling of patronage, and to the other a feeling of sycophancy. Customary as the habit has become, especially in restaurants, we are glad to see that most men cannot give or receive a tip without something in their manner indicating that they are ashamed of the act. The sneaking, careless or disdainful way with which the donor bestows his money and the furtive or oblivious manner in which it is gathered up are in marked contrast with the open and even exchange of money for merchandise across the counter. It is not true, as some argue, that it is just the same thing as tho the service had been charged for in the bill. The mere fact that the amount is dependent on the caprice of the patron puts the employee in the position of inferiority, and takes the transaction out of the class of business-like exchanges. The fixed price for all and uniform wages for the same work are what have raised commercial and professional men to an honorable status in the world to-day. Formerly all commerce was looked upon as degrading, and so it was so long as every sale was carried on by a process of personal bargaining. The doctor, the priest, the author and the artist were once little more than house servants, dependent on the bounty of their patron. Nowadays, except in the case of the larger fees for professional services, the remuneration is fixed and impersonal, and the professional man takes his money as an honest

man should, presenting his bill and giving a receipt, instead of hunting on the mantel for a gold piece which his visitor happened to leave there.

The personal services which are now shunned as menial can be elevated in a similar way to the ranks of honorable employment. We believe the time is coming when the servant girl will be her own mistress, and the barber and the boot-black will be as much insulted by an extra nickel as you would be, dear reader.

It is fitting that the movement against tipping should begin with the Pullman, for it was there that the practice first became general in this country. The public has several grudges against the Pullman Company, which, secure in the monopoly based on patents granted in the name of the people, and using the highways of the nation, has treated neither the public nor its employees in a way to gain their esteem and affection. But nothing else has caused so much popular hatred and justified dislike as the fostering of the feeing system. It was not the extra charge, for the people are used to overcharges, but the principle of the thing that, at least in the beginning, irritated the spirit of the American.

Those were the days when there were martyrs to the cause; when men went through Europe without paying a single "pourboire" or "trink-geld," enduring all the insults and annoyances which experienced guides, porters, cabmen and train guards, feeling themselves defrauded of their snap, could inflict upon them, spoiling the comfort of the trip rather than submit to foreign "extortion." We wonder if there are any such Americans now. At any rate, all their suffering was in vain, for instead of Europe becoming Americanized, the reverse process has taken place. Now the complaint on the Continent is that Americans have spoiled the servants by heavy tipping, and the Englishman protests that a shilling has to go now where a sixpence used to suffice, and the convenient "tuppence" is everywhere disdainfully rejected.

So far no efforts to check the spread of this custom have had the least effect. "Anti-tipping leagues" have come and gone, and *menu* card and wall notices have futilely protested against it. Some

years ago Mr. W. D. Howells assembled the hack drivers of New York one early morning and pled with them to swear off tips and extortion, but the scheme seemed to them too Altrurian, and it was not adopted. But in spite of our forebodings of failure we wish our colored brethren of the whisk brooms success in their efforts.

Summer Resorters

It has not been many years since our leisure class began to find it necessary to take vacations, and now even those who work are beginning to demand the same privilege. The love of the country is spreading among all classes, except, of course, those who live there. At this season of the year people who dwell in cities feel the necessity of escaping from the carbonic acid gas in the air, and so they go to mineral springs where they can get it in the water. We inherited from our strenuous ancestors a belief that loafing is a sin, so for most of us yet an excuse for idleness is necessary. Of these excuses the most readily accepted and incontrovertible is the plea of benefit to the health. "Take care of yourself" has become a common parting, characteristic of the age, and there are some who attach so much importance to the duty so often impressed upon them by their friends that they devote their lives to it to the exclusion of other activities. The pleasantest of prescriptions is that a trip to a spa or a change of air is necessary, and a wise doctor will always consider his patient's taste in remedies.

On the question of the medicinal value of mineral waters there have been different opinions held. Some think it is essentially a form of faith cure; others that staying at home and drinking the same number of gallons of tap water or distilled water would produce the same beneficial effect, since those who most often have to resort to springs do not, as a rule, drink water as a beverage, but only on the doctor's prescription. Mineral waters are easily analyzed, and the salts contained can be bought at a few cents a pound, so there is no apparent reason why one should not stay at home and drink a solution identical in composition with that flowing from some

celebrated spring, or containing a mixture of salts, not such as happens to be produced in nature, but one specially compounded to suit his ailment and constitution. Yet popular belief, and, to some extent, medical authority, hold the artificial and even the bottled waters are inferior to those drunk at the spring. No one has been able to give one any explanation for this alleged fact, but the recent investigations in radio-active matter suggest to us a theory which has some plausibility. The negatively charged corpuscles given off by radio-active salts have a certain germicidal action, and some superficial cancers and diseases such as lupus have been successfully treated by them. Professor Soddy recommends the trial of inhaling air drawn through water containing radium salts in solution as a cure for consumption. Radio-active matter has been found in the air of certain places and in freshly fallen rain and dew, and is left as an infinitesimal deposit on the evaporation of these. Now helium has been found to be one of the products of the decomposition of radio-active matter, and helium is known to occur in the gases given off by some mineral springs, which would indicate that these springs contained radio-active salts in solution. Since this power of radiation is, in most cases, only temporary, ceasing after a few hours or days, it might account for the supposed superior curative properties of mineral waters drunk at the springs over the artificial or bottled waters. We offer this theory to the advertising agents of watering places for whatever it is worth, and it may be worth a great deal to them. Very likely, instead of giving the percentages of soda and lithia, their pretty little handbooks published in the future will boast of the number of negatively charged corpuscles in the water and air of their respective resorts.

There is a beautiful tendency in human nature to turn even bad health into an amusement, and the same spirit which has transformed the drug store into a soda-water palace has made of the watering place a pleasure resort. The more nauseous the water the more elegant the hotels, and the air which bears the odor of hydrogen sulphide is laden

with the music of many bands. An isolated nook in the mountain or a barren beach on the sea becomes in a few years the center of the fashionable world. The desire for solitary communion with nature is so great that people flock in crowds to any place where it may be enjoyed. To discover some spot where nature is yet unadorned and then to adorn it is the occupation of the resorter. At his magic touch the wildest scenery becomes tame, and whatever is unusual soon becomes commonplace. He professes to delight in "roughing it," but he at once begins to use the plane. The boards when smooth become painted, and in time imitation marble becomes petrified into real. The cottage evolves the palace. People expect to have to spend money when they go to a resort, and they find much kindly assistance. From such comparatively innocent amusements, such as buying impossible shells at the seashore and unnatural minerals in the mountains, they acquire the habit of having their tintypes taken with things in the background and writing postal cards from the tops and the bottoms of places. They should beware; these pastimes may seem harmless in themselves, but they are on the road which leads to the race-track and to bridge. What was originally a holy-day becomes in the course of time a holiday, and what should be recreation degenerates into recreation.

Lord Salisbury

The death of Lord Salisbury makes no vacancy in British political circles, as he had already given place, as Premier, to his nephew, Mr. Balfour, and had retired entirely from public life. We cannot say that his name will be connected with any great measure for the benefit of the British Empire or of the rest of the world, altho he was three times Premier, and held the office more than a year longer than did Gladstone. We owe largely to his friendship for Turkey the conclusion of the Constantinople Conference after the Russo-Turkish war, the result of which we are now feeling in Macedonia, and, indeed, in all the Balkan states. He was a stiff Tory, devoted to prescriptive rights and to the authority of the Established Church. Accordingly he opposed

Reform bills and Gladstone's Irish proposals and the disestablishment of the Church in Ireland, altho it must be admitted that he was willing to allow an Irish land bill to be enacted, such as he could not endure under Gladstone. He was a thorough aristocrat, a good scholar, an amateur chemist, a master, in the words of Disraeli, of gibes and flouts and jeers, and he ruled his Cabinet and bent to no one but the Queen, who admired him as much as she detested Gladstone. He had no love for American institutions, but he had the good sense to desire to be on the most friendly terms with the United States, and the character of the Ministers and Ambassadors whom we have sent to London made this easier. He did not even take offense at President Cleveland's demand for arbitration of the Venezuelan boundary dispute, probably because he saw that we were quite within our rights under the Monroe Doctrine, with which he did not wish to quarrel. He was friendly to us in our war with Spain, at least to the extent of not allowing any concerted European action against us. We respect the memory of Lord Salisbury, but our admiration lingers about the name of the great commoner, Gladstone.

Scandal in the Indian Service

Mr. Brosius, agent of the Indian Rights Association, is an intelligent and careful man, and we, therefore, put a good deal of confidence in his report that members of the Dawes Commission in charge of the distribution of land in the Indian Territory have been careless, if not criminal, in allowing their friends to profit out of the sale of lands to settlers, to the injury of the Indians. It is not likely that there has been rascality or dishonesty in the low, exact sense of the term. No Government on earth can keep shrewd white men from making money out of ignorant Indians; the opportunities for fraud are too many, and those for surveillance too few or too complicated. Very likely the Dawes Commission have been lax; they certainly have had a great deal to do and a very intricate job. The opportunities for money making down there are boundless. Some one is going to make it, and with a fair degree of honesty of the com-

mercial sort. It takes a man with a nice sense of honor added to see that he must let opportunities for money making slip by if he is to be above suspicion as a public official, and if he is not to use his official information and position to further private ends. We doubt if so nice a sense of official honor is possessed by all the officials named by Mr. Brosius. We hope the Department of Justice will bring out the facts. But the Post Office Department is keeping it busy now.

Mr. Bryan on the Race Problem

Mr. Bryan discusses the "race problem" in the last number of his *Commoner*, taking President Roosevelt's letter on Lynching as his text. It is as full of errors as an egg is of meat. He assumes that rape is the chief cause of lynching; which it is not. He says that race prejudice is as strong in Illinois, Indiana, Delaware and Kansas as in Mississippi, Georgia, Alabama and Texas; which is not the fact, as legislation proves. He says that the negro has as much race prejudice as the white man, and that this was apparent in carpetbag days, which is false history. He says that the suffrage restrictions in the South are not so severe as the Republican colonial control in the Philippines, where "the inhabitants are permanently disqualified" from voting. But they do vote there. He says that "the Republican leaders are stirring up race antagonism in this country in order to keep the colored vote solid for the Republican party." They are doing absolutely nothing of the sort. He rebukes President Roosevelt for inviting Booker T. Washington "to dinner," and "thus arousing the colored people to expect social equality," which was the last thing in the President's mind when he asked Mr. Washington to remain to lunch. He talks much of "social equality," which is not a question at all at issue; only political equality.

We would not put a feather in the way of Dr. Dowie's proposed crusade to convert the Mormons; indeed, we would willingly have him give up his proposed attempt to convert the city of New York if he would only tackle the Mormons. They are of his sort, with wealth concen-

trated in the hands of the Church, which requires the tithes, as does he. He is reported as about to send three hundred apostles to found a city in Utah, which will, he expects, capture the State. We wish him success there. He has just been naturalized as an American citizen, and Judge Gary, the oldest and one of the most respected of the members of the Chicago Supreme Bench, said, taking Dr. Dowie's oath as a citizen, that never since the Constitution was adopted had the country received from abroad a more worthy citizen or one of greater influence.

For over three years the committee in behalf of the plan to excavate at Ur of the Chaldees, the birthplace of Abraham, has endeavored to obtain a concession from the Porte for that purpose, but in vain. The Germans can get what they want, but not the Americans. The committee has expended the sum raised in advance, and has at last given up the attempt and disbanded. The proposals have been quite in agreement with Turkish law, but permission was stubbornly refused. That we cannot get what the Germans get is humiliating, and there may be reasons not told to the public. Whatever they are they are not creditable. Our Government is dealing with a most unreasonable Government in this matter, as also in the authorization of American schools in Turkey, while other nations have no difficulty.

The enterprise of the Director and Trustees of our Metropolitan Museum of Art deserves all praise. They are securing the choicest archeological treasures that come to the market. Among these are the great frescoes of Bosco Real, bought by Mr. Rhineland for the Museum, against the competition of the European museums. We must also mention the full-sized bronze chariot lately found in an excellent state of preservation, richly ornamented and of a period as early as the seventh century, B. C., which General di Cesnola has also obtained for the Museum, to the chagrin of the authorities of the Louvre and the British Museum.

We published several weeks ago an editorial on "The Passing of Farmington." The present proprietor of Miss Porter's school, Prof. Robert P. Keep, writes assuring us that under the charge of Mrs. Keep, herself a graduate, there will be no change in the character of the school, and he calls our attention to the Advisory Board just appointed, consisting of Professor Seymour, of Yale; Professor Wright, of Harvard; Professor Sloane, of Columbia, Rev. Francis Goodwin, of Hartford; Miss Agnes Irwin, of Radcliffe; Miss Annie B. Jennings, of New York, and Mrs. J. Montgomery Sears, of Boston.

We sometimes smile at the Buddhist or Moslem or Babist missions sent from India or Persia to the United States; but much more serious is a mission to be sent from Japan to this country, for Hawaii is now American. The Japanese Christians are now establishing at Tokyo a training school for Christian workers among the Japanese in Hawaii, and propose to keep sixty such missionaries employed there. The Japanese immigration companies are large subscribers to the expense.

It struck everybody as a new thought that leprosy was caused by eating badly preserved fish, but now it appears that in 1524 Erasmus, in his "Colloquies" condemns the eating of salt fish as productive of leprosy, and before that time the Catholic Church had considered the wisdom of taking off its interdict against meat on fast days in view of the mischief caused by a salt-fish diet.

It is an old lesson that is taught by the embezzlement of \$75,000 by the trusted treasurer of the New England Methodist Preachers' Aid Society, thus wiping out its whole fund. He had no salary, and was under no bonds and none of that strict supervision which is such an aid to honesty.

We cannot help feeling a bit ashamed to beat Sir Thomas Lipton again, as we did last Saturday, but how can we help it? We must do the best we can, even if it does not seem quite hospitable to a guest.

INSURANCE

Spontaneous Combustion as a Fire Hazard

MANY more fires than is usually supposed arise from spontaneous combustion. It is, however, by no means easy to determine whether a fire originates in this manner or not, because unless the fire be detected in its very beginning the flames will have presently destroyed the evidence of its cause. The dangers of spontaneous combustion are not at all appreciated by most people, and a fire originating from this cause was long regarded as a phenomenon. It is only recently that spontaneous combustion has been even partially understood. There is now, however, a more general conception of the fact that many substances ignite without the application of fire or flame, through the agency of chemical changes of the materials themselves.

Spontaneous combustion arises because of the absorption of oxygen from the atmosphere by various substances having an affinity for it. The evaporation of certain oils, especially vegetable oils, such as linseed, rapeseed, almond and palm oil, as well as the drying of moist charcoal, result in the rapid absorption of oxygen to the extent of ignition. None of these things are dangerous in bulk, as in barrels or cans, but the danger arises when any of the oils are distributed over fibrous substances, such as rags, cotton waste, etc. They form an especially hazardous risk when covered up so as to confine the generated heat. Petroleum products are likewise dangerous on account of their vaporizing qualities and ignitibility.

Sawdust mixed with linseed oil will ignite in a few hours. Cotton waste saturated with linseed oil will burn through the agency of spontaneous combustion in from two to ten hours, according to circumstances. With some of the other oils named the ignition is even more rapid and takes place in from five to six hours as a maximum.

Silk waste is more dangerous than is cotton. Wet cotton, damp oatmeal or bran, and, in fact, most vegetable substances, when packed together in a confined place without being sufficiently dry, undergo fermentation or heating, and are

liable to take fire. Shipments of cotton are thus extra hazardous marine risks, and because of a tendency toward spontaneous combustion may account for some unexplained losses of ships. Spent tankers are liable to ignite spontaneously when stacked in heaps. Iron filings, to which moisture has access, generate heat; iron rust is combustion or oxidation of iron. An instance was recently cited by Francis C. Moore, wherein a large machine shop was flooded by a sudden freshet, which thoroughly wetted certain heaps of iron scraps or shavings upon the floor of the shop. They began to heat from the rusting immediately after the water had subsided.

The spontaneous ignition of coal mines is supposed to be due to the chemical action of water and iron pyrites. Unslacked lime is subject to spontaneous ignition when dampened in any way. Charcoal will burn when pulverized or divided. Indeed, a ton or two in a state of minute division is almost certain to ignite spontaneously.

Lampblack is dangerous, as there is very little doubt of its liability to ignite spontaneously if mixed with oils which contain a large proportion of hydrogen.

Tracing paper, made transparent with oil in process of manufacture, if the sheets are not thoroughly dry and cool before piling, will take fire within an hour on account of the linseed oil used.

Roasted coffee sometimes takes fire spontaneously. Hay, when stored away too green or wet, is very liable to set barns on fire by the heat generated in fermentation. Tarred felt and moist hemp have been known to take fire spontaneously. Many of the fires originating in broom corn warehouses are supposed to arise from spontaneous combustion resulting from the saturation of the fiber with oil from the seed, expressed by the process of baling and handling, and the numerous fires in cotton gin houses may be largely due to the ignition of cotton saturated with oil from the cotton seed expressed during the process.

From the few examples cited it will be quite evident that spontaneous combustion as a moving cause from which fires result is more prevalent than laymen have been accustomed to suppose.

FINANCIAL

The Share Market and General Trade

THE question is now asked, whether the reaction and prolonged liquidation in securities is to be followed by a similar movement in general business and the manufacturing industries. Those who, with some indications of anxiety, are asking it admit that there is nothing in the present condition of general trade to warrant a prediction that the remarkable decline in the share market will be succeeded by decline and depression in mercantile circles. Mr. A. B. Hepburn, whose remark that "later the commercial and industrial interests of the country will doubtless undergo a similar experience" has been the subject of much discussion, added to that prediction the qualifying assertion that "general business conditions, however, are in excellent shape, and the crops are so munificent that it will be impossible to produce anything like a financial or commercial crisis."

We do not underestimate the significance and effect of what has taken place in the securities market; but the general situation continues to be sound and encouraging. This is shown by all reports which deserve to be called authoritative. The recent first semi-annual report of the new Department of Commerce pointed out that commerce and industry showed no evidence of shrinkage, notwithstanding a vast curtailment of speculative values. If we look at the foundations of prosperity, we see good crops, undiminished activity in railway traffic, no signs of decline in general trade, the iron and steel industry still maintained with unfailing consumption and scarcely any reduction of an unprecedented output, progress toward more stable conditions in the labor market, international trade sustained at a high level, and the National Treasury never more amply supplied or on a firmer basis.

The extraordinary fall of share values has been accompanied by an unexpectedly small number of financial bankruptcies. It is true, however, that such a fall cannot take place without affecting a great many persons. Both the direct and the sentimental effect of it is to cause

retrenchment and to suggest conservatism. There has been much financial embarrassment of which the public knows little. Those who are hurt and those who are only alarmed will take in sail. Thus such a prolonged and extraordinary decline as the share market has experienced must be felt to some extent in general trade. That decline, while due in part to an inflated and vulnerable condition of the general mass of securities, is not accounted for, in our opinion, by that condition alone or by any natural reaction. We cannot avoid the conclusion that an enormous and irresistible depressing force was applied at the beginning and for some time afterward. The general situation does not warrant an extension of stock market depression to the country's commerce and industries. If, however, there should be dullness and depression in trade, we hope an earnest effort will be made to ascertain to what extent the decline in securities has been artificial or caused by the hostile force of great aggregations of capital. If the downward impulse was given and prolonged by such a force to accomplish selfish ends, responsibility for it should be placed where it belongs.

A SYNDICATE of wealthy Australian and New Zealand wool growers has undertaken to establish a great woolen mill in the suburbs of Tacoma.

....Six of the remaining private railways in Prussia are to be taken over by the Government. There will then be left only two private railways of any importance—the Dortmund-Gronau and the Lubeck-Buchen.

....Henry Howell Hallowell, the assistant secretary and treasurer of the Penn Mutual Life Insurance Company, of Philadelphia, whose death was recently announced, had been in the company's employ since 1873 and was a capable and honored officer.

....The firm of Thomsen & Co., of this city, has sued for damages several steamship lines engaged in trade between this country and South Africa, alleging that they have violated the Sherman Anti-Trust law by maintaining a combination in restraint of trade.

The Independent

VOL. LV NEW YORK THURSDAY, SEPTEMBER 3, 1903 No 2857

Survey of the World

**Taft will
Succeed Root**

Elihu Root has handed in his resignation as Secretary of War before sailing for England to attend the sessions of the Alaska Boundary Tribunal, and it has been accepted by the President in a letter containing, among other commendatory words, the following:

"My sense of personal loss is very great, and yet my sense of the loss to the nation as a whole is even greater. You have been over four years Secretary of War. I wonder if you yourself realize how much you have accomplished during that period. If you will turn to your first reports and will read therein the recommendations you made in order that the army might be put on an effective basis, you cannot but be pleased at the way in which these recommendations have now been adopted by Congress as well as by the Administration, and have become enacted into law or crystallized into custom. We have never had a public servant of the Government who has worked harder than you have worked during these four years and a half, and this not merely in point of time, but above all in point of intensity, and your success has been equal to your labor. The only reward you have had, or can have, is the knowledge of successful achievement, of the performance in fullest fashion of a great public duty, the doing of which was of vital importance to the nation's welfare.

"Your duties have included more than merely the administration of the department and the reorganization of the army on an effective basis. You have also been the head of the department which dealt with the vast and delicate problems involved in our possession of the Philippine Islands, and your success in dealing with this part of your work has been as signal as your success in dealing with the purely military problems. To very few statesmen indeed in any country is it given at one and the same time to achieve signal and striking triumphs in the administration and reform of the military

branch of the Government and in the administration of what was in effect a department of insular dependencies, where the problems were new to our people and were in themselves of great difficulty. Moreover, aside from your work in these two divisions of the Government service, I appreciate most keenly the invaluable advice and assistance you have rendered me in innumerable matters of weight not coming directly in your departmental province, but in which I sought your aid with the certainty of not being disappointed. Your position on the Alaskan Boundary Commission at the present moment is an illustration of these services."

Judge William H. Taft, who has been since June, 1901, Governor-General of the Philippines, will be appointed to succeed Mr. Root in the Cabinet. His place will be filled by the promotion of General Luke E. Wright, who is now Vice-Governor of the Philippines and was Acting Governor during the absence of Judge Taft in this country and in Europe. General Wright is a native of Tennessee, a gold Democrat in politics, and is married to a daughter of Admiral Semmes, of the Confederate navy. He has been a member of the Philippine Commission since the Spanish War.

**Democratic
Nominations** In the Ohio State Democratic Convention at Columbus Mayor Tom L. Johnson, of Cleveland, was nominated for Governor by acclamation after an exceedingly stormy session, in which the opposition forces were so overpowered that the name of their candidate, John L. Zimmerman, was not presented. The contest for indorsement of a candidate to succeed Senator Hanna was closer, but on the second ballot John H. Clarke,

of Cuyahoga County, the Johnson candidate, was chosen over John J. Lenz, of Columbus. The platform is an elaborate document of 4,000 words, advocating just and equal taxation, home rule, public ownership of utilities and the election of United States Senators by direct vote of the people. The Kansas City platform was indorsed, and William J. Bryan was specially invited to take part in the campaign.—The Democratic State Convention of Nebraska, at Columbus, was dominated by the same influences and adopted similar resolutions. The candidates nominated for Judge of the Supreme Court and two Regents of the State University were the same as were named by the Populist Convention of the previous day at Grand Island, so the same fusion policy will be followed as in former years in this State.—In Mississippi, James K. Vardaman received the nomination for Governor at the primaries. Mr. Vardaman's views favoring the curtailment of the expenditure for negro education are familiar to our readers.

Changes in the Army

A letter written by General Miles just before his retirement to the Secretary of War, containing his recommendations for the improvement of the service, has come to the public through unofficial channels. He considers that the proportion of cavalry in the army is altogether too great, since, with the possible exception of Russia, there is no country that has so large a number of men who are accustomed to live in the saddle and are experienced and expert horsemen as the United States." A force of a hundred thousand mounted riflemen could be easily and quickly mobilized, and would be sufficient for the invasion of Canada or Mexico, or to repel any army a European Power could land on our shores. In the English army the proportion of cavalry to infantry is one-seventh, in our army it is one-half. Part of the cavalry regiments should be disbanded, and in their place there should be organized a flying corps of five regiments mounted on automobiles, motor-cycles and bicycles.—The Government has decided to change the rifle of both cavalry and infantry from

the Krag-Jorgensen to the Springfield. A long series of tests have proved the superiority of the new weapon, which only weighs seven pounds, while the gun now in use weighs nine. The discarded rifles will be given to the State militia.—The war game between the regular and volunteer soldiers and the navy at Portland, Maine, came to an end on August 29th with a grand review of the seventeen ships engaged. The results of the maneuvers will not be known until the points are officially determined, but they are considered valuable in the practice they gave in firing, in the handling of fleets and in communication under conditions closely resembling those of war, while from a spectacular point of view there is no question of their interest to the large crowds watching them. The most important action was the successful landing during the forenoon of August 26th of 1,400 marines on Long Island, which was defended by only 300 soldiers; but in the afternoon the navy lost, for it was held that the entire fleet which came within the 8000 yard range was destroyed by the shore batteries before they could return a shot.

Bar Association Condemns Trusts

At the meeting of the American Bar Association at Hot Springs, Walter S. Logan, of New York, chairman of the Committee on Commercial Law, presented in the unanimous report of that committee some recommendations in favor of very radical legislation against trusts. The report calls attention to the rapidity with which free competition is disappearing among producers, transportation companies, tradesmen and workmen of all grades, and to the unparalleled growth and profits of such gigantic corporations as the Standard Oil Company, the United States Steel Corporation, the Amalgamated Copper Company, the Shipping Trust and railroad combinations, and urges that it is impossible to rely on natural forces to check their dangerous development. The following remedies are suggested: First, they can be taxed to death by a graduated franchise tax in each State according to which the rate on corpora-

tions with large capital would be much greater than on those with small. Second, they can be compelled to render cheaper and better service, since Congress could enact that any corporation engaging in interstate commerce furnish its services at lower rates wherever by any combination, competition is prevented than where competition is left free. Third, the State itself can enter the industrial field as a producer and itself becomes a competitor of the great trusts. There was much opposition to the report by various members on the ground that it was unwise to commit the Bar Association to political action. Among other resolutions this Bar Association recommended the establishment of a special tribunal of seven judges to have jurisdiction over all patent and copyright cases.

**Labor
Affairs**

Samuel J. Parks, the walking delegate of the Housesmiths' and Bridgemen's Union, who was convicted of extortion, was sentenced by Recorder Goff to three years and six months in the penitentiary, but may be released on parole after two years and six months. The counsel for Parks insisted on immediate sentence, and made application for a certificate of reasonable doubt. The prisoner was taken to Sing Sing the next day. The Housesmiths' and Bridgemen's Union passed a unanimous vote of confidence in him, and voted to continue his salary of \$48 a week while in prison.—In Chicago the strike of the waiters two months ago, which caused the closing of many of the restaurants and hotels on several days, resulted in an agreement between the union and the Restaurant Keepers' Association to submit all future difficulties to arbitration, but last week the local joint board of the Waiters' and Cooks' unions decided to ignore the Board of Arbitration on the ground that it was partial and dilatory, and a strike was ordered. With the exception of the colored waiters, who believed they were being discriminated against, only a small proportion of the members of the unions obeyed the call, and, as their places were soon filled, none of the restaurants were completely closed.—The national officers

of the seven building trades unions met in Indianapolis, August 26th, to organize a National Federation of Building Trades Unions, which will unite all the laboring men of the country connected with building, the hod carriers, building laborers, structural iron workers, brick masons, painters, plasterers and carpenters, and comprises a membership estimated at 1,000,000. The organization will be completed at a second meeting to be held October 8th.—Fourteen hundred glass workers in New York have struck against the Metropolitan District Mirror Manufacturers' Association on account of being required to sign a statement giving their former employment and the cause of their leaving it.—At Virginia City, Ala., where a temporary injunction was issued restraining the strikers from interfering with the operation of the mines by holding daily meetings, the striking miners leased a church, and are holding daily services in it under protection of the law against the disturbance of public worship.—The American Anti-Boycott Association is collecting evidence for the prosecution of Samuel Gompers, president of the American Federation of Labor, for his publication of "unfair lists," and alleged writing of letters advising illegal boycotting.—Contractors in Perth Amboy have begun suit for \$5,000 damages against the officers of the union of masons and carpenters on the ground of extortion, boycotting and blackmail.

**Reliance and
Shamrock III**

At the time of going to press the contest for the "America's" cup is not yet decided, altho it can hardly be said to be in doubt, for altho the course was not run on the 20th and 27th, the superiority of the "Reliance" was evident on both occasions. The second race on the 25th over a triangular course of ten miles on each side was won by the American defender by one minute, nineteen seconds, after deducting the handicap and time allowance. The wind was fresh, varying from five to twelve miles an hour, but notwithstanding that, the conditions were just what had been desired by the challenger, the "Reliance" gained on each leg of the course, and

came near lowering the record of sloops in the cup races, since its time, three hours, fourteen minutes and fifty-four seconds, was only thirty-six seconds slower than that made by the "Columbia" in the race with "Shamrock II," October 3d, 1901. The course on August 28th was fifteen miles to the windward and return, with a light southeast wind. As in each of the previous starts, Captain Barr outmaneuvered Captain Wringle, and the "Reliance" crossed the starting line a minute ahead of the "Shamrock III." At the end of the course the American boat was eleven and a half minutes ahead, but the wind failed on the return and the "Reliance" finished six minutes over the time allowed, five and one half hours, and accordingly there was no race. Sir Thomas Lipton preserves his imperturbable good temper, but says he will not try again until he finds an English designer as good as Herreshoff. As he said to a friend: "What more can I do? I can't design a boat myself. I can't sail her, once she is afloat. I've done everything a man can do. And I think I've done enough." In a magazine article Sir Thomas says that racing yachts are useless and dangerous, and that beautiful as they are they are of no value to commerce or shipbuilding, and should be replaced by boats that are not mere racing machines. He also expresses strong disapproval of betting on yacht races, and states that he has never wagered on a race of any kind.—The "Reliance" is owned by the following gentlemen: Elbert H. Gary, Clement A. Griscom, James J. Hill, William B. Leeds, Norman B. Ream, William Rockefeller, C. Vanderbilt, A. B. Widener, Henry Waters and C. Oliver Iselin.

Wireless Telegraphy

One of the first applications of wireless telegraphy was in reporting the yacht races, and it was to be expected that with the improvements made since this form of news service was initiated it would be much more efficient; but during the race on Tuesday there was practically no news received in this way from the sea, partly on account of poor atmospheric conditions and partly by the efforts of the three rival companies, the Marconi, De

Forest and International, to interfere with each other's messages. Instead of getting the news from the boats, which was so eagerly awaited by the crowds in front of the bulletin boards, the receiving station got long quotations from Longfellow's "Wreck of the Hesperus," mixed with meaningless letters and contemptuous epithets. Evidently the contrivances for preventing interference and the stealing of messages are not so satisfactory as the public has been given to understand.—The "Lucania," of the Cunard Line, which brought Signor Marconi to this country last Friday, was in receipt of wireless messages every day of the voyage; for the first two days from the English and Irish stations, with the American liner "Philadelphia" the third day, and for the rest of the trip with the Cape Breton, and finally with the New York stations. The news, which included reports of the races for the "America's" cup and warning of a derelict in the track of the transatlantic steamers, was published on board in "The Marconi Bulletin."—The wireless telegraph congress recently held at Berlin declared unanimously in favor of Government ownership and control of this form of communication in the same way that ordinary telegraphy is managed in Europe. According to the German papers the system developed in that country is better than Marconi's for long-distance work. Marconi, however, announces that his new inventions greatly reduce the height of the towers and the electrical power required, and that in three months he will be sending commercial messages between America and Europe.

Latin America

The canal treaty is receiving careful consideration in Colombia. There is considerable opposition to the Hay-Herron canal treaty on the part of the Nationalists in the Senate because of local politics, but it now seems probable that some kind of an agreement will be reached and that a treaty of some sort will be consummated even if a change is made in the Colombian constitution in order to accomplish it. Dispatches from Bogota indicate that the majority of Congress favors granting perpetual control

of the canal zone under some form acceptable to the United States, if this could be brought about without offending the sensitive patriotism of the Colombians. The following are among other amendments recommended by a majority of the Senate Committee on the Panama Canal Treaty, viz.: Colombia's permission to transfer its concessions, rights and privileges to the United States must be obtained initially by the French company. The cities of Colon and Panama are to be entirely excluded from the zone absolutely required for the canal's construction that is to pass to the United States. All the waters required for the canal are to be placed at the disposal of the United States, but such waters are not to be made their exclusive property. No mixed tribunals are to be permitted. The laws of the United States are not to be operative at Panama. If the canal is not completed within a limited and fixed time the concession is to revert to Colombia.—The Colombian Congress has approved the construction of a railway from Cucuta in the department of Santander to Tamalameque on the Magdalena River. This railroad, if constructed, will do away with the necessity of importing and exporting goods across the territory of Venezuela to and from the port of Maracaibo. The suggestion has been made in this connection to utilize a part of the standing army in construction.—Honda, on the Magdalena River, 65 miles northeast of Bogota, with a population of 4,000, is in arms against a Turkish colony, which has been located near there.

England The evidence given before the royal commission on the South African war has been issued in three bluebooks containing over 1,700 pages. The general effect of the evidence is to show that Great Britain was totally unprepared for war at the time, and that in some way the War Office was decidedly culpable in its negligence and its deficiency. Expanding bullets were on hand, which could not be used, for the very good reason that they were dangerous to any one who fired them. Ammunition wal-

lets were provided, which, according to the commissioners, had this grave defect that the ammunition was easily lost out of them. The hospitals were furnished with instruments which were entirely out of date, and the cavalry swords, according to Sir John French, were the worst possible that could be used. Lord Roberts and others gave at length their reasons why the war had not succeeded at the start. Lord Roberts, for one, declares that the strategy of campaign at the beginning was irretrievable. As for the War Office, he censures that on account of its lack of preparation, for its plan of campaign, for underestimating the strength of the enemy, and for general ignorance of the geography and extent of the country. Sir Redvers Buller declares that he was hampered by the War Office, which both refused to accept his plans and failed to give him any definite instructions. Lord Kitchener maintains that the officers in many cases were not fitted for their work. Lord Wolseley complains that the Commander in Chief has lost all his power, which has gone to the Secretary of State for War; and in reply Lord Lansdowne, who was Secretary of War during the first part of the conflict, intimates that Lord Wolseley was ignorant of many of the powers of a Commander in Chief. The commission shows that from the beginning to the end of the war there were 448,435 troops engaged, and that owing to the number of men taken out of the island, Great Britain herself was dangerously weak in 1900. It also asserts that the real lesson of the war is to show that some system of expansion must be adopted beyond the limit of the regular imperial forces, and it calls for better training of the men.—The first by-election which brought in the fiscal policy of Colonial Secretary Chamberlain was contested in Argyllshire on Wednesday, August 26th, and resulted in a disastrous defeat for Mr. Chamberlain. J. S. Ainsworth, the Liberal candidate who stood for free trade, was elected by a majority of 1,586 over Charles Stewart, the Unionist who represented Mr. Chamberlain's policy of protection. At the previous election the Unionist candidate had won by a majority of 600.

Reported Murder of American Consul

On the morning of August 27th the State Department at Washington received a cablegram from Mr. Leishman, United States Minister at Constantinople, stating that Mr. William C. Magelssen, our Vice and Deputy Consul at Beirut, Syria, had been assassinated while riding in a carriage, and that the murderer was unknown. The news had come to Mr. Leishman in a telegram from G. Bie Ravndal, the United States Consul at Beirut. Immediately a message was cabled from Washington to Mr. Leishman, instructing him to demand the arrest and punishment of the guilty person or persons. And after a consultation between President Roosevelt and Secretary Hay a cablegram was sent to Rear-Admiral Cotton, in command of the European squadron, ordering him to proceed with the "Brooklyn," the "San Francisco" and the "Machias" to Beirut. The two former of the vessels were at the time at Villefranche, but the "Machias" was at Genoa. The promptness of the President in making this move was also due to a message from the American Board of Foreign Missions at Boston, to the following effect:

"Information just received that an attempt has been made to burn the Euphrates College buildings. Conditions increasingly alarming. Great anxiety felt for the safety of American citizens there."

The next day a dispatch from Mr. Leishman announced that Magelssen had not been killed, but had merely been shot at, and that the false report was due to a mistake in the cipher message from Consul Ravndal at Beirut. The local Turkish authorities had been prompt to express their regret and were exerting themselves, so they said, to arrest the would-be assassin. Another dispatch from Mr. Leishman stated that, according to advices from our Consuls at Beirut and Harput, the Americans in those places were in danger of suffering from an uprising at any time, but that the situation at the present hour was not as grave as the earlier dispatches intimated. President Roosevelt, however, thought it wise not to countermand the order to Rear-Ad-

miral Cotton, and on Friday the cruisers "Brooklyn" and "San Francisco" sailed from Villefranche to Genoa, where they were joined by the "Machias." The porte's explanation of the event is that a wedding party was merely indulging in a *feu de joie* and that a bullet grazed Margelssen by accident. Meanwhile Mr. Hay and the Turkish Minister to America, Chekib Bey, have gone to Washington to confer over the state of affairs in Syria and other provinces of the Porte. In an interview Chekib Bey declared that the incident at Beirut was without political significance. He said, speaking of the general situation, that America asked for privileges for doctors and students, altho the Government did not examine and license physicians. Turkey, on the contrary, was very strict in licensing doctors, yet allowed the Americans to come in without a Government certificate. He also said the missionaries made a troublesome question. The Turks, he avowed, were a tolerant people, but he frequently read in the papers of returned missionaries who wished that Turkey might be wiped off the map of Europe. And in Turkey they were constantly arousing insurrection. As for the massacres, they did indeed occur in Turkey, but so did lynchings take place in this country.

The Balkans

The news from Macedonia and the Balkans in general is of the most scattered and uncertain sort, since the Turkish authorities place every obstacle in the way of transmitting information from the disturbed regions to the outer world. The war correspondent after he has once penetrated to the heart of the country is compelled to go about with an escort, who take care that he does not see too much, and all his telegraphic messages are, of course, subject to censorship. It is clear, however, that the conditions in Macedonia, especially about Adrianople, are of the most alarming kind. Whether the wholesale devastation and rapine are due to a deliberate plan of the Turks or to the lawless of the soldiers, the result is the same. Krushevo lies a heap of ruins, with the dead actually littering the streets. The

town is situated on a hill some eight miles to the northwest of Monastir and contained about 10,000 inhabitants, who for the most part called themselves Greeks. They were prosperous and lived well. According to the *Sofia Dnevnik* the mutilated corpses of ninety women and children were found in one building. Other reports say that the Turks massacred all the women and children in twenty-two villages of the districts of Florina and Monastir and afterward burned the villages. Armensko is known to have suffered terrible outrages. The Turks here destroyed 150 houses out of a total of 157, and killed every man, woman and child. The report of this massacre is authenticated by the Russian and Austrian consuls. A report from Sofia also declares that there was a massacre of the Christians in Adrianople on Sunday, August 25th, but no exact information of the affair is at hand. The insurgents have had some slight victories. At Passakui, for instance, twenty miles from Adrianople, three Turkish battalions surrounded a body of insurgents. A second band of rebels came to the assistance and broke through the Turkish cordon, killing 150 of them. General Zontcheff is said to be getting together an army of 5,000 Macedonians to cross the frontier. At Iniada, after the departure of the Russian squadron, the insurgents captured a fort and at Mahala 250 Bashi-Bazouks, who had intrenched themselves in a stone tower, were blown up with dynamite and killed. Again the East bound express was blown up near Kuleli Burgas, about twenty-five miles south of Adrianople, and seven persons were killed and fifteen injured. What effect such an act will have on the Powers interested in the movement is not known, but it is likely at least to strike terror into the Mohammedans. At Smilovo on Friday 1000 of the Bulgarian insurgents were slain by the Turkish troops. They had gathered to the number of 3,000 and had occupied a position on a height. Six Turkish battalions under the command of Servet Pasha stormed the position, and after 1,000 of their number had been slain, the Bulgarians fled in the face of the Turkish artillery. The number of the Turks killed was insignificant.

Russian Affairs

An imperial rescript, dated August 29th, appointed M. de Witte, then Minister of Finance, to the position of President of the Committee of Ministers. At the same time the rescript places in M. de Witte's hands the task of concluding the commercial treaty between Russia and Germany, and leaves with him the supreme direction of the Ministry of Finance, in order that his knowledge of the subject may be used for the advance of Russian commerce and industry. M. Pleske, director of the Imperial State Bank, is appointed to fill de Witte's old place. The new Minister has gained a high reputation as Director of the Imperial State Bank, but hitherto he has shown no initiative force such as is required in one who is at the head of Russian Finance. It is presumed that he will remain under the immediate influence of M. de Witte. Whether the changes in the Ministry signify a victory for de Witte, or for the reactionary forces headed by M. Plehve and the heads of the army, does not yet seem very clear. It has long been known that there has existed a bitter rivalry in the Cabinet between the Minister of Finance, who represented advance notions, and the reactionary forces. In particular, he has won the enmity of the army by showing more than once the inability of Russia to undertake war on account of her financial condition.—Since the expulsion of the London *Times* correspondent from St. Petersburg, it is not known just how that paper gets its news from Russia. If we may credit the paragraphs recently published by it, M. Plehve has been playing a rather sinister rôle in connection with the great strikes in Odessa and Southern Russia. He apparently favored the workmen at first, and then suddenly turned upon them and treated them with the greatest harshness. At the beginning of the strike the Mayor of Odessa, who feared disturbances, asked Governor-General Arsenieff to take military precautions against rioting. The Governor replied that he was unable to act without instructions from St. Petersburg, and on application to the capital received orders from M. Plehve that he should not

interfere with the strikers so long as they remained peaceful. Later on when the strikers had gained confidence on account of this lenient treatment, orders came from St. Petersburg to prohibit all public meetings. In the afternoon of the same day a meeting of 25,000 strikers was held outside the town, whereupon the soldiers charged through the crowd with their deadly whips, injuring 800 persons. The secret of M. Plehve's action is said to be found in his direct to ferret out the political agitation supposed to be behind the strike. It was on receiving a circular which had been widely distributed among the strikers that M. Plehve suddenly changed his manner and acted so savagely. The circular reads in part:

"We do not require police protection. Down with Zubatoff (Chief of the secret police)! Down with the spies! They would befool us with honeyed words and try to persuade us that the Government is our friend and that we ought to address humble petitions to it. . . . We will strike the evil at its root. We demand the abolition of autocratic government and the substitution of a popularly elected government."

The Zionist Congress

On Friday, August 28th, the Zionist Congress at Basel, at which 2,000 persons were present, came to an end. The sudden increase in the Zionists from 120,000 to 320,000 is due, no doubt, to the recent persecution of the Jews in Russia; but, apart from that, the Congress just closed was not without significance. During the session, Dr. Herzl, the President, submitted to the delegates a letter which he had received from M. Plehve, the Russian Minister of the Interior, and which apparently favored the plan for establishing an independent Jewish state in Palestine. The letter declared that as long as Zionism consisted in a desire to create such a state in Palestine and promised to organize the emigration from Russia of a certain number of her Jewish subjects, the Russian Government would be favorable to the movement. But the moment this object was abandoned in order to work for a national concentration of the Jews in Russia, the Government would naturally oppose Zionism. Another communication of great interest came from the British Government. A

letter from Sir Clement Hill, Superintendent of African Protectorates under the Foreign Office, to Mr. Greenberg, a British delegate to the Congress, declares that the Foreign Secretary has studied the question with attention and is ready to lend his aid to the movement. The Government is prepared to offer to the Jews territory in British East Africa lying for some 200 miles along the Uganda Railway between Mau and Nairobi. This tract of land is high and is described as being almost unparalleled in tropical Africa, being well watered, fertile, cool, almost uninhabited, and perfectly healthy. The Congress by a vote of 225 to 177 adopted a resolution appointing a committee of nine to go out to East Africa and investigate the situation.

The Situation in Spain

A recent event in Madrid shows dramatically the state of party feeling in Spain. A meeting of Republicans was held in the city to celebrate the anniversary of the sacking of the Tuileries. Present at the meeting was a Government delegate who had received orders not to allow any allusion to the "Terror" or any *vivats* in honor of the French Revolution. During the evening he actually ordered down one of the speakers because he had shouted "*Viva la Republica Francesa*." Whereupon the orator proposed, amid wild shouts, that a friendly message of protest be sent to the French Ambassador in Madrid, appealing to His Excellency to learn whether relations were broken off between France and Spain, since they were not permitted to acclaim French institutions and the French people whom they so much loved. And such a message was forthwith sent. This comical episode has been taken up seriously, and one of the journals favorable to the Ministry warns the Government that its sudden outburst of energy to prevent the Republican propaganda is not merely impolitic but illegal. The position of the Government grows daily more difficult in the midst of its Republican, Socialist and Anarchic enemies. In Madrid 20,000 men in the house-building trade are out of work, and there is a continual, tho hitherto unsuccessful, effort to bring about a universal strike.

Pius X from His Brother's Point of View

By Salvatore Cortesi

Coat of Arms of Pius X

Every Italian, away down in his heart, would much rather be Pope of the world than King of Italy; and the position, like that of President of the Republic, has the additional advantage of being open to the ambition of the humblest person. Every time a Pope is selected from the people it is an encouragement to poor parents to put their clever boys in the Church—which career the boys usually refuse to embrace—but, with all that, I think the people prefer a Pontiff of noble birth, one who will make a *buona figura* (good show), as they express it, one to the manner born.

Pius X is little known to the Romans, altho a familiar figure in Venice, where he was almost worshiped for his charity and benignity, and equally in his native village, because when he rose to the dignity of Cardinal and Patriarch he did not forget his origin, but treated his family with affection, and took his sisters—who were so far peasants that they have never worn hats—to live with him at the famous Cathedral of St. Mark.

The Pope is the elder of two brothers, the other being Angelo, the most important member of the Sarto family, which by universal affirmation is a model of virtue, and of that physical and moral health which only the country, the open air, the "innocence of the fields," seem to produce. No one could speak with more authority or with greater appreciation of his brother than Signor Angelo; so, having occasion to meet him, I utilized the

House at Riese near Treviso, Where Pius X Was Born

ANGELO SARTO,
Only Brother of Pius X

talk in the interests of the readers of THE INDEPENDENT, finding him a good-looking old man, handsomer perhaps than the Pope himself, with fine manners, and a cordial way with him which wins all hearts and makes him the most popular man of his district.

To my discreet questions, he began at once:

"You want to hear of Beppi?" (Beppi is the Italian diminutive for Giuseppe always used by the Sarto family.) "From what I have always understood our family has from the first been humble, altho at one time it rose somewhat. It originated in a foundling home at Casale Monferrato, near Alessandria, at the beginning of the twelfth century, when Ezzelino I, at the head of the Lombard League, freed that part of the country from the dominion of Barbarossa. Evidently the Sarto family followed Ezzelino in Venice, where his estates were, as they are found as land agents for the same family at San Zenone, where in August, 1260, Alberico, the last of the Ezzelini, was made a prisoner by the Guelf

party, was tied to the tail of a horse, then burned alive, after having his five sons beheaded under his eyes, one of whom was a baby in bands, while his daughter and wife were also burned alive. Lively times those," added Signor Angelo, "and they want to talk about the good old days! I am afraid," he went on, "that the Sartos either went over to the enemy at that time or were too humble to be a danger, as they survived, and one is now Pope!" he said, with such simple pride that it was delightful to see. "My grandfather, who was a commercial agent, is as far back as I remember. He lived to be almost 80, and adored us children, altho we gave him little peace. My most distinct recollection of him is that he used to sit at the door of our house, smoking a pipe, dressed in a coat with very long tails, which Beppi and I would surreptitiously pull,

and he would hand us round bits of licorice (a most beatific treat) while mamma wasn't looking. His third son was Battista, our father, commercial agent like grandpapa, who married Margherita Sanson, a pretty little dressmaker of Riese. A country dressmaker fifty years ago meant very few *svanziche* (dimes) and a large amount of work. In those days inch measures were unknown here, so she measured her customers with a piece of string, tying knots in it for the required lengths. They had two sons and six daughters; the present Pope and me (Angelo), Teresa, Rosa, Maria, Antonia, Lucia and Anna; three of the girls married, and three remained maids and lived with Beppi at the Patriarchate in Venice.

"Antonia married a tailor, Francesco De-Bel, and had five children; Lucia married the sacristan of the Church of Salzano, Luigi Boschini, and had two children; Teresa married the innkeeper of Riese, Giovanni Battista Parolin, and had nine children, one of whom is parish priest and Monsignor, and we expect

great things of him. Many of this younger generation are married to persons in their own class, while I have had two daughters and have three grandchildren."

When I had had this interesting account of the family of the Pontiff, I thought I would like some details of His Holiness from a familiar point of view. "Now that your brother has been elevated to such a dignity, will you continue to be postman—an employee of the King of Italy—and shopkeeper in your little village? Have you no desire to live near Pius X?" I asked. Signor Angelo replied: "Of course I will follow the will and desires of my brother, but Rome is not home; I do not hear my language (Venetian dialect), and everything is strange. We have made no plans. Certainly my poor brother must need some dear one near him; he was not made for that lonely post at the Vatican, and is so

GIUSEPPE SARTO
As Pope Pius X

accustomed to be taken care of by my sisters that he must long for them."

Signor Angelo may be quite right. I am sure he is; but what is certain is that his three sisters (now no longer young) lament from morning to night the separation from their favorite brother, fearing for his comfort, and realizing, with a kind of despair, that the separation is as final almost as tho he had died.

Signor Angelo seemed to take great pleasure in recalling early days and stories of Pius X: "We had our house, a little ground, and some furniture; that was all, and little enough it was for a family of ten, so we were obliged to live carefully, very carefully indeed. Papa was most religious, like Beppi, and taught us the rudiments of religion; but we could only sign our names, and could read fluently enough, while Giuseppe devoured whatever came in his way. When he began to go to school he took all the prizes, made such progress that he (and I, too) was sent to Castelfranco to school, a donkey being bought at considerable sacrifice to take us there, we boys quarreling regularly every day as to who should drive it, Beppi always conquering, as he was older and stronger than I.

GIUSEPPE SARTO,
As Cardinal Patriarch of Venice

Cardinal Sarto Leaving Venice for the Conclave

Poor beast," he added with a twinkle in his eye; "those were not pleasant days for him; but he died at a green old age and was very fond of us both.

"Papa died in 1852. So, as our mother could not send us to school any longer, she had Giuseppe recommended to the Patriarch of Venice, Monsignor Monaco, who got him into the Seminary at Padua. He was ordained priest in 1858, and from that time it was clear sailing. Beppi forged ahead to some purpose, as you see. Ah! by the way, Giuseppe was recommended to the Patriarch by an uncle who was Monsignor Monaco's servant. How little any of them thought at that time that he would some day not only be master there but at the Vatican!"

As the good, big Angelo seemed inclined to lose himself in dreams of the family's grandeur, I recalled him to reality by asking for a few stories about his brother. "*Ma che vuole!*" he replied, "what can I say? Things happened and we thought no more of them. When they took place they did not strike us in the light of anecdotes to be remembered."

However, I kept the conversation in the proper channels and learned that Pius X always had the simplest habits. He retired early, rising at most unearthly hours; ate little, without much regard to what it was, and worked indefatigably, without its telling upon him. Apropos of early rising, Signor Angelo recounted that one day when Giuseppe was parish priest at Tombolo he (Angelo) was an interested witness of the following conversation. His brother had risen at 5 A.M. and, as had happened before, finding that the sacristan was still in bed, himself opened the church for an early worshiper, who, somewhat shocked, pro-

posed to call the sacristan, when Sarto replied: "No, no; let him alone. Don't you think I am able to open a door by myself! When I shall be old and ill, he will open the door, and I shall stay in bed."

Another interesting fact which I gleaned was, to use Signor Angelo's own words: "Beppi was at my house when the news that he had been made Cardinal arrived. We had all been together and he had been joking us on what he called our aristocratic habits. We went out together to the post office, and he said: 'I think the moment for you to carry out your great desire to go to Rome has come.' 'Then you are really to be a Cardinal?' I asked, delighted. 'Yes; have you the money to go?' 'Ah, Beppi, things are going badly; I do not believe I can put forty dollars together.' 'Forty dollars! Why, you are a rich man; with forty dollars one could go to the ends of the world!'" Angelo continued with a shake of his head: "Beppi is charitable, and so never has a cent in his pocket; but he has the best heart in the world. Once, after he was Cardinal, he came to see me, I being in bed with pneumonia. When he entered the room he said: 'I hear that you want to die, and I have come to see what you are going to leave me, as my affairs are at a low ebb.'" And he stayed with me until I was better.

"What a pity poor mamma is not alive. When he was created Cardinal he came to see her and said: 'See, mamma, do I not look handsome dressed in red?' and indeed he did, so that she cried for joy at having such a son. What would she have said, if she had seen him in white!"

With these words Signor Angelo went his way.

ROME, ITALY

Seal of Major Domo of Vatican

Literature and Advertisement

By Andrew Lang

“ I MET a traveler from an antique land ”—in fact, from the United States of the American continent.

He was a man of letters and, as one who would gladly learn, I asked him why a certain recent novel had been so popular in his native country. The novel had been sent to me for review. It was of a common class, the historical romance, aimed, apparently, at girls of sixteen, and it was not even a good specimen of such wares. The stranger then told me that the book had been advertised like Waterbury watches, or patent soap, or Boudierbury's chocolate, or Boil's cocoa, or “ Pale Pills for Pink People.” Looking up at the rocky, perpendicular sides of the Bheinach (I do not warrant the correctness of the Celtic spelling), my friend remarked, thoughtfully, “ What a surface for advertisements ! ”

This, then, was the explanation of the success of a thoroughly cheap, commonplace, amateur's exercise in the art of Sir Walter Scott. It was so pushed by canvassers, “ drummers,” or whatever you call them; its name was so shouted in all folks' ears, and so diazoned in all folks' eyes, that the American public could not avoid being aware of its existence, and individuals asked each other “ Have you read ‘ Ladies and Lances ’ ? ” Then they read it, and, for some wholly inexplicable reason, liked it—this part of the mystery is unsusceptible of any solution creditable to public taste, for the book was neither better nor worse than scores which the publisher's reader sees in manuscript and conscientiously rejects. In England I never heard the book mentioned, but in England it was not advertised like a quack medicine. Rows of men bearing boards inscribed “ Read ‘ Ladies and Lances ’ ” did not walk the streets. The sides of omnibuses were not placarded with “ Ladies and Lances,” in *or* upon *gules*, or in *gules* upon *or*. No critic who contributes the same article to a dozen papers had been engaged to puff the trash in every one of them. No philosopher, statesman, labor leader or fashionable physician wrote about “ La-

dies and Lances ” in *The Nineteenth Century*; even the literary Marchioness held her peace; and never a tabernacle echoed to the praise of “ Ladies and Lances ” as urged by the popular preacher. Consequently, in England, “ Ladies and Lances ” was probably no more successful than a score of books equally devoid of knowledge, humor, passion, pathos, or any other literary quality. So I presume that the American stranger was right when he said that, in America, the book was only puffed into popularity, as mustard, starch, soap and pills are urged upon the pensive public. It had a *succès de réclame*.

Of course, the same methods are practiced in England by some publishers and by some authors, who unceasingly advertise by dint of interviews and paragraphs about themselves, by wearing queer hats and clothes, and doing odd things in public and in private—if such charlatans are ever in private.

Two or three years ago an English novel was published, which appeared to me, as a reviewer, to be a tediously conscientious imitation of a celebrated author. It was fantastic without brilliance; its epigrams were like damp squibs; it was odd but not original; silly where it aimed at being subtle, and, in plot and conception, as impossible as “ She,” without providing the faintest excitement. But somebody arose and (I am sure quite conscientiously) boomed this insipidity. Other reviewers followed suit, anxious to be “ *dans le mouvement*.” So, I suppose, in a mild way, the book was a success in commerce. Of course, I may be wrong in my verdict on the book. The thing is not precisely unthinkable. But if “ Old Mortality,” “ Vanity Fair,” “ Richard Feverel,” “ The Scarlet Letter,” “ Adam Bede,” “ Tom Jones,” “ Anna Karenine ” and “ Huckleberry Finn ” are good novels, *that* much praised book was not a good novel—certainly it had none of the qualities of any one of these. To-day, in an advertisement, I read about the innocent author of this thing (*he* did none of the adver-

tising); that he has written a new book, and that "in the publisher's opinion Mr. Blank will, with this book, attain to the high rank predicted for him by the principal critics," and so on, and so on.

What do I care for the publisher's disinterested opinion of his own wares? No more than for the soap man's, and the mustard man's, and the cocoa man's opinions of *their* wares; no more than for "'The MS. in a Brass Bottle,' the authorship of which is still a mystery." The publisher picked up the Brass Bottle, I dare say, by the shores of the Caspian, where he has a desirable villa residence, and he has been advertising, always advertising, for the author of the MS. in the Brass Bottle ever since. The public, therefore, cannot but hear of the Bottle and the MS., and, hearing about it, the world talks about it, till curiosity urges some to buy, and many to borrow, the precious work when it is printed. You can scarce be too childishly obvious in your methods of appeal to the public which, in its commercial transactions, is guided by advertisements. Nobody boomed "Richard Feverel" in this way, and I wonder when it reached its second edition? Perhaps authors ought to resist these modes of claiming attention for their works. I do not suppose that the methods always pay, by any means; still, if there were not a margin of profit, the practices would not be continued.

The philosophy of the matter is probably capable of being stated thus: the public takes very little interest in literature, and, left to itself, would just accept any rubbish that the boys or girls at the circulating libraries choose to send. When the gaudy volumes have lain about the drawing-room for a few days, mainly unread, they are sent back, and others arrive by an automatic process. Thus from 250 to 500 new novels pass through an English home in the course of a year. There is no selection—at least there would be none worth mentioning if the public were left to itself. In the same way, persons desiring soap or mustard, or pills, or cocoa, or beer, would naturally accept such commodities as are set before them by the shopkeepers. To stir up this indifference into Unnatural Selection advertisement exists. The pretty fields along the railway lines are crowded

with huge wooden, painted placards, clamorous of the merits of this or that patent pill, till the name of it penetrates the consciousness of the amateur, and he buys that pill rather than another. The same process can be, and is, applied to the sale of books.

Macaulay, "in the mad pride of intellectuality," thought that he had destroyed these methods of puffery when he reviewed Robert Montgomery and his advertisers. But he had only ruined Robert Montgomery, and hung his body up like the weasels and stoats which the game-keeper suspends, *in terrorem*, on a tree near his lodge.

Macaulay may have frightened the literary advertisers for a while, but now they practice their craft unashamed. In the advertisements which a publisher inserts at the end of his novels one finds extracts from reviews of some three dozen of his romances. They are all proclaimed by one newspaper critic or another, as "masterpieces;" they are all "subtle," and "daring," and "powerful," and "strong," and "intense," and "rich in artistry" (odious word!), and things "that the world cannot willingly let die." Now our contemporary literature is not really so opulent in genius. Every sane man knows that it is not. We have to deal with bronzed and mother-naked puffery.

There is no practical use in this or, I fear, in any other jeremiad over the failings of an age. Still, we must be preaching. Women displayed "the stinking pride of targeting their tails," that is, of embroidering their skirts, in spite of the eloquence even of John Knox, who used the emphatic phrase just quoted and blushing explained. I am not John Knox. If we have a wet summer and a bad harvest, I cannot honestly, in Mr. Knox's manner, attribute the calamity to the vices of the literary advertiser! Moreover, most publishers do not bow the knee to this Baal. They put out their books, place the names in their lists, and leave them there to take their natural chances.

But is this satisfactory to the authors? Do they not grumble that "they are not advertised"? What ought a young author to do? One shows me a volume of manuscript verse. It is uncommonly

good verse—nay, much of it, to my taste, seems to be actual poetry. But, if a self-respecting publisher brings out the book, nobody will hear of it. Office boys, or editors' nieces, will do the reviewing of it in a couple of inches of commonplace insolence. No boomster will roar aloud over the poems, which will never come

to his notice. Yet an author may not like to be proclaimed by the devices of the literary advertiser, even if that worthy thinks fits to exert himself and to bring out his fifes and drums and loud bassoon. I am rather sorry for the poet, and would recommend him to abandon his tuneful labors.

LONDON, ENGLAND

The Meadowbrook Hunt, Long Island

The Influence of Sport In American Life

By William Frederick Dix

WHEN the Netherlands were first settled, the sturdy pioneers had to wage two great wars, one against the sea and one against their hereditary enemies, the Spaniards. It was not till both of these were conquered, not until the marshes and storm-ravaged lowlands were reclaimed by stone walls and drained by canals, and the Spanish oppressors driven home, that the Dutch found time to paint their pictures, to beautify their cities or to find enjoyments and comforts in life. So with us, it was not till we had driven out our foes and tilled the land, had made a nation of ourselves and built our cities, our railroads and our great industries, that we began to find time for the amenities of life. Only within the last few years have we found time to travel abroad and imbibe its art and historical associations, to collect pictures and build beautiful country places and gardens, and to enjoy the rec-

reations of the country club. But within the last decade or so a very remarkable element has been developing itself in our social life—the love of what is generally called, for want of a better term, “gentlemanly sport,” and this element is of very interesting and far reaching significance. I do not refer to professional or amateur athletic contests, to baseball and football, horse racing or the striving for the various medals and cups and championships, but to those forms of sport which are associated with a love of nature, with the developing of the breeds of domestic animals and with country life—to sport which does not require physical powers so much as nature study, forestry, woodcraft, seamanship and horsemanship; in other words, hunting, riding and driving, yachting, stock farming, golf, and exploiting the delights of the countryside.

All these are essentially modern pur-

Polo Team of Squadron A. New York

suits in America. To be sure, there were many gallant fox hunts before the Revolution, and Washington himself used to follow the hounds in Virginia, but sport was then confined to a very small part of society, and chiefly to the descendants of the cavaliers who settled in the Southern States. With our growth in wealth has come an enlarging of our interests. The business man no longer confines his energies exclusively to his work, and he is learning to take up some out-of-door hobby which will help keep him young and vigorous in mind and body. A few years ago if a middle aged English gentleman met a middle aged American in Switzerland, the former would be dressed in tramping clothes and climbing the Alps with enthusiasm and the strength born of years of riding, hunting and tramping, while the American, in city garb, would see the scenery from the carriage. Our college teams would be a match for English teams, but if those two groups of men could be collected fifteen years later and pitted against each other the Americans would make a sorry showing. But to-day the country club links show as many sun-tanned elderly men upon them as college boys, and out-

of-door sports are no longer indulged in exclusively by the very young men. Even such a vigorous game as polo is played by Mr. George J. Gould, who is the father of two stalwart, polo-playing sons, by Mr. John E. Cowdin, Mr. George Herbert and others of about his own age; while Mr. James H. Hyde, who took a four-horse coach from New York to Lakewood in the spring, Judge Moore and his brother of Chicago, who are famous whips, Colonel Jay, of the New York Coaching Club, Mr. Ralph N. Ellis, the master of the famous Meadowbrook Hounds, and Mr. Foxhall Keene, who is perhaps the best all round sportsman we have, are none of them very young men. Sport, in the present acceptance of the term, is graced by many women devotees, and such skilled sportswomen as Mrs. James L. Kernochan and Mrs. Thomas Hitchcock, Jr., who ride to hounds as fearlessly as men, Miss Ruth Underhill, Mrs. Manice, Miss Hecker and Mrs. Fellows Morgan, who are champion golf players, and nearly all the ladies in those families who own country estates have done much to place it in its high position. Many of them drive or ride in the summer open air horse shows at Bernards

ville, Bryn Mawr, White Plains, Long Branch, Newport and Southampton, others have kennels for the breeding of fine poodles or bull dogs or wire hair terriers, among whom Mrs. Perry Belmont, Mrs. Jules I. Vatable, Miss M. K. Bird, Miss Lillian C. Moeran and Mrs. Caspar Whitney are prominent.

An English critic has recently remarked that not even in Hyde Park, London, can such a superb display of horses and equipages be seen as in Fifth Avenue and Central Park, New York, during the season, and these perfect appointments are the direct result of the great city horse shows—notably, the New York one—every November, and the open air shows which have, within a few years, marked the high of the season in various summer resorts. For twenty-five years the New York show has been the supreme test of good horse flesh and the greatest stimulus to horse breeding and training in this country. It is certainly the most brilliant spectacle of its kind in the world, and when one has really appreciated the significance of the scene—the great arena, brilliant with pure blooded high steppers, glossy, perfectly trained coach and harness horses, deep chested hunters and dainty little ponies, the glittering vehicles and faultless coachmen, footmen and grooms, and the boxes and promenades thronged with

the culture and brains, the wealth and beauty of the land, the flower of American society, he cannot but appreciate the tremendous interest throughout the country in horses which this typifies.

And it is the horse which is associated with the most exhilarating of our sports. His species is developed to the highest in Kentucky stock farms owned by James J. Haggin, Colonel Harkness and others; in the Westbury, Long Island, stables of Mr. William C. Whitney, in Mr. Thomas W. Lawson's "Dreamworld," near Boston, Judge Moore's "Lorramoor," near Chicago, and Mr. Andrew I. Cassatt's "Chesterbrook Farm," near Philadelphia, and scores of others; while such polo players as Mr. Lawrence Atterbury, Jr., Mr. Foxhall P. Keene, Mr. George J. Gould and the young Vanderbilts have strings of fifteen, twenty or thirty and even more ponies for which Canada and the West are searched, and which are carefully trained by experts and command fabulous prices. It costs from ten to fifty thousand dollars a year to indulge in the royal sport of polo, for a man must not only have his string of costly ponies, his stables and grooms, but must take his mounts from place to place to play the various matches. Next to Mr. Herbert, who is the father of American polo, Mr. George Gould has had the strongest influence in developing the

The Ardsley Casino, on the Hudson

game in this country, and on his own private field at Georgian Court, Lakewood, he and his two sons and his friends play exciting matches with visiting teams.

Every spring the sound of the merry coach horn on Fifth Avenue, New York, as the great four-in-hand coaches, with a gentleman whip on the box, start from the Waldorf or the Holland Hotel for Ardsley or elsewhere, attests the growing popularity of this reversion to ancient stage coach customs. These coaches are

numerable country clubs which have sprung up all over the land. The Meadowbrook Club on Long Island, the Ardsley Club on the Hudson, the Westchester on the Sound, the Essex County Club in Orange, the Philadelphia Club at Bala, the Brookline Club near Boston, Chevy Chase at Washington, and the Glen View Club at Chicago are but manifestations of this love for outdoor life and examples of hundreds of cozy or elaborate clubs which every city now enjoys. Some are but modest cottages, with a small golf

Dining Room in Mr. Lewis Nixon's Yacht "Loudoun"

historically "correct" in every appointment, and the horses the best specimens procurable for the work. The annual coaching parade, with dozens of drags, breaks and coaches in line, is a sight absolutely inspiring in its magnificence, and the men who tool these four-in-hands, who have selected and helped train them, are busy lawyers, financiers and business men who have learned to appreciate the benefit of some sporting activity and interest.

One of the most delightful results of this modern love for sport is the innu-

course and a tennis court adjoining, while others have golf, tennis, bowling, hunting, swimming pools and beautiful mansions complete in every luxury, with *cuisine* provided over by French *chefs*. Here the busy man of affairs, who has learned by the use of modern machinery and the stenographer, telephone and private secretary to do twelve hours' work in four or five, repairs, to meet his wife and daughter for afternoon tea or for a round of golf and an informal dinner. And here the modern American girl, whose grandmother considered "grace

hoops " or croquet madly exciting exercise, learns to put her hunter over four bars, or to drive a golf ball a hundred and fifty or two hundred yards, to grow sunburned and lithe and resourceful. Here this new race of clear cut, manly, modest, athletic young men learn to make companions of these bright-eyed girls, to associate with them with frank *camaraderie* and to win their friendship and respect. And here, these summer afternoons, come trim little runabouts and dogcarts bringing the club members, who form animated groups on the lawns, the grounds or upon the porches. Surely

powerful in construction, equipped with electric lights, elevators, beautiful bed and bath rooms, a library, gymnasium, music and dining-room, and with launches and small boats for harbor use, manned with officers and crew, *chef*, stewards, valets and servants galore, cruises from sea to sea, adding prestige to the American flag. Its owner is a veritable modern viking bent on the peaceful conquest of the world, and he loses his provincialism and narrowness of view, and brings back with him not only an invigorated body, but a mind refreshed and stocked with ideas gained in

The Green Spring Valley Hunt Club, Carrollton, Md.

a delightful phase of social life, this country club idea, sprung from the modern appreciation of sport!

Perhaps the most magnificent form of modern sport, more roval in its extravagance than polo or coaching, is yachting. With the beautiful, white winged sloops and schooners the general public is, especially during these cup racing times, familiar; but few realize the luxuries and privileges of the modern steam yacht owner. The world lies before him, all seas and lands await his conquest, he goes whither and when he chooses, and his floating palace, graceful in design,

other lands and seas. The great steam yachts of to-day which carry our captains of industry to the foreign harbors of the world are mighty engines of international peace and civilization.

What are some of the far reaching influences of this modern love of sport? In the first place, it is strengthening physically and broadening mentally these overworked American business men. It is making them saner and better, cultivating their love of fair play and their generosity, and widening their interests in life. Secondly, it is stimulating a love for nature and the country, for the broad

meadows of the golf links and the woods and gardens of the country club, an interest in the preservation of forests and trout streams, in good roads and village improvement. The army of equestrians and those who drive perfectly appointed equipages over our city thoroughfares and along our country roads will interest themselves actively in their improvement. Think of the thousands of miles of macadam roads that were laid while bicycling was at its high! And the man who has his country place will want the village beautified and the roads made better. He has traveled abroad in his steam yacht and automobile and remembers the perfectly kept roads of Normandy, France, and Germany, and he has learned that in Switzerland a man who cuts down a forest tree must plant two to take its place, and he brings those ideas home with him. Then machinery has been wonderfully perfected, because the sportsman wants a practical and light engine for his automobile and the best possible machinery for his yacht. Marine architecture has taken many a hint from the builder of the cup racing sailing craft, while carriage construction and horse breeding and raising are studied as never before. In fact, one can hardly find the limits of the

indirect influence. Many great business deals are consummated on the golf links and at the country club, and in the pursuit of out-of-door sport men grow better acquainted with each other and with themselves.

A few years ago the funny papers had much to say about the "dude," the effeminate, self-conscious, sappy, overdressed young man, who drawled and idled in the drawing rooms and on the avenues. But the "dude" died and was buried as the new athleticism came in, and the frivolous "embroidery" girl, who wore multitudinous filmy and perishable garments, has disappeared too, and her modern sister is far more attractive in her pretty evening gown because she has learned the use of the hunting or golf skirt and the outing shirt waist during the day. As we grow to be better sportsmen we become better citizens, we learn to ride straight and play fair and hit hard in life. The blood goes coursing through our veins with a new vigor, and the game of life becomes greater and finer and more worth the playing because we are learning the vast benefits of this manly and womanly idea of modern sport.

NEW YORK CITY.

Lieut.-General Young

(By an Officer of the General Staff)

TO Lieut.-Gen. Nelson A. Miles, who on the 8th of August retired from the chief command of the Regular Army of the United States, has succeeded Lieut.-Gen. Samuel B. M. Young, who was born in Pittsburg, Pa., on January 9th, 1840, and consequently will be retired on account of age on January 9th of 1904.

General Young, like General Miles, is a veteran of the Civil War. He entered as a private, he came out as a brigadier-general of volunteers, with every step of promotion gained by hard work and keen service.

His first introduction to soldiering was as a private in Company K of the Twelfth Pennsylvania Infantry on April

25th, 1861, but he soon exchanged to the Fourth Pennsylvania Cavalry, wherein he became captain, and on the 20th of September, 1862, major. His promotion to brigadier-generalship occurred on the 9th of April, 1865.

At the end of the Civil War General Young concluded to join the regular army, which he did, securing the rank of second lieutenant and patiently setting about climbing up the long hill of promotion. His services to his country on the Western plains were of a high order.

The outbreak of the Spanish-American War found him a colonel of regulars, but he was soon after promoted and commanded the Third Brigade of Shaf-

LIEUT.-GEN. SAMUEL B. M. YOUNG

ter's Corps in Cuba. He was in 1898 made a major-general for gallantry at Las Guasimas, and commanded the Second Army Corps until it was disbanded.

He became a brigadier-general of the Regular Army in 1900, and a major-general in 1901.

In the Philippines General Young had the task of breaking up Aguinaldo's army in Northern Luzon, fit work for iron men on account of the enemy's elusiveness, the deadliness of the climate and the enormous physical difficulties presented by the wild country in which the revolutionist chieftain had made his retreat.

General Young's familiarity with Indian warfare had thoroughly qualified him as a judge of rough campaigning, and his reports show that the jungle beating job in Northern Luzon was one

of unprecedented and most desperate hardship. Nevertheless, the work was thoroughly done, and the revolutionist's forces scattered. In his report made during the summer of 1900, General Young says:

"The magnificent, fearless and rapid work of all the officers and soldiers of my command in the action, and especially the splendid fire discipline exhibited by Ballance's battalion (22d infantry) and Scott's battery at close range, inspires me with full confidence in the belief that with these officers of high ability and these trained soldiers, who enjoyed a dash into the jaws of death as the recompense of a forced march through sloughs of despond which would have barred Christian's progress in his pilgrimage, I could defeat, smash or scatter all the forces that Aguinaldo and his generals could concentrate at any given point to defeat the accomplishment of my object.

"The endurance of the men of my command surpassed the belief of a non-participant, and is beyond any ever shown by an American army."

The American force in this noted expedition was likely at any time to collide with ten times its number of the insurgents, but cheerfully accepted that risk with all the others. As the matter turned out Aguinaldo had not the requisite aggressiveness to make the invaders of his tangled marshy haunts pay dear for their temerity. He slipped away between the commands of Generals Young and Lawton and escaped for the time from the net they were drawing.

Nevertheless, the expedition was thoroughly successful in that it scattered and disorganized the enemy.

After returning from the Philippines General Young commanded the Department of California.

His headquarters now will be in Wash-

ington. He is Chief of the General Staff, as well as Lieutenant-General.

Next in line of promotion to General

Young is Gen. Adna R. Chaffee, who will probably become lieutenant-general

next January.

The Christian Socialist

By the Rev. Charles M. Sheldon

AUTHOR OF "IN HIS STEPS," ETC.

THE REVEREND FREDRICK STANTON, D.D., pastor of the St. Cecilia Metropolitan Church, slowly took up his pen and wrote "finis" on the last page of a book manuscript. He then pushed his chair away from his desk, and leaned back in it for a moment in silence.

The clock in the church tower struck twelve. When the last stroke had sounded, the minister rose, walked over to the window of his study which overlooked the small strip of lawn beside the church wall and stood there a moment.

He then went back to his desk and knelt in front of it, putting his face on the manuscript as he knelt. When he finally raised his head his face was wet with tears and his lips still moved in an inaudible prayer.

The Reverend Fredrick Stanton was not yet forty-five years old, and he was unmarried. He was handsome, intellectual and lovable. There was no reason that could be given by any one in the parish of St. Cecilia why the brilliant preacher of the most aristocratic church in Lennox did not marry one of the fair and rich members of his splendidly dressed congregation. But the fact remained that he did not, and no one had ever dared to ask him for the reason.

Two other qualities which made the Reverend Fredrick Stanton popular and esteemed were his unquestioned affection for little children and a habit of sadness which gave not a mournful but an interesting cast to features which were classical in repose and intensely modern in action.

The book which he had just finished was his first effort. Whether it be his

best or not, an author's first book is an event which brings a particular and peculiar emotion to the heart and mind. He never has the same feeling for another effort. The minister looked at the last page of his manuscript with an affectionate regard. The experience was new to him. The moment was, however, significant for other reasons.

He was about to send this book out to a publisher under an assumed name. The volume represented to him the best ten years of his life. It represented more than that. It stood for his heart's faith, for the real conviction which during the ten years of the book's construction had risen in him a tremendous passion that not a man or woman in all his parish dreamed of. To send the book out and withhold its real authorship was crucifixion to him. Yet—as he walked back and forth—he was not at any time in doubt concerning the matter. He knew what he was purposing to do, and he knew just how he would act.

He had not yet given the manuscript a title. With a deliberate but not a hesitating gesture he now turned to the first chapter, which lay on the desk, and wrote across the upper part of the first page the following:

The Christian Socialist.

After another moment of silent contemplation of the manuscript he wrote the following letter to the largest publishing house in the United States:

" ———— :

DEAR SIRS.—I send you by express book manuscript, entitled *The Christian Socialist*.

"Very truly yours,

"MARK BURNS.

"Lennox, June 1, 1896."

He then ran through the chapter again, making a few slight changes. His handwriting was beautifully clear and strong, and the pages were, even to his own eyes, pleasant to look at. He then placed the chapters together again, put his letter to the publishers on top of the first chapter, wrapped up the manuscript and directed it. The church clock struck the hour of one as he finished. The night was very quiet. The Reverend Fredrick Stanton walked over to the window again and looked out. Then he came back to the desk, turned out the light and kneeled at his chair for a long time. If any one had been in the room during that time he would have been astounded to hear from the brilliant dignified, scholarly pastor of St. Cecilia, a prayer full of broken cries, appeals for pardon, confession for grievous fault and promises of making full restitution. And he would also have been no less amazed, after the prayer ceased, to behold the ministered rise with haggard face and apparently unsatisfied heart and seat himself at his desk once more, resting his head upon it until the dawn came in, to find him still at his desk, the habitual sadness of his features marked by an added sternness of line as the morning looked in upon his unrefreshed spirit.

That same day the manuscript was sent on to the great publishing house. Three days later a printed form came back stating that the book had been received and would be examined in due time. Then two months of silence. The Rev. Fredrick from time to time employed on the beautiful grounds surrounding The Manse two and sometimes three men. One of these men might have been "Mark Burns."

When the minister opened the next letter to "Mark Burns" he was alone in The Manse, seated in his study. He had been out calling that afternoon in his parish. His last call was at the beautiful residence of Judge Rodney. Mrs. Rodney and her daughter, Miss Mildred, were at home, and the conversation had at last turned upon a great strike threatened by the mill operatives in South Lennox.

"The men don't know what is good for them," Mrs. Rodney spoke, sharply. Mrs. Rodney was a large and hand-

somely gowned woman, who wore several diamond rings and had limitless confidence in her own opinions of politics, business and the church. Her daughter, Mildred, was not quite as positive as her mother, but she was a young woman of strong convictions and a natural leaning to the favored classes of society, and especially those classes that associated within the strictly proper social atmosphere of the Church of St. Cecilia.

"Of course," Mrs. Rodney continued, "I don't object to fair wages for the working people, but it is simply preposterous that they should demand so much. The recent disturbances in the labor world are due to envy of the upper classes. The mill operatives are becoming unbearable. They are no longer satisfied with comfortable homes. They begin to cry out for luxuries."

"Do you think the mill operatives ought not to have any luxuries, mother?" asked Miss Mildred, looking first at her mother, then at the Rev. Fredrick. When Miss Rodney spoke like that the minister always gave her an inquiring glance as if in doubt over something serious.

Mrs. Rodney waved her jeweled hand gracefully.

"Of course, they are entitled to what they need; but where will their demands cease? Give them what they ask now and in a year or two they will come back after more. I say it is getting to be preposterous. The working people are demanding as much—as much as——"

"As *we* do," suggested the Rev. Fredrick, with a faint smile, speaking to the mother but looking at the daughter.

"Of course, there must always be classes in society," Mrs. Rodney continued. "The governing classes need certain things in the way of luxuries to minister to their state of development. The lower classes can and should be content with less. I have always noticed, for instance, that when one of my hired girls begins to get ambitious for better clothes or finer wall paper on her room she begins to grow slack with her work, and invariably I have to dismiss her. The working people should be taught to keep their place. That is the reason I say this strike is unwarranted, and I agree with Judge Rodney that the working people

are their own worst enemies when they attempt to claim more than they are capable of assimilating."

"Mother subscribed for *The Ladies' Home Journal* for our last cook," Miss Mildred spoke, looking out of a pair of gray eyes at the minister. "And what do you think the result was?"

"I have no idea," replied the Rev. Fredrick, cautiously.

"The cook came to mother one day and wanted to know who her dressmaker was."

"I should call that a compliment to your mother," replied the Rev. Fredrick, without the hint of a smile on his expressive face.

"It was the height of insolence on the cook's part," Mrs. Rodney said, a little stiffly. "It was another instance, and I have never known it to fail, of the mistake made when we attempt to elevate or encourage the working people. It makes them envious and dissatisfied. Let them know their place and keep it."

There was a little more talk along the same line, and the minister had at last come away after having listened more than he had talked, and bringing away with him, as he always did after meeting Miss Mildred Rodney, a very large interrogation mark in his mind concerning her real attitude toward life in general and his own life in particular.

Back in his study he found his mail on the desk where his housekeeper had laid it, and he noted first the letter directed to "Mark Burns."

He opened it at once, and read, with growing excitement, the following:

"MR. MARK BURNS, LENNOX:

"DEAR SIR—I am happy to state in behalf of the house that your manuscript, entitled *The Christian Socialist*, has been approved by our readers, and we shall be pleased to publish the book at the usual terms of 10 per cent. royalty. We shall be glad to hear from you at your earliest convenience in regard to the matter, and if you accept our conditions for publication shall also be pleased to have your suggestion as to cover design or illustrations.

"Very cordially yours,

"C. M. B., for the firm ———,
"New York."

In his reply to this note the Reverend Fredrick Stanton wrote accepting the terms made by the publishers, and in-

closed a sketch of a cover design, leaving the matter of possible illustrations with the house. There was a glow of unusual pleasure in the thought that his book had been accepted by the firm. The only trace of disappointment felt at the time was a vague and undefined wonder at the absence of any criticism of the manuscript one way or the other. But he reflected as he penned his reply that it was a purely business transaction, and the editor could not be expected to make extended remarks of approval on manuscripts received and accepted.

There followed now, for several weeks, receipt and correction of proof sheets of the book, and early in the fall of that year the book itself came out, and one of the keenest delights of the minister's whole life was experienced by him one day in October, when he received from the publishers half a dozen complimentary copies of his first published volume.

The cover design was a striking emblem representing a gigantic hand squeezing the world, which was pictured as an orange from which ran drops of blood, which a closer examination revealed to the reader to be hearts, with despairing human faces on them, mostly of little children. The artist had put the design in colors of red and white. The vivid appearance of it as the book lay on his desk startled the Reverend Fredrick Stanton, and at first he questioned its good taste so strongly that he was tempted to write a letter to the publisher asking that if any further editions should be printed to have the design discontinued and the book issued in plain covers.

But after thinking it over he decided to wait and let the public judge of the matter; if, indeed, the public, in the shape of that uncertain quantity, the "Kind Reader," should care enough about the book to look at the outside of it, to say nothing of actually buying and perusing it.

Within the next two months the Reverend Fredrick received from the New York publishers several newspaper book reviews of *The Christian Socialist*. They sounded to him suspiciously like advertisements sent out by the publishers, and, although he was unfamiliar with such matters, he afterward learned that his

suspicions were correct. The book seemed destined to be unnoticed, unhonored and unread by the public, however, in spite of the publishers' glowing reviews, and as the holidays drew near the Reverend Fredrick Stanton quietly buried his first born in what he thought was an unresurrected state.

What was his intense surprise, therefore, to receive, a week before Christmas, a congratulatory letter from the publishers, which ran something like this:

"We are happy to state that the sales of *The Christian Socialist* have gone into the third edition and the demand is daily increasing for large orders. We congratulate you on what seems like a popular success."

This was, as stated, a week before Christmas. During the next three weeks the papers began to call attention to the new and startling story called *The Christian Socialist*. Magazines wrote long literary reviews of it. Religious journals bitterly and in most cases savagely criticised it. People talked about the book at social gatherings. They discussed it at religious conventions, they read it on the cars, they took sides for and against its teachings, and on all sides asked concerning the authorship. Even the conventional parish of St. Cecilia caught the contagion of the public mania for *The Christian Socialist*. It actually read the book through, and even went so far as to discuss it. On nearly every library table in the elegant homes of his rich parishoners the Reverend Fredrick Stanton grew daily accustomed to the familiar design of the gigantic hand and the blood red orange world. There was practically only one opinion in the parish of St. Cecilia concerning *The Christian Socialist*, and it was voiced emphatically by Mrs. Rodney one afternoon in the latter part of February while the pastor of St. Cecilia was making a parish call.

"The most dangerous book ever written," Mrs. Rodney declared, tapping the volume decisively with the tips of her jeweled fingers. "It will, in my mind, go far toward inflaming the public mind to deeds of violence. I should not be surprised if this book led to a bloody revolution. I actually saw a copy of it in the hands of one of the strikers this after-

noon as I was coming back from South Lennox in the trolley. He was discussing it in a very excited manner with another man beside him. The author is evidently——"

At that moment Judge Rodney came into the drawing-room. All the parlors in the parish of St. Cecilia were "drawing rooms."

He greeted the minister cordially, and looked inquiringly at his wife.

"I was just saying," Mrs. Rodney continued, "that this book is the most dangerous book ever published, and in my opinion it will inflame the public mind to deeds of violence."

"Oh! *The Christian Socialist!*" Judge Rodney exclaimed, with an air of interest. "A remarkable book, Dr. Stanton. But I agree with Mrs. Rodney, most dangerous. It attacks the foundations of society. Of course, you have read the book. What do you think of it?"

"We have been looking for a sermon on the book," Miss Mildred, interrupted. "Nearly every other minister in Lennox has preached on it."

"You know I seldom preach book reviews," said the minister, with a smile, and at that moment Judge Rodney was called out of the room by a messenger, and the Reverend Fredrick did not answer his question. Mrs. Rodney, however, repeated it.

"What do you think of the book, Dr. Stanton?"

"I am not a very good judge of such books, Mrs. Rodney, and do not know that I am capable of giving an opinion."

"You are too modest," Mrs. Rodney replied, a trifle sharply. If there was one unpardonable sin to her it was the sin of not having positive opinions. "At least you will agree with Judge Rodney and me that the book is dangerous in the extreme." She took the minister's silence for consent, and added: "If I were the Russian Government in this country I would suppress this book by law."

"Therefore, mother, getting it read by more people than are reading it now," said Miss Mildred, carelessly.

"Oh, as to that, I differ! To my mind the only way to deal with heresy such as this book teaches is to stamp it out with a strong hand."

Mrs. Rodney mixed her metaphors as a toper would mix a drink, for her own sake alone and regardless of any one else's taste. After expressing herself thus she suddenly excused herself to answer some call from a servant, leaving the minister and Miss Mildred alone together. It was not the first time, and the Reverend Fredrick did not seem to be disturbed over it.

"What do you think of *The Christian Socialist*, Dr. Stanton?" Miss Mildred asked, as her mother went out of the room.

"Is my opinion worth anything?"

"In this case, yes."

"I think the story is interesting."

"That is not an opinion."

"What is it?"

"Merely a statement."

"What do you want me to say?"

"What you believe, of course."

"Does it make any difference whether I answer or not?"

"It is for you to judge," Miss Mildred answered, but there was a flash in her eyes that the Reverend Fredrick could interpret in any one of several ways.

"Well, then, Miss Rodney, I am not prepared to express an opinion on the book."

"You mean you cannot?"

The minister was silent.

"Or you *will* not?"

The Reverend Fredrick was silent still, yet his silence did not seem discourteous.

"Or you *dare* not?" Miss Mildred shot the last arrow in her quiver, and it went home.

"It is for you to say," he finally answered, looking at her gravely.

"I do not claim the last word, Dr. Stanton."

She picked up the book from the table where her mother had laid it when she went out, and turned its pages as if the minister were not in the room. He did not break the silence, as if he knew she would speak. Finally she began to read out loud:

"Page 127. Janet accepted him as her lover and husband without a single question. Altho he had lived a life of conscious cowardice, and she knew it, at this crisis in his career she forgot and forgave so utterly that her act was redemptive for him, and he permitted the

sacrifice on her part without remonstrance."

Miss Mildred Rodney lifted her eyes from the book, and looked stedfastly at the minister.

"No woman like Janet Arnold could ever love a coward."

"How do you know?" he asked, unexpectedly.

She seemed confused by the question, and did not answer at once. The Reverend Fredrick had never before seen the fair Miss Mildred lose her self-possession.

"A girl like Janet Arnold would not," she repeated, weakly.

"But to my mind," the Reverend Fredrick said, slowly, "the character of Janet Arnold in the book seems to be taken from your own."

"Do you think so?" Miss Mildred asked, in a low tone.

"I was struck with the resemblance all along."

"But I would not act like that; I could not love a coward."

"But was the man a coward at the last?"

"Once a coward, always one."

"Do you want me to argue the matter?"

"No. The story has many faults; still, shall I confess it, it made me cry."

He looked at her in wonder. When had any man ever seen the proud Mildred shed a tear? But as she raised her eyes again the minister for a moment fancied he could detect an unwonted dimness in their regular cold, clear gray depths.

"It made you cry?"

"Yes; I wonder who Mark Burns can be? I should like to know him. I would ask him if I resembled Janet Arnold."

When the Reverend Fredrick Stanton reached The Manse after his parish calls were over he found a telegram on his desk. It was from the New York publishers:

"*The Christian Socialist* to-day passed its one hundred thousandth sold copy. Congratulations."

He stared at the yellow colored paper, hardly grasping the significant item. Four weeks later another telegram announced:

"Book selling one thousand copies a day, Unparalleled demand, rapidly increasing."

This was the latter part of March. By the first of May *The Christian Socialist* had leapt to the front of all the books of the day, and its sales exceeded three hundred thousand copies, with no indications of any slackening of interest on the part of either the buying or the reading public. The papers still discussed the story, the religious press still bitterly assailed it, the pulpit continued to preach about it, workingmen's organizations passed resolutions upon it, it loomed up in the book stores, and on the railroad news stands. Contrary to all precedent the book gained in steady sales as summer advanced, and a congratulatory letter to "Mark Burns" in the latter part of May announced that all other publications issued by the firm were practically suspended to supply the enormous orders that were pouring in from all parts of the country and from Europe as well.

It was a week after this letter came that a visitor called at The Manse one afternoon. The Reverend Fredrick Stanton was out in his parish somewhere, but the well dressed stranger quietly told the housekeeper that he would wait. He was shown into the minister's study, and sat there evidently deeply interested in everything he saw until the minister entered the room.

The minute he appeared the visitor rose to greet him with a smile.

"Dr. Stanton?"

"Yes."

"In other words, 'Mark Burns'?"

The Reverend Fredrick was silent, but he observed his smiling visitor intently.

"You will have to pardon this intrusion," said the visitor, with another smile. "I am the junior member of the firm of —, of New York, and I have come on to Lennox to see the author of the most remarkable book of the age. You cannot hide your light under that *nom de plume* any longer. The public clamors to know you. Our New York office is besieged with letters from readers asking for photographs and autographs, and from lecture bureau agents asking for engagements. The newspapers are hot on your trail, and it has been nothing less than a miracle that you have not been found out and written up weeks before now. We want your photograph

and life history for a new and specially prepared illustrated edition of the book, and I have come on to assist you in working up the material."

"What if I should refuse all that?" asked the Reverend Fredrick, slowly.

"Refuse! But my dear sir, it is impossible! The public must be appeased. It will not be possible to maintain this secrecy any longer.

"Why not? George Eliot was not known as the author of 'Adam Bede' for years. It was five years before Charles Egbert Craddock was known to be a woman. The author of 'Ecce Deus,' Dr. Joseph Parker, of London, did not disclose the fact of his authorship of that book for more than ten years after it was published, and it was discussed by the people in his own church who never suspected that he was the author."

"But I should think, my dear sir, that you would wish to be known. There never was such a sale of a book in this country. We have been obliged to discontinue every other publication to meet our orders. It is simply unprecedented in the history of the book business."

"Nevertheless, I do not wish to disclose my identity. I have my own reasons for not wishing to be known as its author."

The publisher was silent a moment.

"I doubt if you can maintain the secret. Of course, if that is your firm decision, we shall do our utmost to respect it. You need have no fear of that."

Then, after a moment of hesitation, he asked: "Is it—do you—that is—the reason you have for not wishing to be known, is it anything you can give to the firm?"

The Reverend Fredrick Stanton answered slowly. "It is not. The reason is one I have never disclosed."

The visitor bowed, and soon after took his leave, promising again solemnly to respect Mark Burns's secret. When he had gone away, the minister bowed his head upon his desk, and when he raised his head at last the habitual sadness of his face was deepened, and the whole man seemed depressed, even at the moment of his highest fame as an author, a fame from which he apparently shrank as from an unwelcome visitor.

Summer faded into autumn and

autumn whitened into the winter when the great event transpired which marked church history for St. Cecilia for all its life to come. The Reverend Fredrick Stanton, D.D., had been chosen from a large number of candidates in the Church as a bishop, to fill the position of one who had been removed by old age from that distinguished office. The ceremony of inducting him into the high place of honor was fitly performed in the magnificent audience room of St. Cecilia itself. The congregation assembled was remarkable for its aristocratic appearance, for the fine display of rich garments and the unquestioned high tone of its social standing. The array of distinguished guests and church officials and neighboring clergy was imposing. The people of St. Cecilia while truly grieving at the loss of their scholarly, refined pastor felt at the same time a natural pride in the honor conferred upon him.

Judge and Mrs. Rodney and Miss Mildred sat near the altar rail in their accustomed pew, and when the newly elected bishop came out upon the platform to face his brother bishops and answer to the bishop's charge he glanced toward the Rodney pew for a second.

Then he fastened his eyes upon the bishop, a venerable old man, with a clear and resonant voice, who, according to the ritual of the Church, faced the new bishop, and propounded to him the regular questions. As the Reverend Fredrick made his replies, altho reading them from the printed manual, he seemed never to lower his eyes, and his face was grave and, Miss Mildred said to herself, unusually pale:

The Bishop: Brother, forasmuch as the Holy Scriptures command that we should not be hasty in laying on hands, and admitting any person to government in the Church of Christ, which He hath purchased with no less price than the shedding of His own blood; before you are admitted to this administration you will, in the fear of God, give answer to the questions which I now propound:

Are you persuaded that you are truly called to this ministration, according to the will of our Lord Jesus Christ?

Answer: I am so persuaded.

The Bishop: Are you persuaded that the Holy Scriptures contain sufficiently all doctrine required of necessity for eternal salva-

tion, through faith in Jesus Christ? And are you determined, out of the same Holy Scriptures, to instruct the people committed to your charge, and to teach or maintain nothing as required of necessity to eternal salvation but that which you shall be persuaded may be concluded and proved by the same?

Answer: I am so persuaded and determined, by God's grace.

The Bishop: Will you then faithfully exercise yourself in the same Holy Scriptures, and call upon God by prayer for the true understanding of the same, so that you may be able by them to teach and exhort with wholesome doctrine, and to withstand and convince the gainsayers.

Answer: I will do so, by the help of God.

The Bishop: Are you ready with faithful diligence to banish and drive away all erroneous and strange doctrines contrary to God's word, and both privately and openly to call upon and encourage others to do the same?

Answer: I am ready, the Lord being my helper.

The Bishop: Will you deny all ungodliness and worldly lust, and live soberly, righteously, and godly, in this present world, that you may show yourself in all things an example of good works unto others, that the adversary may be ashamed, having nothing to say against you?

Answer: I will do so, the Lord being my helper.

The Bishop: Will you maintain and set forward, as much as shall lie in you, quietness, love and peace among all men; and such as shall be unquiet, disobedient and criminal correct and punish, according to such authority as you have by God's word, and as shall be committed unto you?

Answer: I will do so, by the help of God.

The Bishop: Will you be faithful in ordaining, or laying hands upon and sending others, and in all the other duties of your office?

Answer: I will so be, by the help of God.

The Bishop: Will you show yourself gentle and be merciful, for Christ's sake, to poor and needy people, and to all strangers destitute of help?

Answer: I will so show myself, by God's help.

The venerable bishop closed the manual, and then to the astonishment of the great assembly he did a thing unprecedented in the history of a bishop's consecration. He proceeded to address the new bishop in his own words not outlined in the manual:

"Brother Fredrick Stanton, I feel it to be a part of my duty to-day to add somewhat of counsel to the words of the charge I have in the name of the church just given to you. There is abroad to-

day in the world a new spirit of so-called religious teaching which is subversive of doctrine, and especially dangerous to the Established Church. I refer to the rapidly growing heresy of Christian Socialism, so-called. I especially refer to that most dangerous and pernicious volume published in the guise of fiction, *The Christian Socialist*. Its teachings are a grave and growing menace to wealth and social distinctions, and if carried out they will place the Church in a precarious position and render it necessary for her to abandon the established order of her system of instruction. As your elder in the Church I feel moved to deliver to you, my brother, my earnest charge that as you have thus far in your pulpit ministration commended yourself to the Church as a wise and conservative leader in matters pertaining to doctrine and the social order, you will now with the added influence and power which have come to you with this high office raise your voice and wield your pen in defense of the truths handed down from our fathers, and combat with all your intellect and soul the heresy of this dangerous social movement, and in particular the heresy of this popular volume which has taken such strange and fatal hold upon the imagination of the common people, and in some cases upon the better informed and favored classes within the Church itself. If it were not to appear presumptuous, even in one who is your elder by many years, I would dare to suggest that it may be possible, with your gifts of mind and imagination, you might be led to combat this most dangerous book of the present age with a volume which you might be led to construct. However that may be, I solemnly charge you, to the utmost of your ability, to combat in public and private the growing heresy of Christian Socialism. Do you promise by the grace of God?"

During this impromptu address Mrs. Rodney sat a breathless listener, together with all others in that great concourse. At first she had felt like strongly disapproving such a departure from the established order of the manual. But after the first two sentences she leaned forward with a smile of hearty approval on her determined face. The Judge looked pleased. Miss Mildred never

withdrew her look from the new bishop's countenance.

"He is going to faint," she said, in a half-whisper, as the words of the venerable bishop were followed by a silence of such duration that Miss Mildred Rodney feared her mother would be sharply conscious of a rapid heart beat close beside her.

Slowly the very Reverend Fredrick Stanton, D.D., newly elected and now to be consecrated bishop, turned a little toward the congregation.

"I have a statement to make," he said, in a tone so low that the people in the back part of the church asked what he said. But as he turned again and faced his venerable colleague his voice rose in power until it filled with carrying force the farthest corners of the large room.

"My first statement is this: For twenty-five years I have been a coward in the pulpit. My second is this: I am the author of *The Christian Socialist*, and its teachings are my heart beliefs."

All over the Church of St. Cecilia a gasp of astonishment arose. Mrs. Rodney looked puzzled. "What! what!" she exclaimed out loud. Then bewildered she turned to the Judge and Miss Mildred in turn: "What did he say?" she exclaimed in a whisper to the Judge. Judge Rodney did not reply, but continued to listen grimly as Stanton went on:

"For twenty-five years, Brother Lee and brethren, I have been preaching half a gospel, hiding in my own heart that which was the vital truth to me. I was born into the established order of a wealthy, favored class of social prominence. I entered the pulpit with this inherited, inborn and educated habit of mind. As the years of my ministry have gone on I have been irresistibly led, however, to believe that the gospel fully understood demands a new and different order of social life from that which the Church has all these years been teaching. Ten years ago this conviction had grown so strong in me that I was impelled to write the story called *The Christian Socialist*, and I repeat it, that book contains my heart beliefs, the vital gospel truths which I ought to have preached from the pulpit, but which I did not preach because of my cowardice. I

knew the Church would reject me and my teachings. I was, I confess it freely, too much in love with the social position I held in St. Cecilia to be willing to exchange it for the ostracism and the misunderstanding I shall henceforth know. But, Brother Lee, brethren, friends all, do not have any compassion or even contempt for me. To-day for the first time I speak as a free man. The teachings in the book, I most firmly believe, are gospel truths. I am not and could not be an enemy of human advancement. I love the Church, even tho I anticipate its necessary action in my own case. To relieve her of any possible embarrassment I here and now resign my position as one of her ministers. I lay down this high office just conferred. I step voluntarily into the ranks of the people, and if at any time I am called to assume the sacred office of a minister of Christ and give my message through the pulpit, I will gladly do so if I am called to God and my brethren. Meanwhile I shall privately and publicly espouse the cause as I have declared it in my own book, for it contains my very life. We have already entered upon a history of the race which nothing can set back. The social movement cannot be stopped. The Church is powerless, society is powerless to stay this last unfolding of the teachings of the Golden Rule and the Sermon on the Mount."

He gravely and with great dignity bowed to the bishop, to the assembled clergy on the platform, and then to the congregation, and, turning, he walked with head erect from the platform and into the pastor's room at the side. As the door closed a wave of astonished whispering swept over the assembly. Bishop Lee, after a moment of stunned embarrassment, turned to the congregation:

"This service is over," he said, briefly, and turned to his brethren on the platform. Judge Rodney and his wife and daughter rose, and were among the first to pass out in stern and astonished silence.

That evening the Reverend Fredrick Stanton made his last parish call as the pastor of St. Cecilia. Throughout that afternoon he had been holding conference with several of his brethren in the ministry. There was nothing, however, for him to do but what was inevitable.

His brethren conceded that, after a fruitless conference, and finally withdrew.

When the servant took in the Reverend Fredrick Stanton's card to Mrs. Rodney she turned red, then pale, and handed the card to the Judge.

"Tell him we are not at home," she said, sharply. The Judge turned a little uneasily in his chair but said nothing.

The servant went out. Presently he came back, and said apologetically: "Dr. Stanton wishes to see *Miss* Rodney."

Miss Mildred sat still, and her mother eyed her sternly.

"Tell *Mr.* Stanton Miss Mildred is not at home."

Miss Mildred rose and faced her mother.

"I am going down to see him," she said.

The Judge shrugged his shoulders. Mrs. Rodney struck the table with her jeweled fingers.

"I forbid it! You shall not see that man."

"Nevertheless, mother, I am going, for—for—I——"

"If you disobey me you know what——" Mrs. Rodney did not finish. Miss Mildred said simply, "If he asks me to marry him, I shall become his wife. Father——" she suddenly turned and kneeled by the Judge. "I love him!" She hid her face on his breast as she used to do when a child, and the Judge kissed her, but did not say anything. Suddenly the proud Mildred rose, and walked out of the room before her mother could utter another word.

In the drawing-room the Reverend Fredrick Stanton turned to face a self-possessed woman who asked him to be seated as if, forsooth, he were some indifferent caller.

"I have come," he said, abruptly, "to say good-by. Of course, I am aware that what has been done to-day finishes my life here, but it cannot finish my memories of life, and——"

"What are you planning to do, Dr. Stanton, if I may ask?"

"I do not yet know. The platform is free to me. Out in the world the people whom I have loved are calling me with their myriad voices of appeal. But all this is of no interest to you. Will you allow me to say, however, since it will

not harm you, I have loved you these years of my cowardice, and I know it has been a noble thing, for it has ennobled me. In parting with you I leave the best I have known."

Then Miss Mildred said something that astonished Mark Burns.

"Did you not say once, Dr. Stanton, that I was like the character of Janet Arnold in *The Christian Socialist*?"

"I did. You sat for that portrait; it was my joy to have your presence with me while writing the story."

"Then do you still think—I would do as Janet Arnold did and forgive and forget—her lover's cowardice 'on account of——"

The minister had risen and come over to where Miss Mildred was sitting.

"Because she *loved* him so? Oh, Mildred—do you mean—you love——"

"I will do as Janet Arnold did, if there is a place in your Christian Socialism for me."

"The first place of all," said the Reverend Fredrick Stanton, as he kneeled and laid his proud head upon her lap.

"No," she said, after a moment, while the happy tears fell over her face; "no, you should not kneel to me. I believe in you wholly. I believe in your heart beliefs. I have grown to believe since I read your book, 'Mark Burns.'"

"Did you suspect the authorship?" he asked a few moments later.

"I knew it all along," she said, laughingly.

"I was the only person in the parish of St. Cecilia that knew. Have I not kept your secret well? I wanted to be a coward with you."

"But now?" he asked, a little troubled, as he gazed into the clear, gray eyes, "now, can you follow me in the stormy life that is inevitable? Can you leave all this—cast in your lot with mine, with the people, and enter the new world we may help to make as my wife, as my companion, my very self?"

She raised her face to his, and let him kiss her for the first time. "Yea," she answered. "'Whither thou goest I will go; and where thou lodgest I will lodge; thy people shall be my people and thy God my God; where thou diest will I die, and there will I be buried; the Lord do so to me and more also if aught but death part thee and me.'"

"But you have sacrificed much," she added.

"Nay, my beloved," he answered, with a glorified smile. "I have gained far more than a bishopric, since I have both thee and a free conscience with which to face the wide world."

TOPEKA, KANSAS.

The Yacht Race

By Sydney Reid

IN spite of wind and water apparently made to suite the peculiar taste of Shamrock III and her gallant owner, Sir Thomas Lipton, the challenger has again been substantially defeated in the International Yacht Race, and the America's Cup seems to be fixed here as firmly as ever.

Sir Thomas and his hosts of friends left nothing undone in their efforts to win success. In addition to securing the best boat, sails and sailors that Europe can produce, they used all sorts of charms, Irish, English, South African,

Hindu and Chinese, and one English lady of title wielded as her talisman the left hind foot of a graveyard rabbit, which was very unfair, as that charm is distinctively Afro-American and should never have been used against the Reliance.

However, it is quite probable that the partisans of Reliance had charms and talismans still more powerful than their opponents. At any rate they won, not by a large margin it is true, but by enough to demonstrate a real superiority.

The first trial of their speed proved

no race on account of a light wind, but Reliance at the conclusion was two miles ahead.

The second trial and the first race took place on August 22d, in the presence of an enormous floating city composed of all sorts of craft, steaming, sailing and even rowing, assembled at Sandy Hook and kept in excellent order by revenue cutters. The result was that the Reliance

beat the Shamrock by more than seven minutes over and above her time allowance.

In the next race Reliance, as always, got first across the starting line and slowly but steadily drew away, beating the Shamrock's time over the course by 3 minutes and 16 seconds. Having to give the Shamrock 1 minute and 57 seconds handicap, the real extent of Re-

liance's victory was only 1 minute and 19 seconds. The fourth race was a repetition of the first, as the wind did not allow either boat to cross the line in five and a half hours, but in the slow wind the Reliance showed even more superiority than in the first trial. A sixth trial on Saturday is practically sure to end the contest.

The closeness of the race and the swiftness of the beautiful boats have made the spectacle well worth the trip to sea; and even to the last Shamrock partisans had high hopes of winning.

It is quite possible that Sir Thomas will come with a Shamrock IV, which would indeed be a formidable competitor, as the four-leaved Shamrock is supposed to be invincible.

Each year the yachts have grown speedier, the American keeping only a little in advance of her British sister—superior enough to be convincing, while close enough to tantalize. The limit of this progress has not yet been indicated, and if Sir Thomas will come here in 1905 with the British yacht that properly belongs to 1907 he may catch us napping and take the cup home with him, in which case the popular voice would pro-

claim that next to our own we would most rejoice in a victory for Sir Thomas.

At present our victory is somewhat

The America Cup

embittered by the fact that it has been necessary for Sir Thomas to lose.

If he can arrange to win without defeating us all parties will be pleased, and

considering that Sir Thomas is Irish there seems to be no good reason why this should not be done.

NEW YORK CITY

Heroes and Heroines in Recent Fiction

By Mrs. L. H. Harris

AS the definition of heroism varies from age to age, so do the lives and characters of the heroes themselves vary. In the old days they were men who contended with the gods. Even in the middle centuries of the Christian era their vows and deeds had not been reduced to prose. But when they lost step with Homer's measure and came down to mere ballads of bravery, their glories were doomed to fall altogether short of rhythm, and they were destined to live within the limitations of common facts and possibilities—a hard fate for men whose original vocation had been to fill the rôles of demigods. But this accounts for the fact that the heroes we meet in fiction nowadays are not what they once were. They are more like us and less like the gods. They appeal to our wit and experience more than they do to our imagination. In fact, it is even a question whether the hero will not eventually become an obsolete character in literature. For, as we are more convincingly identified mentally with the reality of some things and the unreality of others, we acquire a rationalism that is intolerant of the incredible and the abnormal both in life and art. There will be no place in the order of things for such exaggerated types, and fiction, so far from being the expression of romantic ideals, will become a literary formula of human analysis, text books of mind and nature in which that ecstatic phenomenon, known poetically as love, will be treated of sanely rather than dramatically as the "procreating instinct."

However, we have not yet progressed so far in the philosophy of materialism, and we are still interested in the small heroics of the fellows in fiction who do the best they can according to their re-

duced stature and in spite of the fact that environment is more or less against the superhuman in them. Only one instance is recorded so far in the late novels of a young scientist—in "The Kempton-Wace Letters"—who proposes marriage upon purely intellectual and natural grounds without confessing the archaic madness of love. But the lady in the case knows nothing of biology, and is disposed to regard her tender emotions as sacred. She therefore refuses to sacrifice her romantic self-respect to his experiment in natural virtue and race economy. And served him right! For if they had married and "lived happy ever after," their content would not only have rebuked the discord in many marriages that were consummated upon higher ideals of domestic felicity, but it would have stultified all romanticists and made a spring-time fallacy of love.

The historical novelists have taken a shrewd advantage of the situation. Since so little margin is left in modern life for the display of reckless valor and poetic sentiment these writers find their heroes ready made, stalking threateningly through a remote past when desperate living and still more desperate loving were the order of the day. And recently two admirable characters have been presented by these romantic conjurers of history. King Canute, in "The Ward of King Canute," gives a vivid impression of ancient kingship in his rude camp court on the forest island of the Angles, surrounded by soldiers, robber barons and gluttons. A royal savage, he begins to know the inconvenience of obligations imposed even upon a king by a sense of justice. Almost he feels the constraint of far off civilization, the bondage of constitutional monarchy, and fiercely re-

sents both, even while he conforms to ideals that eventually bring them about. But no such forebodings troubled the mind of that slim young Duke in Mr. Isham's novel, "Under the Rose," when he came a few centuries later to the palace of Francis I, disguised as a jester, to learn something of his future bride. The world had passed from savage warfare by that time into a confusion of romance and religion. And the Duke was simply a lover who had a sword and a spirit equal to any situation in that court of gay intrigues.

The difficulty about these historical heroes is that they are never quite real to us because there is nothing in the present time to remind us of them. They are only bravely painted, like the portraits of ancient warriors that stare down upon us a hundred years or so without convincing us that they ever lived and loved, or fought and died. They are that part of human nature which time has rendered dust and obsolete, and nothing can revive them in consciousness.

But when it comes to novels of modern life, to think of the heroes and heroines is like recalling faces in a crowd. They are contemporary with us, a part of the herd environment of the race. They enlarge our acquaintance with the world and even threaten to interpret the future. Occasionally we recall one of them so vividly that we do not remember just where we met him, whether in a book or out of it, hand to hand. But there he is, sometimes sweating over the huge yellow belly of a Western prairie, or, may be, driving in Central Park; and I recall one grimy Vulcan who stands somewhere in the red glow of a forge. Even the beggar, the tramp and the thief have been added recently to the list of our more 'spectable literary acquaintances through their "autobiographies." And the bravest hero in this year's fiction is the red bird lover in "The Song of the Cardinal." Perched among the antler branches of an old sumac bush, he sings and flirts himself into an ecstasy of passion. And when no mate responds to his universal vows of love, he makes a regular Knight Templar's expedition into Rainbow Hollow, kisses every red-bird lady he finds, irrespective of her lord's indignation, and finally returns home, followed at a dis-

creet distance by a demure little hen-bird.

In this country the motive of a novel and the character of the hero generally depends upon the section represented. Thus, the ambition of most Southern writers is to maintain a defunct ideal of aristocracy and to preserve in the hero the mind, manners and spirit of an antebellum past. So it happens that "Gabriel Tolliver," "A Gentleman of the South," and "Gordon Keith," three of the latest heroes in fiction from this section, are all products of the old South. And I do not know a single exception to this rule, unless it is George Buckley in "The Substitute." Born in a cabin between moonshiners' stills in the mountains of North Georgia, without a single aristocrat to forefather him, this young man never rises so high in the aurora borealis of the social world as to get beyond the homely shadow of his mother's old sun-bonnet. And, for one, I consider him a more interesting character than many of the strutting dandies who figure in Southern novels.

If the hero is from the North or East, however, he is apt to prove a prodigy in ethics and psychic sensations—not that he is at all religious. As a rule he has surrendered his definition of God to experiment with his own evolutionary notions of life and spirit. But what I mean is that the reader's interest in him usually depends not so much upon what he does as upon the moral and intellectual process by which he arrives at the point of action. And if Mr. William Dean Howells is the author of the book, the hero never does anything at all, beyond threatening us with the evidence of another universe, real but psychic. Indeed, when one of Mr. Howells's New York club men—Wanhope, for instance, in "Questionable Shapes"—begins to drink black coffee and to tell of his artist friend who heard his dead wife calling him, or of the one who saw Death, or of that other who had "an apparition" as nonchalantly as the average man would have a cocktail, we experience an uncanny fellowship with spooks that not all Mr. Howells's exposition upon the difference between subjective and objective influence can overcome. But this is about the best he can do in the hero business—to create a man who is amiable, intelligent, spiritu-

ally clairvoyant, and limited in personality by the artificial instincts of polite society, a sort of drawing-room thoroughbred, with a passive existence. I doubt if such a character would show off to an advantage, say in the midst of the huge realities of the West. Once, indeed, I remember that Mr. Howells did begin a story about a fine old fellow out there; but he brought him on to New York almost immediately, and soon after the poor man came down with a fit of hysterics. He was too nearly normal to know much about telepathic communication and subconscious sensations, and so was unable to bear the strain of Mr. Howells's psychic method.

It is a singular coincidence that the two most beautifully written books of the year in the matter of poetic imagery and almost metrical sentences should contain the two characters destined to live longest in memory. They are pathetic old men, who came far apart in history yet had much in common. Both were somewhat damaged by circumstances and by what one of them called "The Origin of Evil," but withal they were valorous souls, to be recalled gratefully as we recall the faces of friends who have taken occasion to counsel us wisely and tenderly. "Darrel of the Blessed Isles" is a sweet old evangelist who knows the world and his Shakespeare so well that he deals more with scripture life than with Bible texts. And Judge Morris, in Mr. Allen's "Mettle of the Pasture," is a man likely to be quoted oftener within the year on the laws and life of his generation than any living judge in this country.

Contrast with these men of rare inspiration two other characters contemporary with them. Both are fanatics, one religious, the other sacrilegious. Joel Rae, a Mormon mystic in Mr. Wilson's novel, "Lions of the Lord," is a fervid, heroic spirit, rendered vicious, inhuman and treacherous by his sincere devotion to a false creed. His miserable existence excites nothing but compassion. But how shall we describe that mosaic of conceit and villainy, Frank Gordon, in Mr. Dixon's novel, "The One Woman." A demigod demon, with that sensuous power of personality which pleases and sways the mob, he comes with a "message" to

a crowd who fail to comprehend the significance of the fact that he has no God. He is an idealist, without virtue, an orator without philosophy; a man with sympathy, tenderness and tears who has no conscience; true to his own riotous impulses and emotions rather than to the truth—a more sinister character can scarcely be imagined. The unconscious *diablerie* of it is positively fascinating.

The idea of discussing the men who appear in novels of Chicago life as heroes in fiction is manifestly absurd to any who read these books. The scenes are generally laid in a trolley car, a restaurant, or a flat; and human nature under such conditions becomes too vulgarly commonplace to be interesting or heroic. I never met but one man in a Chicago novel that I should care to know in real life, and he was an unsightly German in Mr. George Horton's book, "The Long Straight Road," who had somehow got a poetic perspective upon a certain suburban district of that city.

But we must not forget the heroes in Western fiction. If one of certain writers I know should attempt to draw one of these copperheaded giants (they are nearly always blonds!) into his little sitting-room romance, his literary fate would not be unlike that of the man who hooked a fish so large that it drew him into the river and drowned him. The difference between these heroes and the ones found in the hand-made parts of this country is that nature has had something to do with shaping them. Her droughts, plagues and famines have forced them all into an Homeric attitude of resistance. And from Annixter in Frank Norris's book, "The Octopus," to John Saxon in Meredith Nicholson's new novel, "The Main Chance," they have all caught something of that inspiration which made demigods of the old Greek and Roman heroes. There is no end to their courage, because there is no end to the powers of earth and sky that threaten them. There is no limit to their imagination because the land rolls about them like a shoreless sea, and because silence ever calls to spirit. They have a frightful sense of humor, of disproportion, but they know little of mere mirth; and peace and happiness are not the things they strive for. They are too fiercely mascu-

line to be satisfied with anything so effeminate as felicity.

The hero antedates the heroine in life and in fiction. For a long time she was simply the reward for his vainglorious achievements, a sweet baggage that a knight might bear away across his saddle bow, so to speak. But by degrees she learned to outwit destiny and to do a few things for herself. Now no man would think of keeping her immured in his castle, lest she should have a little hairpin of dynamite concealed somewhere with which to wreck his estate; and in fiction she holds a position of almost equal importance with the hero. The only appreciable change in her personality during the last quarter of a century is an increase in her age limit and a decrease in her sense of marital proprieties. Both are bad signs, so far as they indicate that writers of fiction are discarding the idea of feminine innocence as being uninteresting to the average reader. But at least they prove an increase in the ability of literary artists to develop characters more illusive and difficult to portray than the simple, pretty young lady who once played automatically the part of heroine in nearly all the novels we read.

The peculiarity of the heroine in American fiction is that while she is often well groomed she rarely ever is well bred. There is a climatic as well as a spiritual difference between her vital, charming personality and the women we occasionally meet in novels of English life. She is a new oxygen compound of femininity, fresh, vigorous, magnetic, but she lacks the poise, that sense of totality which makes some women of the old countries in literature the most perfect and satisfying types of the "eternally feminine." It may be claimed that we do sometimes have such a dowager heroine in Southern fiction, but I doubt it. These Colonial dames have a too demonstrative way of indicating their cavalier prestige. They cannot move along the carpeted highways of the old Southern mansion in the story without hinting with their petticoat trains of a genealogical halo. Now the real distinction of the thoroughbred is not mental, but it is temperamental; so that some of the dullest people show the quality and have a unique perfection quite beyond the power of any smart American to acquire. The

only two women I know in recent fiction who suggest this completeness of personality are the elder Mrs. Norman, in "A Modern Obstacle," and Mrs. Meredith, the mother of Rowan, in Mr. Allen's new novel. The latter is the one woman in an American novel who bears a striking resemblance in nature and spirit to Lady Calmady, the lovely mother of "Sir Richard Calmady."

But with the exception of a few dialect stories, nearly all our novels are supplied with the well groomed woman, a lady whose mind generally has a financial basis upon which Cupid is obliged to stand if he stands at all in her regions. Illustrations of the type are to be found in "The Beautiful Mrs. Moulton," in the heroine of "The Spenders," and more recently in the character of Pauline in "The Modern Obstacle." All are capable, and none of them are commonplace, but they simply lack the instinct for the part they wish to play. They are not the *real* thing. With them refinement is not so much a matter of *being* as it is of externals, household decorations and clothes. No other women show such courage, taste and originality in the things they wear. (It is only when a Western novelist furnishes the heroine's toilet out of the abundance of his own red Indian imagination that she gives the impression of being a sort of cross between the bird of Paradise and a milkmaid!) But I doubt if any other women are so dependent upon the effect produced by clothes, if the truth were known. These are often the only mitigating circumstance in the conduct and point of view held by American women in fiction or out of it. The fact is, when a woman's figure proves her the mistress of the art of symmetry, and past mistress at reconciling a too vivid personality with the subduing harmony of clothes, she wins an appearance, and a sort of liberty of expression denied her less facile but better bred sisters. She has a genius for looking well, and a constitutional vivacity which Mr. Zangwill calls the "accent" of American beauty. And these constitute her national charm as a heroine in fiction.

Two types of women have been neglected by writers of fiction this year, the mothers of young children and the young widows of deceased husbands. No one

seems interested in the psychology of the child-bearing woman, altho it is dramatic enough to satisfy the demands of the sensationalist even. And apparently no one recognizes the peculiar fascinations of the pretty widow who wears her tribulations in the style of becoming weeds. This woman has had two natures already, maiden and married, respectively; she still has several minds, and an inscrutable disposition. Her charm would consist in the fact that she is never to be trusted. Thus she would give every man who bowed at her shrine the delightful sensation of gambling with destiny, an uncertainty that would insure to her many lovers, to say nothing of her other attractions. Yet I have not read a novel this year with such a character in it, while

most of them present the married coquette in nearly every phase of romantic impropriety. But why have the married coquette when the young widow possesses the same qualifications and is without the moral incumbrance of a husband? Is it because virtuous, loyal wives are supposed to be uninteresting? Possibly they are when they have nothing to recommend them but dog-like fidelity, as in the case of Ruth Gordon in "The One Woman." But the one-sided development of this character is the author's fault, and so does not fairly represent the dramatic possibilities of the type to which she belongs. In any case, a little more of the "mother, home and Heaven" ideas will not damage fiction in this country.

NASHVILLE, TENN.

Who Invented the Mariner's Compass?

By Park Benjamin

To the Editor of THE INDEPENDENT:

IN the article of the Chinese Minister in your issue of August 6th I find the following:

"With the mariner's compass, which they had devised, her sailors were exploring the waters of their outlying seas for cycles before those of other lands borrowed it from them."

Altho I have reviewed the Proceedings of the principal Asiatic societies, the available translations of the Shoo-King and other Chinese classics, the quite extended study of Klapproth into this subject, and all other sources to which I could get access, I have never been able to find any evidence in support of the foregoing assertion. That the Chinese—or, more properly, the tribes which, migrating eastward, drove out the aborigines—used the magnetic needle in front of their chariots to indicate direction and so to serve as a guide in traveling over the land, is supported by various legends, all more or less mixed with the supernatural and grotesque. This employment began before China even extended to the sea. It did not involve in any wise the discovery of the mariner's compass as a pathfinder on the ocean. Nor does it appear that the Chinese ever so used it until long after the Arabs did, and the latter

after the Northmen. In fact, the Chinese were river navigators, not blue water sailors, and river navigation never made a seaman and never will. They appear even to have remained in ignorance of the islands off their own coast until the Europeans found them—as the Dutch did Formosa.

Still there is a hazy tradition that ages ago the Chinese sailed across the Pacific to Mexico—even maintained regular communication with the American shores. Does His Excellency refer to this? If so, will he indicate where the proof is, or where any proof can be found in support of the actual invention of the mariner's compass by the Chinese?

Meanwhile, to make the issue plain, and so far as my own studies go, I should paraphrase his statement as follows:

"With the mariner's compass, which they had developed from the south pointing needle, which led their ancestors northward from the valley of the Oxus to the sounds of Finland, even as it led the invaders of China eastward to the fertile plains of Asia, the wonder-working Finns explored the northern waters and taught their discovery to all the Northmen long before the utterly uninventive Chinese ever dreamed of venturing out of sight of their own shores."

NEW YORK CITY.

LITERATURE

Mr. Dixon Once More

THE Caliban-Mob is a new element in American fiction. But it had to come. There is something in the ungarded liberty of this country which develops sensation and intelligence faster than it does virtue or character. And now we have at least one mob genius among us—a writer whose appeal is always to the herd instinct of his kind, an orator producing epigrammatic fiction about morals under conditions that render morals apocryphal or merely sentimental. In his new novel,* Mr. Dixon heralds *The One Woman* as the presiding genius of monogamous marriage; but he lays the scene of his story in the midst of a lawless-minded socialism that he has massed in New York. And he does this because the passions of the crowd are always the springboard of ideas with Mr. Dixon. He must feel in imagination the breath of ten thousand excited men against his face, sense the fury of their moral madness, before he is sufficiently charged with “the eloquence of emotional thinking” to write out any tragedy of life from the gallery god’s point of view. For that is what he really does, giving a touch of vulgarity and coarse emphasis to every situation so as to appeal to the vulgar and coarse-minded.

Frank Gordon, the hero, is introduced as the pastor of Pilgrim Church in New York—“a man of powerful physique, wide chest and broad shoulders, a tall athlete six feet four, of Viking mold, hair blond and waving, steel gray eyes, a strong aquiline nose, and frank, serious face”—a man of magnetism rather than of intelligence, a sentimentalist who interprets life and nature and God through his nerves; a man, in short, who had too much fellowship with his mob-congregation, and too little conscience or principles of his own apart from them. Properly speaking, he is an animal and not a moral being. The Gospel gets at him, therefore, through shallow humanitarianism, love reaches him not through

lawful wedlock but through the attractions of a beautiful, sensual woman, and when he sins flagrantly there is no evidence of repentance or a moral reaction. The author does not treat him as a sinner, the monstrous mob sees in him only the eloquent impersonation of their own passions, even his wife thinks of him tenderly as the romantic dupe of his senses.

Now socialism is that spiritualism of passion which is the logical madness of such temperaments. And Gordon becomes a Socialist in spite of the fact that his wife, “the one woman,” opposes him at every step with those instinctive defenses of the wife-woman when she feels her state in danger. Also, he persists against the advice of his bachelor friend, Overman, a huge, ugly, one-eyed materialist, whose occasional assaults upon the absurdity of Gordon’s position are the only intellectual features of the story. Meanwhile, the leading deacon in Pilgrim Church is more practical in his opposition, and shows a diabolical ingenuity in his efforts to balk the young enthusiast’s scheme for erecting a splendid “Temple of Humanity,” where he would preach the dogmas of socialism, of heroes and senses, in the name of “hope and freedom.” This deacon, Mr. Dixon intends, shall represent all the real and traditional meanness of the church member. But when we consider the sort of gospel wonder the old man had to deal with our sympathies go with him. A preacher whose avowed sensuality leads him unresisting into the arms of the first pretty female Socialist he converts to the creed is not exactly the man to inspire a wise confidence.

The sense of psychic proportions in such a character would naturally be marred by nerve exaggerations. All his mustard seed sensations grow into green bay tree emotions, social climaxes. Thus Gordon, caught in the current of his own passion, magnifies the immoral ripple of it into “the breath of the spirit that is driving this century before it”—namely, the spirit of socialism, and more particularly “free love.” It is the

* THE ONE WOMAN. By Thomas Dixon, Jr. New York: Doubleday, Page & Co. \$1.50.

eternal fallacy of a man who is true to his animal nature rather than the abstract truth.

"I admire your ingenuity," said Overman, when Gordon announced his determination to divorce Ruth and marry Kate in the name of "freedom and fellowship," with a view to starting a revolution that would "redeem society." "Just a plain rooster fighting sinner like me would never think of making his sin a holy religion." But when a man has nothing but his nerves to go by, he is not discriminating in spiritual values, therefore Gordon cannot detect the difference between blasphemy and righteousness. And it is not certain that the author can, for, referring to the occasion when Gordon determines to separate from Ruth, he writes: "The battle between flesh and spirit had ended." But when did

it take place? And what kind of "spirit" does Mr. Dixon mean? The only spirit Gordon had from first to last is the red blood spirit of the flesh. And he never once resisted it, nor even wished to resist, unless we except the one hysterical moment when his ambition had been gratified by a million dollar gift for his "Temple," and he falls upon his knees and thanks God (of all gods!). But to continue. Having wearied of Gordon's degenerate sentimentality, Kate boldly thrusts herself into the arms of Overman. And Overman takes a cynical advantage of his friend's gospel of "freedom and fellowship" to justify his course in receiving her.

The consequent battle in the darkened room between the two undecorated males is scarcely up to the mark after what we have been accustomed to, even in the

THOMAS DIXON, JR.

average historical novel, and, if truth must be told, bears a lurid resemblance to the gory combat of two cats. Curiously enough there are manifestly readers who take pleasure in such things as this, just as there are people who enjoy a rat-baiting. It is the same appeal to the crude savage within us, and on the same level emotionally:

"Over and over on the velvet carpet, dimly lighted now from the glowing coals, they rolled, growling, snarling, cursing in low, half-articulate gasps, thrusting the steel into flesh and bone, nerve and vein and artery. Gordon suddenly plunged his dagger with a crash in Overman's shoulder, snatched at it, and broke it smooth at the hilt. Throwing his opponent to one side by a quick movement, he sprang to his feet, and, as Overman rose, fastened his enormous hairy left hand on his throat and closed it with the clutch of a bear. His enemy writhed and plunged the steel twice

to the hilt in Gordon's breast before his big right hand found the knife and wrenched it from his grasp."

But what of "the one woman" during this whirlwind of freedom and passions that sweep away her peace and happiness? She is simply a poor little spook with stormy human eyes watching the performance. Mr. Dixon's purpose is to prove the necessity and wisdom of the monogamous marriage outside scriptural grounds, and to show that it is the *natural* marriage. This "one woman," the faithful wife who is to redeem the world, is attached to her husband by affection and sentiment only. Her dog-like fidelity to him under the most humiliating circumstances is a natural creature instinct, neither noble nor self-respecting. Such women may cherish the remains of a disrupted moral order in society, but they are by no means effective in preserving it. And they do not command respect so much as they excite compassion.

The flaw in the story is the author's failure to prove that the monogamous marriage is the marriage ordained by instinct, apart from scriptural or moral compulsion. All he proves is that a deserted wife may remain so infatuated with an unfaithful husband that she will risk a second matrimonial experiment with him. This is at least a doubtful tribute to the woman, and any one who knows the Frank Gordon type knows that she will have about as much influence over the inherent vice of such a man's character as music would have in reforming a maudlin drunkard.

The Lions of the Lord

A NOVEL which gives not only the history of a people, but such an interpretation as this book contains of their life and character, is something more than fiction. And in this story* Mr. Wilson dramatizes early Mormon civilization, so to speak. He begins with the saints' expulsion from Missouri, accompanies them through the wilderness and records the difficulties of their final settlement in Utah, thus proving that in less than fifty

years these people endured the suffering and martyrdoms of several medieval centuries. Yet, at bottom, the book is a relentless exposure of the ignorance, brutality, lust and deceit of practical Mormonism.

"Joel Rae," the sincere fanatic, and Brigham Young, that sagacious, deceitful, unscrupulous leader of men and maker of states, represent the two elements of Mormonism—one to scheme and dictate, the other to obey blindly, unquestioningly, with the ardor of fierce fanaticism. This blending of cunning and faith accounted for the wonderful vitality and endurance of the brotherhood. And the fact that the mass of the people at this crucial period in their history were grossly ignorant and superstitious made the imposition of a lying priesthood all the more credible. Many of them sincerely believed in the daily intervention of God in their affairs. They took themselves for saints as truly as ever the Jews believed themselves to be the chosen people. And not all the inconsistencies of their prophets, nor the diabolism and absurdity of their creed, could shake their faith in this conviction.

So much for the constructive effects of Mormonism upon the political character of these people—an effect admirably wrought out in the community life depicted in this book. But the interest of the story centers about the figure of Joel Rae. In the pure soul of this man the author proves the frightful consequences of a hideous faith. This man, profoundly susceptible to spiritual influences, was among the first generation to be born and brought up in the teaching of the Mormon Church. He lives, suffers and dies within the limits of this monstrous creed, which holds in solution the horrors of the Mountain Meadow massacre, blood atonement, polygamy, the absolution of a brutal priesthood and the poison of universal hatred against every man not a Mormon.

The tragedy consists of the fact that Joel Rae was essentially an honest man, who at last caught fairer visions of the truth that lay beyond the crimson shade of his own creed, but not before that creed had led him into crimes and cruelties that shocked his humanity. Mountain Meadow ghosts haunt him.

* THE LIONS OF THE LORD. By Harry Leon Wilson. Boston: Lothrop Publishing Co. \$1.50.

Terrors of death and darkness lay hold of him. And, conscious in spite of Mormon ethics that he has sinned, he tries to expiate his fault. But even his penance must be worked under the peculiar conditions imposed by his surroundings. Thus he denies himself, suffers, marries the ugly, cast off women,—a great soul degraded and rendered contemptible by the baseness of a faith imposed by false and unscrupulous "prophets."

On the whole, this is a unique contribution to historical fiction, and no stronger, more suggestive story dealing with the psychic effects of religious dogmas and doctrines has appeared in recent years.

Cypriote Antiquities

SEVERAL years have passed since the two first volumes of this work appeared. We may presume that the delay has been caused, in part at least, by the difficulty which General di Cesnola found in securing an assistant who could take the place of the lamented Dr. Isaac H. Hall. The present volume* has had the help of Dr. Charles R. Gillett, Librarian of Union Theological Seminary, whose studies in Egyptology have been of much advantage in this work.

This third volume, like the two that preceded it, consists of five separate parts, which really ought to be bound separately. Each part contains thirty large folio plates with the necessary letterpress. The volume describes the gold, silver, bronze and lead objects collected in Cyprus by General di Cesnola, a number of Egyptian terra cottas, the engraved scarabs, scaraboids, gems and seal cylinders, the glass vessels, and the inscriptions in Egyptian, Babylonian, Phœnician, Cypriote and Greek. With the two preceding volumes, which contain the statuary and pottery, it represents one of the most notable archeological collections ever made. Its equal, in this department, is not to be found in any European museum, and the Metropolitan Museum has done wisely in hav-

ing it thus sumptuously published. Too much cannot be said for the energy and enterprise that made the collection, while General di Cesnola was a United States Consul in Cyprus. The time which other men less well equipped would have given to pleasure he gave to opening the buried treasures of the island; and it was most fortunate that his treasures were purchased for the Metropolitan Museum as a first foundation for its collections, and that he should have been made its first Director. The wonderful growth of the Museum is a testimony equally to his ability and to the generosity of many princely friends who have been its trustees and benefactors. No American should visit the British Museum or the Louvre until he has first taken pains to visit our own principal Museum of Art.

The wealth of gold objects shown in this third volume is remarkable. First come the heavy gold armlets of Eteveander, King of Paphos, as learned from the Cypriote inscription; but unfortunately they were stolen, and are replaced by an exact copy made from a mold. There is a profusion of bracelets, earrings, chains and objects in gold, silver and agate. We must particularly mention the wonderful head of a scepter in agate and silver, of a form that has come down from the earliest times, when a club with a knob of bitumen was both the chief weapon and the badge of authority.

General di Cesnola's fine collection of Cypriote cylinder seals is included in this volume. A few of them are of foreign origin, or at least of foreign art, Egyptian, Babylonian or Hittite, but most are of the later Cypriote origin, and are not at all easy to explain, as the objects are figured in a way so conventional as to seem almost meaningless. Several have Cypriote inscriptions, and one, with a Babylonian inscription, states that the owner was a worshiper of the god Naram-Sin. Naram-Sin was a King of Babylonia who lived, on the authority of Nabonidos, about 3750 B. C., and his power extended to Cyprus, and he was early apotheosized. We must not, however, suppose this seal to have been made in his life-time, as it is evidently much later. M. de Morgan has lately found at Susa a splendid stele of Naram-Sin,

* A DESCRIPTIVE ATLAS OF THE CESNOLA COLLECTION OF CYPRIOTE ANTIQUITIES IN THE METROPOLITAN MUSEUM OF ART, NEW YORK. By Louis P. di Cesnola, LL.D., Director of the Museum. Vol. III. Folio, 150 plates, with letterpress. Published by the Metropolitan Museum of Art, New York.

in which the King is represented in a very heroic attitude trampling on his enemies.

Every visitor to the Metropolitan Museum is struck by the wonderful beauty of the iridescent glass objects which occupy one of the rooms. Of late a considerable business is carried on surreptitiously in excavating tombs in Syria, and the fine glass found is widely scattered among collections. But this collection from Cyprus will long be a most notable one, and very important for the study of this early art. We learn from it

for Greek than for legal practice, attacked the inscriptions then lately brought to the Museum, and translated such of them as were not too fragmentary. The Cypriote is a strange alphabet, in which a Greek dialect is written not in letters, but in syllables, perhaps derived from the earlier Hittite. One of these inscriptions contains four lines of a Greek hexameter which bids the King to remember that he can do nothing apart from the gods. It is very curious to see Greek poetry written in a Cypriote syllabary.

Upper Portion of Stele, with Two Winged Sphinxes. From Cesnola Collection

the use of the "whorls," which so long puzzled scholars, and which were stoppers placed over the mouth of unguent bottles. They are often pierced for the insertion of the glass rod which stirred the unguent and removed a drop of it.

For the scholar no portion will be more welcome than the collection of inscriptions. For the study of these we are indebted to the competent scholarship of Dr. Hall. No sooner had George Smith found the clue to the Cypriote syllables than Dr. Hall, then a young lawyer in New York, with a greater love

The Metropolitan Museum has provided a supply of hand-catalogs for its various departments, but here we have, in these fifteen parts, the beginning of that kind of a more ambitious series of atlases with plates, such as we have no doubt the Museum will supply for the use of the scholars of the world. We are not sorry that the beginning has been made in the department of archeology, and in that branch of it which first gave the Museum its distinction, and with which the name of its Director is so honorably identified.

Out of the Past

THERE is a peculiar kind of book which can scarcely be conceived to emanate from America and which may be described as *Anglican*, and in these two volumes of essays* by Sir Grant Duff we have a notable example of such writing both in its excellences and its defects. They contain the opinions on a variety of literary and biographical subjects written by a man who is saturated with that special form of worldly training which comes with public life in England, and hardly elsewhere, and with that fine flower of education which only the English universities know how to give. There is a tone of mellow ripeness about it all, a manner of testing everything by the kindly yet not unexact judgment of the wise man of the world which the word urbane conveys better perhaps than any other in the language.

More than once the author speaks critically, even harshly, of the old-fashioned training of the English schools, and complains that so much of his student time was wasted in Latin composition and on the Greek drama when he might have been employed in learning more profitable matters. Curiously enough the chief characteristic of his work is just that wide and philosophic acquaintance with men and affairs, even with sciences, which we rarely find in those whose early years were directed to such ends, and withal that mellowness of judgment which would seem to be not disconnected with his early industry in old-world ideas. His culture, while dealing directly and powerfully with the present, bears the same relation to the ordinary unrooted culture of the day as the manners of a gentleman conscious of his ancestors are supposed to bear to the unrelated manners of the man in the street. It is safe to say further that the style of the essays, the chastened yet ductile language, rarely if ever comes to any one who has not been drilled in just the studies which Sir Grant Duff deplores.

But we would not slur over the defects common to these essays with other books springing from the same *milieu*. It is

the weakness of a certain insularity which shows itself as soon as the writer leaves the track of worldly-wise experience and touches upon abstract ideas. That, too, is Anglicanism, as Matthew Arnold and others have not been slow to point out, and depends more perhaps upon a certain inherent trait of English character than on any result of individual training. As an example of this bluntness to ideas, apart from concerns of the world, may be mentioned such a comparison as the following:

"I could not find anything in Emerson's prose which I should even put alongside the 'Hyperion' of his friend and neighbor, Longfellow."

Such writing as this of Sir Grant Duff's is not precisely literature, but it has all the charm of conversation with a man who is of the world and who knows books, and who uses in his talk the quiet, refined language of gentlemen. It is a training in taste and judgment to read such essays, and a season of entertainment as well.

The Essays of Elia and The Last Essays of Elia. By Charles Lamb. Edited with a Memoir and Notes by William Macdonald. With illustrations by C. E. Brock. New York: E. P. Dutton & Co., \$1.50 net each.

We have here the first fruits of what is to be an elaborate edition of Lamb's Works in twelve volumes. Mr. Macdonald's plan is to include everything of Lamb's that is known, and to arrange this material in such a manner as will be at once reasonable and convenient. We have not in general much sympathy with the prevailing mania which seeks to justify a new edition of some author by the inclusion of a mass of ephemeral and worthless matter deliberately passed over by earlier editors. Such a process serves generally rather to obscure what is really deserving of preservation than to enhance the author's glory or the reader's profit. But in the case of Lamb the attempt to draw a line between what is ephemeral and what is permanently interesting becomes extremely difficult—if, indeed, the former class has any existence at all. Other reasons contribute to justify Mr. Macdonald's design of impartiality, and certainly his scheme of arrangement, as forecast in the present vol-

* OUT OF THE PAST. By the Right Hon. Sir Mountstuart E. Grant Duff. New York: E. P. Dutton & Co. Two volumes. \$5.00, net.

umes, promises to render his edition the most serviceable on the whole that has yet appeared. Of his two introductions much might be said. That to the first volume is a somewhat long-drawn-out examination of previous editions, in which the present editor takes occasion to scold unmercifully those who labored before him. The tirade would be in ill taste, if it were not written with a manifest intention (with what success is another matter) to be humorous. The introduction to the second volume gives a pretty satisfactory life of Lamb, with a few concluding pages of literary criticism which are decidedly the best of Mr. Macdonald's work so far. His attempt to show the predominant intellectual quality of Lamb's writing is well made. Something on the derivation of Lamb's style we miss, and it would have added greatly to the value of the pages. As for the notes (which, considering their aim, are rightly placed at the end of the vol-

ume), they give about as much as we need to know, tho they leave many allusions and quotations unexplained. They are, moreover, vivacious and add materially to the value of the edition. May the editor's work prosper and may he add to the number of devotees at the shrine of the gentle saint! We love to recall the verses of Lionel Johnson:

"*Saint Charles!* for *Thackeray* called thee so:
Saint, at whose name our fond hearts glow:
See now, this age of tedious wo,
That snaps and snarls!
Thine was a life of tragic shade;
A life, of care and sorrow made:
But nought could make thine heart afraid,
Gentle *Saint Charles!*"

A Parish of Two. By H. G. McVickar and Percy Collins. Boston: Lothrop Publishing Co.

THERE seems to be a reviving interest in the epistolary novel. Nor is this astonishing. Indeed for the treatment of cer-

tain subjects the novel in letters offers advantages so substantial as to make it rather a matter of wonder that the wideawake novelist should have neglected it so long. For the writer who wishes to escape from the tyranny of material circumstance into an atmosphere of emotions and ideas the epistolary novel provides a natural and ready opening. Its strength and weakness are well illustrated in "*Clarissa Harlowe*," which moves sightless and indifferent through the spectacle of the world, and with the exception of that "little valley between the hills" where ends the long drawn sequence of fate, has hardly another evocation of physical surroundings. But, on the contrary, if he is to ignore the topography of nature the novelist must have a soul in which to set his scene. His only excuse for leaving the world of facts lies, not in his inability to transfigure it, but in his ability to enter the world of philosophy and

Old Benchers of the Inner Temple
(Illustration by C. E. Brock for *Essays of Elia*.)

poetry. Facts may be commonplace, coarse and brutal; but a man's mind, as expressed in his correspondence, may be not only all this, but vulgar also—smart, and vulgar, and occasionally even nasty. Nor in the interests of the economy of space is it difficult to find from this volume of fictitious correspondence between a clergyman and a worldling a single quotation that will embody at once all three of these characteristics. For instance:

" . . . but your three most desirable attributes of women made me roar. Why, man, I expect to find them 'sober;' I should hate to

cessory, ardent lovers and frequent travelers of the country. But on this particular occasion they leave the beaten track for a side-tour, as it might be, through a series of little trodden by-paths, which include such outposts of civilization as Dombaas, Lesjevaerk, and Stueflaaten. Mr. Wood has already written several volumes of this sort and has developed a *procédé* of his own, until there is little in the present volume of the ordinary still life and landscape of the conventional travels. It is rather the animation than the panorama of travel which engages him—the exhilaration of

Stavanger Cathedral (From *Norwegian By-Ways*)

find them 'silent' and 'fertile.' That's as you like. My idea is beauty, tenderness, and sterility."

Underlying the whole conception of the book there is something like this—something raw, sore and itching.

Norwegian By-Ways. By Charles W. Wood
New York: The Macmillan Co., \$2.00.

This light and well made volume contains the "over simple tale," as the writer calls it, of a trip of his with a friend to Norway—"to Noroway o'er the faem." They are both, principal and ac-

spirits, the surprise of chance encounters, the vivacity of incidental conversation. Indeed, some of the dialog makes the best of the book, tho throughout the sense of shift and change is well rendered the ceaseless *Wirrwarr* which underlies all the other impressions of such a tour. To pick holes in a book from which one has had so much pleasure must needs seem an ungrateful sort of proceeding; but we will venture to suggest that if the author would but break himself of the habit of the "misrelated" participle, he would considerably improve his style for the future.

EDITORIALS

The Yacht Race

ONCE more the American yacht has been proved superior to the English, Mr. Herreshoff more skillful than Mr. Fife, Captain Barr a better sailor than Captain Wringe; and the cup won half a century ago, when the "America" was first and the rest "nowhere" remains our prize.

Victory is sweet to us, and defeat is bitter to Sir Thomas Lipton. To be sure, we have been generous victors and he has been a cheerful loser. He has three times spent his money most freely to win back the trophy, and we all admire him, and wish he had had a little streak of luck to salve his failure, and we hope that the profit of his teas will more than make up his financial expenditure. And yet, should he come again, another syndicate will try to gain another victory.

But why a syndicate? Simply because after the race is over nobody wants the yacht. It is of no use to anybody. We have yacht clubs in plenty, with hundreds of yachts, large and small, to indulge the favorite sport of millionaires. But not one of them would take and use the "Reliance" as a gift. She will be put out of commission, laid away and protected against rot and rust, her spars greased and wrapped up, her sails folded away in camphor and carbolic acid, and her body docked and covered, to wait the time when Sir Thomas or some other man of wealth shall believe he has a chance to gain what the present competitor has failed to secure.

For these yachts are not the kind that men sail in. They would not risk their lives in them. Think of that fin that runs straight down from the keel, loaded at the bottom with tons of lead, which grew out of the center-board of the earlier yachts. It will hold the boat stiff in a moderate wind, but who would dare to venture his life with it in a storm? And think of those tremendous spars of hollow steel, rising higher than a church-

steeple, and of the mighty spread of costly sail, all too fine for common use, and sure to swamp the boat in a sudden squall. And who that valued his life and that of his visitors and his crew would think of going to sea in a vessel too slim for cabins, and with no railing to save one who slipped on its polished deck? The man who takes his rest at sea must have a very different and far less anxious boat for the safe comfort of himself and his friends.

So these yachts have come to be nothing more than mere racing machines, good for nothing else. The greatest skill and the most intense thought have been devoted to their building, but it has taught little or nothing useful for naval construction. Sir Thomas Lipton is right when he says that while he hoped and expected to win the cup, he did not desire that such races be perpetuated. He would have had the conditions changed so that only serviceable boats should contend.

And this is what we would now have. This sort of competition has gone far enough. There is good will between winners and losers. Englishmen and Americans are the best of friends. Another trophy, for success in tennis, an Englishman carries back across the ocean, and we are not sorry, even if we are not glad; for a great victory on the sea is balanced by a small defeat on the land. Why may not our yachtsmen agree on some better conditions, which will allow sea-going boats to compete, and which will really be of use to stimulate the best devices for ship construction? We would not have Great Britain alone compete, nor would we have only our visitors put to the disadvantage of crossing the ocean. We would have our yachtsmen, in their turn, take the best sea-going boats that our Herreshoffs can make to international contests off Cowes or in the Baltic or the Mediterranean, and then we shall know whether the useful skill that built the "America" still holds its supremacy.

The Beirut Affair

It is unfortunate that a blunder in interpreting a cipher message should have led Minister Leishman to cable to our Department of State from Constantinople the report of the murder of Vice-Consul Magelssen at Beirût. Doubtless the President and Secretary Hay are much annoyed at the blunder which has precipitated their action. It is a kind of blunder that ought not to have been made.

But the fact that the shots missed their mark must not obscure the seriousness of the event. The American Vice-Consul, an American citizen, while riding in a carriage in the streets of Beirût, was shot at with the intention of killing him. We have no knowledge who did it, or why he was attacked. It was not from any general political unrest looking to revolution, as in Macedonia, for there is no thought of such a thing there. The large number of Americans in Beirût, particularly those connected with the Syrian Protestant College, are on the best of terms with the leading Mohammedans of the city, and they travel in the country with very little fear of danger. There is now in the College a larger number of Mohammedan boys than ever before.

As the murderous assault on Mr. Magelssen was not the result of any popular uprising, it must be credited to an individual assassin, acting either through personal revenge, or hired to do the deed by individuals who had conceived an enmity to him personally. It is likely that the attack was provoked by his faithful performance of his duty in protecting men of Syrian birth who had become American citizens and had returned to Syria to visit their relatives or for purposes of trade.

Our Ministers at the Porte are well aware of the exasperating difficulties connected with asserting and securing the rights of such American citizens who were born Turkish subjects. Thousands of Syrians from the neighborhood of Beirût and of Armenians from Asia Minor have become American citizens and are living in this country honorable lives, industrious and successful. Now and then they visit the land of their birth, to see beloved parents or to bring back wives and children. On landing in a

Turkish port they are often deprived of their American passports by the police, and arrears of many years' taxes are demanded of them. Often they are imprisoned or heavily fined and ordered to leave the country at once. In such cases our Consuls are instructed to protect any American citizen. Consul Ravndal and his brother-in-law, Vice-Consul Magelssen, have been most active in securing the rights of every Syrian who brought proofs of his citizenship. Some two years ago a Mohammedan from Tripoli, near Beirût, who had been about ten years in America, returned a well authenticated American citizen. He was not a man of a clean record before leaving Syria, and soon after returning he committed a crime in his old home. Dr. Ira Harris, United States Vice-Consul, arrested him, and after a protracted struggle with the local authorities sent him to Consul Ravndal in Beirût for trial. The Turks protested, insisting on their right to try him. The Consul telegraphed to Constantinople and carried his point, tried the man before an American jury and sentenced him to imprisonment. As there is no prison in Syria belonging to Americans, the Consul sent him, under the charge of Mr. Magelssen, to Smyrna, where there is a naval prison. Mr. Magelssen's part in the transaction, acting as police over a Moslem, made him especially obnoxious to Moslems and to Turkish officials. Frequent cases of defending Syro-Americans, in almost all of which Mr. Magelssen had been prominent, and in which he had been obliged to insist on American rights with great emphasis, may have rendered him personally obnoxious to certain persons who hired the assassins to do the deadly work.

It is notorious that a group of Moslem boatmen in Beirût commit crimes constantly and are seldom punished. In the vicinity of Mr. Magelssen's lonely house in Beirût there are Druze and Moslem desperadoes who waylay passers-by at night, so that the citizens dread to go out of their homes after dark. The city is lighted with gas, and an efficient police could easily keep it in order. But the present Vali of Beirût is notoriously corrupt, in league with robbers and murderers, taking bribes from them and letting them go unpunished. Both the Vali and

the Chief of Police ought to be dismissed. If they remain there will be no security. They probably know who made the attack, but will not punish the guilty man unless compelled to do so. Damascus, with 250,000 inhabitants, twice the population of Beirût, is well governed under Nazim Pasha, an efficient and impartial ruler, who treats Moslems and Christians alike; but in Beirût no Moslem can be punished for killing a Christian dog.

We are glad that President Roosevelt has ordered a naval demonstration at Beirût to support the demand for redress. A mere apology is not enough. The miscreant and his backers should be discovered and punished, and the Vali and Chief of Police removed if, as is probably the case, the attack was due to resentment at the performance of his official duty by the American Vice-Consul. We must protect American citizens not in Beirût only, but also in Harpût, where dangerous conditions are reported, and throughout all the dominion of His Unutterableness.

Literary Perversities of Modern Novelists

THE average novelist does not know enough of his own limitations. He mistakes courage for genius, and defies God and nature in the literary license he takes with the affairs of this world. He refuses to see things as an artist, but he comes to his task with a theory and he makes the whole of life conform to it. To begin with, this involves logical conclusions that are more or less exaggerated. In real life we do tend toward good or evil, but we do not progress in either direction so far as these writers of fiction imply. We are restricted in our morals and immoralities by laws and customs and by the common lead of society about us. Thus the murderer is not really the exponent of human hatred. He is simply the literary expression of it in romance where the author hurries us on with dramatic fervor to the superlative degree of vindictive emotion. But it is one thing to make a man monstrous with perversities and quite another, greater achievement to show the effects of a vice normally as it blends with the currents of life about it.

Nor does the undertaking belong any more to the essayists who explain psychic phenomena than it does to the novelists whose characters are supposed to illustrate the same. The difficulty with the latter is that their dramatic instincts are more highly developed than their sense of proportion. They do not convince of anything, they simply agitate us with bloodstains, impossible situations and startling results. This is not literature. It is sensationalism reduced to a literary formula.

To see things in their true relation is intelligence, to be able to depict them so is art. This is why novels dealing with plague spots in society never are the best forms of fiction. Writers of this class have their minds focused upon excesses and abominations, things exceptional to the common order, and so developed as to sustain no true relation to the whole of society as it really exists.

That such novels do good is beyond question, even when, as Maurice Thompson once complained, the "moral purpose" sticks out "like the sting of a wasp." "Little Dorrit" hastened prison reform in England, and "Uncle Tom's Cabin" is said to have been instrumental in bringing on the Civil War that freed the slaves in the Southern States. But in its last analysis, this kind of fiction is not so much a permanent part of literature as it is a dramatic demonstration of the abuses and needs of society during the period represented. It is a morbid product brought on by the fever of the times. And at the present day, aside from their literary inconsistency, such novels are not nearly so interesting or so effective as they once were—partly because we have outgrown the merely sentimental call to duty, and partly because we no longer trust the sincerity of writers who play too much to the gallery of our human sympathies.

But not only is the modern novelist disposed to select extreme situations where there is some moral sickness, or where social disorder or political congestion renders conditions abnormal, but he shows a preference for artificially developed types. If not the more vulgarly vicious, it is the elegantly sensuous man and the exquisitely pagan woman who figure most frequently as the leading characters in his books. And when we

meet one of these calmly poised scamps wandering about in the ball room of the numerous society novels, we generally understand that he has a satyr hoof, concealed somewhere, and that often his lovely companion is only a poetic variation of the well-known scarlet woman.

Now Millet painted the French peasants in the Barbizon Forest rather than the lords and ladies of Paris because he had a sense of color that conformed to truth. He summed up earth and nature and God in scenes that were hymnal in their simplicity. Just so, the legitimate business of the literary artist is to select a credible situation, and to depict the individual in it who is typical of his kind. And the best setting for such characters is the original one of woods and fields. These are the only really native environment of mankind. Meanwhile, we have had enough of the "people of the whirlpool," as some one has aptly called society folk. Why should these gaslight parodies on human nature figure so prominently in fiction? They have no reasonable existence, and they are "out of drawing" because they have lost their true direction. They are not types so much as they are idiosyncrasies incident to the real development of the race.

But to abandon these exceptional characters and extraordinary situations brings our novelist face to face with that which appeals least to his charlatan imagination—the average life, the commonplace. He cannot accept this supreme challenge of literary art because he is not able to conceive of things as they are, but only according to his dramatic theory of how they should be. His conditions are false, and his characters are posters that flare out upon the billboards of literature, highly colored prevarications of the human nature they are supposed to represent.

The truth is, we are still in the garulous, sensational stage of fiction as an art. And our novelists are mere tattlers dealing with the two extremes of human nature, those above or below the average of their kind. The normal middle class, in whom alone exists a balance of power between good and evil, furnish them less material than any other class. They fail to note that the great tragedies of life are enacted by these people, because they

are more nearly capable than any other of making an even fight between the gods and demons of their nature. They do not spiritualize vice and then embrace it as do the sensuous pagan classes; nor do they conform to it with the unimaginative brutality of the desperately depraved who hide in the back alleys and under the doorsteps in nearly all our novels. But the middle classes have a rectitude of intelligence, a capacity for long endurance, and a natural courage that wins or loses the fight without noise or demonstration. Ethically, they do not acknowledge the tragedy of defeat because they can only comprehend that ultimate victory is a moral obligation. They incarnate the stern stuff out of which scriptures are made, and poetically they are related both to the earth and to the stars because they are separated spiritually from these by so little that is false or artificial. They do not know so much, but they feel more that is right than any other people in this world. And they are not only the best, they are the most typical of the race at the apex of its virtues.

Yet they attract little attention in life or art. They are so lasting, so really a part of the natural order, that we take them for granted. But when fiction ceases to be merely fanciful, a vehicle for conveying cunningly devised feats of the literary imagination, and becomes the sincere art of illustrating life, these people will have a part to play that will not be lacking in heroic action. They figure so little now because the writers of fiction are not masters of the wisdom of life. They are primary interpreters who show only the prominent, bizarre features of existence.

The Church in the Market Place

THOSE who know of European cathedrals by the pictures and descriptions alone usually imagine them as set on hill-tops, with spacious grounds and terraced approaches, and they are disappointed to find them in many cases down in the common market place, huddled by shops and disreputable looking buildings, and surrounded by peasants with baskets of eggs, fowls and vegetables. This disappointment is at first generally expressed by

disapproval, but afterward there comes the question of whether the preconceived ideal or the actual condition is the better. Is the proper site for a temple - the Acropolis or the Forum? Is religion the most efficient and beneficent when isolated in imposing grandeur or when in the midst of business, political and social life? If the latter, it inevitably becomes vulgarized through familiarity and defiled with daily dirt; if it is on the hill-top, it is highly esteemed but rarely visited, for people have not often the time, strength or disposition to climb high, physically or morally.

It cannot be imagined that the market women shut out the world the instant they pass under the carved arch and slam the heavy leathern door behind them. The church is manifestly more a place of casual rest and refuge than a sanctuary to them, and they show little fear of profaning it by thought or action. They mingle their business and their religion, muttering prayers between sales, and make bargains with the saints in very much the same spirit they make bargains with their customers.

To those who have succeeded in confining their religion to certain sacred days and in certain sacred places this mixing of the divine and human is very offensive. They can easily show that it is sacrilegious and injurious to the feelings of awe and reverence which are so important a factor in religion. In *genre* stories of all countries, whether of New England deacons or darky preachers, this incongruity between sacred words and secular actions forms a staple subject of humor, and reformers of all ages have found their theme in the contrast between the meek and lowly spirit of the Master and the pride and intolerance of some of his professed followers.

The fact must be met that, however centralized the control and uniform the creed and ritual, religion in so far as it becomes a vital part of the individual will be individualized, and the more deeply it is felt and the more sincerely it is expressed the greater will be the variety of its forms. Religion in the mind of a vulgar person becomes vulgarized; the religion of a mystic is mystical. A religion which reaches all the people will assume many perverted and grotesque forms.

We cannot altogether prevent this divergence if we try, for even where the same form of service is used the creed and the ritual do not mean exactly the same to any two individuals. The materialist and the sentimentalist may say the same thing, but they do not think the same thing. If the particular modification demanded by any social group is not provided officially by the Church, they will develop a sect or sub-sect of their own; so we find segregated, more or less definitely, in certain localities or denominations, those to whom philanthropy, faith-healing, asceticism, ritualism, holiness, fashion or intellectualism are important factors in their personal religion, while ethical standards vary so much that what is regarded as meritorious in one Church is considered sinful in another.

There are Churches which expel their members who indulge in amusements, harmless in themselves, but which are liable to lead to injurious habits; there have been instances where Churches kept on their rolls of membership men who were serving terms in the penitentiary under conviction of crime. Should a Church include only the minority whose morals are higher than the average, or should it be so wide and so low as to embrace all who have any pretensions to decency? It is easy to see advantages on both sides. The smaller and purer Church will embody and espouse a higher ideal in the community and keep its members on a higher moral plane than could be reached by them individually, while the Church which does not attempt to separate the wheat from the tares will influence more people but less intensely. It may modify more sinners, but it will make fewer saints. The question is like the conflict between the advocates of intensive and extensive cultivation of the soil.

Fortunately it is not necessary to choose between these two divergent and somewhat antagonistic aims. In all lands practically the same *modus vivendi* has been reached, and different types of religion are provided for different persons, suited to their kind of culture and the degree of their moral development. The two great branches of the Christian Church have solved the problem in much the same way; the Catholic with nominal unity but with real and often very fierce

internal antagonisms; the Protestant with independent Churches often in conflict but really with much community of interest and sentiment. In both the varieties of individual religion range from crude emotionalism and fetishism to cold intellectualism and liberal scholarship with all kinds of ethical codes. The practical necessity for providing for an almost infinite diversity of religious needs should be clearly recognized by those who are working for Church unity. They should aim to secure harmony, not uniformity, among the Churches; not to bring their differences into agreement, but to get them to agree to differ. There must be some religion attainable for the weakest spiritual natures, just as a gymnasium provides one pound dumbbells for those who cannot lift ten. Religion is a ladder from earth to heaven, but a ladder is of no value unless it comes near enough to the ground to be within the reach of men.

Very curiously, there are persons who do not understand this need for diversity in religion and reproach the Church for permitting the name of Christianity to cover those who have so little of its spirit. To take a single example, several popular novels have had for their theme the Church as a stepping-stone to society, and have shown how social *parvenus* may make use of it to force an entrance into exclusive circles, and a certain class of newspapers use this for denouncing the Church. Now it is, of course, very bad to join a Church with no higher motive than social advancement and to utilize its machinery for that or any other selfish purpose; but why it should be considered disgraceful to the Church that it can be used in that way is not clear. On the contrary, it shows that even the most narrow and worldly Churches are not merely "social clubs," as they are so often called, but that they are the least exclusive of all the institutions of that part of society. The spirit of Christianity is hostile to all forms of caste and exclusiveness, and it is a proof that it is even here exerting its rightful influence for good, if the members of the fashionable set are willing to meet in their religious and philanthropic work on terms of equality with those whom they treat in all other relations of life as a lower

caste, sprung from the feet of Brahma. It shows that God has not left himself without a witness even among the gentiles.

Mr. Shepard's Bid for the Presidential Nomination

WHEN the New York *Evening Post* wrote two months ago to a dozen leading Democrats of the country asking them what they thought about the schemes by which negroes in the South are excluded from the right to vote, it got nothing in reply from most of them, but from one it got more than it expected: it got from the Hon. Edward M. Shepard a bid for the Presidential nomination. It got in reply a very long letter which is sure to be widely quoted and greatly praised all through the South.

The questions asked Mr. Shepard and others were based on the averments, in the Alabama suffrage case, that in Montgomery County alone over 5,000 colored persons were excluded from the suffrage, tho "qualified under the law of the State of Alabama and of the United States;" and they asked whether, granting the truth of these statements, Congress has any duty in the premises. Mr. Shepard refuses to admit the truth of the averments, recalls that the Supreme Court said it had no jurisdiction and heard no evidence, declaring that even if the statements in the bill were true the court could give no relief. He refused to admit that it was Northern Democrats alone who were in sympathy with the effort to disfranchise the negro in the South, inasmuch as Northern Republicans, like Secretary Root and Dr. Lyman Abbott, have condemned negro suffrage. But we are certain that Secretary Root has done no such thing. He merely stated the plain fact that the Fifteenth Amendment has proved a failure. And Dr. Abbott has done no such thing. The most he has done is to oppose ignorant suffrage, black or white. In his editorial in *The Outlook* of May 21st, with which we least agree, he says:

"The iniquity is in allowing incompetent white voters, not in disallowing incompetent negro voters."

He has never published a word in de-

fense of any discrimination against negro suffrage, only against incompetent suffrage, white or black.

Mr. Shepard attacks the appointment by President Roosevelt of negro office-holders in the South. He asks why Mr. Roosevelt does not execute laws protecting negro suffrage, if there are any such laws; or, if there are not, why he does not recommend such laws; and he refuses to admit either that the Constitutional guarantees have lapsed, or to recommend other laws which would be equally futile against public sentiment.

On safe topics he is emphatic. He believes "profoundly in Democratic self-government," with "no exception against negroes or Filipinos." He "hates human slavery, whether of white men or black or yellow or brown." He "abhors peonage," and "honors the citizens of Alabama who as prosecutors, judges and jurors have punished it." He says:

"There rests on the President no duty more imperative than to enforce the Thirteenth Amendment and the legislation enacted under it; for the Amendment can be practically enforced."

This is the Amendment which forbids slavery and involuntary servitude; but he has not a word to say for the Fourteenth and Fifteenth Amendments. He believes in the advancement of the American negro, and especially in "the labors of that true American patriot, Booker T. Washington." He says:

"I believe it to be wise for Southern white men to cheerfully accord the ballot to the negroes who achieve industrial success and are intelligent and are men of high character."

We note here that in the North we allow men to vote who have not these qualifications, for we have no courts to decide as to their possession.

With all this Mr. Shepard declares:

"Nevertheless, I should regard it as calamitous to the American nation, and, above all, calamitous to the American negro, if the North were to undertake, through the Federal Government, to enforce upon the South the right of the negro to vote, or to make a political issue of that right."

Very probably he is right, altho, if undertaken, it would be by the Nation, and not by "the North." The North has no Congress, makes no laws, has no ap-

pliances to execute them. We presume that no laws, however just, and no constitutional provisions can be executed where the ruling mass of the people are opposed to them. We must trust, even for justice, to slower forces.

But here let us quote:

"The problem, it is plain to the last degree, is not one of democratic self-government. I would, if I could, have blacks govern themselves. Therefore it is that I hate the Imperialistic scheme carried out by the Republican party in the Philippines. But in commonwealths where whites and blacks, altho races profoundly distinct from one another, nevertheless live together, I should be sorry indeed to have the Government controlled by the blacks. . . . Whatever, however, be our grief at difficulties or inconsistencies, whatever be their practical evils, it is idle to ignore the vast racial difference between whites and blacks, or the vast superiority of the white race. . . . The fact of the racial difference and of the white superiority is, for our generation and for generations to come, open to no doubt whatever. . . .

"The problem in the South is unique. There we have two races dwelling together in closest industrial relation, city and country alike—races not far from numerically equal—races of which one on the average is very superior to the other, but, nevertheless, both races entitled and subject to a legal theory of perfect and democratic political equality. No like problem exists in any Northern State or in any democratically governed community of which I know. If, on the one hand, negroes be systematically excluded from the franchise while white men of like qualifications are admitted, then clearly the white man rules the negro without the latter's consent, and the foundation doctrine of the Declaration of Independence and of American Government and the express law of the land are violated. Such a result is lamentable and demoralizing, like many another inconsistency or anomaly. If, on the other hand, there be no such exclusion of negroes from suffrage, then in some States at least negroes will rule white men, with the result that, so long as the conditions of negro life are what they now are at the South and what they must for generations remain—civilization itself will be undermined and decay. The rule would inevitably be what it was in corrupt carpet-bag days—a rule of adventurers and demagogues kept in power by ignorance, unspeakably disastrous to white and black alike.

"As between violation of American doctrine and law and surrender of civilization, the Southern States with large negro populations have seized the horn of the dilemma which the white of any and every Northern State would

in like situation seize. The Southern whites stand for civilization as against political theory of legal right. And so they will stand. Nor do I believe that the North will effectively find fault."

These are words addressed, not to the North but to the South, with the Presidential nomination in view. They will be quoted with great delight as the voice of the Northern Democracy. He hates Imperialism in the Philippines, that gives to the brown race the ballot, which they never had before, because it does not yet give enough of the ballot; but he defends that other worse Imperialism at home which denies the ballot to the black race. He points back to "carpet-bag days," when he knows, or ought to know, that there was misgovernment only where the white people sulked and refused to help govern the States. Governor Bullock has told our readers why that period gave good government to Georgia, and Bishop Hood only last week told us why everything went well and harmoniously in North Carolina.

But the great fallacy and vice of Mr. Shepard's seductive letter is in its cowardice. Why should he assume and fear that, were men of both races treated alike, "in some States, at least, negroes would rule white men"? Does he not believe that knowledge is power? Would not intelligence rule, as it always rules? If the white race is so incontestably superior what has it to fear? In our Northern States the majority of the voters, as everywhere, are commonplace or inferior or ignorant. They take their views from more intelligent and forceful men, and they can be trusted partly for that reason and partly because of that inherent sense of right which ignorant and commonplace people possess. We are democrats; we believe in the rule of the common people. The negro has learned something since President Hayes's time, and he could be trusted and guided in Georgia and North Carolina even before Hayes withdrew the army from the South. White men would rule South Carolina and Mississippi just the same if negroes had the ballot exactly like white men.

But there are sections of the country where it is customary to say that the negro is essentially and eternally an inferior race, and yet that if he were al-

lowed equal privileges he would rule the white race! This is ludicrously inconsistent, but it is to those who talk that kind of talk that Mr. Shepard is talking. He would make the negro question, which we are utterly tired of, the leading question in the coming campaign.

The Effects of the Rhodes Scholarships

WE cannot tell until some fifty years have passed whether the results of Cecil Rhodes's plan for educating at Oxford the future leaders of the Anglo-Teutonic race will be those pictured by the imagination of the Empire-BUILDER, but his endowment is already producing some noticeable effects which were doubtless quite unintended and unforeseen by the founder. The first of the Rhodes scholars will not take up their residence in Oxford until October, 1904, so we do not speak of the effects of Oxford on those who go there, but upon those who do not, an influence which is more far-reaching and possibly more important than that which is more obvious and direct. All over the country young men are studying the specimen papers for "responsions" and trying to find their way through that mighty maze, entirely without a plan, the official publications of the various colleges of Oxford.

To the large universities of the East the addition of two more scholarships, even tho they are large and provide for foreign study, to the already long list of those offered to their students will make little difference; but the opening of these scholarships to a free competition of small colleges of the South and West, which have few or no such opportunities and which are in their formative period, will make a great difference. To have three years of study and travel in Europe at a salary of \$1,500 a year is a dazzling prize to hold before a poor country boy, and such an unexpected possibility is quite sufficient in many cases to change his course of study and plan of life. Our unequal division of the population into States, which produces so many anomalies in our representative system, causes here some curious results, since Nevada, with a school population of 11,000, sends two students to Oxford, and New York,

with 2,100,000, has no more; so Cecil Rhodes's bequest is nearly two hundred times as important to Nevada as to New York.

It is the rule with most forms of radiation, such as light, heat and electricity, that its power decreases as the square of the distance increases, but the influence of Oxford will be most strongly felt in those States which are the most remote from it, whether the distance be measured by difference in latitude or by difference in social and educational conditions and ideals.

One effect has already made itself clearly apparent—that is, the strengthening of the classical courses. Professors of Latin and Greek in many Western colleges have felt themselves fighting a losing battle for their educational ideals. Those who held scientific training to be a superior form of culture and those who advocated it for its practical value combined against them, and as the elective system was extended, they lost in the numbers and in the quality of their students, especially among the young men, until one prominent educator has gone so far as to say that in the future the classical and similar liberal arts studies would be taken almost solely by women. Now, however, the tide has turned and in every college numbers of the brightest young men are devoting the greatest part of energy to Greek and Latin, and a considerable proportion of the students will follow their example, for practically the elective system is something like restaurants *à la carte*, and one is most apt to order what he sees his neighbors enjoying. Since the standing of a college will depend somewhat upon the success of its representatives in securing the scholarships in competition with other colleges of the State, the authorities will naturally try to secure and develop promising candidates and to strengthen those departments where the most important part of their training is done. It will be interesting to see whether the scientific members of the faculty will be as enthusiastic advocates of the elective system now that it is against their interests as they have been in the past when it was so useful in breaking the solid ranks of the classical curriculum.

In mathematics the effects will also be perceptible, for a professor cannot fail to

be influenced by the fact that a dozen or two of his most ambitious pupils want geometry taught after the manner of Euclid. It has long been recognized in England that Euclid, however admirable it may be from a theoretical point of view, does not furnish the kind of mathematical training most needed by those who most need mathematical training, and the best teachers have been working for many years to introduce more modern, flexible and efficient methods of demonstration and analysis as a practical substitute for the cumbrous forms of the Greek philosophy. But what congresses of educators have not succeeded in getting rid of in England, the whim of a South African millionaire has introduced into America.

In their plans for the selection of the Rhodes scholars the trustees have made a wise application of the usual British custom of disregarding consistency and uniformity, and have adopted different methods for the different States. Naturally the president of the State university would be the chairman of the committee to select the scholars, and this has been done in most cases—but, while in some States the State university has few or no rivals in the field of higher education, in others it is overshadowed by one or several denominational or independent universities. In such cases accordingly the head of the leading university is chosen, and the presidents of Yale, Chicago, Georgetown, Johns Hopkins, Harvard, Princeton, Columbia and Brown will be chairmen of the committee of selection in their respective States. In California a peculiar method has been adopted. The State University and Leland Stanford will alternately send a scholar to Oxford except every seventh year, when he will be selected from the smaller colleges of the State by competition among themselves. In all cases the authority to appoint is placed in academic hands; so the Governor of Colorado was quite out of his place when he nominated his young friend as a Rhodes scholar as soon as the will was published.

The complicated system of marking the candidates for scholarship by their teachers, and for character and ability by their schoolmates, devised by Cecil Rhodes, is manifestly not applicable to a competition between colleges, and the decision of

the State committee, selected from the various colleges, difficult enough in itself, will give occasion for much jealousy, recrimination and suspicion among the students and, it must also be admitted, the faculties of the rival colleges; but, on the other hand, the educational institutions of each State, hitherto not on very intimate terms, will be brought to act together in this work as they never have before, and will come to know more of each other. Students who have been educated in the State will naturally be given the preference over those who have gone to more distant colleges, and this will have some effect, both on students and institutions.

Triumph in the State competition does not mean appointment to Oxford, for Oxford is purely Calvinistic in its doctrine of election. No man can demand admission to that university on the ground that he has passed the entrance examinations. By that act he has merely removed any obstacle on his side; and then, if suitably recommended and favorably presented, the college authorities may see fit to receive him. In reply to the criticism so often heard in this country that the educational facilities offered by Oxford were not equal to those of other European universities, the friends of the English university make the somewhat peculiar defense that since the Oxford term of residence is only twenty-one weeks and the allowance so ample, an American student can do some semesters of work at German universities, thus getting his "atmosphere" at Oxford and his knowledge in Berlin.

Senator Hoar's Reminiscences

It would be hard to say when so good a series of American stories has been brought together as in Senator Hoar's article on "Some Famous Judges" in the September *Scribner*. The anecdotes bear that delightful flavor of humor and sturdy character which is characteristic of Mr. Russell's "Collections and Recollections," to mention a familiar English example, and which is exceedingly rare in books of reminiscences. Some of the descriptions are clear and picturesque, as, for instance, this of Chief Justice Lemuel Shaw,

whom Senator Hoar places above every other judge except Marshall:

"He had a massive head, a low forehead, and strong and rather coarse features. He reminded you of the statues of Gog and Magog in the Guildhall in London. His hair came down over his forehead, and when he had been away from home for a week or two, so that his head got no combing but his own, it was a sadly tangled mass. His eye was dull, except when it kindled in discussion, or when he was stirred to some utterance of grave displeasure."

One of the most amusing stories is told in connection with Judge Theron Metcalf, who was trying a case in which a railway company was sued for a house set on fire by a spark from a locomotive. One of the witnesses was a self-contained old woman who had been sitting at her window in a house nearby knitting when the train passed. Just before the alarm of fire she had made a mark in the stocking to see how many times round she could knit. Senator Hoar, who was himself on the prosecution, continues the story:

"So we claimed that we could tell pretty well how long the time had been between the passing of the train and the breaking out of the fire. Judge Metcalf, who was always fussy and interfering, said: 'How can we tell anything by that, unless we know how large the stocking was?' The old lady, with a most bland smile, turned to the judge as if she were soothing an infant, lifted up the hem of her petticoats, and exhibited a very sturdy ankle and calf, and said: 'Just the size I wear, your honor.' There was a roar of laughter in the court house. The incident was published in the morning paper the next day, much to the judge's indignation."

A volume of reminiscences from the amiable Senator from Massachusetts, with mingled grave and gay, would make excellent reading.

Mr. Vardaman

We were hasty in assuming that at the first popular primary election in Mississippi Editor Vardaman had received a majority of the votes. It was only a plurality, and the combined vote of his two competitors was 19,000 more than his own. But the Mississippi primary law drops all but the two highest candidates, and the second primary election has resulted in the choice of Mr. Vardaman by a substantial majority. This seems to have been a case where prayer failed of its object, for,

if one may trust the press dispatches, the fact that the negroes held prayer meetings to pray for the defeat of the candidate whose platform was the ruin of their public schools aroused a successful resentment against their interference at the court of the Most High. Nevertheless, we do not believe that Mr. Vardaman's proposition, on which he appealed for votes, that of dividing the school money in the ratio of taxes paid by the two races, will be accepted by the Legislature. It is quite too criminal for decent and intelligent people to adopt, and it is said that the Legislature already nominated is conservatively opposed to it. A law to reduce the school privileges of poor people, to allow them only the schooling they can pay for, is simply suicidal. We do not believe that Mississippi prefers ignorance to intelligence, or that her men of property are unwilling to pay to educate the children of those less fortunate.

Mr. Olmsted Frederick Law Olmsted, who died last week in his eighty-second year, created a new profession of vast benefit to the country, or rather to our cities, that of landscape architect. Before his day we had no real parks. To this farmer, who had ideas for the beautiful as well as the useful, who saw profit in prospects as well as potatoes, we owed first our Central Park in this city, and then a multitude of the most beautiful pleasure grounds in the country, public and private, including the notable World's Fair grounds in Chicago, the Boston system of parks, and Biltmore, N. C. We cannot compute the amount of pleasure his skill and taste have given to millions of poor people and rich. Every child that wanders from the crowded tenement to enjoy a half holiday in any one of our parks unwittingly blesses the memory of Mr. Olmsted, for every pleasure ground in the land has been modeled after the creations of his genius.

**Mayor Low and the
Liquor Dealers** The saloon keepers do not like Mayor Low and propose to join their forces for his defeat at the next

election. It is natural; did he not refuse to receive their deputation while they had a lobby and a fund to bribe the Legislature? Their enmity is a compliment, and they give it emphatically. The platform of this Liquor Dealers' Association adopted last Sunday night is a literary curiosity. It exhausts the dictionary for invective. The supporters of Mayor Low are "clad in vestments of pharisaical pulchritude and wear halos of self-constituted righteousness." We are told that "the misplaced and exiguous brain of the flabby, flaccid creature who misfits the Mayoralty chair is incapable of concepts of honor." He represents "that small, over-satisfied, obtrusive, meddlesome and noisy pharisaical body of citizens who forswear their taxes." Of this "smug and oleaginous Mayor" they say:

"Dr. Seth Low was elected Mayor by the grossest misrepresentation and deceit. He lied in order to be elected Mayor, and has lied to and about the liquor dealers ever since. Reared amid wealth and culture, Dr. Seth Low looks on the common people much in the same spirit as the Latin poet Horace did, who laid down the doctrine that it was perfectly justifiable to lie and practice the arts of deceit on inferiors in wealth and education."

While we do not instantly recall the passage in which the "flaccid" Flaccus records this doctrine, we should fear to challenge the classical correctness of the Latin learning of the New York saloon.

We should think that the wildest and most suspicious of our "Anti-Imperialist" friends might discover a real desire to do the best we can for the Filipinos in the provision to send one hundred of their most promising youth from the public schools to this country to carry on their education. Only native youths are allowed to compete.

A Lutheran ministerial conference has adopted a resolution condemning President Roosevelt for sending condolences to the Vatican on the death of Leo XIII, and a number of other people have said the same thing. What would they have? Is there anything unchristian or dangerous in the ordinary expressions of Christian courtesy?

INSURANCE

Insurance and Coinsurance

MANY people have an impression that a policy of fire insurance is an agreement to pay a stipulated amount in the way of reimbursement for damages sustained in case the object covered, is burned, irrespective of the fire damage. This is very far from the real facts in the case, for the reason that a fire insurance policy is, after all, simply an undertaking on the part of the insuring company to indemnify the owner of the destroyed or damaged goods to the extent of his actual loss arising from or in consequence of the fire. The amount of insurance written in the policy and paid for at the stipulated rate of premium is the limit of claim and by no means the measure of it.

Fire insurance thus differs materially from marine insurance, in that there can be no "abandonment," or right of an insurer to turn over what survives a fire in the way of salvage to the company, and to make a sustainable demand for a full payment of the binding policy unless by consent of the company. The owner under a fire policy is obliged to take care of all damaged property, preserve it from further injury, and to accept a canceling recompense that is in proportion to the loss sustained by him.

The term *Coinsurance* is far from being entirely clear to every one, even when a policy is accepted which bears the so-called Coinsurance clause. The theory of Coinsurance is based on the merchant's being fully insured or nearly so. If he is not, then when Coinsurance applies, in case of a total loss, he is, of course, a coinsurer to the extent of the under-insurance. If a merchant having a stock of \$75,000, for example, insures it for \$50,000 with a 50 per cent. coinsurance clause, in case of a partial loss of \$10,000 he would receive \$5,000 from the company instead of the full loss, he himself being a coinsurer. This principle is a little confusing to the layman, but is well understood by insurance men. The modern tendency has been to carry too little, rather than too much insurance. In both the insurance and coinsurance fields the carefulness and intelligence of both agents and inspectors

must be very largely relied upon to counteract the carelessness and possible dishonesty of the assured himself. Both insurance and coinsurance are desirable, and particularly so when they go hand in hand.

It is not always from choice that many men are without life insurance. In many cases those lacking the protection which a good life insurance policy affords never intended that it should be so. The fact that they were considered un-insurable by the medical examiners was almost universally very disappointing to them. None of the insurance companies are accustomed to taking any but selected risks, and the medical examinations as a rule are very rigid. It follows, therefore, that there must always be some who fail to obtain insurance protection. It is a popular belief among those who are not insured that all that it is necessary to do is to make application, and that any life insurance company will be only too ready to issue a policy. This is a great mistake, and as a matter of fact the New York Life Insurance Company alone has found it necessary during the past eight years to turn away 68,384 applicants, whose combined insurance, if issued, would have amounted to exactly \$188,100,000. It seems almost beyond belief that one insurance company should reject this large number of people in so short a time, but the figures quoted are official. Even if the number of cases rejected by all insurance companies in the United States are not considered, it would certainly appear that the fact that the men who have sought to obtain an insurance from this one company alone, without success, ought to give every un-insurable man a better idea of the value of life insurance and of the importance of obtaining it without procrastination.

...The manufacturing establishments in Newark, N. J., have been cautioned against using soft coal by the manager of the Newark Fire Insurance Exchange. The warning is issued because of the extra hazard arising from the use of soft coal, which is considered to increase the danger of fire.

FINANCIAL

Financial Items

ALL signs point to a great harvest this year in Canada. The increase of the area under cultivation in Manitoba alone is 568,000 acres.

....The Chicago and Northwestern Railroad Company has decided to increase its capital stock to \$100,000,000, thus adding about \$36,000,000.

....By new alliances in England the United Fruit Company of New Orleans and Boston has obtained a monopoly of the Jamaican fruit trade.

....The express companies have issued from Chicago new schedules of charges, making a large increase of rates on all packages up to 50 pounds.

....At the end of the fiscal year, the money in circulation in the United States amounted to \$2,375,943,337, an increase during the year of \$126,552,786.

....The recent annual report of the New York Central Railroad Company shows that the company has bought 30,000 shares of the stock of the American Express Company at \$150 per share.

....Coinage executed at the mints in the last fiscal year for this country amounted to \$74,203,000. There were also coined 19,182,829 pieces for the Philippines, 750,000 for Venezuela and 1,360,000 for Colombia.

....The first shipment this season of fresh fruit to London was made last week on the "St. Paul," and it consisted of nearly 10,000 boxes of pears, plums, cherries and peaches brought to New York from California by special refrigerator train.

....The report of the Interstate Commerce Commission for the last fiscal year shows that the net earnings of the railroads were \$606,616,794, or \$51,395,000 in excess of those of the year preceding. The increase of the amount paid in dividends was about 25 per cent.

....The recent expansion of business is shown by the record of the issues of stamps, stamped envelopes and cards by the Post Office Department, the value of these rising from less than \$80,000,000

in 1896 and 1897 to \$95,000,000 in 1899, \$99,700,000 in 1900, and \$109,784,000 in 1901.

....It is understood that the National Packing Company, recently incorporated in New Jersey with a capital of \$1,000,000, was formed by the companies known as the Beef Trust, and will probably be enlarged to include all their interests, with a capital in the neighborhood of \$500,000,000.

....The bids for the \$3,000,000 certificates of indebtedness for the Philippine Government were open August 25th at the Bureau of Insular Affairs, Washington, D. C. Harvey Fiske & Sons bid for all or any part of the amount at 102.24, which was accepted. The bonds are deliverable in New York, September 1st.

....The suit of the Government against the Beef Trust does not engross the attention of the defendants. The Armours recently cleared \$1,850,000 in a wheat speculation; and the head of the Cudahy Company has acquired 1,000,000 acres of rubber forest in South America, and organized a company with \$5,000,000 capital to carry on the business connected with this purchase.

....A delegate attending the recent meeting of the British Iron Trade Association is reported to have said that he regarded the preponderance of the United States Steel Corporation as very fortunate for the British trade, because the Corporation would use every resource to maintain prices at the present level, at which most British works could undersell the American product at home and in Colonial markets. But he did not mention the fact that the Corporation's foreign prices are sometimes much lower than its prices in the home market.

....Dividends and coupons announced:

U. S. Leather Co., Preferred, \$1.50 per share, payable October 1st.

Minneapolis & St. Louis R. R., Coupons, payable September 1st.

Iowa Central R'way Co., Coupons, payable September 1st.

Amer. Chicle Co., 1 per cent., payable September 15th.

People's Trust Co., 1 per cent., payable September 1st.

The Independent

VOL. LV NEW YORK THURSDAY SEPTEMBER 10, 1903 No 2858

Survey of the World

Political Events

It seems to be settled that the special session of Congress will be called to meet November 9th, to act on the Cuban treaty, which must be approved by both Houses of Congress, on account of its revenue raising provisions. There does not seem to have been any financial legislation agreed upon in the conferences that have been held at the summer capital at Oyster Bay. In his address at Syracuse on Labor Day the President discouraged any radical financial legislation.—The main question in New York politics the past week has been as to the nominations for Mayor of this city. The Fusion elements will by a large majority agree to nominate Mr. Low, altho some of the Democratic allies object strongly. There is a fear that he has not shown the qualities that excite enthusiastic loyalty, and that it would be better to nominate such a Democrat as Mr. Jerome. The nomination will, however, be offered to Mayor Low if he will accept it.—The search for a Democratic candidate for President goes on languidly. The elimination of the name of General Miles follows that of Mr. Bryan. The Southern press agrees that, however warmly his attitude toward Imperialism and the Philippines may be approved, the part he took in the imprisonment of Jefferson Davis at Fortress Monroe cannot possibly be condoned.—Mr. Bryan shows signs of a weakening attitude toward those who have opposed him. He has uttered himself in favor of the Democratic can-

didate for United States Senator in Ohio who was a Gold Democrat.—The nomination of Major Vardaman by the Democratic popular primary election in Mississippi, equivalent to an election, has aroused great enthusiasm among his friends, and "Vardamite" clubs have been visiting him in great numbers. He is described as a man of unusual personal magnetism. He declares that his administration will be for the benefit of the negroes as well as whites. At the same time he says his chief purpose is to lengthen the school terms in the white counties, while the negro children do not need so much education, for "God Almighty made negroes different in the beginning, and so they must remain until the end of time;" and he does not hesitate to say that book learning spoils good servants and field hands. The New Orleans *Picayune* thus sums up his creed:

"He believes in giving the white children of Mississippi just as much schooling as possible and in giving the negro just as little as possible."

Some Southern papers attack him on the ground of a ribald utterance of his, unfit to print, about President Roosevelt and his mother. He believes that Mr. Bryan will be a potent factor in the Democratic Presidential convention. He is 42 years old, and his education was of the crudest kind. He is a lawyer, and editor of *The Greenwood Enterprise*.—The success of the popular primary method in Mississippi has led the Louisiana Democratic Central Committee to decide in favor of

adopting it in that State. All candidates must submit their names to a white Democratic primary. The first primary will probably be on December 13th, and if no one has a majority the two highest candidates will be voted for on January 1st. Senator Foster will probably succeed himself, and four candidates for Governor have been announced.—While the Consular service will not come under the Civil Service rules, it is the declared policy of President Roosevelt and Secretary Hay that promotions to important consular posts shall hereafter be made by promotion of those who have had successful experience in minor positions and have shown ability to be of service to our commerce.

The Postal and Other Inquiries Ex-Superintendent George W. Beavers under indictment for postal offenses in connection with extensive purchases of Bundy time clocks, it now appears, has not gone away. The Post Office has received authoritative information that Beavers is at present in this city. A personal friend of his recently journeyed to Washington for the purpose of making certain arrangements in his behalf in anticipation of the outcome of investigations by the Grand Jury. These arrangements are of such a character as to make it certain that Beavers is preparing to stand trial for any indictment the Grand Jury may return against him. While Mr. Beavers was in office many Bundy time clocks were, under his authority, placed in post offices throughout the country, and it has been charged that these clocks were generally forced upon the Postmasters at exorbitant prices. In certain offices where there were but a very limited number of clerks and there could be no possible need of a time clock it was made compulsory to purchase the Bundy clocks at prices ranging from \$100 to \$125. The name of State Senator George E. Green, of New York, has been used in connection with the case. Mr. Green appeared before the Grand Jury in this connection on September 1st. Several of the employees of the Bundy Time Clock Company, whose plant is located at Binghamton, N. Y., have been closely questioned by Post Office In-

spectors. In an interview given on September 3d Postmaster-General Payne stated that when the Federal Grand Jury sitting at Washington disposes of the Post Office cases now before it the investigation in Washington will be practically completed, after which the matter will be taken up in New York City. He expressed the hope that the entire Post Office investigation would be ended and Fourth Assistant Postmaster-General Bristow's report filed by the end of the current month. The Postmaster-General will embody reports made to him in a formal report he will personally make to the President.—Enough has been developed in the Indian Territory investigation to indicate that the matter is one of grave importance. Reports already made to Attorney-General Knox are to the effect that several officials in the Department of Justice have largely profited through contracts for feeding prisoners, and that the liquor traffic has been full of scandal. The present investigation is being conducted in the Indian Territory.

The Panama Canal Treaty Notwithstanding the present seemingly hopeless condition of the Colombian canal treaty, Dr. Thomas Herran, the Colombian Minister at Washington, has not yet abandoned hope that the treaty may be ratified. In a recent interview he is reported to have said that notwithstanding the objections on the part of the people of Colombia, who are bitterly opposed to several points in the treaty, he has not lost confidence in the ultimate acceptance of it in a manner that shall be satisfactory to all concerned. Secretary of State Hay in his most recent instructions to Minister Beaupré at Bogota, has directed him to reiterate to the Government of Colombia the statement previously made by him, to the effect that the United States Government will not accept any modification or amendment of the Panama Canal treaty. It is thus made clear that if Colombia is not willing to accept the rejected treaty as it stands, the opportunity of having the United States build the canal in its territory will be lost. The limit of time for exchanging treaty ratifications at Washington will expire on September 22d. After

that date it is probable that negotiations will be begun with Costa Rica and Nicaragua for the alternative Nicaraguan route. President Roosevelt is said to prefer the Panama route, but he is prepared to follow the directions of the act of Congress as soon as it becomes evident that the required concession will not be granted by the Government of Colombia.

The Newark Disaster Trial

A trial just decided in Newark, N. J., has awakened much interest, both on account of the men involved and the novelty of the arraignment. On February 19th a train on the tracks of the Lackawanna Railroad crashed into a street car which was crowded with school children, killing and maiming a number of the children pitifully. On Monday of last week the State of New Jersey arraigned eleven directors and managers of the street car company for manslaughter. The men called upon to defend themselves thus from the charge of carelessness or wilful neglect were the following directors of the road: A. J. Cassatt, president of the Pennsylvania Railroad Company; E. F. C. Young, president of the North Jersey Street Railway Company; David Young, former vice-president and general manager of the North Jersey; Dr. Leslie D. Ward, first vice-president of the Prudential Insurance Company; John D. Crimmins, of New York; Elisha B. Gaddis, a wholesale grocer, of Newark; J. Roosevelt Shanley, a contractor, of Newark; also the following officers; Charles M. Shipman, former general superintendent; Arthur W. Pratt, former roadmaster; Richard Eick, superintendent of the Clifton avenue division, and James Smith, an assistant. The case came before the Circuit Court, Chief Justice Gummere presiding, and the opening for the State was made by Prosecutor Riker. Mr. Riker said that the State could prove the crossing at Clifton avenue to be one of special danger. As far back as 1899 the Street Railway Company and the Lackawanna Railroad Company saw the necessity of a derailing switch, but nothing was done because the two companies could not reach an agreement as to how it should

be connected. He called attention to the slippery condition of the approach on the fatal morning. The president of the road, the prosecutor said, knew of these conditions, and knew that no proper safety device was in operation. He knew also the way in which the cars were habitually overcrowded, but took no action in the matter. The defense sought, on the other hand, to show that whatever negligence existed belonged to this particular case, and did not indicate any general mismanagement on the part of the trolley system. The evidence of witnesses made it clear that no salt or sand had been used on the tracks that morning despite their snowy condition, and that the motorman on the car had properly applied the brakes. On Thursday Chief Justice Gummere, Justice Van Syckel and Justice Dixon ordered the discharge of the eleven prisoners. In addressing the jury Chief Justice Gummere maintained that the directors, "if they did not furnish as safe a method as could possibly have been furnished, certainly did furnish so safe a method as to justify these directors and officers in supposing that additional precautions would not render the crossing any more safe." He ordered the jury to acquit, with the assurance that all responsibility for such action rested with the court.

Samuel Parks and Labor Day

The trial of Samuel Parks, walking delegate for the House-smiths and Bridgmen's Union, of this city, has more than local interest. After a trial by jury Parks was convicted of extortion in the case of Josephus Plenty, a Hoboken contractor, from whom he got \$200 for calling off a strike. On Saturday, August 29th, he was duly escorted to Sing Sing to serve his term. On the Monday following Parks's counsel obtained from Justice Sewell, of Brooklyn, a certificate of reasonable doubt, and, bail to the amount of \$16,000 being obtained from Richard Butler & Devery, of police fame, Parks was on the next day released from detention pending the determination of his appeal for a new trial. The most significant feature of the case is the treatment accorded Parks by his own union and by

the other affiliated unions. The House-smiths and Bridgmen voted to continue his salary, \$48 a week, to him while he was in prison, and have apparently indorsed his character without reservation. On his arrival in New York from Sing Sing, Parks was welcomed by a large and noisy crowd, but from that day until Monday of this week he kept himself pretty much in seclusion, being indeed physically unwell. There was much debate among the various unions as to whether Parks should be so far honored as to lead the parade on Labor Day, and, if this honor were accorded him, whether the various unions not in sympathy with him should participate in the procession. Monday turned out to be fair and cool, an ideal day for marching. The procession representing labor started at the Plaza and marched to Washington Square, being led by Parks and Devery. There were something under 9,000 men in line against about 25,000 last year, and not much enthusiasm was displayed for the convicted delegate, except by comparatively small groups of men. Ex-Chief of Police Devery, who drove at the head of the procession in a carriage, was observed to accept what little cheering there was as if it were given in support of his independent and somewhat amusing candidacy for the Mayoralty of New York. The following organizations did not parade, giving as excuse for their absence the plea that they could not afford it: Amalgamated Bluestone Workers, Amalgamated Society of Carpenters and Joiners, Amalgamated Sheet Metal Workers, Brotherhood of Boiler-makers and Iron Shipbuilders, Dock Builders' Union, Granite Cutters' Union, International Association of Machinists, Journeymen Stonecutters' Union, Mosaic Helpers' Union, United Portable Hoisting and Safety Engineers, Steam and Hot Water Fitters' and Helpers' unions, Wood Lathers' Union.

The Yacht Race On Monday of last week the "Reliance" and "Shamrock III" failed to sail over the course within the prescribed time-limit, so that the trial was not counted as a race. It was once more evident, however, that the "Reliance" was the swift-

er boat; in fact, this was the worst defeat the challenger had yet suffered. On Tuesday again the yachts left their moorings at Sandy Hook, and sailed out to sea, but on account of the calm and fog the race was called off after the vessels had waited for about two hours. The final race took place on Thursday when the "Reliance" proved conclusively that the "America's" cup was to remain in this country for another year at least. It seemed early in the day that there would not be wind enough to provide a race, and even when the signal was flown that the course would be fifteen miles to the south and back there was little hope among the few excursionists who had gone out that the boats could get over the course in the required time. But later the breeze freshened and the two contestants rode briskly out toward the outer mark. The "Reliance" started at 1:01:56 and finished at 5:30:02, making her time 4 hours, 28 minutes and 6 seconds. The "Shamrock" started four seconds later than the defender but never finished the course. The "Reliance" led from the first and drew steadily away from the "Shamrock," gaining on every tack. During the latter part of the race a heavy fog settled down on the boats, completely hiding them from view. When the "Reliance" again appeared and ran over the finishing line she was greeted by a chorus of whistles and shouts. Then came a long wait for the "Shamrock," who had gone astray in the mist, and only came in sight when the committee had begun to grow worried about her. The contest had been won. Of the three "Shamrocks" built by the gallant Sir Thomas, not one has gained a single race. He is said to have placed the yachts in the hands of his New York representatives to sell. Whether he will try once more to "lift" the "America's" cup, does not seem to be known even to himself. He has avowed more than once that Mr. Fife, the builder of the "Shamrock," has done the best in his power, and that as long as the Herreshoffs are ready to build a defender there is no profit in trying to beat them. The end of the international event may be said to have occurred at a dinner given the next day to Sir Thomas Lipton by the "Pilgrims of America."

There were many distinguished guests present, and the utmost cordiality prevailed. Sir Thomas was heartily cheered, and made a speech as pleasant as it was sportsmanlike in tone.

Alaska Boundary Case

The Alaska Boundary Commissioners held their first meeting in London in the conference room of the Foreign Office on September 3d. Prior to the formal assembling the Commissioners met in private conference and selected Reginald T. Tower, recently Minister to Siam, and now of the British Diplomatic Service, to be Secretary of the Commission. Mr. John R. Carter, Second Secretary of the American Embassy, and Mr. Joseph Pope, a representative of the Canadian Government, were appointed assistant secretaries. Lord Chief Justice Alverstone was subsequently chosen chairman of the Commission. After considerable discussion it was decided to hold five-hour sessions five days a week, beginning September 15th, until the oral arguments are concluded. The attempt made to fix a definite date for the closing of the hearing failed on account of objections interposed by Sir Robert Finlay, the British Attorney-General. A hope that the hearings might close by October 9th found expression, but it was tentatively decided to terminate the hearings on October 15th. The question of admitting representatives of the press was affirmatively decided. The Commission with secretaries, clerks and attendants numbers about fifty members. Among the questions at issue are the following, viz.: What is intended to be the point of commencement of the line of demarkation between the United States and Canada; what is the Portland Channel; what course should the line take to the entrance of that channel; to what point of the fifty-sixth parallel should the line be drawn from the head of Portland Channel; what is the extent of the strip of territory along the coast on the mainland that Russia conveyed to the United States by the treaty of 1867; does not the line begin at Cape Muzon? The United States contends that it was the intention of the Powers which signed the treaty of 1825 to confirm in full sov-

ereignty to Russia a continuous strip or lisière along the continental shores of the northwest coast of America, extending from Portland Channel to the one hundred and forty-first meridian of longitude west of Greenwich, and that such strip was to be ten marine leagues, measured from the heads of all gulfs and other arms of the sea, unless there was within that distance a range of mountains. The contention is further made that there is no such mountain range. It is urged also that the United States has occupied this strip of territory ever since its acquisition from Russia, and that Russia had controlled it since the treaty of 1825 until ceded to the United States in 1867.

The Situation in Spain

There recently appeared in Madrid the first number of a daily paper called *Tierra y Libertad*, an organ of the Anarchists, which claims to be the only daily paper of the sort in the world. About the same time Señor Salmerón, the head of the Republican party, which is the best organized political party in Spain, dispatched a circular all over the country calling on his partisans to organize meetings for criticising and attacking the monarchical régime, "while showing its incompatibility with the national spirit which craves for justice, and thus proving that the Republican party is ready and qualified to hold office." "Moreover," the circular continues, "let the causes of our great national misfortunes be bitterly emphasized, while expressing the profound love which the Fatherland feels for the army and navy over whose prestige the monarchy neither can nor will stand guard." This circular is denounced by the Government, but in papers and clubs it is commented upon along with the question of the general strike and the labor movement, to which so conservative an organ as the *Correspondencia de España* is willing to devote seven of its columns. A most significant assembly of the Spanish Socialist party, led by Señor Iglesias, under the influence of Herr Bebel and M. Jaurès, has been convened to decide whether the Socialists generally shall accept the plan of the central *junta* of Madrid to ally their forces with the Republicans whose

bitter enemies they have hitherto been. Thus the organization of what may be called a "labor *pronunciamiento*" may coincide with the insidious efforts to divorce the army from its loyalty to the King. The army is in a state of agitation and doubt. One hundred thousand anæmic soldiers, brought back from Cuba and the Philippines and still unpaid, are dragging out a wretched existence in the large towns, and are spreading discontent among the lower classes. Curiously enough, the Republican party takes up the grievances of the army and favors all kinds of plans for its aggrandisement and glory. Señor Villaverde, who leads the Government, has only one idea, that of financial retrenchment, and shows no sense of this widespread discontent among the officers and men of the army. The Liberal party, in anticipation of the speedy demise of the present Government, are looking for a chief. Three strong men stand ready to their hand—Señor Montero Rios, Señor Canalejas and General Weyler.

The Balkans The state of affairs in the Balkans becomes daily more alarming, and it seems to be the universal report from that part of the world that war between Turkey and Bulgaria is inevitable, and that the insurrection in Macedonia is becoming daily more general. The Porte has sent a memorandum to the Russian and Austrian Ambassadors at Constantinople, pointing out that at a recent mass meeting of Macedonians in Sofia it was decided to send fresh bands into Macedonia, and also pointing out that the committees in Bulgaria were sending arms and ammunition openly to the insurgents in Macedonia. The report has moreover sent a note of warning to the embassies and legations at Constantinople, stating that Bulgarian agitators are planning outrages against the embassies and other public buildings in Constantinople, and requesting the heads of foreign missions to take precautions for their own safety. On the anniversary of his accession, Tuesday, September 3d, the Sultan, contrary to his custom, made a speech to the Patriarch and others who visited him, declaring that the insurrection was provoked by foreigners

and did not originate among his own subjects. According to the late Turkish official estimate, some 1,500 Bulgarians were killed in the fighting at Smilero, Neveska and Klissura. The Turkish losses are not given, nor does this estimate include the number of men killed at Smilero after August 30th. Sarafoff, the revolutionary leader and patriot, has left Selenika, and just what and where he is now acting does not seem to be publicly known. In Northern Macedonia a new outbreak has been headed by the famous Macedonian leader, General Zontcheff, President of the Macedonian Committee. There has been a great deal of severe fighting in the district in the valley of Scruma at the foot of the Rhodope Mountain chain. The vessels under Admiral Cotton have reached Beirût, and the President has ordered them to remain there for the present, despite the fact that the Assistant Consul was not murdered as was first reported. Admiral Cotton reports that the presence of the American vessels at Beirût gives confidence to the foreigners in the city and is having a good effect.

Russia in the East and West A note sent on Sunday, September 6th, by M. Lessar, the Russian Minister in Peking, to the Wai-Wu-Pu (Chinese Foreign Office), promises that New Chwang and Mukden Province, Manchuria, shall be evacuated on October 8th. The note also confirms the agreement made between Prince Ching (head of the Foreign Office) and our Minister, Mr. Conger, that Mukden and Tatung-Kao should be opened on that date to American commerce. It is known that Prince Ching, doubtless under Russian influence, put every possible obstacle in the way of signing this commercial treaty, and the European press, particularly that of England, was warm in commendation of American tenacity in procuring its object. Mukden is a well known city, the capital of a province; Tatung-Kao is important on account of its position, being situated on the Chinese bank of the Yalu River, which flows between China and Korea and is at present disputed between Russia and the Japanese influence in Korea.—Somewhat

to the general surprise when his former note is considered, M. Plehve, Russian Minister of the Interior, has issued a circular to the Governors of provinces, prefects and other authorities against Zionism. The note commands that the following precautions be taken against the growth of that movement:

First—Prohibit action of "Mahids," traveling agitators, who make speeches in the synagogues and at public meetings.

Second—Not to allow public meetings of the Jews.

Third—To forbid conferences of delegates who are members of Zionist organizations.

Fourth—To prevent the collection of money for the Jewish National Fund.

Fifth—To compel Zionist leaders to bind themselves in writing not only to collect no more funds for the promotion of the Zionist scheme, but to agree to transfer the present funds to the Odessa Society for helping the Jews in Syria and Palestine and to confiscate for that purpose all shares of the Jewish National Fund now circulating in Russia.

Sixth—To closely watch all schools, libraries and other institutions where Hebrew is taught.

Seventh—To report to the Minister of the Interior with regard to all Zionist inclinations and upon all candidates for the position of rabbi and other offices.

A Russian Prison Peter S. Polivanoff, a Russian prisoner just escaped from Siberia, has published in an independent newspaper abroad an open letter addressed to the Minister of Justice which throws some light on the nature of Russian imprisonment. Polivanoff began life as a political agitator, and finally fell into the hands of the authorities while attempting to rescue a revolutionary prisoner named Novitsky from jail. He was sentenced to death by a court martial, but afterward this sentence was commuted to that of an imprisonment for life. For nearly twenty years he endured solitary confinement in the Schlüsselburg, and was then deported to Siberia. He was strong enough to effect his escape, and in the early part of this year contrived to reach Paris. Just recently, however, he killed himself in a public garden at Lorient, in Brittany, having first published his open letter to the Russian Minister of Justice. In this letter he shows that the manner of detaining a prisoner in the Schlüsselburg is contrary to the code of the Russian Empire, and calls on the

Minister of Justice to rectify these illegal practices. Prisoners are not allowed under any circumstances to see any of their relatives, and correspondence with the outer world is conducted in such a way as to render it entirely nugatory. Prisoners, moreover, are not divided into classes according to their time of service and docility, as they should be according to the law. He mentions a number of men who have gone insane in the prison. Fifty-nine persons, he says, have been brought to the Schlüsselburg since it was started. Of these eight were held for execution, all but one of these being students of the St. Petersburg University. Of the remaining fifty-one, two were shot for having struck persons in authority, three were transferred to lunatic asylums as hopelessly insane, two were sent to the Saghalin Island to serve out their term, three committed suicide, fifteen died and twelve were sent away as exiles. The remaining fourteen persons were still in prison. In the spring of 1902 a change was effected in the prison *régime*, which brought back the state of affairs in the nineties by depriving prisoners of the greater number of those privileges which were in force during the last ten years. Up to August, 1884, political offenders who were regarded by the Russian Government as belonging to the most dangerous category were confined in the fortress of St. Peter and St. Paul, on the banks of the Neva, in St. Petersburg, either in the Trubetskoi Bastion or in another isolated building known as the Alexeievsky Ravelin. The chief warders lived in almost equally close confinement within those precincts, being seldom allowed to go out, and they received their orders direct from the Chief of the Secret Police over the heads of the governor and officers of the fortress. The isolation of the prisoners condemned to those "living tombs" appeared to be complete. But a certain Nechaeff, after many years' detention, contrived to establish relations with the outside world. When this was discovered, some of the warders were sent to Siberia, Nechaeff was executed, and the famous fortress of Schlüsselburg, on a little island in Lake Ladoga, near to where the Neva flows out of it, was converted into the chief State prison for political offenders.

The Old Corner Bookstore

BY COL. THOMAS WENTWORTH HIGGINSON

THE passing of the Old Corner Bookstore in Boston, at the point where School Street ends in Washington, carries back the imagination to the time of which Lowell said of his favorite city: "How narrow it was! how little pasture was offered the imagination for want of a center;" or the period of which Bayard Taylor says, fixing the date at 1840: "Willis was by all odds the most popular American author; Longfellow was not known by the multitude, Emerson was only 'that transcendentalist,' and Whittier 'that Abolitionist.' We young men used to talk of Rufus Dawes and Charles Fenno Hoffman and Grenville Mellen, and Brainard, and Sands. Why we even had a hope that something wonderful would come out of Chivers." Thomas Holley Chivers, whose style was described by the New York "Quarterly" as a "fusion of the Hebrew Prophets, Solomon's Song, Jacob Böhme, Edgar A. Poe, Anacreon, Catullus, Coleridge and

Isaac Watts into one seething, simmering caldron of abominations."

The center for which Lowell sighed really existed in a somewhat microscopic form between 1840 and 1850 or thereabouts, at the Old Corner Bookstore. One can see in looking back that the very smallness of this center was its strength. The little sitting room which offered its special seductions—called Number 2—promoted wit and terseness by the very restriction of its quarters. The most hardened offender must leave outside his staler jokes and his twice repeated old stories, for there really was no room for them. There were Dr. Holmes to represent the medical body, Dr. Bartol with the odd little Englishman, Rev. Dr. Choules to stand for the clergy, Whipple for the newly rising corps of merchants, Emerson more sparingly a visitor from his own domain, daily more and more recognized with leadership. Hawthorne and Whittier were modest and even silent at a social gathering, even if present; Longfellow's poems were not yet published in Boston, but by Owen in Cambridge; Lowell still held aloof from the Longfellow clique, as mentioned by himself in a letter to Poe dated June 27th, 1844, and Thoreau was as yet unknown. These men did not all publish in those days with the house of Ticknor, but they frequented the Corner as headquarters. Others came in from a distance, Tuckerman from New York, Dr. Furness from Philadelphia, and the elder Dana from rural haunts. As to the hosts, they were simply Ticknor and Fields; the former shy and self-withdrawing, but always at home on the practical side; and the latter with inexhaustible enterprise, anecdote, wit and good nature; so secure of his own leadership that he could always waive his own jest for to-morrow and let some visitor carry the palm for to-day.

In all these literary conferences, large or small, Fields had a hand, at first as organizer, then as inspirer of the talk. I recall him first as bookseller's clerk, with face ever cheerful and smiling, with the broad collars then known as Byronic,

even then full of anecdote and fun, but gradually proving to be the comrade and adviser of the men to whom at first he seemed but a bookseller's boy. Always busy, methodical, kind, sympathetic, judicious, he enjoyed, as might any man, the opportunity of dealing on equal terms with the leaders of a literary epoch, but it never turned his head, never made him a toady, always left him free to hold his own. Alert, as was his duty, to keep in relations with the most available authors, he was always on the lookout for new merit, and, to my knowledge, if he paid higher prices to famous new contributors, he also did it from time to time expressly because writers were poor or unknown or in ill health. This, of course, is done more easily where, as in his case, the same man is editor and publisher of a magazine, and I am persuaded that more of it is done in periodical literature than the public generally knows; but in the case of Fields it was an essential and very human attribute. He also had the more especial intellectual quality of seeing the limitations of his own favorite heroes, even of Lowell's humor and Holmes's wit. Doing more than any one else to secure for Dickens his brilliant career on his second visit to America; organizing his readings, and never, it was said, missing one of them, he was yet able to recognize distinctly the somewhat maudlin pathos into which they occasionally sank; and would admit, on cross-examination, that Oliver Twist became at last an utterly tiresome and intolerable little creature, and that every hearer was grateful when he died.

The casual coffee parties at Mrs. Haven's in those days held—besides such occasional and shining lights as Holmes, Lowell and "Tom Appleton"—two trustworthy lieutenants, able always to fill a gap, and in story telling having few rivals, these being Fields and Whipple. Of these Fields's inexhaustible anecdotes had a richer humor and while, perhaps, they were never made out of actually the whole cloth, they certainly never suffered for the loss of those collars and wristbands which Sir Walter Scott thought it the absolute duty of every narrator to supply. Thus Fields handled very easily his tale of a country village, so actually led and controlled by the typical maiden

JAMES T. FIELDS

aunt of the whole region, that when a school boy fell into the family well, and the collected ladders and ropes of the whole neighborhood failed to reach him, the voice of the victim was at last heard shouting from the bowels of the earth, "Why don't you send for Miss Kent, you fools?" upon which the messenger was sent forth and as soon as that energetic lady appeared upon the scene the necessary ladders appeared and the ropes were all long enough. In the same way he brought into its precise form, doubtless, the legend of his English guest, who on breakfasting at the exquisite table of Mrs. Fields, absolutely declined sugar with his coffee—"Never take sugarr unless the coffee is very, very bad indeed, you know"—and then two minutes after added, unblushingly, "May I trouble you for the sugarr?" Fields was an unsurpassable mimic, and the rich English *r* never clinched a sentence more unconsciously, or more conclusively.

The right hand man of Fields in the Old Corner circle was, of course, Edwin Percy Whipple, who enjoyed through life the double distinction of being the only author among the Boston business men, and the only business man among the Boston authors. More distinctly than any of them, he had turned to literature

with deliberate intent, and had made a public library his university. His books have not quite held their own with readers, but his sayings—"the effete of Boston," "the gentlemen of wealth and pleasure"—and his story of the business man, in his first yearnings after letters, who said: "As I look at it, Goethe was the N. P. Willis of Germany," stand fair to be remembered; and his unbounded good nature took away the sting from all satire. He had no mannerisms, such as sometimes overcame Lowell—the Carlylese vein, for instance, in the prose portions of the "Biglow Papers"—and he was absolutely free from all personal quarrels, such as the Poe period seems to have supplied freely, without extra charge to all. He wrote to Griswold

(January 6th, 1848): "I have no patience with the New York literate. They are all the time quarreling with each other. Why not kiss and be friends?" Nothing annoyed him seriously except the compliment oftenest paid him familiarly, as when Griswold calls him in one of his letters "Macaulay." "Don't say," he wrote in return, "that I imitate him, for imitation is the worst kind of worthlessness. Say that my essays are worthless, in some other form of contempt. . . . I think it possible to be a mediocre writer without being a copyist." After all, Fields and Whipple must have been the two pillars of the coterie which left a memory of literary attractiveness about the Corner Bookstore.

DUBLIN, N. H.

The Reported Social Boycott

BY THE HON. JOHN S. WISE

[*This communication was written in reply to a request from THE INDEPENDENT for information as to the statements reported in the daily press.—EDITOR.*]

To the Editor of THE INDEPENDENT:

THERE was positively no "basis of truth for the report of social unpleasantness" to which you refer. Some reporter or reporters built up the whole thing on the isolated fact that Mr. Anderson, President of the Horse Show, who had intended to show Mrs. Wise the special courtesy of a complimentary box, sold the box to some one else when he found she could not be present. It was simply a dirty, low means of some dirty, low fellow or fellows to make up a sensational lie, and sell it, when business was dull, regardless of truth or the feelings of others. People like that have none of the sensibilities of the better social class, and are alike incapable of appreciating them or interpreting or reporting them.

Your inquiry is evidently made for the purpose of getting at the true state of feeling in Richmond, and I will try to make it plain to you. I am sure my case has developed it as distinctly as that of any one else that ever arose.

I knew everybody in Richmond, and everybody knew me. My family had very extensive connections of blood and friendship, and I may say without vanity that up to about 1880 I was popular politically as well as personally. I then separated from the mass of my former political associates, and antagonized them as sharply as possible. There was a strong disposition on both sides to recriminate, and I'm afraid I was as bitter as anybody else. On the one side I told them I left them because they were obstructionists, irreconcilables, etc., and on the other they did not hesitate to asperse my motives and attribute my course to pique, revenge, a desire to obtain reward, etc., etc.

That was nearly a quarter of a century ago. And even then that controversy was far more political than personal. My little boys, perhaps, had the hardest time of all of us during that time. Hardly a day passed that they did not have a fight with some other little boys about their

father's politics. But the instances in which personal estrangements crept in were rare. Altho I became Republican candidate for Governor in 1885, a campaign of great excitement, I can truly say that very few of our personal friends allowed my politics to affect our social relations. There may have been isolated cases, but it would be altogether unfair to the community to say that the feeling was general.

In 1888 I left Virginia for New York, more for the purpose of weaning myself from politics than for any other reason. I had become satisfied that Republican views would never gain the ascendant there under such leadership as we had, and I had a very flattering professional offer here. To say that social estrangements led to the change is simply an exaggeration. Whatever such existed died out very rapidly. Richmond is as it always has been since I was a boy, filled with my personal warm friends, and those of them who are, or ever were, my political supporters are rare indeed. I never go there now that I am not cordially greeted, royally entertained, and begged to return by a host of Democratic friends, and it is the same with every member of my family. Indeed, political sentiment there has become much more liberal than formerly, and the candidacy of Mr. Bryan caused a very large defection. I have not been in Richmond for nearly a year. I happened to be there attending to this test case arising under the new constitution last November, when the Horse Show was in progress. I attended it with a friend, and that is the only opportunity I have had of judging what the sentiment of fashionable "society" toward me was. I can truly say I never had a more charming evening, and it was altogether unexpected, for I did not know of the existence of the Horse Show and did not have the "wedding garment." Nevertheless, I was welcomed everywhere, went into a great many boxes, was greeted as an old friend by everybody, from the Governor down,

and was struck by the cordiality and kindness of every one, even including quite a number with whom I had never been intimate. Out of my enthusiastic report of the beauty of the show grew the conversation which led to Mrs. Wise's invitation and qualified acceptance for this year. I did not, however, remember that she had promised Mr. Anderson, the President, to go, or know that she had subsequently declined.

Of course I know that my acceptance of the test case for the negro voters was distasteful to the great mass of the white people there. I could not defer to their judgment or their feelings upon a question of principle like that. On the other hand, I am satisfied that however strongly their political judgment and feelings antagonize mine, I have neither forfeited the personal friendship, or respect, or consideration of any former friend in that community whose friendship or association I would in the least prize.

Virginians, while they have strong feelings and strong prejudices, are not as a rule socially intolerant or vindictive. The State was always divided nearly evenly in public sentiment. The old political antagonisms between Whigs and Democrats were very intense, but seldom invaded the realm of social intercourse, and accustomed the upper classes not to confound the two. And, to-day, among the people with whom I have been accustomed to mingle socially there, that truce of politics is generally recognized so as to make the social relations of respectable political antagonists very pleasant indeed. I do not say that it is universally true, but it is the rule. And I believe I shall be corroborated in this statement by the vast majority of gentlemen of all parties. At least, I may say for myself that while my political views may have tested sorely my political antagonists, I have found nothing to complain of in their personal treatment of me, and have had much of courtesy at their hands, and I believe that is the rule, sensational liars to the contrary.

NEW YORK CITY.

Elizabeth's Husband

BY REBECCA HARDING DAVIS

ELIZABETH WARE, at seventeen, hit on a fine scheme of self culture, so she left school, and, tho she did not carry out the scheme, never went back. She was a silent, tall girl with watchful, gray eyes and a thick braid of brown hair hanging down her back. Every girl that she knew had had experiences of flirtations and moonlight walks with the nattily dressed boys who came to the little sectarian college in the village, but Elizabeth—not one. Yet she had thought of love and marriage since she was six years old. Those girls had rows of photographs of these heroes of their heart dramas on their parlor tables, each with a heavy frown on his brow and a touch of down on his upper lip. But Elizabeth had only wood-cuts, clipped from newspapers. It might be of a German artist, or a Western cowboy, or an English earl. She always thought it resembled Him. And she would keep it on the table beside her bed with a pot of growing flowers before it for a week or two, and then she would throw picture and flowers out of the window.

When she was older, a photograph of the Emperor Tiberius stayed on the table for months, during which time she gave herself up to reading Plutarch and Marcus Aurelius. She told her brothers and the other young electrical engineers who came to the house and looked at her books with awe, that she "was in search of good company."

So it came to pass that she was twenty-eight and had not found this modern Plutarch's man. She would not have married any of the clever, honest fellows who talked loudly of her beauty and distinction, but at heart she was sore and angry that not one of them had ever asked her to do it.

A year later James Norman, a professor in the University of Virginia, came to visit somebody in the village. He fell in love with her in the old, unreasoning Southern way, and before the amazed neighbors could catch their breath had

married her and swept her out of sight.

There could be no doubt, she told herself, of his likeness of Tiberius. There was the square brow, the inflated nostril, the cleft chin, the smiling, stern mouth. Nobody, she was certain, but a man of the loftiest virtue and intellect could have a mouth like that! There was, too, always a shadow of melancholy—or was it foreboding?—in his gray eyes. Had he a secret sorrow? Some injustice had been done to him? Her heart leapt with sudden rage against his unknown enemy. But what did that matter? She would console him. She would wipe away every blot on his life. Her fierce pity and love for him forced the tears to her eyes.

They were then on their wedding journey, and at that moment Norman was standing at the end of the Pullman car buying a newspaper. She wondered that the other passengers did not all look at him. Nature had clothed one soul, she thought, in imperial garments.

One thing was certain, tho she did not see it. Norman was conscious of his royal robes. He never laid them off. He broke his egg with dignity, and as he paid the newsboy his nickel, did it as Arthur might have given largesse to a serf. She wondered if his mother had ever called him Jim, even in his cradle.

When they reached the university town he took her to a noble old mansion back in the hills.

"This is the old home of the Normans," he said, simply. "It was good stock, Elizabeth. The family are mentioned often in Evelyn and Clarendon. They," he hesitated, "they were not money-grabbers, nor vulgar fellows."

"I know what they were!" she cried, clinging to him fondly. "Noble knights—fighting the infidel or the dragon—always victorious! You see," and she gave his arm a little happy shake, "I know one of them!"

"Nonsense, little girl!" he said, patting her hand. But he laughed at every trifle that evening.

As the days wore on she discovered that she had married a very rich man. He was able to give his work to the university without salary, and his charities seemed enormous to Elizabeth, who was used to close economies. He was the only son of an only son. For three generations all the ambition, cares and hopes of the Normans had been directed to him—a wide stream flowing through a narrow outlet. And not for a minute of his life, not while he shaved or buttered his toast, did James Norman ever forget this crowd of witnesses watching him to see what great part he would play for them in the world.

Vacation was over. On the first day that college opened it seemed to Elizabeth that her husband came out of the sunlit dream of their honeymoon and became his real self. He was grave, silent. He wore a mud-colored suit at breakfast. The melancholy and foreboding were darker than ever in his eyes. What mysterious evil was coming? She braced herself. She would meet it. It should not touch him!

He gave a dry cough and pushed away his plate.

"Can you not eat your chop, James?"

"I have no appetite." Another cough.

"Do you think you have taken a little cold?"

"No," with a bitter smile. "I think it most probably is the beginning of tuberculosis. I have every symptom."

Elizabeth leapt to her feet, white and trembling. She urged the doctor, bed, a dozen remedies, but he shook his head. "I saw a physician yesterday. He made light of it. *You* did not even notice that I was ill."

"Oh! James! I heard you cough once or twice. But the boys at home are always having colds, and they are angry if I notice them. And you are angry if I don't."

"Do not use such extravagant language, Elizabeth," he said, coldly, "I am not in the least angry. I *am* hurt, I confess."

He buttoned himself in a heavy overcoat, kissed her with the air of a victim, and went down the hill.

Old Winny, who had been James's black Maume, came to Elizabeth when the door closed, and patted her shoulder.

"Now, doan you cry, honey! You ain't use to Mars Jeems. He ain't got no 'berculosis nor nuffin' 'tall."

"Was it in the family, Aunt Winny?" sobbed the girl. "You know. Did any of the Normans die of consumption?"

"Not a one of dem. You'll get use to Mars Jeems, chile. To-morrow he'll likely hab scarlet feber and Friday cancer, and all de blessed time it's he's mudder and gran' mudder a workin' in him."

"They are dead—what do you mean?" gasped Elizabeth.

"I mean ole Mist an' young Mist, an' all de aunts dat fetched him up. He war de only boy chile foh thirty year an' dey all tought he war de only boy a livin'. Lah, sakes! Didn't I heah dem? From mohnin' to night, it was Mars Jeems's teeth or chilblains or spelling or measles or Latin—dem tings fill up de whole world foh dem. Now dey's all dead—ole Mist an' Miss Addy, an' all de aunts. But Mast Jeems he done took up heself, an' specelate on heself till he's come to tink dah's notin' in God's yearth but Mars Jeems Norman. Doan I know? He's my own chile!"

Elizabeth said nothing but hurried away, insulted and angry. And yet?—

James's attack of tuberculosis lasted a week. Then he bruised his thumb and was certain that blood poisoning had set it. In this new alarm the pulmonary danger was forgotten. For days his wife thought of nothing but antiseptics and gangrene. At his request she kept a written record of his symptoms. In the middle of a meal he would bring out a thermometer and ask her to take his temperature.

The doctor smiled and was silent. When he rode away Norman's ailments always increased in violence.

"I can prescribe for myself," he would say with melancholy patience which seemed heroic to Elizabeth, and then he would unlock his private closet filled with emulsions, drugs, plasters, etc.

Whenever he had a spare hour he would go to bed and try experiments with some of these weapons against Death.

One day he came out of his room in his dressing gown, holding a hot water bottle to his side.

"What is it, James?" she cried. "Have you pain?"

"Pain! It is almost unbearable. Some obscure disease of the liver, I fear. But, no matter! I can bear it! I have been thinking it was time for us to return the hospitality shown us. We will give a series of dinner parties. I have been making out a list of guests in my mind."

"And you so ill? Oh! No—No!"

"I never shirk duty because I am suffering. Bring more hot water, dear, and your pen and ink." In ten minutes he had dropped the bag and was eagerly telling her the histories of the people whose names she wrote. He had a keen sense of humor, and a womanish sympathy with suffering. He knew all the tragedy and comedy in the lives of his old neighbors. One minute he shouted with fun and the next the tears were in his eyes.

During the next week the hot water bag never was seen. James was absorbed in anxious preparation. The Norman women all had been typical Virginian housekeepers. Would Elizabeth? Elizabeth's home training saved her in this strait.

"No woman of my family," he said, gravely, when the great event was over and they stood alone by the fire, "ever conducted an entertainment with more skill. It was perfection. I was glad, too, that you prepared some of the dishes with your own hands. That is the finest expression of hospitality."

"Oh! The salads are nothing!" cried Elizabeth, breathlessly. "It was you, James, *you*, that made the feast so fine. I never heard you really talk before! Those great subjects—the difference between the Latin and Greek Churches—and the English and Boer difficulty. I wish you would publish what you said, James. I am sure those questions never would be broached again. You have settled them."

"Nonsense!" said James. But he was in high good humor, and for days his lungs and liver were not mentioned.

A week later they dined with the Cochranes, and as he placed her in the carriage to come home, his hands trembled. "Never again," he said, as he took his seat, "will I enter the doors of those people! I have been grossly insulted, and I believe it was planned beforehand."

Elizabeth cried out in dismay.

"It was after the women left the table. Cochran's brother—that stout, red-haired fellow—said to me that Andrew had told him I had invested heavily in the Arizona Flavia gold mines, and that he wanted to warn me. It was a bogus concern, run by sharpers."

"But, James, he is a stockbroker in New York. Wouldn't he know? It seems to me it was kind—"

"It seems offensive impertinence to me. The President of that company is Frank Head. I went to college with him. The Heads have intermarried with the Normans twice."

There was an uneasy silence.

"Have you invested heavily in it?" Elizabeth ventured.

"Yes, I gradually put every dollar I own into it. Frank wrote to me confidentially, not a week ago. In a month the stock will go up tremendously. The output is enormous. He wanted his own family to have the benefit of it, he said. I have mortgaged the house to its full value to buy more stock."

"Of course, you know best," Elizabeth said, tenderly, patting his hand.

"Of course. The Normans owned and managed estates as large as principalities when the Cochranes were pettifogging attorneys. Why! The mine is named for my cousin Flavia! The Normans gave their women Latin names."

"Still," hesitated Elizabeth, "perhaps his advice was meant for kindness."

"Advice from a Cochran to a Norman is impertinence. I am sorry you do not appreciate the position of the family into which you have married, Elizabeth."

"Now you are angry with me!" she cried, throwing her arm around him.

"You talk as if I were a child." He put her away coldly. "I am not angry. I never am angry. I confess that I am hurt. No, don't explain. We never will speak of the matter again."

When they reached the house he took some bromide and put on an ice cap, having, he said, reason to fear cerebral congestion.

The summer passed. One October day Elizabeth sat on the balcony outside of her room, a little, soft, white bundle in her arms. Now and then she bent over

it to be sure that the faint breath still came and went. She thrust her fingers in and felt its heart beat.

"It's a live soul," she said. "It will be a man some day. And it's mine! Oh! God! I'm scared with it!" Her face grew bloodless as she sat holding the child tight and staring into the far, cloudy sky. "Help me! Help me!" she cried. But her mouth uttered no sound.

Presently there was a heavy step in the hall below.

"Aunt Winny! Bring baby's embroidered cape!" cried Elizabeth, sharply. "Mr. Norman has come."

"He's queer!" grumbled Winny, as she wrapped the child in the long robe. "Pears as ef de little fellar was a kind o' God to him 'n not he's own son."

Elizabeth took the baby again, and sat listening to the heavy steps below. She had told herself incessantly this summer that she loved her husband more and more each day, that nobody was so just, so lofty in thought, nobody so kind.

But why did she not run down to him now, she asked herself. She half rose and sank back trembling. She used to fly to meet him. Was he not still her lover, her leader—her twin soul? She had told him so a thousand times. Yet as she heard his step coming nearer she was bored, tired in body and soul, and she knew it.

Could it be that she was tired of—James?

Elizabeth had a sound foundation of common sense. "There is a strange little chill between us," she said, "but the baby will make it all right soon."

She stood up, smiling, as he came up the steps, holding out the child. "Here's Boy," she said.

James touched the child's cheek with his finger. It shook a little.

"Don't call him by any of those nursery names, Elizabeth. They may cling to him. Let him be James Norman now."

"It's a big name for my baby," she said, cuddling him closer.

"He is hardly to be considered as just your baby. He will hold a high place in the world. He will be the head of the Norman family when I am gone."

"But he is my baby now," cried Eliza-

beth, obstinately. "Mine. My little son."

"Don't kiss him, my dear. So many microbes infest our lips. That is a sacrifice which I must ask you to make, in future." He sat down beside her. "Elizabeth, I wish to talk to you seriously. Of course, there is nothing so important to me as this child. He is my second self. I have thought of little else since his birth. I have perfected a plan for his education, and now that you are strong enough, I wish to impart it to you."

"Oh! He's only two months old! We have a long time to consider his education," she laughed, fondly patting the tiny hand.

"I have considered. He will be the head of my family, and must be a thoroughly educated man. There are many great fields of learning for him to conquer. The modern languages he can acquire insensibly in childhood. I propose to begin with German. Montaigne's father gave me the hint. His child never was suffered to hear anything but Latin. I have engaged German nurses. They are coming to-morrow. James must never hear an English word after today."

"Why, I don't know a word of German!" cried Elizabeth.

"James will no longer be in your care, my dear. Artificial food is best for a child. These women will have entire charge of him. You can soon acquire a few words to speak to him. Of course, we will see the child every day."

Elizabeth stood up, staring at him. "Why, James," she said. "Are you mad? This is my baby. God gave him to me to make a man of him. German women—I don't know what you mean."

Norman also rose. His legs trembled, and his tongue was dry. He tried to speak, but could not. Did she think it cost him nothing to give up his boy? He was hungry to hold him in his arms, to call him by a thousand silly, fond names, to be his chum as he grew up, his friend! But the child was to be the head of the Normans! His race, dead and alive, were watching to see what he would do.

"The boy," he said, at last, "is to fill a high place in the world. I must

make him ready for it. I have fitted up the north wing for him and his attendants. When he speaks German fluently—at six, say—he will be taught French in the same way. Afterward—”

She still looked at him with dull, bewildered eyes. “Why, James, you forget. I brought him into the world. I went down to death to do it. I put some of my own body and soul into him. How can anybody take him from me?”

Why not yield to her and be happy? Why not let the boy grow up in his home like any ordinary child?

“No, Elizabeth,” he said, “since I was a boy I planned that if a son were ever given to me to train as the head of my family, I would do it in this way. I will never give up.”

He did not give up. Elizabeth struggled desperately, but she was worsted. The child, with his German attendants, was established in the north wing, and she saw him for an hour each day. Being worsted, she made no outcry, nor ever spoke of the matter again, except to her God upon her knees.

The winter passed. In May, Mr. Norman was called to New York by the stock broker, Cochran, who advised him to look after his investment in the Flavia mine. James at first was disposed to treat the advice as impertinent meddling, but at last decided to take it. He told himself on his way to New York that perhaps he had been too harsh in his judgment of the Cochrans. There was a bare possibility that he had been mistaken. A strange doubt of himself in other matters began for the first time in his life to creep into his brain. Had he been harsh with Elizabeth as to the child? Of course, he was right. Yet many persons held that a mother had a share in her child. He knew that a storm of gossip had raged in the village, and that Elizabeth had silenced it by calmly stating, “We propose to give the boy a German accent. It is our plan.” That was plucky in her! She would be loyal to him to the death. God bless her! She never had once complained, but all winter she had grown thinner and paler.

Norman tried to sleep, to put the whole matter away, but could not. For the first time since he was born, he

doubted himself. Had he, James Norman, actually been wrong? The bare suspicion maddened him.

The first hour in New York told him that he was a ruined man.

“The stock is not worth a penny,” said Cochran, “I warned you a year ago. Didn’t you sell out then? Too bad! Too bad! Very little of the stock is held here. That fellow Head is too well known, he is a cheap scoundrel. His victims are women and country-folk.”

“He is—” but his tongue failed him. He could not claim Head as a Norman, just now.

“Is there nothing to be done?” he said, rising.

“Nothing. I’m sorry, my dear fellow. But you might as well have poured your money into the sea. The thing means absolute ruin to thousands. To you, of course, it matters little. You have your real estate.”

Norman did not tell him that he had mortgaged every acre to invest in the mine. He went back to his hotel, conscious only of a dull nausea, thinking that Cochran was a friendly soul, and then that he must have sunk low indeed to be grateful because a Cochran called him “my dear fellow.”

Two weeks afterward he arrived at nightfall at the station nearest home. When he left the train he stood on the platform looking at the waiting wagon with dazed eyes.

It would take just a half hour to reach the house. Then he would tell Elizabeth that they were paupers. They had not a dollar nor a roof to cover them. And that was because he was a fool, a conceited, ignorant dolt, and because another Norman was a cheat and a thief. The family—the family. He gave a queer choking sob, as he climbed into the muddy old wagon.

“Norman! James!” shouted somebody in the dark. “Come out of that. Here is my trap. Get in. I’ll drive you home in half the time. Thank God, you’re here at last!”

Another Cochran! Norman was roughly dragged out of wagon and pushed up into the cart, and the horse plunged down the road.

“Thank God, you’ve come!” cried

Cochran again. "It's the boy—he's had typhoid. Nobody knew where to reach you."

"Typhoid?"

"Yes. Impure milk. Those Dutch women gave it to him. They brought in their own doctor—Godfrey. In my opinion he's a quack."

The whole world suddenly grew calm and still about Norman.

"Dead?" he said. "Will he be dead when we get there?"

"There has been no hope since morning. But you may see him alive, if—"

He lashed the horse furiously. Neither of them spoke again. When they reached the house Dr. Godfrey stood on the steps.

"It's all over!" he said. "The child was breathing his last when I left him."

James pushed aside the excited servants, and going into his own little study shut the door.

"I have killed her child," he said, loudly. "He was her child. I have been a selfish brute."

He was alone there for a couple of hours. Whether it hurt him most to lose

the child or the old self of which he had always made a god, who knows?

The door opened at last.

"Elizabeth!"

Her face was pale and pinched. "Hush! He is asleep. He will live!"

"They told me—"

"I took him from them. Winny brought old Doctor Paul. He will live—he will live."

The next day James Norman told his wife that they were paupers. "I have been a fool," he said. "But what does money matter? My salary will keep us in comfort. I am sane at last. I'm not a bad fellow at bottom, Elizabeth."

"No," she said, gravely.

"And we will keep the boy to ourselves."

"Yes. I emptied the north wing yesterday. He is our child now, James."

She was very quiet, but James Norman laughed and cried and sank upon his knees beside the cradle. He looked up into his wife's face, and pressed the boy's thin hand to his lips.

It seemed to him that God gave to him then, for the first time in his life, a holy sacrament.

PHILADELPHIA.

The Yacht Races Reviewed

BY T. JENKINS HAINS

[AUTHOR OF "MR. TRUNNELL," "THE WINDJAMMER," ETC.]

FROM the beginning of the first American trial races in the early spring the "Reliance" showed her matchless form and promised the greatest speed. She was noticeably stiff in light weather. She had an ugly overhung bow which threatened to slap heavily in a lumpy sea, but with even these slight drawbacks she was easily picked from the more beautiful "Columbia" and ghostly, uncertain "Constitution" as the representative of the type which would defend the Cup.

From the designer's point of view there has been little developed in either the "Shamrock" or the "Reliance." Both are so nearly alike in general appearance that they resemble each other

in type as much as two pins. They represent nearly the point of convergence of the different variants from the possible or nearly possible perfection. After them will be even less change for the racing vessel of ninety-foot water-line if the speed trials are to be carried on under such abnormal and arbitrary rules. It is very doubtful whether the best results in practical and useful development of model are obtained under the peculiar rules which now govern the International Cup Races.

From the sportsman's point of view and from the yachtsman's or sailor's, the results are most satisfactory. There must be rules to govern all contests of strength or skill, and the present ones

are accepted without murmur. The fairness of the speed trials has been made of national importance. Every effort has been made to give the contestants a clear course and no favors, and at the same time allow the countless thousands of spectators to get an occasional intelligent glimpse of the sport. The absurd interest and tolerance of the American at these races is a monument to patriotism and patience. Many thousands of the onlookers could not tell one boat from the other. Not one in a hundred knew which was ahead at the different stages of the game, and none of them could be allowed within a mile or more of the yachts, or near enough to recognize owner from master, cook from sailor, without the aid of a powerful glass. Fancy going to a horse race and taking up a position on the roof of some house a few miles distant. Yet this is about what the watching of an International Yacht Race amounts to.

To the serious minded, who would view racing with other interests than the absurd sort manifested by an over-journaled public, the results are far from satisfactory.

The "Reliance" won. This satisfies an antiquated patriotism. Under the present rules it instructs us very little and arouses no more interest in many than a horse race did in the Sultan of Turkey, who refused to attend a celebrated one on the ground that "he was quite certain one of them would win." As he could not care a rap which did, he failed to see an excuse for being bored. Sir Thomas Lipton is in no way to blame for the results, or, rather, lack of results, in the international game. Yacht racing is the most expensive amusement known, when indulged in upon a large scale, and the "Shamrocks" have cost the challenger a handsome fortune. It is he who first made public his desire for a change of rules which would allow a change of model. It is therefore both right and in good form for the Cup Committee to take the matter up, unless they determine, as many already charge, that the races are entirely private affairs and should in no way interest the absurd onlooker. If this is the truth, and the races are solely for the pleasure of a few members of the New York Yacht Club, then it is no-

body's business how the rules are framed, and apologies are offered the sportsmen who have so ably conducted them. If the idea of international competition really enters into the game, then there must certainly be some way which will allow the use of legitimate models, models that represent useful and legitimate types of fast sailing craft of small tonnage. The present ones are solely racing machines. They have done much toward developing lines which are fast, and they have changed the modern cruising vessel to some extent, but they are no longer useful. Their superior points for speed are now simply exaggerations. They have fulfilled a mission and should be placed with the remains of the good ship "America." Racing, to be countenanced by the serious, should have more in view than what may be developed under the present system.

The race-horse has done much for the excellence of breed, and horse-racing has many beneficial qualities in consequence. The simile is drawn for the landsman who can readily understand how the development of the sailing vessel of small tonnage, upon lines which can be adapted for general use, would be of vast benefit to the sea-faring public.

It is one thing to criticise and another to offer a remedy or suggestion. The evil is evident in the racing model, now consisting in a long, overhung and deep fabric which is cut away forward almost to the heel of the mast. There is no forefoot or cutwater, as in the usual type of cruiser, the bow being smoothed back to slip as easily over the water as possible, instead of through it. The center of lateral resistance is well aft and deep down, far too deep for practicability in a cruising or cargo vessel. But the racer's stability must be great in order to carry a press of canvas, and the difference between the center of buoyancy and center of gravity is consequently exaggerated until the draft is beyond all usefulness. The principle might be kept up until the buoyant knife-blade, with its leaden bulk, reaches the limit of mechanical construction.

In the legitimate models, the models which do duty for cruiser designing, the principle of cutting away may be carried to a considerable extent below the water-

line; but while it makes a vessel quicker in stays and more certain in her movements in smooth water, there is a very grave danger in the long overhangs in a heavy sea. The smashing crash of a ship falling into a head sea with such a bow, or the twisting throw of a falling wave upon the long counter are too well known to call for comment. In the Lower Bay the strain would not be exceedingly great driving to windward, but at sea the clipper bow would be sadly missed.

The "Reliance" in the first race showed at once that she was a vastly superior vessel. She won easily in spite of her great handicap of 1 minute 57 seconds—enough under ordinary conditions to have caused her to be hopelessly out of it. In the second race she showed her speed again, and the "Shamrock" people began to cry that their boat was not well handled. It is safe to say that Sir Thomas did not cry out when he saw there was no chance. He had been told long before the races began that he had no show whatever with the Bristol boat, and it is quite certain that he knew what was coming. His satellites made the cry.

As to the handling of the vessels, there is nothing to say either for or against them. They were both well handled. Barr, the captain of the "Reliance," is an expert sailor and is a foreigner. He

carries nearly always a foreign crew. Wringe, of the "Shamrock," has little to learn about handling fore and aft canvas. There was nothing proved whatever which might give the patriotic of either England or America cause to rejoice in superiority. There is no superiority in either crew; both are masters of the art.

It is to be hoped that the result will not cause a large order for small "Reliances;" there should not be too much enthusiasm for the newly developed model. If there should be a tendency toward an exaggeration such as the "Reliance," it should be indulged in moderately.

The interest in the races is waning very fast. It is seen that the limit is about reached, and the results obtained do not justify any great expenditure of either time or money to press them further. The type has reached the limit. Now let there be a more rational and legitimate model, which, while it may contain many of the good points of the champion, also have the solid and seaworthy build of the cruiser.

Sir Thomas has done well and has lost nothing by his venture. If he cares to try another "Shamrock," Americans will be glad to welcome her; but they would just as soon some one else should make the trial, for variety's sake.

BALTIMORE, MD.

A Message

BY EMILY HUNTINGTON MILLER

THE wind caught up a seed one day
And dropped it by the dusty way—
A wondering child the blossom bore,
Where a lost soul lay sick and sore.

Its breath stole through the mist of pain,
And calmed and cooled the throbbing brain.
Whispering, "The lilies share his grace,"
He turned and sought his Father's face.

GENEVA, ILL.

Close of the English Parliamentary Session

BY JUSTIN M'CARTHY

THE one great work of the session of Parliament now closed—indeed, I may say its only work—has been the passing of the measure for the reform of the Irish system of land tenure. The measure is in substance molded according to the terms of the agreement adopted by the conference of Irish landlords and by the Irish National Convention. Some few slight alterations for the worse have been introduced by the efforts of what I may call the anti-Irish groups in both Houses of Parliament, but, as a whole, the measure has come safely through its ordeal and may be regarded as the opening of a new era in Ireland's domestic history. Its main result must be to put an end to the absolute rule of the landlord and his agent and what is called the "middleman" in Ireland, and to make the hard-working Irish tenant the owner of the soil to which he devotes his time and his labor. One result of this change, it may be confidently expected, will be to give the Irish agricultural classes a motive at last for settling on the soil of their own country, and for putting a stop to that wholesale emigration which within my own lifetime reduced the population of Ireland to little more than one-fourth of its former number.

Of course even this would not of itself constitute a settlement of the whole Irish national question. That settlement, as every reasonable and thinking Englishman must now see, is only to be obtained by the restoration to Ireland of her right to make laws for herself in her own Irish Parliament. The address lately sent to the King by the representative chamber of the Canadian Parliament comes in with most timely effect to drive home this conviction to the mind of the English people. The Canadian address reminds the Sovereign of the fact that Canada, which at the opening of the late Queen's reign was in actual rebellion against English rule, and was at

the same time torn asunder by internal dissensions between the French Canadians and those whom we may call the British Canadians, has been converted by the magic of Home Rule into one of the most contented, united, loyal and prosperous divisions of the English Imperial system. The concession of Home Rule to Canada was the work of a man of genius, the late Lord Durham, who was sent out by England with something like dictatorial powers for the suppression of the rebellion, and who soon saw with the eyes of a statesman that Home Rule for Canada was the indispensable condition of peace and prosperity there. I cannot feel the slightest doubt that the reign of King Edward VII, if it only lasts for a few years more, as we may well hope that it is likely to last, will be made memorable in history by the granting of Home Rule to Ireland. But in the meantime a great work has been accomplished by the passing of the Irish Land bill, and the session of 1903 will make its mark in history by that great work at least.

Otherwise the session has nothing to boast of. Except while the Irish measure was under discussion the attendance of members in the House of Commons was smaller and more irregular than in any previous session which I can remember, and there were long nights when the representative Chamber seemed to have become absolutely indifferent to its legislative functions. The Government has been divided in itself, and more than once appeared to be on the verge of an actual break up. The Liberal Opposition made but a poor show during the whole of the session and counted for little in any work that was done. Mr. Chamberlain has been the most conspicuous figure in the House, and his has been to all appearance a work of destruction and not of construction. The financial measures which he has foreshadowed on his own account have been publicly and

steadily opposed by his colleague in administration, the present Chancellor of the Exchequer, Mr. Ritchie, and by the only three living statesmen, Lord Goschen, Sir William Harcourt and Sir Michael Hicks-Beach, who during our time held the office of Chancellor of the Exchequer before Mr. Ritchie came to occupy that place. Among the members of the present Government Mr. George Wyndham, the Secretary for Ireland, has made a distinct mark by the eloquence and the genuine statesmanship which he displayed during his conduct of the Irish land measure. George Wyndham, it may be said, is descended on the maternal side from Lord Edward Fitzgerald, one of the leaders of the Irish rebellion of 1798, and thus may be assumed to have some sympathy of blood and feeling with the national aspirations of Ireland. Among members of the representative chamber who do not hold office in the Government Winston Churchill, son of the late Lord Randolph Churchill, Lord Hugh Cecil, son of the Marquis of Salisbury, Thomas Gibson Bowles, Lloyd George, a Welsh member, and John Redmond, leader of the Irish National party, have distinctly added to their already brilliant reputation as Parliamentary debaters.

I have already described for the readers of THE INDEPENDENT the curious waking up which took place in the House of Lords during the past session, when on several important occasions the Peers actually succeeded in drawing the whole attention of the country to the debates of a House concerning which nobody in other sessions ever felt the slightest interest. But this very unexpected up-

rising of the House of Lords was mainly due to the fact that apart from the Irish Land bill the House of Commons seemed to have abdicated its functions and fallen asleep, and some energetic Peers found that if the Lords would not discuss Mr. Chamberlain's proposals these proposals would have been allowed to pass without any Parliamentary notice whatever. The Lords, therefore, probably awoke to a recognition of the happy chance afforded them, and seizing the unexpected opportunity succeeded for once in holding the undivided attention of the British public.

PHIL MAY

hope for the growth of Ireland's welfare he distinctly and directly associated that hope with the measure for the benefit of the Irish tenantry which was then passing through Parliament. Other Royal visitors to Ireland have always confined their utterances of hope for Ireland's improvement to the pious declarations of their faith in some good time coming, but King Edward VII explicitly declared that his hopes for Ireland's growing welfare were mainly founded on the passing of certain legislative measures to which he gave his

The King's visit to Ireland has produced a most favorable impression there and everywhere else. The active interest which he showed in studying the condition of the people with his own eyes, in entering many of the poorest houses and conversing freely with their occupants, has made it clear to Irishmen that he felt a real and deep sympathy with the condition of the country. He made it evident that he was not uttering the mere formal commonplaces of a Royal visit when in expressing the

cordial approval. The Irish people, therefore, have been given clearly to understand that the King believes the first remedy for Irish suffering and discontent is to be found in wise and beneficent legislation on the part of the British Parliament. It was observed, too, with much gratification that the King in his answers to addresses from local bodies always used the singular pronoun "I" in speaking of himself, and never employed the Royal "we," according to the hitherto invariable phraseology of a Sovereign's ceremonial declarations. The

Irish people in general now hold the firm belief that King Edward is their sincere friend, and that his influence will ever be on their side in every appeal which they make for justice and the full recognition of well-founded national claims. His recent visit is therefore everywhere regarded as an omen of good.

Literature and art in these countries have undergone some most serious losses since I sent my latest contribution to the pages of *THE INDEPENDENT*. American readers will appreciate just as

fully as we can appreciate it here the seriousness of the loss which both art and literature have suffered by the death of James A. McNeill Whistler. I had the honor of knowing Whistler during many years and of meeting him very often in London. For some time lately he had lived for the most part in Paris, and it was in Paris that I saw him on the occasion which proved to be my last opportunity of meeting him. I need not descant upon his genius and his gifts as a painter, or on the marvelous literary skill which he displayed when he took to the writing

of books or the delivery of lectures. But I may say that in private life he was one of the most brilliant and witty talkers I have ever met with, and it has been my good fortune to meet with many witty and brilliant talkers in various countries. Whistler could adorn and brighten the most commonplace subject by some flash of wit and humor, of fancy and creative force, which sent new and sudden light into the minds of his listeners. We all remember the description of Burke given by Dr. Johnson, when he said that if Burke only spoke a few words to the

most unenlightened stranger when they both sought shelter from a casual shower of rain the stranger would say to his friends afterward that he had just been talking with a most remarkable man. The stranger who came by chance into talk with Whistler would have been sure to say, even if he did not know who Whistler was, and had never seen one of his pictures, or read any of his writings, that he had just been speaking with a most remarkable man.

The death of William Ernest Henley

removes from our midst a man of varied literary capacity and of much influence in journalism. Henley was a poet, a dramatist, and an essayist of very high order. He was the editor and the inspiration of several magazines and weekly newspapers, and he had the art of drawing around him colleagues of remarkable capacity and of discovering and developing the literary qualities of young men. He at one time started and edited a weekly paper called *London*, and to this journal Robert Louis Stevenson contributed some of his best writings.

JAMES ABBOTT MCNEILL WHISTLER

Portrait shows the famous white lock

In other journals which Henley edited he had among his contributors such men as Rudyard Kipling, James M. Barrie, the novelist and dramatist, and Lord Curzon, the present Viceroy of India. Henley was regarded with intense affection by all the rising young men whom he gathered around him, and he seemed to have a remarkable gift for discovering genuine ability in literary aspirants whose qualifications had not yet been rightly appreciated by other publishers or by the public in general. His political opinions were strongly opposed to my own, and he was especially antagonistic to that Irish Home Rule movement, in which I took an active part, but I hope I could not any the less admire the genius and the gifts of the man because his political opinions were not in accord with my own, and I knew well that whatever views he might adopt in public affairs were always the result of his sincere and conscientious convictions. Another man of mark was my friend, Benjamin Leopold Farjeon, one of our most prolific and successful popular novelists. Farjeon's capacity was first discovered by Charles Dickens, and he was for a long time one of the group which used to be described as "Dickens's young men." He was married to a daughter of Joseph Jefferson, the famous and, in his way, incomparable American actor, the creator of the dramatic "Rip Van Winkle." I had known Farjeon well for many years and I valued his friendship highly. Art has suffered a loss hardly second to that of Whistler by the early death of Phil May, who as a "black-and-white" sketcher may well be said to have had no rival

in our time. Phil May's drawings for "Punch" were unique in their style and were known all over the world where men can appreciate artistic skill combined with genuine humor. My daughter regards as a priceless possession a small sketch which Phil May drew for her in one of her birthday books. She had only asked him for his autograph, but he accompanied the autograph with the sketch of a young "coster," or flower girl, a bright-eyed, smiling lass of that class which he loved to make a subject for his pencil. His sketches always seem at the first glance as if they were touched off with light and careless hand, but every line in them was the result of thought and patient elaborate study. We have many great artists still, but Phil May was himself alone, and now he has passed from among us soon after he had attained his thirty-ninth year.

Not much has been done in literature calling for special notice since I last addressed the readers of THE INDEPENDENT. But we have had one remarkable novel, bearing the title of "Against the Pikes," by Mary F. A. Tench, a story of romance and realism combined. The title of the book is taken from the lines in Tennyson which tell of the man who "hurls his soiled life against the pikes and dies." The book itself, I should say, is dedicated to the memory of Tennyson. It is a thrilling story, the scenes of which are laid sometimes in Ireland and at other times in England and in Australia, when Australia was still a land of penal settlement. The author shows originality and distinct power, and the book seems to me to give much promise of a successful literary career.

LONDON, ENGLAND.

Four Part Harmony

BY M. WOOLSEY STRYKER

JUNE's high soprano, Autumn's alto deep,
 Winter's strong bass and April's tenor clear;
 These are the tones that make our pulses leap,
 This is the mighty quartet of the year.

HAMILTON COLLEGE, CLINTON, N. Y.

Helpless Liberia

By AUGUSTA V. POHLMAN

[Mrs. Pohlman is the wife of the Rev. August Pohlman, M.D., who for over five years was in charge of the Lutheran Mission at Muhlenberg. She was his companion during the entire term of his pastorate, and she returned with him to the United States when he relinquished it.—EDITOR.]

LIBERIA, the negro state founded on the West Coast of Africa by the philanthropy of citizens of this country, presents two fundamental problems: one is the racial and social antipathies among her people; the other is the lack of stable, uninterrupted industry. Mulattoes against pure bloods, American

mon highways—where even the trails are practically under the control of savage tribes. The state receives nothing but good will and a guaranty of neutrality from its foster parent, the American nation; it must some day become the prey of European states, whose spheres of influence are constantly nearing its borders.

PRESIDENT-ELECT BARCLAY AND WIFE

born against natives, form the lines of cleavage in her population; for the present they render impossible any harmony, any real concert of action for the good of the country. In the development of the land tropical richness of soil and facile production are of no avail. Business is virtually impossible where, as in Liberia, there are no steam roads and few com-

Lacking industries, the only ray of light for the people seems to come from missionaries of the Christian Church, who maintain stations and endeavor to inculcate thrift and energy. But tropical fevers and enervating heat are enemies few men of the European races can face for long periods. The field is dotted with graves.

View of Monrovia, Liberia

Mission work, the one means of rescue for the country, is hampered not alone by the character of the climate and the population; it is the native customs which interpose the almost insuperable obstacle. Once thoroughly indoctrinated with the tribal lore in childhood, it is almost impossible to give the savages a higher culture, so strong is the fear of witchcraft, the tribal tradition.

Witchcraft, lifted above the commonplace, erected into a system and surrounded with all the mysterious possibilities of the forest depths, is, however, not to be despised, nor even entirely condemned. Bla Bubba, the mighty old "gri gri" woman of the Golah tribe—tall, venerable, with the conscious dignity of a personage—once appeared at our mission at Muhlenberg. The imposing figure stalked silently out of the forest and, without asking leave, proceeded across the clearing that separated the buildings from the bush. She came forward calmly, and, entering one of the compounds, sat upon the ground and looked around without giving a sign that anything she then saw for the first time was of earthly moment. Boys and girls looked on in awe; men from the bush appeared to be

unable to say a word. Some were brave enough to come forward and kiss her hand.

Only a few days before she had, by a word, stopped a war between two of the neighboring tribes. Petty chiefs dared not oppose her; even tribal kings were in awe of her least word. She had more power than any of them. The face was a kindly one, for all its dignity and solemnity; but wo to man or woman who crossed her. She made no explanations for either the least or the greatest of her acts, and none was ever asked. She was simply obeyed.

Her visit to our mission was to inspect the "God man's" ways, for so do the natives style the missionaries. Being apparently satisfied, she departed with as little ceremony as she came.

The "gri gri" bush for the girls and the "devil bush" for the boys are the institutions from which such as Bla Bubba derive their power. With an insight equal to that of enlightened peoples, the tribes know the value of impressing the budding intellect at the time when it is "wax to receive, marble to retain." At eight years of age the children go into the bush, where the witch man or woman

deals in tribal lore and mystery—whence al. come, their souls seared and darkened by terror, forever distrustful of the religion of the white man. The course lasts four years, with daily instruction; yet what it is not even the bravest have dared tell their Caucasian friends. The most devoted of converts, those who have braved death for their new faith, tremble or turn away when asked what the witch man or gri gri woman said in the little forest canopied schools of superstition.

Once, I remember, an initiate came forth from the gri-gri bush clad, according to custom, in a cloth that must not be removed until the chalk-like pigment placed upon her had been washed off by an experienced hand. A native convert, who had become a Presbyterian minister, dared say he did not believe in such foolishness, and he took from the little girl the forbidden cloth. His father and sister were immediately summoned to a "talk." They were told that one of the three must drink poison. The sister hesitated a moment and took the draught to her brother; in a few hours he was dead.

The Mafia itself does not guard its secrets more religiously than do the

tribes their tribal mysteries and their lore, as expounded in the "bush." Even the general character of the training is not exactly known. Some writers regard it as a secret society initiation, a sort of masonry; others as a ceremony purely religious; still others, as semi-political or clan knowledge. Whatever it be, it is universal in its operations—supreme and absolute in its authority over the least and greatest acts of man or tribe. No one may sit in tribal council or "palaver" unless he be initiated. No one may see the "Devil" but him who, in the bush school, has sworn allegiance to His Satanic Majesty. In his journeyings His Majesty is preceded by a herald who, by vigorous shouts, announces his approach. All women and all uninitiated, or "strangers," must hide as the dread personage draws near. In towns they shut themselves within their houses until he has passed.

Missionaries endeavor to secure control of the children before they have been through the "devil bush," and they are often successful. The natives have a secret respect for the white man's ways. Even the most devoted adherent or timor-

A Street Scene in Sierra Leone

ous slave of devil bush mystery will often permit his boys and girls to go to the schools to learn English, which all reverence, and to be instructed in gardening, sewing and other crafts. Before they are obliged to pass the tribal initiation they can be handled; the spirit and intellect can be brought to a degree of culture which is most promising. After initiation they seem able to appropriate the mere school learning; religious culture, as a rule, makes then little or no impression.

An entire recasting of their lives is involved in the taking of the young children from the tribes; they must literally be recreated in heart and spirit. For them, henceforth, there is little of home, parents or friends among their own flesh and blood, if they are to remain true to their Christian culture. From childhood to youth, from youth to early manhood, everything must be supplied for them. They must be carried through to the time of marriage. Indeed, wives and husbands must be provided, if they are to be retained as permanently useful converts. Arrived at 21, the boys must go forth to defend themselves; the girls leave the schools at 18. Fortunate are they who can find fit companions from among those who have been fellow pupils. Do the boys go back without wives to the interior? They are practically outcasts, knowing nothing of tribal thought, tribal life and daily occupations. The girls are in even worse plight. In the towns and "half towns" of the Liberians of American birth, among people many of whom are not so well educated as themselves, they are "only country girls." Returning to the tribes, they have a more difficult lot than the boys. If they marry at the mission, however, some of its land is set aside for them, and they receive from the schools their first household outfit. The mission land is a loan only from the Government. The pupils, in taking it up, become proprietors under a law somewhat resembling the American "homestead" acts.

Occasionally the victims of "devil bush" horrors and fears, rescued for Christianity, have developed into a type of convert peculiarly heroic. It would appear as if, having broken away from the most groveling of its superstitions,

they were all the more determined to live according to the new light that has come into their lives. Yet none of them has ever whispered so much as a syllable that can be called a real revelation of the doings in the rustic forest temple where they were inoculated with the tribal songs, secrets, traditions and fears. It is difficult—practically impossible—to determine even the feeling which dictates their reticence; whether it be fear of death by secret poison or assassination, or whether it be the instinct of respect for the lore of their fathers, cannot certainly be surmised by their Caucasian friends.

I was sitting one day in the mission at Muhlenberg, when Rev. Henry Stewart, one of our most sincere and courageous converts, came in. He sat down and began talking of his school and his pupils. Henry was much interested in his story, and time passed rapidly. I invited him to stay to dinner. He accepted, glad of the opportunity for a further talk on his work. Suddenly, from behind the door of the room, which stood open, came a sharp demand:

"Want some water!"

At the mysterious sound Henry trembled and turned quickly.

"Who was that?" he muttered, in a voice that strongly suggested one completely unnerved. Pitiable as was his fear, I could not help smiling, as I replied:

"Oh! Henry, that is only my pet parrot. You know we teach him to say little things."

"A parrot!" he replied, in a tone of surprise that did not augur a very flattering opinion of the truth of my statement.

"Yes, Henry; a parrot. Did you never see a parrot?"

"Yes; I have seen thousands of them, in the woods. But I never heard one talk."

"Well, we teach them to say some very funny things; didn't you know it?"

"No," he replied, still somewhat incredulous.

Polly slowly walked out into the center of the room and remarked, commandingly:

"Want some water—want some water!"

Henry's manner was a study. Fear,

curiosity and an unnamed something I could not quite fathom were apparent. A thought came to me like a flash. I said:

"Henry, you didn't think it was a devil, did you?"

My visitor was a convert of fifteen years' standing—one who had proved his faith by braving fears and encountering dangers that would have appalled even the stoutest native hearts. To be asked whether he still believed in devils was embarrassing. His answer was some-

only recourse for him was to separate entirely from his family.

From that day he has been a constant object of suspicion and, not infrequently, of persecution, especially from the family of his first wife. Her kindred, indeed, tried to poison him. Only to his most intimate friends will he even mention the devil bush, and to them only in the most guarded terms. If he were suspected by the tribe of having told one of its secrets, it is doubtful if any power or safeguards could save his life.

Supreme Court, Liberia

what non-committal, but it was manifest that centuries of tradition and inherited instinct were not to be overcome in a day.

Mr. Stewart was an ordained minister of the Lutheran Church. He was converted in middle life, after having gone through the devil bush and being thrice married according to native custom. It was a case in which the whole life had to be recast. The first step was to put away his plural wives. The oldest, who had borne him two children, would have been preferred, as the real consort; but she declined to adopt Christianity, and the

Industrial work is the main leverage of mission effort. As much mechanical training as possible is coming to be the rule. Missions have not only preceded trade; they have, in most instances, created it. The first steam vessel ever built on the St. Paul's River, in Liberia, was launched at Muhlenberg. The Superintendent, under whose care it was constructed, was a negro from America. The German Lutheran Mission authorities recognize so clearly the necessity for mechanical training as a part of religious work among the heathen that they send

craftsmen as members of the forces to be attached to stations. The craftsmen are missionaries in a measure as great as are the religious teachers, altho they are called "Brothers." General mechanical training, tailoring, gardening and agriculture are the leading branches taught the boys. The training of the girls is even more largely industrial than that of the boys, for the success of mission work depends more upon its progress with native women than with native men.

If the population were homogeneous,

blacks, of pure or nearly pure blood, look down upon mulattoes as a race without standing either among Caucasians or Africans. And the mulattoes return the feeling with a bitter intensity, for they consider themselves "white men."

Industry, the hope of all lands, and the only salvation to be looked to there, is practically non-existent in Liberia. Life is from hand to mouth. It depends upon agriculture, carried on in most fitful manner, altho iron is so plentiful that in some places it can be obtained by scratching the surface of the ground. Savage crafts-

Legislative Hall, Liberia

or if it were possible to obtain any real concert of action among the people, more immediate hopes might be entertained for Liberia. But racial and caste distinctions are more numerous and mischievous than in other lands. The population is divided into three classes: negroes of native birth; negroes of foreign birth, usually American, and mulattoes. The natives resent the arrogance of the "Americans," as the men born in the United States are called. The "Americans" despise the natives as a lower order of beings. Both native and foreign

men make weapons and utensils that would do credit to the mechanics of civilization; but it does no good, contributes nothing whatever to the ruling caste, adds no impulse to the progress of the people. It cannot do so while there are no roads, and while even the forest trails can be closed at any time at the whim of some savage chief.

Wherever the missionaries go on their travels they see, however, some rays of light. Threading their way, unarmed and defenseless, through dark forest paths, the wanderers come across a clear-

ing. Some savage, indistinguishable from any of his fellows, comes forward and addresses them, with every evidence of pride in his accomplishments, in a tongue he believes to be English. The visitors perceive at once that they have a mission-instructed man to deal with. Looking about them, they see signs of a superior intelligence struggling to make itself felt amidst surroundings of supreme discouragement. It is a ray of light from out the dark, a sign that mis-

sion fostered industry is the only hope of the field of their choice. All over the land, and far into the interior, the natives are keen for the mechanical culture of the white man. Added to their skill, already high for savage peoples, it must inevitably bring greater refinement, truer culture, gentler manners—must make ready the ground for the seeds of a real civilization. Missions alone are doing the work; the industries they are planting are the only hope of Liberia..

PHILADELPHIA.

The Story of a Betrothed Chinese Young Lady

BY MISS WONG JIN YING

[This record of the daily life of a Chinese young lady of the upper class has been obtained through an interview with Miss Wong Jin Ying, her words being interpreted for the interviewer by her father's secretary, Mr. Chang Yow Tong, who approved the interview after it had been written. Miss Jin Ying is the oldest daughter of the Hon. Wong Kai Kah, Vice Imperial Commissioner of the Louisiana Purchase World's Fair. Mr. Wong has recently taken a house in St. Louis, and will reside there with his family until after the Exposition.—EDITOR.]

I WAS born 13 years ago in Shanghai, China, and have been betrothed since I was 12 to Master Sah Fok Kyiun, a son of Admiral Sah, of China. I am as yet too young to be married. For five years I shall remain in my father's house, the marriage ceremony taking place when I am 18, or two years after I become of age. In China a girl is of age at 16.

Master Sah, who is 17, resides also with my father. This is sometimes the custom in China among families of the upper class, in cases where two families are on very intimate terms. Master Sah's father is away at sea, and his mother is dead. At my father's house it is more homelike for him than any other place could be. He goes to school (to private tutors) with my elder brother, who is about his age. Master Sah and I see very little of one another, altho we are in the same house. Judged by the way

American young people act, Chinese boys and girls are very shy.

Much of my time I spend in my own room, engaged in my studies or in practicing the accomplishments which I must master. I have committed many passages of poetry to memory, for the Chinese consider this a very graceful art, one that surpasses music. I can both recite and compose poetry. The two studies go side by side in a Chinese girl's education. She is taught to begin writing poetry at a very youthful age.

One of my favorites among the selections which I have committed to memory is a production by a famous Chinese poet. It is quite long, of many verses, and is entitled, "The Burial of the Flowers." An American might not understand what this means. It refers to the poetic custom which the Chinese sometimes practice of burying the petals of the flowers, because, they say, the lovely

leaves are too sacred to be left uncared for, at the mercy of the wind, the dust and the rain.

Water-color painting has consumed many of my leisure hours. We begin to paint on paper, and then, when we are well advanced, paint on silk. A scene on a hillside, or bamboo growing, or a beautiful lake, are familiar subjects. In a corner of the picture we place some quo-

embroidered in dull blue and bronze, to be used in a set of perfume bags for summer, was one of my lessons. The katydid, which we sometimes cage in summer for its song, is very beautiful in embroidery, as well as the gold fish and the stork.

I have also taken instruction in playing the lute—a stringed instrument which responds to a very light touch—altho,

Miss Wong Jin Ying (in the center). Her only sister is standing at her left. Her elder brother appears at the right

tation, usually a poetic sentiment, to show what the painting represents.

Elegant letter writing is a most desirable accomplishment. When I was very small I was taught to write letters to little girls whom I knew, and to strive to improve continually. Embroidery was also commenced when I was very young. Both of these accomplishments are ranked along with poetry by the Chinese. Our embroidery is wrought very closely, with extremely small stitches, usually on satin. It is often in imitation of some artistic object. An antique coin

as I have said, we do not consider music as highly as the Americans do.

As a little child I enjoyed more freedom than I do since I have become older, for then I could play with my brothers and there was much time to play. We played "hide and seek" just as the American children play it. Our tops were superior to anything I have seen in America. They rolled on two disks, with a large and a small hole in the axle, so that they sent out a loud, musical sound. We could pitch them into the air above our heads merely by a skillful pull of

St. Louis residence of Miss Wong Jin Ying's father, the Hon. Wong Kai Kah

the string. This was a matter of rivalry among us, to see who could pitch her top the highest. At about 8 or 9 years of age we began to keep distant from the little boys.

An "old maid" is unknown in China. From the time a little girl is born, her future is considered as belonging to some other family, so that it is very natural for us to play those games which remind us of the time when we shall be married. We enjoyed our dolls very much, and often played "cooking" and "sewing." My sister and I had small ovens with which to cook, and we possessed several small tea pots and other diminutive dishes. Sometimes we would invite each other to a play dinner, and we would serve candy, peanuts and walnuts.

When we gave a formal party, the custom was to tell our nurse to go and extend invitations to those little girls whom we desired. Generally we had as many as the house would hold. On the day of the party everybody would dress up in her gayest. We would play games and then dinner would come on, after which we would play again. Our parties

were always in the afternoon. There is never any social function in China in the forenoon, unless it is a marriage dinner, which begins a celebration that is to last a week or possibly a month.

Another great feast in a Chinese family is that given in honor of the firstborn and in honor of each son. When the infant is three days old—"presentation day"—there is a dinner, and after the child is a month old a very great time of feasting is enjoyed. That is the day when every one has the chance to make himself sick with eating. Only men are present at these celebrations.

My parents celebrated each of my birthdays with a fine dinner for me and gifts when I was small, but this is done no longer, because I am now old enough to understand that it is not showing parental respect for me to have a feast on my birthday. My duty and pleasure on this day is to honor my parents, not myself. So on my birthday I go to them and bow before them and prostrate myself.

Ever since I can remember I have seen my parents the first thing in the morning after I arose and made my toilet. It is my duty to go at once to them, to bow

before each of them and bid them good morning.

The reason why a Chinese girl is betrothed so long before she is married is, as my parents have explained to me, because the Chinese like to have worldly affairs settled as soon as possible. Parents wish to be sure that whatever may happen to them, their daughter will be taken care of, therefore every family, even the poorest, is anxious to secure a daughter's betrothal just as soon as the family can afford it. In families of the upper class there is not anxiety as to the settlement of a daughter, but marriages are often arranged to cement friendship between two families.

On the girl's side the parents wish to know of the character, cleverness and the social standing of the boy; on the boy's side, they would be more careful about the temper and disposition of the young lady. It is thought in China that a girl's true nature may be seen at five or six years better than when she becomes old, as American girls are, because as she gains knowledge she learns how to hide those traits which are disagreeable.

If a girl has been betrothed and her husband dies before they are married she may marry some one else if she wishes. Her parents may persuade her to do this, but they cannot force her to it. She has the privilege of going to live in her dead husband's house to be taken care of by his family as long as she lives. Sometimes when a girl's parents have urged her to marry against her will, after her betrothed husband has died, she has committed suicide. If a girl should die

and the betrothed husband live, she is mourned by his family as his wife, and when the families are on very intimate terms she may be buried in the vault of her husband, even tho the marriage ceremony has not taken place.

Girls in the upper class in China are taught to rear flowers. We learn the culture of the hundreds of beautiful flowers which bloom in China, particularly the chrysanthemum, the peony and the lotus lily. Often we go out to the ponds and lakes to gather lilies. That is considered a very nice pastime for young ladies. Our education is not regarded as complete unless we know the poetical names of all the flowers, as well as how to take care of them. This is not very difficult, because our recreation is almost always taken in the flower garden.

To rear gold fish is another accomplishment of the Chinese girl.

I have lived in several cities, Shanghai, Canton and Chifoo in China, and in the American city of St. Louis. Neither my sister nor I have bound feet, because when we were born the fashion was coming in of letting the feet grow to their natural size. But my mother's feet are bound. I wear exactly the same garments which girls of my age wear in China. I have my hair braided in a queue; when I am married it will be rolled in a coil on the top of my head. I have learned some of the American sports. I can play croquet and lawn tennis, and I ride a bicycle. There are reasons, however, why China appears to me a better country to live in than the United States.

ST. LOUIS, MO.

The Gossips

BY FRANK WALCOTT HUTT

WHEN Hearsay sits in Gossip's hall,
The guests crowd greedily about
To catch some word of knightly rout,
Of sore defeat and fall.

Alas, alas, how few there are
Who in Hope's quiet chapel pray
The warrior may come away
Without a wound or scar.

ASHBURY GROVE, MASS.

The Macedonian Torch

By Hon. A. LOUDON SNOWDEN, LL.D.

FORMERLY UNITED STATES MINISTER TO GREECE, SERBIA AND ROUMANIA, AND TO SPAIN

[Colonel Snowden was the author of the very interesting article which appeared recently in these pages upon the assassination of Alexander of Serbia and of Draga, his Queen. Colonel Snowden has kept in close touch with the affairs of Europe since his relinquishment of the post of Minister, and his opinion upon the conditions in Macedonia and the neighboring States is worthy of grave consideration.—EDITOR.]

WITHIN a few weeks Macedonia, a mere outlying satrapy of the Turkish Empire in Europe, has come to occupy the front place on the stage of Old World politics; the torch has been lighted which may yet cause the conflagration that will mean the end of Osmanli rule in Europe. Small and tragically hopeless tho it seems, the uprising may indeed contain the germ of the movement which shall set the Balkan states aflame, and, if it do not extirpate the Ottoman cancer in Southeastern Europe, at least narrow its dimensions and circumscribe its blight.

For over a century each generation has witnessed a war by Russia against the Mohammedan intruders. Since the Czar's soldiery dictated the humiliating treaty at San Stefano, almost within sight of the mosques of Constantinople, a quarter century has elapsed; the customary period of repose for the Asiatic interloper has about ended. Indeed, the twenty-three years' respite that intervened between the Crimean and Turko-Russian wars has now been exceeded by three years; it would seem as if another historic wave of feeling was due—as tho the cadence of affairs must again have brought us face to face with a movement which shall work more quickly and violently for human betterment. Tho the name of Macedonia be lost in the fierce tumult history is possibly preparing, just as the sufferings, the gallant resistance and the ruthless conquest of Bosnia and Herzegovina in 1876 were swallowed up in the larger tragedy of the war of 1877-1878, yet in the cataclysm, the tiny state will have furnished the martyrdom that rendered possible the final result.

History's repetitions were never more strikingly illustrated. Again are heard

stories of butchery of men, of horrors upon inoffensive women and children committed by the Ottoman soldiery on their errand of "restoring order." The Osmanli have learned nothing from their five and a half centuries of contact with European civilization. One hundred and eighty-six years have elapsed since Prince Eugene's great victory before Belgrade put the Turk upon the defensive; yet even the years of defeat, loss and humiliation have taught the Ottomans nothing, either of justice in peaceful administration or of humanity in war. Again, as in 1876, protests are heard against the misrule, against the venality and oppression of governors, against the system of plunder which, throughout the Orient, passes for taxation. Bulgaria, no longer a victim of the Pashas as in 1876, but an independent nation, voices the sufferings of Macedonia and of her own people domiciled in the province. Prince Ferdinand's government, roused to formal protest, has used language in addressing the Powers which can mean only that an *impassé* has come, that words are no longer the final recourse.

Russia, her Consul at Monastir murdered, took a step that chilled to the heart the diplomatic world. Her Black Sea fleet, or a portion of it, was ordered to the coast of Turkey, a menace to the Sultan, an incitement to Moslem reprisals; and, even tho the ships be now withdrawn, none of the Christian millions in Abdul Hamid's empire, at this hour, can lie down to rest with confidence that he will see the sun again. Strong as are the efforts of the Ottoman press censors to suppress the news of the Muscovite defiance, knowledge of the situation is slowly diffusing itself among the

people; and, as it spreads, it requires but a feeble imagination to see the terrible memories of ages of reprisal and bloodshed aroused by the growing hostility of their neighbors among the Christian subjects of the realm from the Danube to Armenia.

What did Russia mean? Her act, tho retraced, can have only serious significance. Talleyrand's "language invented to conceal thought" is the tongue of current diplomacy. Turkey had previously offered large indemnity to the family of the murdered diplomat and made full apologies; justification for the moving of a great fleet to Turkish shores was apparently lacking. It may have signified that the Muscovites believed, and still believe, another generation has come that does not remember Plevna, Kars, Skobeleff, Loris Melikoff and '77; that the Turk's respite is exhausted; that the time is at hand for a new page of history to be written. Or it may have been due to Russia's impression that her own grievous internal disorders—worse with each passing hour, according to competent observers—can be postponed only by shedding Turkish blood. Did she seek to offend Ottoman sensibilities by a show of naval force and to provoke reprisals which—setting Christian resentment aflame—would have seemed to force her hand to war? All are reasonable explanations of her unprecedented haste in the crisis, still acute despite withdrawal. That she was disinterested, no one pretends to credit; that she was justified, or, indeed, that her act was called forth by the murder of a minor diplomatic official by a private soldier, since executed, few believe. Her prompt and forceful act would seem to mean that she is more than ever on the alert to draw advantage from the crisis which is felt to be impending. Even her Balkan ally and copartner, Austria, is by common report mystified if not seriously alarmed by her conduct. Her recall of her fleet cannot dispel the fearful tension of the situation.

Russia's diplomacy—a compound of the Machiavellian and the Asiatic—never moves without the incitement of the self-interest of her ruling caste. In her dealings with other Governments she is the expression of her bureaucracy. Foreign

nations never meet the real toiling, suffering, starving Russia; they learn only the one that means rank, caste, ambition, "manifest destiny"—the parasitical Russia. The Russian who pays taxes and endures oppression in peace and bears arms and sheds blood in war has nothing to do with either war's incitement or declaration, or with the disposition of his treasure or his life. He may, indeed, be considered fortunate if they are not spent in wars whose real inspiration is the perpetuation of his own enslavement. Even the blameless and humane Czar himself, first of monarchs to move actively for peace and arbitration, has probably had little to say in the events of the last fortnight, overwhelmed by the force of an *entourage* which, in the aggregate, knows neither justice nor pity in weighing the claims of its own interests against those of weaker peoples. "There are but two honest men in the kingdom—you and myself," Nicholas II might well say to some friend, as did Louis XVI of France before the Revolution.

Not alone in Russia does the current of diplomacy move in subterranean channels. As Muscovite activity, proceeding in darkness, often seems to conflict with itself, so do affairs on the scene of action bear an aspect incompatible with sincerity or consistency, and chilling to European sympathies. In Macedonia Christians are arrayed against Christians, to a degree of bitterness worse than that which all share toward the Turk. The rulers, too, in putting down the uprisings of their subjects, often fail to discriminate between adherents and foes, destroying their own friends, as did the Spanish of Philip and Alva in the Netherlands. Even the presence of Ottoman soldiery and the spectacle of a cruel and bloody repression of Macedonia's desire for freedom cannot blind Greeks, Servians, Roumanians and Bulgarians to their ancient feuds, nor constrain them to forget that the ascendancy of Bulgarians in Macedonia means, probably, an addition to Russia's dreaded and already overshadowing influence. It explains why the Greek element should be found on the side of their hereditary foes of Constantinople.

Tho Macedonia is a Turkish province, the peculiar characteristic of Ottoman domination is to be seen there in all its fullness. The rulers are, comparatively, but a handful, largely composed of officials and their families. That "the Turks are but camped in Europe" is exemplified as thoroughly in Macedonia as it was in a past age in Hungary. That country was garrisoned by them for over a hundred years, and was virtually a Moslem province; yet scarcely a trace of the conquerors' presence is left at this hour.

In dealing with Macedonia, practically the whole problem is the happiness of the Christian residents; but what shall be done to conserve or promote that welfare seems to be a matter as to which Servians, Roumanians, Bulgarians and Greeks are utterly unable to agree. Hatred of Turkey, and of her *régime* of blood and plunder, is exceeded only by ingrained distrust of one another.

Upon such a hodge-podge of Christian hatred and feud European sympathy might seem ill spent; but the grievances are too real, wrongs too manifest, to permit of indifference, even should Russia or any one racial element succeed over well in its "fishing in troubled waters." Even if each nationality would prefer Turkish oppression to the ascendancy of any other, the historic development must proceed and the present status end.

Every day brings new rumors, fresh

guesses at the outcome, with more reports of bloodshed and horror. Out of all of them the conclusion can consistently be maintained that a crisis is near at hand. That it will pass beyond the control of the Powers is by no means impossible; that more blood must flow seems inevitable.

The Sultan has snapped his fingers repeatedly at Europe's pacific remonstrances, and even in the face of its joint "peaceful" naval demonstrations.

But, this time, the atmosphere has something more distinctly suggestive of gunpowder. Notwithstanding his prompt and abject yielding to Russia, and his procurement of a temporary respite, I am inclined to doubt that the Sick Man of Europe will be permitted longer to defy the feeling of the age and rule subject European Christians after the manner of Asiatic conquerors in the fifteenth century. Blood is still flowing in the vilayets, unchecked by the complaisance of the Porte on the high seas, and, if not soon stanchd, must soon lead to serious consequences. The throne of Abdul Hamid is less secure at this hour, probably, than at any time since his accession; the spirit of the twentieth century, once aroused, will sweep from European soil the Ottoman anachronism. Balance of power, petty racial and religious feuds, local and dynastic jealousies, must yield and work out salvations as best they may.

SOUTH POLAND, MAINE.

"Worth What It Will Bring"

BY MARION HARLAND

"Men's Wages for Men's Work!"

To no other demand of the contestants for Women's Rights do all classes of men concede more respectful assent than to this. In justice, it claims equality with a proverb patent to all crafts and in all markets:

"A thing is worth what it will bring."

The dictum that really valuable commodities will, if judiciously put upon the market, in the end, command equitable prices, is offered with diffidence justified

by the incredulity with which it is received by pessimists whom non-success has made such.

Bound into a threefold cord, the dogmas I have quoted give the best clew ever presented to the solution of the question, "How shall Our Girl earn her living?"

Narrowing the question down to one branch of industry, nobody denies that the attempt to make a comfortable livelihood by plain sewing is to add another

victim to the thousands who are stabbing themselves to death with their needles all over a country where there should be room and bread for every one. The hurrying seconds clicked away by the sewing-machine mock the "stitch! stitch! stitch!" of the seamstress who does by hand exquisite work that will not rip or "give." Only a *clientele* of rich and liberal (just?) personal friends warrants a woman in taking up "white work done by hand" as an avocation when she has nothing else to depend upon.

The old-fashioned body who has her house, bit and sup, but wishes to add to her income spare cash for the purchase of luxuries, or for charitable purposes, still sets minute stitches, like rows of seed-pearls, in the hems of napery which the fastidious housewife objects to have run through the machine, but the best-paid of these would starve on what she gets from this source, so small is the demand, so meager the compensation. So well does Our Girl, who aspires to become a breadwinner, understand the miserable unprofitableness of this branch of woman's handiwork, that the first earnings of a young seamstress go for the purchase of a sewing-machine, and so sure is she that she is making a profitable investment that she will mortgage the labor of six months to buy one on "the installment plan."

Therefore, if she be sagacious and must make a living with her fingers, she looks further and higher, and embraces the first opportunity of learning the dress-maker's trade. Every country neighborhood supports one or two women who have had a three or four months' course of training as apprentices, or have picked up the craft by "sewing around" with a regular dressmaker. They are engaged from season to season by thrifty housewives to make over and make up and cut-down and otherwise accommodate the gowns of mother and daughters to change of fashions and altered growth.

Every other city-block shows a sign of "*Dress-making done here*," or "*MODES*," according to location and rents. They all live—in some fashion—from Miss Brown, who charges \$1.50 a day for family work, and Miss White, who cuts and fits and dictates, and expects to have a seamstress and the ladies of the

house sew with her, and asks \$5.00 per diem, besides good board and extra cups of tea—to Madame Le Vert, who goes abroad every summer, and allows her customers to pay her traveling expenses.

In business-phrases, there is money in dress-making in all its branches. There is a fortune in it, if Our Girl will not be rash in counting herself to have "apprehended," but "do this one thing."

An IF so high and broad we may well halt at the base to gather courage and breath.

An IF which is the key to the terrible problem of Women's Work, when used as a synonym for Women's Wrongs.

Our Girl will be patient with one whose heart and head have travailed long with the sorrows and perplexities of her class, while the truth is spoken in love on this subject.

The reason why women are not paid as well as men for what seems to be an equal degree and kind of labor is—in ninety-nine out of a hundred cases—*because the work is not as well done as a man would do it in the same circumstances.*

It is not so well done because—First, it is not the custom to train girls as severely as boys, and precedent and usage are potent here. Secondly and chiefly, because a girl considers her trade, be it typewriting, book-keeping, selling merchandise, dress-making or teaching—as a raft that will float her and her fortunes until she is picked up—near shore, or far at sea—by the good ship "Matrimony." Then the raft is abandoned, and forgotten, so far as she can forget an unpleasant episode. The boy learns his business for a lifetime. That he hopes to marry somebody is but another reason why he should master the more thoroughly every department of his work, and make himself the sooner indispensable to his employer.

Mr. W. H. Rideing says of this matter so much more forcefully and poetically than my blunt "stub" can phrase it that I cannot deny my readers the pleasure of enjoying the paragraph with me:

"There are very many things for which women are naturally adapted, and in which they might earn an ample living if they would only devote themselves to business with the thoroughness and constancy of men. But they

allow themselves to be easily drawn aside from the highway of practical life into Love Lane, and then they disappear in the foliage.”

He might go on to say that it is not always leafy summer, even in Love Lane—a possibility of which Our Girl dreams as little when she is acquiring a superficial knowledge of her handicraft as of the blank walls and rough pavement of Singletown Alley.

It is worthy of a passing remark that the only profession in which Sex does not tell upon wages is Literature, and that this is also almost the only one which can be prosecuted as readily after marriage as before.

I can cite no better proof of the pungent truth of what I have asserted than the variety of dress-makers' prices which prevail in the same town. The woman who has her hands full all the season through at \$5.00 per day, while her neighbor in the adjoining flat is glad to make over, turn, rip and clean from morning until night at \$1.50, commands the larger price because she understands her business, and the cheaper workwoman does not.

“She fits perfectly,” is the royal road to custom and high prices. I know dress-makers—so-called—who trim tastefully and finish off their work neatly, who are obliging, faithful and quick, and are yet kept down to low wages because they have never learned this art, which is the very spine and pivot of the profession. To fit well, adapting the curves and trend of the seams to the conformation of each subject, so as to improve while following the lines of the figure; to make the waist sit comfortably, binding and wrinkling and straining nowhere, until, while it looks, as the wearer acknowledges delightedly, as “if she had been melted and poured into a mold,” while it is “as easy as if she had worn it all her life”—requires study, pains and time—such “thoroughness and constancy” as Our Girl's brother would call into play in the endeavor to become a master-workman.

How seldom she summons them to her help let those say who have gone from one dress-maker to another in the vain hope of having good materials handled skillfully and artistically. These self-named *artistes* keep some customers in consideration of the lowered prices consequent upon their inefficiency. Among

really well-dressed women these economists appear in their “cobbled” gowns, as would houses, out-of-line and badly-jointed, contracted for with journeyman builders, a thing which, by the way, sensible men never do.

The great body of dress-makers—especially those who sew from house to house—are mere smatterers, half-taught apprentices, whose impatient to set up in life for themselves, and, if possible, to abridge the voyage of the “raft,” has condemned them to wearing toil and discontent. The most pitiable class of laborers are the incompetent who are ignorant *why* they are failures.

The percentage of those bred to the business who, having joyfully accepted Marriage and a “support” in lieu of continued practice of their profession, are eventually compelled by poverty to return to it for the maintenance of themselves, their children, and, sometimes, their husbands, is appalling to the student of domestic statistics.

I heard but yesterday a young dress-maker say of another who married a so-called prosperous farmer four years ago:

“Poor creature! They say she has had to take up her trade again. I wonder, sometimes, if it isn't just as well to go on with it as if you never expected to lay it down!”

When Our Girl makes up her mind to be absolute mistress of the trade, without regard to the probable contingency of resigning it for home and family, the problem will be wrought out, so far as she is concerned. The man milliner, satirized by Miss Edgeworth, is no longer a mythical burlesque. The term “tailor-made” has baleful meaning for our sex, altho we may not as yet discern it. It denotes that a craft which demands masculine constancy and thoroughness is being reduced by masculine brains and hands almost to the exact science cobbling women will never make of it. In proportion as careful measurement takes the place of slapdash guessing, and determination to build up a permanent business-connection supersedes the half-hearted effort to retain customers as long as it is quite convenient, the aggressive sex will press the weaker from the field, until one more avenue of honorable and lucrative employment for women is barred against them.

Literature

Sir George Grove

It is not, on the whole, quite certain that the now established custom of making a biography to consist almost entirely of letters linked together by a slender chain of editorial comment is the best way of presenting a man's life. Yet altho this *Life of Sir George Grove** is largely made up of letters, and altho Mr. Graves can hardly be congratulated on the skillful arrangement of his material,

* THE LIFE AND LETTERS OF SIR GEORGE GROVE, C.B. By Charles L. Graves. New York: The Macmillan Company. \$4.00 net.

the reader of the book will enjoy them all, for every one of them contains a piquant anecdote or a curious detail about some great man of the Victorian era.

Sir George Grove was himself a remarkable man, in some respects an extraordinary man. He was the first engineer to build an iron lighthouse; he was not a scholar or a linguist, yet the amount of work he achieved in the domain of Biblical research won esteem and admiration from scholars and linguists in all countries; he was not a technical musician, yet by his picturesque and

genial analysis of the symphonies of Beethoven, Schubert, Brahms, etc., he did more to educate the musical taste of the British people than any man of his century. He might, perhaps, be described as an impassioned dilettante, using the word in its best sense. He was keenly and intelligently interested in everything, from tight-rope dancing to Chinese porcelain, and his width of culture and passionate temperament enabled him to invest every subject he touched on with an interest that seems to have exercised a kind of fascination on the most highly equipped professional artists and scholars. For, if he did not shine greatly as a critic, he was a delightful expositor, a brilliant and persuasive interpreter.

But, above all, Sir George was a born letter writer. Every letter gushed from his

SIR GEORGE GROVE
(Courtesy of the Macmillan Co.)

heart and reflected his soul like a mirror. This work is then to be enjoyed, rather than analyzed, for these letters light up every day, every hour, not only with the writer's joys, sorrows, tastes, hopes, labors, but with fragments of history, notes on art, literary judgments, ghost stories (in which Sir George was evidently a devout believer), interesting anecdotes of Browning, Tennyson, Dean Stanley, Renan, Carlyle, and a host of celebrated persons, and appreciations of events and men, which, if not always profound, are never commonplace.

Some of the most interesting pages in the volume are devoted to Sir George's short visit to America in company with Dean Stanley, in September of 1878. Yet during his brief stay Sir George, as he says himself, fairly "devoured the United States." He never went abroad without at least half a dozen notebooks, which he filled with everything that might strike a mind that was always on the *qui vive*. Mr. Graves tells us that one of these notebooks contains the notes of a conversation with Emerson on Carlyle and Goethe. It is a pity he did not find room for it in the biography, even if he had to omit the opening chapter, in which the question of Sir George's ancestry is discussed. Very few people, we imagine, care whether or not the Groves came to England with William the Conqueror or were plain Anglo-Saxon yeomen, whereas a discussion on Goethe and Carlyle by Dean Stanley and Emerson would attract a good deal of attention. Sir George thought more highly of Philadelphia than of Boston or New York. "It seems to unite the advantages of Boston and New York. Solid, good, intellectual people." Yet all the reporters of this model town, he tells us, were very much puzzled by some references in Dean Stanley's sermon to "the judicious Hooker." They could not see how these allusions fitted in with the characteristics of "Fighting Joe," and Sir George had to enter into a long explanation. Now, surely, this could not have occurred in Boston! At Baltimore Sir George and Dean Stanley tried vainly to see Madame Bonaparte-Patterson. She sent down the following message: "All my feelings are dead, except hatred of mankind."

Another startling saying of the old lady is recorded in Grove's notebook:

"God has given me three passions—love, ambition, avarice. My love is slighted, my ambition is thwarted, and I exist upon my avarice."

Sir William Johnson

THE eighteenth century was the age of striking personalities in this country, and among them all Sir William Johnson was one of the most impressive, certainly in a way the most romantic. Born in Ireland with good connections, he came to America as a young man to take charge of a large estate in the Mohawk Valley which had been granted to his uncle. Of his subsequent career every reader of American history has some knowledge, but probably the real scope of the man's character is not so well known as it deserves to be.

Mr. Buell has presented the historical aspect of his life* accurately and agreeably, nor has he failed to emphasize the breadth and versatility of Sir William's talents. A man who was master of 200,000 acres of land, who was indeed the largest landowner in America if not in the world, who was Indian Commissioner of New York and at one time General Superintendent of Indian affairs for North America, who was concerned with all the important military and political events of the day, who found time to make of himself something of a scholar, leaving at his death a library of some two thousand volumes; who was a host in the old and large sense of the word—such a man is no slight subject for a biography, and in general Mr. Buell may be said to have succeeded in his portraiture. We could, however, wish that the language were not so careless in places and so flaccid throughout; and it would have seemed possible to bring out the romantic and picturesque side of Sir William's personal life more saliently. There is ample material for a biography which would rival, if not surpass, any volume of Parkman's for varied and literary interest. Sir William himself

* SIR WILLIAM JOHNSON, *By* Augustus C. Buell. New York: D. Appleton & Co. \$1.00 net.

Fort Johnson. (Courtesy of D. Appleton & Co.)

was no mean letter writer, and more use might have been made of this material to the exclusion, if necessary, of some of the outlying historical subjects. We have this interesting picture of Sir William from one who visited him in his famous home at Fort Johnson:

"A little scant of six feet high—say, five feet, eleven and one-half inches. Neck massive, shoulders broad, chest deep and full, limbs large and showing every sign of great physical strength. Head large and finely shaped. Countenance open, frank, and always beaming with good-nature and humor—a real Irishman as he is for wit. Eyes large, a sort of black-gray or grayish-black in color. Hair dark brown, with a tinge of auburn in certain lights. In conversation, he is a most delightful person, relating recollections of his dealings with the Indians, or discussing the classic authors or the literature of the day with equal readiness and ease. His mode of living is that of an English gentleman at his country seat, and I was astonished to find on this remote frontier, almost in the shade of primeval forest, a table loaded with delicacies and Madeiras, ports and Burgundies of the rarest vintage. His table is seldom without guests, and his hospitality is a byword the region round. During my stay he had Indian chiefs to dine with him several times. Their attire was the same as white people, and for the most part they conversed in English. . . . Colonel Johnson is the soul of method.

At breakfast I tell him I wish a half-hour's sitting some time in the day. We agree on an exact time by the clock. The Colonel then mounts his horse and dashes here and there about his estate, overseeing everything. At the appointed moment he dismounts at the door and is ready for the sitting. When the half hour is done he is away again as swiftly as he came. He must have fifty or sixty people in his employ, besides the negroes, and he oversees everything that they do. Marvellous! And then he attends to a mass of complicated public business besides."

Stevenson's Faith

IN these days when no paradox, however violent, lacks an advocate, it ought to cause no surprise that one should be raised up to write of the faith of Robert Louis Stevenson.* And yet it does. Not that Stevenson had no faith; but that, whether he had or not, it seems somehow a private matter, outside his legitimate public function. It is important that every least opinion of a spirit like Shakespeare should be sought and sifted out like gold and treasured. But such spirits are rare, and we wonder whether Stevenson is of them. That he should be credited with oracular utterance in matters

* THE FAITH OF ROBERT LOUIS STEVENSON. By John Kelman, Jr. New York: Fleming H. Revell Co. \$1.50.

of style and taste is intelligible; in such matters, tho no great critic, he is an authority. But we are rather surprised that an issue should be made of his religious belief or beliefs, merely because he wrote a few literary prayers and took in some of his later essays a tone of moral exhortation, which is to us neither his most interesting nor his most characteristic note. The confusion is something of the same kind, it seems to us, as when a self-made multi-millionaire is invited to address the students of a college on the conduct of life; and we are inclined therefore to think Mr. Kelman's octavo of three hundred pages greater than the importance of the subject.

But not to be captious—it must be acknowledged that Stevenson's "faith" may have the same interest and importance for us as any one's else who has made for himself the perilous experiment of life; and that is still considerable—particularly if we take "faith" as elastically as Mr. Kelman, of his whole view of life. And here Mr. Kelman has gone dangerously near to begging the question. He uses faith thus largely and yet at the same time he gathers all the advantage of the implication which certainly attaches to the word in ordinary speech. If religion means anything, it ought to mean more than an indefinite physical vibration. In disagreement with Mr. Kelman we believe it comparatively easy to formulate a man's real faith; the difficulty arises in an attempt to formulate the obscure yearnings of his viscera. Nor do we know in what respect Mr. Kelman's Gospel of Health, in which he finds most of Stevenson's spirit, better deserves the honor of the connotation. It strikes us that in these points his thinking is singularly confused, and that the whole ulterior effect of his book, in which particular it is well within the current of present tendency, is to denude religion of ideas and to identify it with life, precisely as critics of another kind have already done with literature. The outcome of such a movement makes a bewildering subject of speculation; for if religion has any *point d'appui* at all, one would expect to find it in just such a perception, as is here denied, of the illusion of existence and the permanence of an abstract spiritual principle.

Aside from these matters of fundamental conception there is one contribution to the Stevensonian psychology in which the book eventuates for us. Readers of Stevenson are already pretty well acquainted with his egotism, or whatever they may prefer to call his intense personal concern for himself. It is illustrated in many ways—by Miss Simpson's anecdote of his sitting in a drawing-room in his shirt sleeves to attract attention and more radically by his interminable vein of personal reminiscence. Now as we read Mr. Kelman's volume it begins to come out that this intense self-interest must have taken a particularly definite turn as he grew older—a turn which in a manner explains the genesis and nature of the religious feeling which distinguished the last phase or fourth quarter of his life. He began apparently to conceive from his own sense of his importance a sort of conviction of grace and pre-election, not unfamiliar to his Scottish consciousness, a sense of government and direction at operation for the sake of bringing him, R. L. Stevenson, through. So Mr. Kelman quotes him:

" . . . of that great change of campaign, which decided all this part of my life, and turned me from one whose business was to shirk into one whose business was to strive and persevere—it seems as though all that had been done by some one else. . . . All I mean is, I was never conscious of a struggle, nor registered a vow, nor seemingly had anything personal to do with the matter. I came about like a well-handled ship. There stood at the wheel that unknown steersman whom we call God."

Outlines of Psychology.

THIS latest book by Professor Royce,* as a volume in the Teachers' Professional Library, is addressed to serious but not necessarily psychologically trained readers, particularly to such as are teachers. It modestly claims to present only the elementary principles of psychology, but the result is neither a rehash of psychological commonplace nor an accumulation of technical details taken at random from the unassimilated mass of psychological experiments. On

* OUTLINES OF PSYCHOLOGY. By Josiah Royce. [Teachers' Professional Library.] New York: The Macmillan Co. \$1.00 net.

the contrary, the principles of psychology receive a treatment at once comprehensive and original.

Among the new features is the classification of mental phenomena under the three heads of sensitiveness, docility and initiative. The new phraseology is to some extent justified by the new points of view brought out. Particularly, the author desires to emphasize the unity of the intellectual and voluntary processes. In every case stress is laid upon the motor aspect of consciousness and the social conditions under which it develops. Thus, the general idea is defined as a "plan of action;" and all the higher thought-processes, as conception, judgment, and reasoning, are shown to "result from the effect of social stimulation." In this connection the phenomena of imitation and of social opposition receive detailed consideration.

In his discussion of feeling the author suggests a new two-dimensional classification of the feelings, namely, the pairs pleasure-displeasure and restlessness-quietness, as more in accordance with introspection and more usable than either the traditional pleasure-pain classification or the three-dimensional scheme of Wundt.

Especially suggestive, however, is the discussion of mental initiative, since the author defines his attitude at once toward the associationists and the advocates of mental activity by an appeal to Loeb's so-called "tropisms" as furnishing a possibility of explaining how mental initiative arises. "The bases of all initiative are to be found in 'tropisms' that lead to a restless persistence in types of action which are not yet adaptive." Inventiveness is thus explained as the outcome of the restlessness of the individual.

Not only, however, does the volume offer suggestive contributions to psychological theory, but it also includes discussion of its practical application to questions of education, a discussion which, if not as extensive as one would like, is certainly stimulating. There is, moreover, a comforting absence of that vacuity in treatment which so often characterizes the application of psychological doctrine to matters educational. Particularly suggestive are the consid-

erations relative to the study of the varieties of emotional, intellectual and voluntary life; the diagnosis of abnormalities, and the training to healthiness of emotion and will.

Throughout the book the author, while strictly confining himself to the psychological point of view, shows his habit as a philosopher of thinking-topics-together, a trait which gives additional value to his treatment of his subject.

A Book of Essays. By G. S. Street. New York: E. P. Dutton & Co., \$1.50 net.

Into this volume Mr. Street has gathered a number of pieces, which are at once "occasional" articles and something more, from *Blackwood's*, the *Fortnightly*, *Cornhill*, and a few other periodicals. The contents of the book fall into three groups; a series of impressions of London agreeably free from the otiose particularity of the guide book; a set of criticisms, of which the reviews of the first six volumes of Prothero's "Byron" are the most ambitious, and a collection of unclassified remainders, entitled "Various." The essays are "occasional," as we have said, by their easiness; but the ease is of that rarer and better sort which makes pleasant reading, as every sort does not do by any means; for it is the ease neither of flippancy nor of superficiality, but rather that which is content for the nonce to float over the profundities in preference to descending into them. It is not superficial, for instance, tho it may seem paradoxical, to accuse "the City," the great yeasty business center of London, of "idleness and stupidity" in the face of its bustling pretensions. Nor will Mr. Street be thought only a prophet of lamentation when it is seen that he can find cause for congratulation in the late South African unpleasantness. While particularly interesting in still another vein is the essay "Twenty Years Since," which attempts to measure the distance we have come in that time by a comparison of our notions nowadays with the state of things represented in Mallock's "New Republic." The following observation is so acute and suggestive, so indicative of his best, and at the same time so instructive

in comparison with the discussion recently aroused by the "Journal of Arthur Stirling," and other literature of explosion and protest, that we cannot refrain from quoting it.

" . . . I think the contemporary fact that men of every society and set are engaged in commerce has its connection with the contemporary fact that every society and set tends to take money for its chief consideration. . . . One sees it everywhere nowadays. Even they who ought to be Bohemian, brilliant young people who write and paint, are reckoning their royalties and sales. . . . It is hard but that a universal atmosphere should get into individual lungs, so that those in whose pursuits merit brings little money and faults bring much may be tempted to desertion or regrets. But if a man's aim in life be money chiefly, he should go where money is. No amount of fretting an artistic conscience will bring him a large fortune. He should go into the city and try his wits, and if I am right about intelligence, he should succeed."

The Sins of a Saint. By T. R. Aitken. New York: D. Appleton & Co. \$1.50.

There is a time in the intellectual development of youth when the imagination is but the young gossamer-winged power of fancy, not full fledged and sound and vigorous as it becomes in after years. It is sentimental merely, and ready to accept the most incredulous tales with delight. At such an age this story of old England, in which the author turns history into poetic traditions, when Saxon priests still mixed wild chants with Christian orisons, will prove especially interesting. And older readers who wish to try again those old sensations of pleasure in the radiant language that once pleased them will find the story sweetened by their own memories.

The Dowager Countess and the American Girl. By Lillian Bell. New York: Harper & Bros., \$1.50.

Among the good old stock plots that have been used fairly threadbare by dramatists and story writers is that of the American girl who, venturing to marry into the English aristocracy, finds herself sore bested and only succeeds in overcoming the hostility of her prejudiced In-laws by her rare tact, personal beauty

and native courage. To say that Miss Lillian Bell has handled the subject in her characteristic style is all that would seem to be necessary under the circumstances, considering that in no possible event could the book be taken seriously either by ourselves or our cousins over the water.

The Autobiography of a Beggar. By I. K. Friedman. Boston: Small, Maynard & Co., \$1.50.

The humorous adventures and incidents, related at the "Beggars' Club," which preface this autobiography have been edited by Mr. George Horace Lorimer, of the *Saturday Evening Post*, where the "minutes of the club" have appeared from time to time. And the whole book is illustrated with characteristic drawings by W. Glackens. We have already had the autobiography of a convict, and of several other disreputable characters; and whatever may be said of the entertainment to be had from these ragged literary farces, there is a class of youthful readers who will find them all the more suggestive because they are written in a humorous style which gives to vagrancy and theft the aspect of witty adventures. Some men are now in prison serving twenty-year sentences who received their first inspiration toward a criminal career from reading "The Life of Jesse James," and no doubt many newsboys in New York will read this volume and long to emulate the marvelous life of "Mollbuzzer," "Squint Eye," or some other hobo hero whose exploits are set forth in this volume.

Notes from Nature's Lyre. By Howard Beck Reed. New York: G. P. Putnam's Sons, \$1.50 net.

A book of very amateurish verse, indeed. To judge from the Introduction, the writer has difficulty enough with sense and grammar without undertaking in addition the labors of meter and rime. Most of our great English poets have been able to write pretty good prose when they had occasion. And it might still be an excellent discipline for our modern aspirants to practice their steps with the younger sister before approaching the elder and more exigent.

Literary Notes

PUTNAMs announce for publication in the autumn the first five volumes of "The Works of Charles and Mary Lamb," edited by E. V. Lucas.

....*The Fortnightly Review* for August contains an appreciation of William Ernest Henley by his friend, Vernon Blackburn, which presents the critic in a more amiable, and no doubt juster, light than he is commonly seen in.

....Messrs. Charles Scribner's Sons have imported Baedeker's guidebooks (1903) to "Berlin and Its Environs" and "The Rhine from Rotterdam to Constance." All travelers know the nature of these books, and they need not be described. (Price 90 cents net and \$2.00 net, respectively.)

....How many readers have enjoyed the fun of Dr. Syntax? His "Tour in Search of the Picturesque" is issued with colored plates from the edition of 1817 by Messrs. D. Appleton & Co. In the same form we have "Memoirs of the Life of the Late John Mytton, Esq.," by Nimrod. (Price \$1.50 each.)

....Kenyon West, whose novel, "Cliveden," is one of the successes of the present season, has in *The Era* an article which ought to do much good if its principles are heeded. It is a strenuous and earnest plea for honesty and independence in dramatic, musical and literary criticism.

....In *New Shakespeareana* for September-October the Rev. Dr. George Arbuthnot, Vicar of Stratford-upon-Avon, replies at length to the charges of "desecration" aimed at him so continuously for his action in permitting guidebooks and souvenirs of Shakespeare's birthplace to be sold in the Church itself.

....Norman Duncan, whose stories of the sturdy fisher folk of the North, contributed to various magazines, will be brought out this fall by McClure, Phillips & Co., under the title of "The Way of the Sea," is about to take another trip to the Labrador coast. This will make his fifth season there. He goes on the hospital ship "Strathcona," as the guest of Dr. Grenfell. Mr. Duncan is off in search of material for a novel of the north coast people.

....Bayard Taylor's "Story of Kennett" is published by Putnam's in the Cedarcroft Edition. The novel might almost be reviewed as a new work for the present generation of readers, and might be recommended to them for its quiet, rather artless, presentation of bygone days in the little towns of Pennsylvania. But why do our publishers not learn that this style of illustration by the insertion of crude photographs is an offense to every cultivated eye?

Pebbles

GUEST: "Why do you believe in second sight, major?" *Major Darby* (in an impressive whisper): "Because I fell in love at first sight!"—*Punch*.

....The labor troubles were under discussion. Said Spatts to Dinsmore: "Are you a union man?" "Well," replied Dinsmore, with a smile, "I am engaged to be married in about a fortnight."—*Woman's Home Companion*.

...."There's a peculiarity about the Russians that I have noticed. They nearly all seem to have square, heavy jaws." "I suppose that's the result of the exercise they get through calling one another by name."—*Chicago Record-Herald*.

....*Jack*: "Miss Fay—Fay—will you marry me?" *Fay*: "I wouldn't marry you if you were the last man on earth." *Jack*: "Oh! I say—that's rather hard—I—" *Fay*: "Goose! how could I? Who'd perform the ceremony?"—*Philadelphia Ledger*.

....*Maude*: "What a story teller you are! You told me you were going to marry Mr. Catcherly, and he says he never heard of it." *Carrie*: "Of course, he hasn't. It was only last night that I made up my mind to get him to propose."—*Harper's Bazar*.

....Little Doris (talking to her doll, whose arm had come off, exposing the sawdust stuffing): "You dear, good, obedient dolly. I knew I had told you to chew yofir food fine, but I did not think you would chew it so fine as that."—*Glasgow Evening Times*.

PIDGIN ENGLISH IN CHINA.—A missionary is called a "Joss pidgin man," from a modification of the Portuguese word for God, "Dios;" and therefore a bishop is called a "number one top-side Joss pidgin man," leaving little scope to denominate an archbishop!—*The Mission World*.

...."There's a strange man at the door, sir," announced the new servant from Boston. "What does he want?" asked the master of the house, impatiently. "Begging your pardon, sir," replied the servant, a shade of disapproval manifest in his voice, "he wants a bath, but what he is asking for is something to eat."

.....*Galton*: "I suppose my wife's one of the greatest wonders of the world. She tells me she spent three hours in the theater the other night, when there wasn't a particle of air in the house." *Bates*: "Speaking of wonders, there's my wife. She was telling her friend, Mrs. Simmons, the other day, that she hadn't had a thing to wear for the last six months. And you know we have had some pretty cold weather this winter."—*Ladies' Home Journal*.

Editorials

The Responsibility of Directors

It was a very important trial that was concluded last week at Newark, N. J. The country will remember the horror of the shocking accident at a grade-crossing in that city last winter, when a trolley-car, crowded to the front gates with high school boys and girls, slid down the hill along the unsalted and unsanded track over the dry snow, crushed through the flimsy gate which closed the way to the passing railroad train, struck it, and a number of children were killed, there being no derailing device. The motorman did all he could at the instant to stop the trolley-car, and the engineer tried to slow his train, but down the car came along the slippery track to the fatal collision.

The trial was to find out whether the directors of the trolley line were responsible for the accident, and could be punished for criminal negligence, beyond the pecuniary damages they would have to pay. The defense was that the rules of the company were strict as to allowing passengers to ride on the front platform, and as to salting or sanding the track, and that the employment of a derailing appliance was at the time a matter of correspondence between the trolley line and the railroad, and that it was not clear that the derailing device was practicable. The claims of the prosecution were that the rules of the trolley line, made by the directors, had been so long and notoriously broken that the directors might be supposed to know it, and that they were responsible for permitting their infraction, and that some derailing device should long before have been adopted. The case was tried before three judges of the State, and they all agreed in directing the jury to find a verdict for the defendants. This takes the blame entirely from the millionaires who own and control the trolley lines, and puts it on the employees who failed to obey the rules written down in the book. This seems to mean that no one will be punished.

The public will remember a similar case two years ago, when a terrible ac-

cident occurred one foggy day in the tunnel of the Hudson River Railroad within the city of New York. An engineer of little experience but of good record for carefulness was unable, for the fog and steam, to see the signal, ran past it and the collision followed, killing a number of passengers. In this case the blame was all put on the engineer, and no legally criminal charge would stand against the directors of the railroad, who were held by the public responsible for the condition of the track and the use of the steam that caused the wreck. Public sympathy was strongly with the engineer, who was expected to keep on time even if he did run some risks.

It is evident that there must be some defect in our laws, if in the case of such fatal accidents the higher officials cannot be held responsible for an accident which occurs through frequent, continuous and notorious violation by employees of the rules of a corporation which carries passengers. In the case of the Newark accident the car was every morning so crowded at the school hour that the boys and girls filled the front platform. This had been the case for a long time. It was these children that were killed. This violation of rules was known, must have been known to some superior authority—superintendent, directors or somebody—and those who allowed it, for the sake of the money in it, ought to have been held legally and criminally responsible. The defect must be in the laws. We know that such corporations can be sued for and must pay heavy pecuniary damages, but that is not the whole and sufficient measure of their responsibility. The superior authority, whoever he may be, who knew, or ought to have known, of the violations of rules for the protection of life should be punished for his neglect. We do not say that he should be hanged, but something more than simple pecuniary damages is due.

Of course the great wrong is in the maintenance of grade crossings, which are now being abolished along the crowded line where the accident occurred; and

it was curious that among the defendants was President Cassatt, of the Pennsylvania Railroad, who has perhaps done more to abolish grade crossings than any other man in the country. Our older States ought to have laws abolishing them entirely. But they are not yet abolished in the older countries of Europe, and our best railroads are spending much money in this direction. Our legislation should look to the abolishment of the grade crossing, and to the holding of the superior officials of railroads and trolley lines to stricter responsibility.

The American Vice

It takes a century or two for a people to develop a national virtue or a national vice. Virtues many, and vices many, it displays in the mean time. By diligence in business it lays the foundations of prosperity. By courage and patriotism it establishes its independence. By kindness and charity it softens the harder conditions of life. By dissipation it squanders a larger proportion of its accumulated wealth than it would like to acknowledge. By unscrupulous selfishness in business competition it drives many a discouraged struggler to the wall. By bribery and "boodling" it impairs the vigor of its political life. Yet no one of these virtues nor any of these vices becomes in a generation so all-pervading that it is universally recognized as characteristic. It took centuries to make the word *Roman* a symbol of austere justice. It has taken as long to make the word *Jew* a symbol too often of economic qualities that perhaps were best described in Shylock's own confession:

"There is no power in the tongue of man
To alter me: I stay here on my bond."

But America is no longer an infant folk. The American people, mature in experience, have now tried most of the experiments that humanity diverts itself with, and its character is beginning to show of what inherent qualities it is made. Some of its virtues we can say with assurance are more distinctive than others. It would be pleasant to inquire whether we have a national virtue everywhere recognized as the hall-mark of an

American. Mr. James Lane Allen, in his thought-provoking "*Mettle of the Pasture*," expresses the wish that the virtue of truthfulness might distinguish the American people. He evidently feels that we cannot claim such distinction now. Unhappily, there is no room for doubt that we have developed an unmistakable American vice. Wherever the American goes in his own or in any other land he gives himself away by one frailty. No one can be with him for an hour without knowing him for what he is; a citizen of a great and wonderful nation, which, however, has given itself over to the childish, the body-and-soul-ruining vice of *unbridled Impatience*.

Most American boys never get as far as the high school in their educational course. Many of them must go to work as soon as the law allows; but more of them hasten into money-earning occupations from sheer impatience. In this they are encouraged by the average American business man, who sneers at college training as impracticable, and says that if a boy is going into business life the earlier he begins the better. Of the few boys who get as far as the college door not many escape the disastrous consequences of our national vice. They are no longer willing to submit to the old-fashioned drill of the classical and mathematical courses. They must begin to "specialize" in their Freshman year. Time spent on anything but technical courses is looked upon as wasted. And now, impatience growing by indulgence is threatening to sweep away nearly half of the cultural disciplines that have thus far been tolerated. The cry is raised that the course must be shortened. A four years' curriculum was all well enough a generation ago, but it is too slow for the twentieth century. Give us our baccalaureate degrees in two years or we shall have to get on without them.

The impatience that thus characterizes our educational plan is carried into all the activities of mature life. We tear through a hastily prepared toilet in the morning, hurry through an apology for breakfast, snatch a newspaper, rush for a car, hear the conductor yell "Step lively," grab at a strap, and read head lines. We stopped reading books so long ago that we can hardly remember what the

experience was like. Now we no longer really read even the newspaper. Arrived at our places of business we plunge into schemes for "turning over" our money quickly. Every old and approved method in business experience is "dead slow." We seize upon new schemes, get up new combinations, water the stock for country investors to buy, turn out the old men from places of responsibility and put in "hustlers." Then, if we "rake off" from thirty to sixty per cent. on invested capital we allow that business is "fairly good." Meanwhile, our wives and children, as eager to be "somebody" in the social world as we are to "get somewhere" in the financial world, are spending money like oriental nabobs, not for comfort or even for luxury, but to "make an impression."

All this is bad enough, but our national vice has assumed yet another form that is infinitely worse and that threatens the very foundations of social order. Impatience, like a mania, has taken possession of the multitude and has overthrown the sense of justice. It was once the boast of the Anglo-Saxon that even the criminal under his jurisdiction enjoyed the presumption of innocence until proven guilty, and that in his trial every safeguard protected his rights, including the right of appeal if any reasonable doubt remained touching a point of law. All this careful attention to justice, this anxiety to prevent the horrible wrong of depriving any possibly innocent man of life or liberty, has become clumsy and antiquated. This is an enlightened age; a very lively age. When a crime is committed somebody must pay for it before another sunrise. If we are lucky enough to capture the real offender, good and well; if not, an innocent man will answer every purpose as a victim. In methods of execution, too, we are getting on. Hanging, like a classical education, is rather out of date. The burning of a poor wretch drenched with kerosene is livelier and more entertaining.

And if further proof be needed that the madness of this national vice has left none of us calm-minded, we have it in the proposed remedy for the lawlessness that has become well-nigh epidemic. A Justice of the Supreme Court of the United States would meet the mob in its

own spirit of determination to "rush the case" to a conclusion without deliberation. An instantaneous trial and a verdict without appeal would be offered to a maddened populace as a substitute for lynching.

Such remedies will never cure. They reach the symptoms only, not the disease. Our madness is the offspring of our besetting vice. We shall not be cured of it until, as a people, we cultivate calm reasonableness of mind, patience in the pursuit of our objects in life, and a conviction that life itself may and ought to be something more and something better than threescore years of insane haste to "get there."

Governor Taft and General Wright

WE deeply regret the necessity that recalls Governor Taft from the Philippines to succeed Secretary Root at Washington. We assume and presume it is only because his health requires it that Governor Taft accepts the superior office at home. But really it is not a superior, but an inferior, office, of much less real importance. We dread the change. We have the fullest faith in Mr. Taft's ability and rectitude, and in his sympathy with the Philippine people. They have measured him and they believe in him, and they have begged him to remain. We doubt not he would remain if he had not been told that it would endanger his life.

We fear that the change will have unhappy consequences. We have no question of the integrity of his successor, Gen. Luke H. Wright, member of the Philippine Commission. He is as fine a Southern gentleman as ever lived, but that does not make him fit to cope with the situation. We need a strong man at Manila, of a stiffer fiber. Already we hear that the Americans after concessions are pleased with the change, and think they can have better success under General Wright than under Mr. Taft.

General Wright is a lifelong Democrat and a Southern Confederate soldier. It may be nice in the next Presidential campaign to ding this fact into Democratic ears, as an evidence that the Philippine conditions are not of partisan but

of national import. That may count here, but it tells nothing favorable in the Philippines; and it is the Philippines that we must be most concerned for. Those islands are not to be sacrificed to American exploiters or American politicians, nor are the people to be humiliated by any superior Caucasian pride. We have had occasion to remark more than once that the chief difficulty about governing the Philippines is in the attitude of our army and officials to the people. They are very apt to look upon the natives as of an inferior race, to be kicked into submission, a sort of "niggers." We by no means pretend that no Southern man is fit to rule the Philippines, but we do know that the Southern feeling which has pervaded the army has cost us many lives and much money in our new possessions; and it seems that General Wright does not escape the prevailing sentiment of the section from which he sprang and of the cause for which he fought in his youth. The one attitude toward the people of the Philippines which will secure loyalty and love is that of kindly fellowship on the plane of human equality and not that of racial superiority. The schoolma'ams represent what we mean.

Psychic Phenomena and Immortality

THE latest number of the *Proceedings of the Society for Psychological Research* contains an interesting discussion of psychic problems by several men eminent in science or literature. Among the papers are the presidential address of Sir Oliver Lodge, delivered before the society last January; a reply to a critic, by Prof. James H. Hyslop; a review, by Mr. Andrew Lang, of two articles by Mr. W. H. Mallock and Mr. Frederic Harrison in the *April Nineteenth Century—And After*, on Frederick W. H. Myers's recent work on "Human Personality and Its Survival of Bodily Death," and four reviews of the book itself. Among the writers of these reviews are Sir Oliver Lodge and Prof. William James.

Mr. Lang dismisses Mr. Harrison's article as badinage, and then turns upon

Mr. Mallock. The latter, he maintains, repeatedly misquotes or misinterprets Myers, and by frequent citations to the original he makes out a strong case. With true Scotch caution, however, he avoids a definite statement of his own views on psychic theories, further than that he rejects Myers's hypothesis of "possession." He is concerned, not with an argument on psychic phenomena or the survival of human personality, but with disposing of Mr. Mallock.

Sir Oliver, on the other hand, ventures further. In his presidential address he warmly congratulates the society upon its purposes and its work. He says:

"If there is any object worthy the patient and continued attention of humanity it is surely these great and pressing problems of *whence, what* and *whither* that have occupied the attention of prophet and philosopher since time was. . . . Already the discovery of telepathy constitutes the first fruits of this society's work, and it has laid the way open to the discovery of much more."

He looks forward to greater and richer discoveries in this field, and implies belief in a period when it will dominate thought:

"Geographical exploration [was] the feature of Elizabeth's time. Astronomical inquiry succeeded it. Optics and chemistry were the dominating sciences of the early part of the nineteenth century, heat and geology of the middle, electricity and biology of the latter portion."

Psychical investigation, he says, has not yet had its phase of popularity, and he is not anxious that it should become "universally fashionable," since a "special danger" attends it: "Training and some admixture of other studies are necessary" for its proper pursuit. Yet "the day will come when the science will put off its foggy aspect, bewildering to the novice, and become easier for the less well-balanced and more ordinarily equipped explorer."

In his review of Myers's books he pays his respects to Mr. Mallock in somewhat more emphatic language than does Mr. Lang:

"Few essays, which bear a superficial resemblance to the truth, could readily be more misleading or less illuminating than this article."

Myers was, in his opinion, a man of

profound attainments: "It is by the name of man of science that I wish to hail our late chief and leader," he exclaims, and he indignantly resents the flippancy with which, in certain quarters, his book has been reviewed.

Sir Oliver's belief in telepathy is generally known to the reading world. It is a fair inference from this review that he also accepts as proved some of the so-called evidences of communication between the physical and another world, by whatever name it may be called. He exclaims against credulity, and urges the keenest and most thorough investigation of every reported phenomenon bearing upon the subject; but he believes the subject one wherein "the onlooker does not see most of the game," the clearer and fuller sight being possible only to one of special aptitudes and training.

"It is difficult to realize [by the average person] the strenuously acquired and full-bodied certitude, or the clear-visioned perception and what one can hardly help calling, in some sense, knowledge, whether it be concerning the 'ether' or concerning the problem of what is known as human 'immortality,' which may be possessed by a specifically trained man of science."

Myers was such a man, Sir Oliver affirms, and in this estimate of his position "scientific posterity will acclaim agreement."

It is a beautiful and striking figure by which Sir Oliver explains Myers's doctrine, a metaphor which, he admits, breaks down at times, as all complex metaphors do, but nevertheless sufficient for the purpose at hand:

"The doctrine which Mr. Myers arrived at after years of study is that each individual, as we perceive him, is but a small fraction of a larger whole, is, as it were, the foliage of a tree which has its main trunk and its roots in another order of existence; but that on this dark, inconspicuous and permanent basis now one and now another system of leaves bud, grow, display themselves, wither and decay, while the great trunk and roots persist through many such temporary appearances, not independently of the sensible manifestations, nor unassisted by them, but supporting them, dominating them, reproducing them, assimilating their nourishment in the form of the elaborated sap called experience, and thereby growing continually into a more perfect and larger

whole. . . . And whereas we, the visible manifestations, exposed to sun and air, can signal to each other and receive impressions through rays of light and sound and heat, our transcendental portions, with roots in another order of being, must be supposed capable of communication, too; they are individualized but not isolated, being welded into the framework of things in such way as to receive nutriment from subterranean moisture and from dying relics of the past—even from things which to the aerial portion seem useless or noxious; and they may thus send up to the leaves strange streamings of sap laden with the common wealth of Mother Earth."

It can hardly be doubted that the general import of this doctrine, tho perhaps with specific reservations, Sir Oliver unhesitatingly accepts.

Prof. William James also accords Myers the rank of scientist, comparing him with Darwin, and suggests him as the founder of a new science, that of the Subliminal Self. With considerable caution he avoids a direct statement of belief regarding Myers's central doctrine; but he emphatically insists upon the validity of many of the reported phenomena, and urges their further investigation:

"Those who simply ignore them (for whatever reason) may themselves be ignored here as belated students. . . . Any one with a healthy sense for evidence . . . ought now, it seems to me, to feel that exalted sensibilities and memories, veridical phantasms, haunted houses, trances with supernormal faculty, and even experimental thought-transference, are natural kinds of phenomena which ought, just like other natural events, to be followed up with scientific curiosity."

It is no part of our present purpose to take issue on any of the points raised in this discussion. It is sufficient to summarize a portion of it as an interesting light on the position taken by two eminent men of science on the subject of psychic phenomena, with their inevitable bearing on the problem of the survival of human personality after death. At present the most the onlooker can do is to maintain a willing attitude, awaiting the evidence, careful not to run before it nor to fly from it. The scientific proof of the existence of the soul separate from the body would be of immense importance, and a death blow to both Agnosticism and Materialism; but we have

lived long and well without it, and we must not be hasty to accept this new and at present doubtful support to the universal faith in immortality.

A Strange Oath It is not strange that the Rev. P. A. Baart, D.D., rector of a large Catholic church in Marshall, Mich., and distinguished as one of the most learned ecclesiastics in the country, has called attention in a sermon to the oath of the Typographical Union, which reads as follows, and which we can vouch for as correctly quoted:

"I hereby solemnly and sincerely swear that my fidelity to the Typographical Union and my duty to the members thereof shall in no sense be interfered with by any allegiance that I may now or hereafter owe to any other organization, social, political or religious."

We cannot believe that the members of the Typographical Union, who are among the most responsible and we should have supposed, intelligent of any craft, can have appreciated the meaning of that oath. It puts fidelity to their labor union before fidelity to the country or to the Christian Church. It must have been composed by some absolute unbeliever, if not an anarchist. We sincerely hope that, since attention has been called to it, it will be speedily modified. Doubtless hundreds or thousands have taken it without observing that it sets their union above their country or their God. Do they mean that no members can belong to the militia or the Church?

Directors of Missionary Societies We have spoken elsewhere of the responsibilities of the directors of railroads and trolley lines. An occurrence last week raises the question of the responsibilities of the directors of benevolent societies. We do not now speak of their obligation to protect the funds committed to them against speculation, but of their possible duty to protect the lives of their agents and to punish those that attack them. The precedents are various. During the recent Chinese disturbances 177 European lives were sacrificed in the Province of Shansi, mostly of missionaries. In North-

ern Shansi 2 Italian bishops, 3 priests and 7 nuns were assassinated. As reparation 1,000,000 taels were demanded and paid by the viceroy of the province. In four of the southern prefectures no lives had been lost but one *attaché* of the Dutch Mission had been wounded. Here the indemnity, which must have included loss to property, was 550,000 taels, to which 500,000 was added for the grand Indemnity Fund at Peking. Yet another body of Belgian missionaries in Shansi were granted 600,000 taels, altho, we believe, the only lives lost were those of the 12 above mentioned—certainly not more than 20 in all. The Protestant societies did differently. They had 156 American, English and Swedish members killed. Viceroy Shen had the victims buried with all honor, and then met Dr. Timothy Richard, as representative of the missionary societies, and it was agreed with him that they would ask no reparation except the grant of 500,000 taels, to be paid in ten yearly installments, and to be expended in the establishment of a college for education in Western learning. That was all the reparation for lives destroyed. A somewhat similar case of assassination of a missionary has just occurred in this country. The Rev. L. A. Planving was a missionary of the American Missionary Association in Oscar, Pointe Coupée Parish, in Louisiana, where he had established an excellent industrial school. He was a graduate of Straight University, and had spoken with great acceptance on Northern platforms. His school had the sympathy and aid of the best white citizens. He was shot because, if we may trust the New Orleans dispatches, he had disturbed labor conditions by teaching the negroes "that they should own the land and cultivate it for themselves." The dispatch adds that he taught them that they "should work for themselves only," which is incredible. Now, what is the duty of the directors of a missionary society in such a case? Should they take a good deal of pains and spend some money, if needed, to see that the lives of their agents are protected and those that kill them are punished? Russia and the United States have lately shown what Governments think about protecting their agents.

A Composite Creed

Some weeks ago President Hyde told in *The Outlook* the result of an investigation he made as to the religious belief of the sixty men in the last senior class of Bowdoin College. He asked each one to state as exactly as possible his belief or unbelief. He then took these individual creeds and fused them into one, omitting everything that was special and retaining only what was common to all, with this result to which they all gave their assent:

"I believe in one God, present in nature as law, in science as truth, in art as beauty, in history as justice, in society as sympathy, in conscience as duty, and supremely in Christ as our highest ideal. I believe in the Bible as the expression of God's will through man; in prayer as the devotion of man's will to God; and in the Church as the fellowship of those who try to do God's will in the world. I believe in worship as the highest inspiration to work; in sacrifice as the price we must pay to make right what is wrong; in salvation as growth out of selfishness into service; in eternal life as the survival of what loves and is lovable in each individual; and in judgment as the obvious fact that the condition of the gentle, the generous, the modest, the pure, and the true is always and everywhere preferable to that of the cruel, the sensual, the mean, the proud, and the false."

This creed, examined closely, might seem to be a good deal more abstract than concrete; but—and this is the point to which we would call attention—*The Presbyterian*, a paper of undoubted orthodoxy, says of this, which is the minimum faith of these young men:

"On the basis of this creed we think that most of our sessions would receive applicants into the membership of the Presbyterian Church."

It thinks the creed "very encouraging." We think its statement encouraging also.

Some Prophecies

Archbishop Ireland some time ago expressed the belief—we may say pious belief, which is an expression meaning *hope*—that in fifty years the whole country would be Roman Catholic; and at the late meeting of the Federation of Catholic Societies in Boston Father Dolan expressed a similar view. If they are honest in their Catholic faith, and believe that truth will

prevail, they have the right and duty to believe that their Church will prevail. But the exoteric evidence is not clear. There is not a predominantly Catholic State in the Union, and yet more than three-fourths of our country was first settled by French or Spanish Catholics, as the names from Calais, Me., and Vermont to Detroit and Vincennes and St. Louis and San Francisco, and round to New Orleans and St. Augustine, prove; and this notwithstanding the millions of Catholic immigrants, who are said to be fertile of progeny. One would think there must be some disturbing factor which interferes with such prophecies. If we were to prophesy, it would be that by the quiet dropping of the emphasis on its adventitious doctrines, so that they will become innocuously desuetudinous, the Roman Church will within the fifty or a hundred years become so like the Protestant churches that it will not be worth while to emphasize the distinction between them.

A Lesson from the Mexicans

An interesting illustration of the conflict between broad and narrow ideals among union men is afforded by the organization of the Mexican and Japanese engaged in thinning sugar beets at Oxnard, Cal. It has been thought impossible for men differing widely in race, religion and modes of life to unite for a common purpose, and it is commonly asserted that large corporations have been actuated by this theory in their efforts to get many different nationalities represented among their laborers. At Oxnard, however, the Japanese and Mexicans worked together during a long and riotous strike, and the Japanese showed themselves as apt at organizing, picketing, parading and "persuasion of scabs" as they have been ready in adopting other forms of our civilization. On applying to the American Federation of Labor for a charter, however, President Gompers refused to grant it, except to the Mexican branch, on the condition of the exclusion of the Japanese. The reply of Mr. Lizarraras, secretary of the Mexican Union, is worth quoting from, for it has something of the good old ring of the "all men" in the Declaration of Independence:

"We beg to say in reply that our Japanese brothers, here, were the first to recognize the importance of co-operating and uniting in demanding a fair wage scale. . . . In the past we have counseled, fought and lived on very short rations with our Japanese brothers, and toiled with them in the fields, and they have been uniformly kind and considerate. We would be false to them and to ourselves and to the cause of Unionism if we now accepted privileges for ourselves which are not accorded to them. We are going to stand by men who stood by us in the long, hard fight which ended in a victory over the enemy. We therefore respectfully petition the A. F. of L. to grant us a charter under which we can unite all the Sugar Beet and Field Laborers of Oxnard, without regard to their color or race. We will refuse any other kind of charter, except one which will wipe out race prejudices and recognize our fellow workers as being as good as ourselves."

Labor unionists have often been justly reproached for inciting class antagonisms, but we are glad to see the same movement is, in some cases at least, exerting a solvent action on racial antagonisms. The same spirit is strikingly manifested in Europe, where the Socialists of France and Germany fraternize quite oblivious of the feud officially existing between the two nations. The action of the officers of the American Federation in this case seems altogether inconsistent with their determination to organize the negroes, which was discussed in our last issue.

"Letting the South Alone" Congressman Livingston, of Georgia, asserts that the Democrats may make the race question an issue in the next campaign, as the President's letters and conduct do not suit the people. He says:

"If the North and East will let the South alone the whites and the negroes will adjust matters and maintain satisfactory and harmonious relations."

"Let the South alone!" Who has meddled with the South? What could the North and East do? Have they forced any offensive legislation through Congress? Have they invaded the South with hostile hosts? Have they interfered with the free utterance of Southern opinion or with the enactment or enforcement of Southern laws? Have they not in-

vited the most unbridled Southern orators, like Tillman and Graves, to speak before their largest assemblies? Have we in the North and East done anything more than in a restrained and perfectly proper way to express our opinion about lynching and grandfather clauses and the suppression of the negro vote? We take it for granted that freedom of speech up here, if not in the South, is quite permissible and ought not to give offense to anybody. Certainly "letting the South alone" ought not to mean the denial of free speech in other parts of the country.

A Sainly Life

We read in the English papers of the death of Richard Wilton, Canon of Londesborough, in the East Riding, whose name, we confess, is not familiar to us, who was yet a poet honored by Lord Tennyson and Professor Palgrave, and who seems to have fulfilled a life as saintly as it was beautiful and singularly representative of much that is most attractive in the English Church. In his secluded parish of Londesborough, with its quiet scenes of hill and valley, he trod in untroubled peace the *fallentis semita vitæ*, content with the exercise of lowly duties and "the cleanness of sweet abstinence," happy in the love of those he served, frail in body yet looking always toward the end with serene hope. Like Gilbert White, he was something of a naturalist, and it is said that a walk with him in the country was an exhilarating experience. "There was not a bird in the neighborhood whose note he did not recognize, nor a flower whose lore he could not dwell upon with interest." Like George Herbert, of Bemerton, he was a scholar and a poet, publishing several volumes of verse which are replete with the meditations and observations of his peaceful years. The poems do not seem to be much known in this country; indeed they are of that modest texture which may win the esteem of a few refined readers, but is never likely to make progress in the noisy world. A sonnet, written when he had passed his seventieth birthday, sums up happily an ideal of life, noble in its own way, which has

always found its best expression in the Church of England :

"O God, I thank Thee for the gift complete,
The rounded sum of threescore years and ten—

A life not useless to my fellow men,
And yet sequestered from their hurrying feet;
Where Nature smiled on me with glances sweet
In many a leafy nook and secret glen,
And deigned at times to touch my heart and pen

With thoughts the Muses deemed not all unmeet.

Perchance in after-days some word of mine
Will lead a kindred soul to haunts of peace,
Where mirrored woods in tranquil waters shine,
Or lift a drooping heart to hopes Divine :

Thus with the allotted years I shall not cease,
Nor with my breath my work on earth resign."

The Control of Trusts

Three possible means of controlling the so-called trusts were suggested by the Committee of the American Bar Association. One is by severe taxation ; another is by further interstate commerce laws, and a third is by Government assumption of the business of these trusts—that is, by the extension of the socialistic features of our Government. Of these the first, destructive taxation, seems oppressive and unfair. We doubt if it will be very much applied. The second provision, legislation for interstate commerce, ought certainly to be developed. The Interstate Commission has asked for further power. Railroads ought not to be allowed to give preferential rates which will foster monopolies. But it is to a certain extension of the third method, that of Government assumption of certain industries, that we look for speediest important control. The other nations of the world have set us the example, even the most conservative. We lag far behind Great Britain or France or Germany or Austria. Enormous combinations of railroads and trolley lines are now being made here which would not be allowed abroad. Our Government ought to hold these means of transportation, which have been the fosterers of unfair wealth. The same is true of the express business and of the lighting industry. This amount of socialism, already begun in the post office, is safe, and should be developed.

There are some favorable signs in Papal affairs. One is that the Pope has ordered estimates to be made for the cost of repairing the Lateran Palace so as to make it habitable for summer residence. It is now a museum of classical antiquities, and has not been the residence of the Popes for five centuries. It will be something if the prisoner of the Vatican can lengthen his chains a little, but why cannot he take a summer villa on Monte Rosa or Lake Como or by his beloved Venetian shore? He has also ordered that perfect respect be paid to the Italian Crown and officers, which is not out of place considering that the Italian police and soldiers were invited to keep order in the Vatican and protect the body of Leo XIII while it lay in state. Things are moving slowly toward a tolerable relationship between the Vatican and the Quirinal.

Women are coming to their own even in Germany. At the late jubilee of Heidelberg University the degree of Doctor of Laws was given to Miss Agnes S. Lewis, the Syriac scholar, and Doctor of Philosophy to her sister, Mrs. Margaret D. Gibson. In presenting the degrees the Dean of the theological faculty thus characterized them :

"The sisters closely united in nature, affection and study, who brought back from a Sinaitic monastery and from Egypt precious Christian and Jewish writings, carefully edited them with equal intelligence, patience and assiduity, translated them into English, and thereby made extraordinary contribution to the understanding of the Holy Scriptures, and to the literary history of the early Eastern Church ; and who not less, through their liberal contributions for the establishment of a theological institution, have advanced theological studies."

The spread of the highest sort of ritualism in the Protestant Episcopal Church is boastingly proclaimed in one of its Western organs which declares that twenty years ago not more than two or three churches had confessional boxes, while some thirty have them now. There are nine places in Chicago alone where the Holy Sacrifice of the Mass is offered daily. Indeed, you cannot tell them easily from the real Catholics. The prayer

of the Rosary, we are told, is used by many Episcopalians—no, “Anglicans”—which must be peculiarly effective, for we are told by one of our ablest Catholic papers that this was the special variety of prayer which made Pope Leo so universally admired. God seems to be most influenced by this fashion of praying. But what an idea of God!

The proper management of the Sunday school puzzles some unco guid people. Some years ago a correspondent wrote a Southern Baptist paper asking if it was right for a woman to repeat a passage of Scripture as part of a Sunday school exercise. The editorial answer was that she could hardly commit a greater sin, as is would be using the Bible to disobey the Bible. It is an organ of one of our straitest sects that now answers the question, whether “It is right for a Christian to take part in a union Sunday school?” It answers:

“We do not think any man could work long in a union Sunday school and be true and loyal to the word of God. If he should stand for the whole truth as taught in the New Testament, he would either break up the concern or they would put him out of it.”

The Rev. Walter Laidlaw, secretary of the New York City Federation of Churches, finds from his statistics that the percentage of children is greatest in Jewish families, and that the Catholic families come next, the “positively Protestant” denominations following, the “indefinitely Protestant” next, and that the smallest families are those of the Agnostics. The reason, we presume, is not, as some say, that the less believing households put less weight, or none at all, on the command to Adam to “increase and multiply,” but rather because those of the more positive religious convictions have greater scruples as to the sacredness of undeveloped human life.

It is not very strange that the Russian Government should be suspicious of Zionism. The Jews cannot combine for any object without some sort of utterance against oppression. If they wish to help immigration to Palestine, it must be partly because of unfavorable conditions

in Russia. Russia wants no national idea for Jews, and for that reason it forbids meetings, and proposes to seize all Zionist funds and transfer them to the Odessa Society for the Aid of Jews in Palestine. This will be a sad blow to Dr. Herzl, and quite dashes his rosy anticipations and promises given at the late Zionist Conference at Basle.

The new Georgia law against vagrants may be all right on the face of it, but its danger is in its application, which may be made very unfair and oppressive. It requires sound and impartial judgment to decide whether this man or that is without visible means of support and is a parasite on the community. Such a law may serve the hateful purpose of the peonage legislation which was enacted immediately after the Civil War. Already the question has arisen whether a presiding elder of the African Methodist Episcopal Church is a vagrant.

A huge procession of laboring men followed Sam Parks and Bill Devery in this city last Monday. They honored the man whom twelve men had convicted of extortion. We do not like to call such an event ominous, but it stretches our optimism to the utmost. Yet those men do not believe in extortion; they are convinced that the court did an injustice which will be repaired.

A Vermont girl the other day refused to be married by her rector because he would not consent to leave out the word “obey” from the promise in his marriage service. But why should the fact be published? There have been thousands of such cases, and the retention of the word is a relic of barbarism, fit for Unexplored Africa. It is already omitted in all sensible services.

Bishop J. W. Hood writes us that the sentence, “The radicals are now in the saddle, as was shown by the last Senatorial contest,” referred to the election of Senator Simmons. The article was written before the election of Senator Overman, who “represents our best citizenship.”

Insurance

The Equitable Summer School

THE Equitable Summer School in Life Insurance, whose first class assembled last year, is a new but happy idea in the business world. The experiment of establishing this school was entered upon with some misgivings, but the results obtained during the first session were so satisfactory that the institution was again opened during the summer that has just closed. The work of the class of 1903 was, if possible, even more encouraging. More than one hundred students participated, and the present indications are that the summer school as devised by Gage E. Tarbell is to be made permanent.

The Equitable's scheme has made it evident to every college man with a serious purpose in life that the great business of life insurance offers a practical field in which he may labor immediately after he has been graduated, if the student so elects. The lectures and various demonstrations, based upon expert knowledge gained in the field, make it easy to obtain a firm grasp upon the principles and practice of life insurance and point out the way to reach most readily that success which appeals to every one.

The closing of the summer school of the present year was marked by a dinner given at the Lawyers' Club, in New York City, upon which occasion covers were laid for the 110 students and their various guests. Prior to the dinner the participants were photographed in a group around the statue of Henry B. Hyde in the great rotunda of the Equitable Building, and again as they were seated upon the grand staircase. At the conclusion of the dinner, William Henry Baldwin, Jr., gave an admirable and very practical talk to the boys. Gage E. Tarbell, second Vice-President of the company, who founded the school, also made an address, at the conclusion of which a stick pin ornamented with diamonds and opals was presented to him. H. E. Tincher, of Indiana; Dr. Franklin C. Wells, of Massachusetts; Mr. Reeves, Herbert E. Parker, Mr. Reynolds, of Georgia; H. L. Rosenfeld and W. P. Sewell, of Georgia, also spoke.

CALCIUM carbide must now be added to the list of dangerous articles, from a fire insurance point of view, because it is becoming extensively used for bicycle lamps and gas generators for isolated buildings. When touched by water, or stored in a damp atmosphere it gives off acetylene gas, which is very inflammable and explosive when mixed with air, and since a large amount of heat is produced by the evolution of this gas from the carbide, it might very easily be lighted spontaneously. Junk stores and rag stores are also very liable to spontaneous combustion, and are not considered safe risks to insure.

....Embezzlements and defalcations for the month of July, as tabulated in the current issue of the monthly Bulletin of the Fidelity and Casualty Company, shows a pronounced falling off in the total for the preceding month. The amount of defalcations for July is \$252,692 less than the June total. The July items are given below:

Banks	\$63,125
Benevolent institutions and associations..	5,060
Building and loan associations.....	17,032
Court trusts.....	
Federal and State.....	3,800
Firms and corporations.....	184,758
Insurance companies.....	8,870
Municipal	25,000
Transportation companies.....	21,025
Miscellaneous	14,581
Total.....	\$343,251

....The fourth international congress of actuaries was opened in this city on August 31st and continued in session until September 5th. Meetings were held in the Hall of the Fine Arts Society. Delegates from all over the United States were present as well as representatives from England, Germany, Canada, Scotland, France, the Netherlands, Belgium, Russia, Austria-Hungary, Italy, Switzerland, Sweden, Norway, Mexico, Japan, New Zealand and Australia. The assembly was addressed and welcomed by the Hon. George B. Cortelyou, secretary of the Department of Commerce and Labor of the United States, honorary president of the congress. The President of the United States himself sent a letter of regret at not being able to be present. Government supervision of insurance companies was an attractive topic among others presented and discussed.

Financial

Adams Express Assumes Its Own Surety Business

FOLLOWING a similar system to that already in use by both the American and United States Express companies, the Adams Company, with the beginning of the present month, establishes a bonding department which is designed to protect that company against losses arising from breaches of trust on the part of its employees. Various surety companies have hitherto been relied upon in this connection, but the successful working of a like department in the American Express Company, which has been in operation for about five years, has led the management of the Adams to follow in the footsteps of its rival.

Beginning with September 1st the Adams Express Company will bond all of its employees in any way concerned in the handling of moneys. The tentative rate will be one-quarter of one per cent., which will be charged to the person bonded. The expense of maintaining and conducting the department will be assumed by the company and the collected premiums will be converted into a reserve fund to indemnify the company in case of loss. If it should be found that the premiums are in excess of losses the premium rate will be reduced.

A decided improvement is confidently looked for under the new system, as the loss through the dishonesty of one will fall upon the working force collectively, and each man will in consequence, it is thought, be inspired with increased vigilance in favor of the company.

THE Lackawanna Steel Company, one of the two or three important competitors of the Steel Corporation, has recently issued \$15,000,000 of bonds, to be used in extending its plant at Buffalo and in acquiring ore mines. The company's capital is \$35,000,000.

....Gross receipts at the New York post office during the fiscal year 1903, exclusive of the money order business, were \$13,012,503, against \$11,674,574

for the preceding year, or an increase of about 11½ per cent. The money order business shows an increase of 16½ per cent. The office's net revenue was \$8.-450,738.

....In the last fiscal year the imports of sugar into the United States exceeded 5,000,000,000 pounds for the first time, the total having been 5,217,077,034. Imports of beet sugar fell from 908,000,000 pounds in 1901, and 255,000,000 in 1902, to only 87,000,000. Hawaii sent 774,825,000 pounds, and Porto Rico 226,143,000. The average cost per pound in the foreign country of production has fallen from 2.3 cents in 1901 to 1.82 cents in 1902 and 1.71 cents in 1903.

....At the meeting last week of the directors of the Chicago, Milwaukee & St. Paul Railway the report for the year ending June 30 was considered and approved. The regular dividend of three and one-half per cent. was declared on both common and preferred stock. Authoritative statements were made to the effect that the net earnings of the road are equivalent to ten per cent. on the stocks, which would have been increased to twelve per cent. had it not been that liberal improvements were charged off to operating expenses. No issue of stocks or bonds was considered at the meeting.

....An analysis showing the earning powers of several important railroads has been compiled by Spencer Trask & Co., the figures covering earnings as reported for the fiscal year ended June 30th, 1903, and affords an interesting basis of comparison. The amount of surplus applicable for dividends is also given, together with the percentage of surplus beyond fixed charges and dividend requirements. Two columns are devoted to net income yield, based upon current market quotations. This analysis will undoubtedly prove of interest to investors, and will serve them in determining intrinsic values. Copy of the above, we understand, will be mailed upon request.

The Independent

VOL. LV NEW YORK, THURSDAY SEPTEMBER 17, 1903 No 2859

Survey of the World

Political Matters

The Fusion Conference held last week in New York failed to indorse unanimously Mayor Low as Fusionist candidate for a second term. The dissentient organizations were, as expected, the Greater New York Democracy and the Kings County Democracy, who refused to vote. This has, perhaps, left Mayor Low's candidature a little more problematical, especially as District-Attorney Jerome has become mysteriously active in sounding the depths of the local situation. It is yet uncertain whether Mr. Jerome will come out openly in final opposition to Mr. Low, but at the time of going to press he is widely credited with that intention. All the remaining organizations represented at the conference were strongly in favor of Mr. Low.—It seems that a ring of American schemers is doing its best to break the agreement which our Immigration Department, after much trouble, has entered into with the Canadian Pacific Railway to prevent the smuggling of Chinese across the Canadian border. Under the present law there are only two ports of entry in this country for the Chinese, and as the latter are brought through Canadian territory in bond, the abuses of the old state of affairs in this respect are rapidly being remedied. But these schemers are contesting the agreement in a Canadian court at Montreal, a case having arisen where some Chinese were sent back. If the court decides against the agreement, it is the reported intention of the Government to prosecute the Americans who are behind the plot to nullify the agreement.—The annual report of the Com-

missioner of Pensions shows that 996,545 names are now on the rolls, five of whom are Revolutionary War pensioners. The annual value of the Spanish War pension roll is now \$1,765,310, and the total of disbursements for pensions resulting from all our wars, beginning with the Revolution, has been \$3,038,623,590. The Commissioner recommends laws providing for additional forfeitures and prohibitions in reduction of current disbursements, and also suggests examining boards of experts, under the civil service rules, to investigate and report upon the condition of applicants.—The annual report of the Commissioner of the General Land office shows that approximately \$8,461,494 was conveyed into the treasury to the credit of the reclamation fund from the sales of public lands and from fees and commissions in the various irrigation States in 1903.—The search for a Democratic candidate for President has not developed any noteworthy disclosure during the past week.

Government Investigations

Seven indictments were found last week against six different defendants by the Washington Grand Jury. They are George W. Beavers, of New York, formerly Chief of the Division of Salaries and Allowances, Post Office Department; August W. Machen, of Ohio, formerly General Superintendent of the Free Delivery System, Post Office Department; James W. Erwin, formerly Post Office Inspector, with headquarters in San Francisco; George H. Huntington and

Isaac S. McGiehan, both of New York City, owners of the Columbia Supply Company of that city, and Eugene D. Scheble, of Toledo, Ohio, a dentist, and interested in the firm of Maybury & Ellis, of Detroit, Mich, letter box manufacturers, the head of which firm is Mayor Maybury, of Detroit. Work on the final report in regard to Post Office irregularities is progressing steadily, and the report will probably be in the hands of the President by the middle of next month. A large number of indictments against persons said to be implicated in the Post Office frauds have been placed in the hands of Charles J. Bonaparte, the Baltimore counselor, who has been retained by the Government to aid in the prosecution of nearly forty of its employees. Among those whose names were given out by Counselor Bonaparte as being directly concerned in the inquiry now in progress are George W. Beavers, August W. Machen, Congressman Edmund H. Driggs, Maurice Runkle, George E. Lorenz, George F. Miller and Thomas W. McGregor. Mr. Beavers has surrendered himself and has been admitted to bail in the sum of \$5,000. His examination will take place in Washington on September 25th. An indictment against Beavers had previously been found by a Brooklyn jury. Harlow E. Bundy, manager of the International Time Recording Company, which has been mentioned in connection with the present investigation, has denied the truth of the repeated charges made in the press dispatches against his company. Mr. Bundy asserts that when the inquiry is complete his company will be found to have been entirely vindicated.—Several New York bankers were summoned to appear in Washington on Monday last in connection with the Post Office case. Perry Heath, secretary of the Republican National Committee, recently declined to discuss the Post Office scandal. To a direct inquiry on the subject he is reported in the daily papers to have replied as follows:

"There really isn't a thing to say. I've never rushed into the newspapers on that matter, and I really have much better employment now than devoting my time to denying the stories that are published from Washington."

—Secretary Hitchcock has announced

the removal of John A. Sterrett, of Ohio, as Town Site Commissioner for the Cherokee Nation in the Indian Territory, and the appointment in his place of Dwight Tuttle, of Connecticut. The removal is one result of charges against Sterrett's administration of his office. Investigation in this department is being continued.

The Labor Situation

Frank Buchanan, President of the International Association of Bridge and Structural Iron Workers has issued an order suspending the Housesmiths' and Bridge-men's Union, local No. 2, of which Samuel Parks is the walking delegate and the ruling power. His action was made known by a letter which was read at a meeting of the union, and which was greeted with derision by the supporters of Parks, who were present in great force. President Buchanan bases his act of suspension on avowed irregularities of the union in calling strikes and neglecting arbitration, and in attempting to involve other locals of the international organization in strikes with their employers. He also declares that the business agent of the union is violating the constitution by assuming control of strikes when they should properly be controlled by the Executive Board. The meeting at which this letter was read was practically in possession of Parks's men, and Parks himself was the first speaker when the session was called to order. Secretary Johnston declared to the reporters present that the letter had no legal force.—Father Ward, of Beloit, has refused absolute to a member of the International Typographical Union on the grounds that a man's oath to this union conflicts with his duty to the Church. His position was this: A man owes his first allegiance to God and the Church, then to the civil authorities. After that he may join what societies or unions he pleases, only keeping in mind that any oath or pledge he takes to support them should not conflict with his duty to the Church and State. The oath which is taken by members of the International Typographical Union, and which has become a subject of contention between the union and the Catholic Church, is as follows:

"I (give name) hereby solemnly and sincerely

swear, or affirm, that I will not reveal any business or proceedings of any meeting of this or any subordinate union to which I may hereafter be attached, unless by an order of the union, except to those whom I know to be members in good standing thereof; that I will, without equivocation or evasion, and to the best of my ability, abide by the constitution, by-laws and the adopted scale of prices of any union to which I may belong; that I will at all times support the laws, regulations and decisions of the International Typographical Union, and will carefully avoid giving aid or succor to its enemies, and use all honorable means within my power to procure employment for members of the International Typographical Union in preference to others; that my fidelity to the union and my duty to the members thereof shall in no sense be interfered with by any allegiance that I may now or hereafter owe to any other organization, social, political or religious, secret or otherwise; that I will belong to no society or combination composed wholly or partly of printers, with the intent or purpose to interfere with the trade regulations or influence or control the legislation of this union; that I will not wrong a member, or see him or her wronged, if in my power to prevent. To all of which I pledge my sacred honor."

Bishop O'Connor, of Newark, N. J., takes the same ground as that held by Father Ward, and Bishop Scannell, of Omaha, Neb., is reported to have said that no one could be a good member of the Roman Catholic Church and adhere to the principles of the Typographical obligation, and unless the obligation is changed the Catholic members should get out of the organization. No priest has any right to absolve from sin any member who holds the Typographical Union in higher regard and authority than he does the Church and State. At a meeting of the Typographical Union of Omaha, one-third of whose members are Catholics, the position of the Church was denounced, and the opinion was generally expressed that no member would leave the union on account of the words of the bishop.—Hon. Carroll D. Wright was, it will be remembered, selected as umpire to decide the five questions in dispute between representatives of the operators and miners on the Board of Conciliation appointed under the provisions of the anthracite mine strike commission. Mr. Wright has now handed in his report. The chief points made by him in this document are, first, that the

operators have the right to discharge without giving the cause of the discharge, and, second, that the companies should take back old men, instead of putting on new men, in all cases where old men are competent and have not been convicted of crime during the strike.

The Panama Canal Treaty

The Colombian Congress has not yet finished its consideration of the proposed new bill upon the subject of the Panama Canal. The State, it would appear, regards with favor the idea of having a canal constructed across the isthmus by the United States. The only question is as to ways and means. Thus far it has been impossible to agree upon a plan that is satisfactory both to Colombia and the United States. The Colombian Government in framing the bill now before it has included the following stipulations:

First—Approval of the action of the Senate in rejecting the Hay-Herran treaty.

Second—Authority to be given to the President to conclude treaties for a canal, or to contract for a canal with private persons, subject to the rights of the companies.

Third—The Panama Railway Company to be permitted to transfer its property, all existing obligations to be assumed by the purchaser, including the annual payment of \$250,000, and the surrender of the property to Colombia in 1967.

Fourth—The canal company to be permitted to transfer its rights and property on payment of \$10,000,000 to the Government of Colombia.

Fifth—Authority to be given to the President of Colombia to make the following concessions and conditions:

Lease of the canal zone for one hundred years, not including therein the cities of Panama and Colon; annual rental therefor until 1967 to be \$150,000. Lease renewable every hundred years, with increase of 25 per cent. in the rental for each succeeding one hundred years' period. Neutrality of the canal and recognition of Colombian sovereignty over the whole territory and the inhabitants thereof. Mixed tribunals only in the canal zone. Police and sanitary commissions to be exclusively Colombian. A time limit to be fixed for the completion of the canal and works.

Sixth—Colombia to receive from the contracting government \$20,000,000 on the exchange of ratifications of the treaty.

Seventh—Regulations to be made fixing the conditions of purchase of private property.

It remains to be seen whether these stipulations will be satisfactory to the United States. Dr. Herran has pronounced the terms of the measure now before the Colombian Senate as altogether impossible of acceptance by this country. French emigrants have been advised through the President of the French Council of Ministers not to proceed to the Isthmus of Panama in expectation of working on the canal. President Marroquin appears favorable to the canal and is casting his influence against the secession idea that has been proposed. The Colombian President would doubtless like to have his Congress ratify the treaty in some acceptable form, but he appears lacking in force of character sufficient to bring this about. Meantime the treaty lacks confirmation and the possibility of the canal location being transferred to the Nicaraguan route remains.

Mexico and the Islands

The persistency of error, in spite of the illumination signified by modern discovery, has had a rather striking illustration recently in the yellow fever quarantine established by Texas against Mexico. It would not appear that the Texan officials have heard of the recent discoveries as to the nature, origin and distribution of this disease. The methods in use before the part now known to be taken by mosquitos and flies in the spread of contagions are continued, and an enormous amount of useless loss and inconvenience is in consequence being inflicted upon themselves and their neighbors for the sake of keeping out of the State property which could not possibly carry the yellow fever infection. Recent reports from El Paso and Austin, Texas, however, indicate a very alarming condition in so far as yellow fever is concerned. As many as 2,200 persons are reported to have died last week at Linares because of yellow fever that has become epidemic.—The anti-reciprocity influences of the United States are being felt in Cuba and a systematic fight has begun. The price of sugar has been advanced four reals. The general appraisers in New York have rendered a decision that duty must be paid on sugar imports from Cuba, notwithstanding the fact that the pend-

ing treaty abolishes it.—A considerable scandal regarding the leper colony in Porto Rico, which has caused much alarm, has just been brought to light. It was found that dogs, goats, chickens, rabbits and pigs had been herded with the lepers, the chickens nesting in the unclean beds. The patients were in a filthy condition with no bathing facilities, and most of them clad in rags. A considerable traffic in chickens and pork from the colony had been maintained. The reforms now instituted carried with them the destruction of more than one hundred animals and chickens. There are now in the Cabeas Island colony twenty-three lepers, and at least as many more, it is believed, are scattered through Porto Rico.

Insular Affairs

An English correspondent of the *North-China Daily News* reports that Manila is in a state of commercial stagnation and discouragement. The American population has fallen in one year from thirteen thousand to six thousand, and there are numerous failures. He ascribes the depression to the following causes: (1) Lack of suitable labor for the development of agricultural, mining, lumber and railway interests, (2) high export and import duties, (3) the depletion of silver, (4) the placative policy of the civil government, (5) the recent fatal epidemic of the rinderpest plague among the carabao, or native oxen. He points out that all these conditions except the last could be remedied by Congress, and recommends the introduction of Chinese coolie labor.—The Department of Commerce at Washington reports that the commerce of the United States with its noncontiguous territory during the past fiscal year amounts to \$100,000,000. Merchandise to the value of \$11,000,000 has been shipped to Porto Rico, \$10,000,000 to the Hawaiian Islands, \$8,000,000 to Alaska and \$3,500,000 to the Philippines. Of the \$53,000,000 worth of merchandise received from these possessions during the same eleven months nearly \$22,000,000 worth came from the Hawaiian Islands, \$11,000,000 worth from the Philippines, \$10,500,000 worth from Puerto Rico and \$10,000,000 from Alaska. The \$10,000,000 from Alaska

is merchandise and does not include the gold received from that Territory, which amounted in the eleven months to \$4,540,677. The principal articles received were sugar, coffee, hides and skins, fruits and nuts, tobacco and manufactures, Manila hemp, canned salmon, furs and raw hides, whalebone and copper. The shipments include a much wider range of articles.—Seven small islands off the coast of Borneo, over which the American flag was recently raised by command of Rear-Admiral Evans—viz.: Baguan, Taganac, Bakungan, Libiman, Boaam, Sibaung and Langkayan—are claimed by Great Britain as part of the territory ceded to the British North Borneo Company in 1881. According to our State Department the islands were under the supremacy of the Sultan of Sulu, and are situated over a marine league's distance from the coast and, therefore, according to the treaty of 1885, between Great Britain, Germany and Spain, were part of the Spanish possessions.

Resistance to the Education Tax

The Nonconformists pretty generally and some of those

otherwise opposed to the recently enacted Education Act have determined to frustrate its purpose by passive resistance to collection of the tax. An account of the action of the courts in several such instances is significant of the manner in which the Government is treating this opposition. At Penge Petty Sessions two weeks ago nine "passive resisters" appeared to show cause why they had refused or neglected to pay the education rate. The court house was crowded with the sympathizers with the defendants, including several Nonconformist clergymen. Early in the proceedings there was loud applause from the body of the court, and the chairman suppressed it with the remark: "I hope we shall have no demonstration. It is a very unpleasant thing for the magistrates to have anything to do with these summonses." The defendants all stated that they had offered a portion of the rates and had held back only that part which was required for educational

purposes. The chairman hereupon advised the collector to accept the portion of the rate offered and to distrain only for the remainder. The collector replied that he was only a servant and had no power to do this without the authority of the overseers. Some debate followed on the legality of this point, but it was finally decided that the collector should distrain for the whole amount of the tax. The clerk of the court asked the collector when the distress would be made. The collector replied that he could not say. At this the defendant broke in with the words, "I should like it done as quickly as possible"—whereupon there was general laughter in the court. On the same day nineteen "passive resisters" were summoned before the Colchester Bench for non-payment of the education rate. They declared that their objection was on conscientious and patriotic grounds to prevent priests, whether Roman or Anglican, from getting their hands on the school children. To this the chairman replied that the bench could hear objections only as to the legal validity of the rate. The Rev. Thomas Batty, Congregational minister, argued that the rate was not valid, since it was to be applied for sectarian teaching. He complained moreover against the form of the summons, as it tended to lay on him the odious charge of refusing to pay the poor rate. His remarks were so frequently applauded that the bench threatened to clear the court. Orders to distrain were made in each case. Mr. Batty held an indignation meeting on the steps of the town-hall, complaining that cherished possessions would be taken from him and sold, but the police soon put an end to the proceedings. At Salisbury a Mr. Gregory and a Mr. Warren, prominent "passive resisters," were summoned. The former declared that he refused to pay the tax because he regarded the Education Act as the most wicked Act of modern times. Mr. Warren said he was determined not to pay. When distress warrants were issued, he asked whether the police or the overseers would make the distraint. He was overseer for the parish, and did not feel inclined to distrain upon himself.

Trouble in South Africa

The press of the Netherlands has been publishing a large number of communications from South Africa from which it is made clear that the Boers have already effected a new and solid party organization under the direction of Generals Louis Botha, Delarey and De Wet, as also of the former Vice-President of the Transvaal, Schalkburger. This party, according to the Dutch press, is pronounced in its Anti-English tendencies. The Boers are trying to reach an understanding with the Afrianders—*i. e.*, those inhabitants of Dutch descent who before the war were already British subjects. These Afrianders constitute the great majority in the autonomous English colonies of Capeland and Natal, and as they have full political rights, their co-operation with the conquered Boers who have been deprived of their rights is an element of danger to the English authority. The new party is Anti-English because the Boers have become convinced, or at least proclaim their conviction, that England will not keep the promises made in the formal peace, nor those given orally by Lord Kitchener. Instead of the general amnesty, they assert that only a comparatively small number have been pardoned. Of the damages promised in payment for the destruction caused by the English army, only three million pounds, and that in the shape of a loan, has been granted. No beginning has yet been made with the self-government that was a condition of peace. But nothing has aroused the Boers so much as the treatment which England accords the Dutch language. Lord Milner is accused of conspiring to crush out this language as far as official intercourse and school are concerned. Recently a Boer mass meeting was held in Heidelberg, with Botha as president, and on this occasion the opposition to the British rule found dangerous expression.

M. Combes in Brittany

In Tréguier, Brittany, the birthplace of Ernest Renan, a statue of the famous historian and Orientalist has been un-

veiled with ceremonies conducted by Premier Combes and other notable men. Brittany has always been, and still is, the stronghold of the Church, and there was much hostility shown to the ceremony on account of the irreligious character of Renan and the recent policy of M. Combes in carrying out the new laws against the religious orders of France. As the Premier passed from Portrieux to Tréguier he was repeatedly hissed, and there were constant cries from the peasantry of "*A bas Combes!*" and "*Vive la Liberté!*" In his speech M. Combes alluded to his reception thus:

"I heard a few hisses. Let me compare them to the melodies played on the flute behind the conqueror's chariot in olden times, to remind him that, raised by the people, he must govern by the people."

During the ceremony of the unveiling there was considerable disorder. The Clerical party had thoroughly organized their demonstration, and the peasants from the country round about had been assembled, armed with clubs and prepared to create a disturbance. At one time a body of soldiers had to be called in to quell the tumult. At a banquet of 2,000 "blues," or Republicans, given after the exercises, Premier Combes made a long speech, in which he asserted that the time was not distant when the peasants of Brittany would shake off the yoke of the clergy. He defended the Government, and declared that the history of the past few months fully demonstrated the fact that the clergy had persistently violated the law.

The Balkans

The news from the Balkans is still of the most disturbing sort, altho under the conditions there prevalent it is practicably impossible to learn exactly what is happening. Turkish authorities see that every newspaper correspondent in the districts is "escorted," as they call it, and this escort means that it is extremely difficult for the correspondent to come into free communication with those who know the real state of affairs. It is, however, clear that a general massacre has been per-

mitted in the Valiyyet of Monastir. Between thirty thousand and sixty thousand Bulgarian inhabitants in this district have been slain by the Turks, and every Bulgarian village has been utterly destroyed. According to the Macedonian Interior Organization as many as one hundred and fifty thousand women, children and old men have taken refuge in the forests of Macedonia and are starving to death by the thousands. In the districts of Leren and Kostur the Turks are setting fire to the forests and killing those who attempt to escape. According to information published in a revolutionary paper, the *Autonomye*, a force of Albanians and Turkish regular troops, acting under direct orders from Constantinople, entered the districts and killed men, women and children with a barbarism almost incredible. According to other reports the Turks have instituted a system of drives in the Valiyyet by which the hiding Bulgarians are driven out of their lairs like wild beasts. A correspondent of the London *Times* writes from Monastir describing a railway journey to that point from Salonika. There are, he says, no Christians to be seen in the district. Crops are abandoned and no one can be seen working in the fields except in the immediate neighborhood of Turkish villages. At the railway stations there are swarms of armed Turks, very few of whom are regular soldiers. His train was filled with boisterous young Albanians going to join the Turkish army, whereas the train which passed him going the other way was loaded with Bulgarian prisoners with chains about their necks and bloody rags wrapped around their limbs. It is quite possible that at any moment Bulgaria may openly declare war against the Porte, and according to a Vienna newspaper the Government of the State has applied to a Hungarian firm for fifteen million Mannlicher cartridges. Much depends on the action of Servia. If that country should join Bulgaria, there would probably be little hesitation in making war. A correspondent of the London *Daily Telegraph*, writing from Sofia, says that Bulgaria has displayed extraordinary moderation. The Christian Powers paid no attention to her last urgent request, that they should compel Turkey to suppress the

rising by legitimate methods of a warfare and to spare women and children. Bulgaria, therefore, he says, can no longer neglect her sacred duty, and an official communication will be made to the Powers to this effect.

Boris Saraffoff Boris Saraffoff, the leader of the insurgents, is said to be in the center of disturbance near Florina, where he recently seized and carried off a Greek priest who had denounced the revolutionists. He has issued a manifesto in which he disclaims any attacks on peaceable persons, but says that destruction of railroads is necessary, and begs the railroad officials "from humane considerations to accept no passengers in order that there may be no unnecessary sacrifices to deplore. Saraffoff began his antagonism to Turkish rule at the age of fourteen, when, as a student in the Bulgarian High School at Salonika, he saw his father and grandfather driven as prisoners through the streets by the Turkish soldiers, and without fear or hesitation the boy attacked the guards with stones and fists. His father and grandfather had been accused of revolutionary sympathies, and without trial were banished to Asia Minor for fifteen years. At twenty Boris Saraffoff graduated from the military academy at Sofia and received a commission as lieutenant of the First Bulgarian Infantry. Three years later, in 1895, he resigned, and with a hundred other young Bulgarians, started a rebellion in Macedonia, which was soon quelled by the Turkish Government. Saraffoff managed to escape capture, altho the Government set a price of 100,000 francs on his head.

**The Situation
at Beirut**

The Egyptian Gazette, published at Alexandria, gives the following account of the attack on Mr. Magelssen, the American Vice-Consul at Beirut. He was driving home in a hired carriage one evening, when he heard sounds of pistol firing. He turned round to see what was going on, and immediately a bullet whizzed past his face. At this he stopped the carriage and jumped out to discover his assailant, but could see no one. On

his complaining to the Governor, the only arrest made was that of a young Christian, who had attended a marriage on that night and in whose possession a toy pistol was found. Mr. Magelssen refused to accept the arrest of this man as sufficient.—On Sunday, September 6th, there was a riot at Beirût, which was described in a cablegram from Admiral Cotton just made public. Violence and bloodshed occurred between Mohammedans and native Christians; and six Greek Christians, two Mohammedans, and one Turkish soldier were seriously wounded. Other murders were also reported. The Turkish Government is affording every facility for investigation, and according to Admiral Cotton there are Turkish soldiers present in sufficient numbers to maintain order if they are properly managed. The Admiral has prepared to land force for protection of American citizens if the situation demands such action. The *Temps*, of Paris, states that the trouble began when three Christians were assassinated in the streets on Saturday evening. A riot followed and when the soldiers attempted to put down the tumult some thirty persons were killed and wounded. Germany's comment on the event may be understood from these words in the *Lokal Anzeiger*:

"Now that the Americans have their dead they will little inquire whether they were responsible for the effervescence in Beirût.

"By the unprecedented action of their naval Minister in Constantinople and their naval demonstration the yearning of the United States to mix up in European politics has found some justification."

China and Russia

The conditions have now become known under which Russia has consented to the evacuation of Manchuria on October 8th. M. Lessar, the Russian Minister at Peking, indorses the opening of Mukden City and Tatung-Kao, provided that China cedes no portion of her territory to any other power; that no concession shall be granted to England that shall not equally be granted to Russia; that there shall be no increase of the import tariff on goods entering Manchuria by railway; that in the event of an epidemic at New-Chwang a Russian health officer

shall superintend the sanitary work; that Russia shall retain her own military telegraph line along the railway; that the Russo-Chinese Bank agencies in Manchuria shall be guarded by Chinese soldiers; that the Russians be allowed landing stages on the Sungari River, with the right to guard them with Russian soldiers, and that Russia shall have the right to maintain Russian post stations along the main route from Tsi-Tsihar, the capital of Heilung-Kiang Province, to Blagovestchensk, where the massacre was perpetrated by the Russians at the Amur River. To the last two of these provisions China, since her attention has been called to the gravity of their meaning, has strongly objected. Russia also announces the time for the evacuation of Kirin Province as four months after that of Mukden, and of Heilung-Kiang Province as a year after the same date. Russia has still further requested permission of China to postpone her evacuation of one of the frontier provinces of Manchuria for several months after October 8th. The last point is apparently of no great significance, as the province in question is a small one. But the general feeling in China is described as being one of depression over the new turn of affairs. The English papers see in these demands of Russia only further evidence of her determination to hold fast to Manchuria while ostensibly letting it go. Viceroy Chang Chi Lung has ordered four river gunboats from Japanese builders for use on the Yang-tse, thus showing that Japan's efforts to obtain a larger share of Chinese commerce have not been unsuccessful.—It is still a question whether M. de Witte has really been promoted by his transfer from the position of Minister of Finance to that of President of the Committee of Ministers. The *Novoe Vremya* maintains that the Czar intends to increase the power of de Witte's new place and so has really honored him. An article in the *Kieff Gazette*, on the other hand, holds de Witte responsible for the present labor agitation in Russia, for the growing deficits from the railways, the improverishment of agriculture and the excessive taxes, and declares accordingly that de Witte has really been degraded by the change.

Contemporary Fiction in Germany

BY FRIEDRICH SPIELHAGEN

CONTEMPORARY German fiction not only equals that of any other country in respect of artistic worth—and such worth alone decides the final destiny of a literary production—but in my judgment surpasses the fiction of other countries. The leading novelists of France, Russia and Scandinavia are very industrious, very instructed, very clever, and, on the whole, very interesting, sometimes even very brilliant writers. Notwithstanding, however, one can hardly concede a high rank in epic poetry to their works. These “human documents,” as they are called, fall short of being creations of genuine inspiration, make no pretension of being such, in fact. Immediate recognition of their clever merit is their reward, on the part of the public, which is really a most fortunate circumstance inasmuch as they must fall into oblivion so soon as a new fashion of seeing and thinking sets in, and men lose interest in the subjects that now absorb them. The past history of novel writing supports this conclusion. At the same time, it is my guarantee for believing that such of our romancers as Gustav Freytag, Gottfried Keller, Paul Heyse and Theodore Storm, who, in contrast, wrote for all times, because writing with the heart’s blood, which is the same in all societies, at all epochs—are the truer artists, since while so writing there appears inevitably in their style the *vis suprema formæ*.

Not that I consider all that these men have written perfect. By no means. I think hardly two things perfect of all the fiction that Goethe penned—Goethe who has been our master and will ever remain so!

No; an epic production is perfect only when it represents individuals in action. These individuals, moreover, must be created after the author’s own image; and for the reason that the author thus becomes free of the need of employing abstract descriptions, in order to make the actions of the personages clear to himself or to others. The actions speak

from themselves with eloquence and clarity.

In other words, a novel to be good must be a self-confession. By which I am not saying that the subject matter of it must be a direct revelation of some individual experience of the author, such as is, for instance, the “Sorrows of Werther” (to keep to epic productions already recognized as enduring), which embodied the love that Goethe was feeling for a married woman. The subject matter *may* be this; but oftener it will be what the writer feels respecting the world, his confessions incorporating themselves in the actions of his personages. The earthly mission of every poet consists, in truth, in thus letting the world pass, as it were, through the medium of his soul, as through a dye. In the passage the personality which is his very own separates itself from the personalities of other men, which are different, but each and all of whom take on distinctness, vibrant life, fullness and completion by reason of the sympathetic insight of the genius that is transcribing them. It may happen that the one personality remains mute, while the others act, as Goethe’s own personality is mute in the short story in verse, entitled “Hermann and Dorothea.” But these other personalities, be quite sure, the author has met the originals of somewhere in the world.

Herein lies the difference between the best German fiction and French fiction. German novel writers, whether impressed consciously or unconsciously by the example of Goethe, draw the characters of their personages through their own being; whereas the writers of Paris are content to let their fancy play upon them and depend upon dexterity in using language for technic. In Germany a pious belief still obtains to the effect that inspiration shapes its own perfection of form; the study of technic is less absorbing than with the French.

The results of the study that has been devoted to technic have been chiefly to

make conversation realistic; and, in general, to curtail. Our older novels are long; modern ones are short.

Modern fiction, indeed, may be said to be characterized by this practice of simplifying plots and excluding irrelevant matter, together with the practice of letting sympathy range over a broadened field. Yet it is to be noted that the stories that are impressive by reason of their elemental truthfulness are transcriptions of environments, amid which the author has suffered and lived. Thus our best depicter of aristocratic life is Baroness Marie von Ebner-Eschenbach; of military life, George von Ompteda; of peasant life, Peter Rosegger; of artistic life, Paul Heyse; of middle class life, Theodore Fontane, and so on.

Marie von Ebner-Eschenbach's tales are peculiar in bespeaking, to a strange degree, a personality behind the scenes of them much superior to any character in them. She is a woman of clarified humanity, sybil-like intuition and mellow wisdom. I do not know which other literature of to-day possesses her like. What a riddle that we Germans should feel that what is French in her art, better French than any other German novelist has succeeded in attaining—the utmost condensation and simplicity of style—namely, is to blame for an arrest of her poetic potentiality. For this is truly what we feel in respect of her; that the ideal of technical perfection has been a tyrant over her heart and soul, suppressing, or hampering their full outflowing. Whence it comes to pass that while her books afford the most polished, lucid, simple writing to be found in German fiction, her personality much exceeds her achievements. One may forget all her personages in the course of time, remarkably plastic as they are—Bozena, Margaret, the Countesses, the Children of the Castle, village and parish, the bachelors and school boys; but whenever the name of Marie Ebner von Eschenbach shall be mentioned something like the fragrance of summer parks on a fresh day will occur to the memory.

Beside clarified wisdom and a light touch in execution, humor is found throughout her works exhibited in exquisite discretion.

Humor, combined with wisdom, a little less elevated and less sifted, is a portion, too, of Theodore Fontane's art, which, for the rest, comprises more varied subjects than that of Marie Ebner.

Humor is a golden sunshine that makes even the dirt of life endurable. Fontane may write as realistically as Zola; by reason of this soft, magical medium the result is relieved of atrociousness, just as happens in actual life.

What small miseries come to light in "Poggenbuhls," for example; yet how tolerable are they rendered by the passage through the medium of their transcriber's soul. A lilliputian world, poverty-stricken, common, even gross, with every intimacy exposed, none the less endearing! A masterpiece!

Another tale by Fontane has issued out of profounder depths of experience, "Effi Briest." Nothing shall convince me but that the heroine is taken from life, which means for me that the original of the personage existed doubly, in our actual world and in the heart's blood of the author. Hers is his own gracious disposition, her sunny temperament, his own inextinguishable kindness.

Effi is a young creature who transgresses against her elderly husband by accepting a lover—a situation and stuff which you will own to be about the very commonest in modern fiction. The peculiar circumstance in this case consists in the transgression being discovered by the husband six years after its occurrence.

Six years is a pretty long period of time. What is a man likely to feel over such an old story, especially a man who suffers no stirring of jealousy. The little wife has hardly grown out of girlishness. Besides there is a child of his by her to be considered. Would it not be well to spare scandal, and let the moss remain undisturbed that has grown over the past by simply burning the old letter which has fallen out of his wife's desk into his hands?

Ah! have we forgotten? Briest is a high official. The possibility of a flaw being left in his reputation for honor can alone concern him. So, naturally, he shoots the offender against this honor, and Effie returns home. She dies later;

not from heartbreak of any kind, but simply from a chronic ailment that she had had already before the trouble.

How different the straightforward narrative is from the long-winded tale of Ottilie's life; technically, indeed, hardly two novels can be found so divergent in method as "Elective Affinities" and "Effi Briest." But just as Goethe's representation of the irresistible, fatal force of mutual attraction is convincing above all others, so is this character of a young transgressor of the law which remains, notwithstanding, harmless, gracious and lovable, likewise convincing beyond a hundred thousand others.

I repeat 'tis not cleverness, nor "the skillful touch," nor any virtuosity whatever that tells, but heart's blood.

There is Peter Rosegger. Who that is capable of judging but recognizes in his "Light Everlasting" a haunting self-confession and a work of higher art, old-fashioned as the book is, long and full.

Here the "Light Everlasting" is love in its militant phase. It leads the humble priest to submit to his bishop, who disapproves of his humanitarian experiments and sends him, by way of discipline, to an obscure parish in the Alps. And he would have come out with his rough mountaineers, hard as their hearts are and narrow as are their brains; but by and by tourists discover the mountain valley. Then presently hotel keepers settle there, then doctors, and finally manufacturers—so many names for esthetics, science and capitalism with its attendant social cynicism. Against these factors the idealist stands alone, and his single handed efforts count no more than pebbles that are dropped against an Alpine torrent.

What raises the picture upon the plane of dramatic poetry is the attraction which the strenuous life of the newcomers exerts upon himself.

The force and power of will of Yark & Co.—the founders of the mills—command his respect. "They are different fellows from us," he writes, meditatively, and meditatively he also records that while teaching the children he spoke of the justice of God. "My father says

there hain't no God," a child opposed. While another instantly called out: "But there be a devil, my father says. It be Mister Yark, my father says."

A climax approaches when he goes on from appreciating the vigor of practical life to appreciating its concomitant vigor of sensual enjoyment; a condition of feeling that takes the form on one occasion of a dream in which he finds himself marching with soldiers, cursing, swearing and throwing dice in camp for a brown maiden, singing the while:

"Puly pah, puly pah,
Here we are in Bohemia."

This regret is keen on waking that the dream is not a fact. "All mankind dwells in the being of each one of us ready to come to light," reflects his soul. He flees away further into the mountains. There he consorts with a madman and becomes lost in a mountain-like wilderness of insanity.

Not a cheerful book this; nor is George von Ompteda's "Sylvester von Geyer" a cheerful book. But if you want a picture of the life of a German officer who is sprung from an honorable family possessed only of small means—such as are the families of the vast majority of military men in Germany—here you have one which is normal, veracious to the last degree, and unforgettable.

As for Paul Heyse's short stories, they are of the same order of sincere art, altho the major portion of them are suffused with sensuous brightness. Sincerity need not be solemn nor even earnest. It need only be spontaneous and a true reflection of the inner being. So much the better if the being be Olympian in its essential quality.

I can go no further, however, in detail respecting contemporary fiction with us.

Our own and foreign critics must "discover" it for themselves, as they are "discovering" the old German masters of painting; in which case they will and must value it as they do the paintings and for the same reason. There is something organic and enduring in race, and the trait characterizing ours is to-day what it was in the past.

BERLIN, GERMANY.

Why "Shamrock III" Failed

BY ROBERT WRINGE

CAPTAIN OF "SHAMROCK III"

"RELIANCE" won because she was the better boat. That's all there is of it. The difference was all in the models of the yachts. The "Reliance" was of scow model, practically flat bottomed, while "Shamrock" was round bottomed. We have now learned that the scow model is the swifter. We did not know that before—no one knew it. These great cup racers are all experiments, and we learn something from them every time.

In every respect, except model, "Shamrock III" was quite as good as "Re-

liance I and II," are all lying in the Erie Basin with their crews aboard. They will probably all be converted into schooners and sold to men on this side of the water.

Of course, I and my associate, Capt. C. V. Bevis, and our men are all much disappointed. We certainly expected to win. But I do not look upon our defeat as permanent or as settling anything except in regard to the merits of the different models. The thing for us to do, therefore, would appear to be, Come again with a scow model; so I suppose that is what we shall do.

The "Reliance" in Dry Dock

Courtesy of the *Scientific American*.

liance." My crew did splendid work, clean, swift, excellent. In some respects they made records. For instance, in the first race they got in the big club topsail and set a small club topsail in nine minutes, taking the time from start to finish, and that smart bit of work was done in a stiff breeze.

Into "Shamrock III" there went the very best material of every kind that could be found anywhere. She is a fine, stanch boat, and, converted into a schooner, would make a good, comfortable cruiser. She and her sisters, "Sham-

There is no reason why we should not borrow from Herreshoff. He borrowed from us. The American cup defenders a while ago were all centerboarders, but the centerboard gave way to the fin keel, borrowed from us. Ten years ago any yachtsman could tell an American from an English boat by merely looking at them. They were of different types. Now the English and American boats look alike because by reason of these cup races the process of selection has left only the best.

I don't know whether or not Sir

Thomas will come again with "Shamrock IV." I don't think that he knows. Everything is yet unsettled. We are waiting. It is probable that Captain Bevis and I will sail some of the American yachts this fall, but there's nothing certain.

There's no reason for our despairing. They can build good ships on the other side, and with the lesson that "Reliance" has given them taken to heart they may next year produce a winner.

It is not true that these races are useless. They comprise a series of experiments on a grand scale, and one that could not otherwise be had. They have taught us a great deal about shipbuilding, rigging, strength of materials, and so on. Of course, this is not so important now as it would have been before the age of steam, but at the same time it still has its uses for commerce, while to the world of sport it is of first consequence.

Beyond the disappointment consequent on the complete overthrow of high hopes I am not a sufferer from the "Shamrock's" defeats. I have been a yachtsman twenty-five years and a skipper ten years, and I never bet on a yacht race in my life. Some of the men, however, were not so cautious. The crew was very confident that we had the best boat, and, of course, the best crew; so that a good many are now sorry for themselves, having wagered on the issue all the money they could raise.

We have been splendidly treated here

by every one. No one could ask for a fairer chance to win than was given us. If we had made the arrangements ourselves they could not have been more favorable. Only in one respect is the challenger at a disadvantage. He must name his boat before she is built, and he must stick to her no matter how she turns out. On the other hand, the defenders may build any number of boats and take the best of them. In one year the "Vigilant," "Colonna," "Pilgrim" and "Navahoe" were all built, and the "Vigilant" proving the swiftest, she was chosen to defend the cup.

Of course, we could build three or four and take the best of them for our challenger, but that selection would have to be made before the American boat was built, because of the long notice obliged to be given, and the builders here would have full benefit of all the progress that we had made.

These cup races here have resulted in such a change of rules on the other side that it would be of no use for "Shamrock III" or "Reliance" to go into any of the races there; they would be discriminated against to such an extent by the new rules that there would be no hope of their winning. They would have to give the other yachts a start equal to about half the course.

These new rules are intended to preserve a type of yacht that is safe and comfortable as well as comparatively swift, and to penalize the mere racing machine.

NEW YORK CITY.

Love for a Star

BY NATHAN HASKELL DOLE

"POOR hapless mortal!" cried the Evening Star,

"I see you lifting your impassioned eyes;

Your plaintive songs like incense to me rise:
They tell me how in love with me you are!

Alas! I am compelled to wander far

Down through the deepening twilight of the skies.

Love's sweet communion Fate to me denies
And I am doomed thy happiness to mar!"

And yet the joy of love that mortal knew—

The bliss of living in a dream of love;

Of looking up to one so far above

That ever heavenward his spirit flew

As on the wings of God's own spotless Dove,

And thus more worthy of his Love he grew!

BOSTON, MASS.

King Christian IX of Denmark

BY HROLF WISBY

WE have yet to learn of a ruler more remarkable for what he is not than for what he is, and who has done more remarkable things despite himself, rather than by conscious effort, other than the genial and emi-

Crown-Prince Frederik, the Prince-Elect Christian, and the Prince Royale Frederik—that is, one present king and a treble row of kings to be. In addition, King Christian wields a larger power through the intermarriages of his children than any other monarch.

His hold on England is effected through the marriage of his oldest daughter, Alexandra, to King Edward VII; his youngest daughter, Thyra, to the Duke of Cumberland, and his grandson, Prince Charles, to Princess Maud, oldest daughter of King Edward VII. His relations to the imperial house of Russia began with the marriage of his son, King George of Greece, to the Grand-Duchess Olga; then followed the marriage of his daughter, Dagmar, to the late Czar, Alexander III, whose oldest son, the present Czar, is King Christian's grandson. With royalistic France, the King is connected through the marriage of his youngest son, Prince Valdemar, to Princess Marie d'Orleans; with the royal house of Norway-Sweden, through the marriage of his oldest son, Crown Prince Frederik, to Princess Denise, and with Germany through the marriage of the

KING CHRISTIAN IX

nently respectable person known as King Christian IX of Denmark. He celebrates this month his fortieth anniversary as sovereign, and besides being the oldest living ruler in Europe (he is now in his seventy-eighth year), he boasts a son in King George of Greece, who also celebrates his fortieth anniversary as sovereign, a most extraordinary coincidence, of which history has not the precedent. Moreover, King Christian represents the only quadruple generation of male royal blood extant, consisting of himself, the

Prince Elect, Christian, his grandson, to Princess Alexandrine, not to mention his numerous other royal relations.

King Christian's reign has produced one event of importance to international diplomacy, and one movement of consummate benefit to his country. As to the former, I allude to the now prevalent *visiting custom* among rulers, which, inaugurated by King Christian more than a generation ago, continues to be the most active means for ameliorating the diplomatic dif-

ferences of Europe, and for establishing mutual feelings of tolerance between the nations. As to the latter, I refer to the agrarian rise in Denmark, which has made that country the model agricultural community in the world.

I shall now have to demonstrate the statement made that these things, remarkable under the circumstances, worked themselves out despite King Christian rather than as a result of conscious effort on his part. They are just the things which historians love to attribute a sovereign merely, as I suppose, because they happened during the sovereign's reign. We face the startling fact of a ruler more remarkable for what he is not than for what he is, and who has managed to succeed chiefly by the exercise of an opportune nonentity enabling him to know what not to do.

In the first place, how are we going to credit King Christian for his forty-year rulership, his long life, his quadruple generation and his offspring, unless we credit him for longevity and for progeny, which are not virtues, but only a capacity to live and to multiply. Add to this the intermarriages of his children, and the results, far-reaching and important tho they are, are not due to him, but to his deceased spouse, Queen Louise, who was the matchmaker par excellence of the nineteenth century, and to whom Bismarck once paid what must have seemed to himself the high of compliment, saying that she was the "female Bismarck" of the world. The visiting custom among rulers was a very significant movement, lacking neither in originality nor in execution, but since the King was forced to put it into operation from sheer personal poverty, we may with confidence suppose that he was not

conscious at the time that he was doing a deed of consequence. The case was simplicity itself. He could not afford to visit his sons-in-law, the present English King and the late Russian Czar, for such royal sojourns cost almost as much to the guest as to the host, so he made them come to him, with the understanding that the visits were to be of an informal and inexpensive character. Edward and Alexander readily agreed to this condition, and found to their gratification that each visit to the Danish court not only proved to be a large financial saving to themselves, but a most pleasurable outing, exempting them from the restraints of official etiquette. The visits became an annual institution, were imitated by other rulers, and thus developed into a well defined custom, that has done more to bring about a feeling of goodwill among the courts of Europe than any other single factor.

The agrarian rise, than which no movement has more genuinely benefited

CROWN PRINCE FREDERIK
KING CHRISTIAN IX OF DENMARK
PRINCE-ELECT CHRISTIAN
PRINCE ROYALE FREDERIK

Denmark, was due to the efforts made by the agrarians themselves. The King had nothing to do with it, tho we may trust the official chronicler of his reign to give him the glory of it. However, it is only justice to say that King Christian, tho he had it in his power to retard and cripple the rise, did not in any way hinder it, but even extended himself—think of it!—to administer his official encouragement. In fact, it would have been madness to do less than that, since the agrarian movement was the country's only chance, which, smarting and staggering from the wounds of the disastrous war with Russia in 1864, proclaimed Christian King, since the Oldenburg line was extinct, and no other man could be found. The result of the agrarian success was to turn the natural resources of Denmark into specialties for export. By co-operative measures the peasants banded together in leagues for rearing cattle, swine, poultry, horses, etc., and yet other leagues for the production of staples, like butter and cheese, and at the tail end of the operations central leagues for selling the produce abroad and for buying, on a co-operative plan, such materials and utensils as the various sub-leagues might need. To mention only a single instance of the enormous success attending this movement, consider the rise, within a quarter of a century, in the meat exports from a half million pounds to a hundred and sixty million pounds.

The secret of Christian IX's success as King lies in his instinctive knowledge of what not to do. He has shown rare tact in the exercise of this negative knowledge, which in his case has proved of far more importance to the country than the most positive knowledge, on his part, of what to do. Circumstances demanded neither a doer nor an undoer of things, but simply a respectable figure-head of non-interference—and Christian filled the bill. Had he been a proud man of aggressive ways, he would have undertaken the matchmaking business himself and failed at it; he would have either fought or furthered the agrarian rise, and in the latter case he would probably have hampered it with some ideas of his own, impossible of realization, but sure to hinder, if not to kill, the movement: he would have insisted on visiting his

mighty sons-in-law with royal pomp and splendor, but necessarily, then, at such infrequent intervals as never to encourage the present royal visiting custom as an institution, for it amounts to that now.

Personally, Christian IX has the charm and distinction of a man old in years only, but with the agile step of youth, possessing the easy manner and genial language of a well-rounded, harmless and negatively necessary nonentity. He is considered the first horseman of Denmark, and he sits in the saddle as if there might be some truth in this. Of his humanity, patience and conciliatory turn of mind, there is no room for doubt. They are natural parts of this kind old potentate, and form the best trait of his character.

Once he was thrown rather roughly in the filth of the street by a careless bicycle rider, who, instead of helping the aged King to his feet, abused him in vile language, not knowing the identity of his victim. The fellow was arrested on the spot, but when the King learned that the sentence would be for *lèse majesté*, he had him instantly released. An incident which King Christian never tires of telling as a good joke on royalty occurred when he and his oldest son, the Crown Prince Frederik, accompanied the late Czar Alexander III of Russia on a pedestrian tour in Denmark. Weary of walking, they asked a peasant to give them a ride home, to which he assented. It was evident from the peasant's manner that he had no knowledge who were his august passengers. The King made up his mind to play a practical joke on the man, but as it happened the man turned the joke on the King. Nudging the Czar with his elbow, the King said to the peasant: "Good man, tell me have you even seen the Crown Prince of Denmark?"

"Crown Pete?—No," responded the man, his answer being a vernacular pun on the Crown Prince's title. "But I know he lives up there in the castle."

"Well, I am the Crown Prince of Denmark," announced the holder of that title, restraining himself from laughter with great difficulty.

"And I am the King of Denmark," supplemented King Christian, impressively.

"Czar of Russ—?" broke in the late Czar with his barbarous pronunciation of Danish, which on the tongue of the present Czar, Nicholas, sounds like that of a native.

The peasant looked them over slowly, one by one, with a mischievous eye, and barely removing the pipe stem, he said in a slow, crooning voice:

"Weel-a-weel! If you're the Crown Pete, and you're the King Bee, and that is the Czarri o' Russialand, then—I am the Imperor o' Chinah!"

The story of "Kongen's Greng" (the King's boy) is quite recent and serves as a good instance of the many in which the King's good nature has been truthfully revealed. While living at his summer palace, Bernsdorf Slot, the King was in the habit of taking long walks, during which he would always pass by a certain house where a little bit of a boy was always playing in the open. One day the King approached the youngster.

"What is your name, little boy?"

"Quto Johannes Rasmussen," said the boy promptly.

"How old are you?" went on the King.

"Four years," said the little man, adding suddenly: "And what's your name?"

"My name is Christian," said the King.

Next time they met the King had brought some candy for the boy, but as he was busy devouring a huge sandwich, he could not hold the candy in his hands, and so the King proceeded to put it in the boy's pocket. After some fumbling about the little man's clothes, the King concluded that there was no pocket.

"Why have you no pocket?" asked the King.

"I have," said the boy, with dignity.

Again the King went through the youngster's clothes, and again he was forced to admit that he could not find any trace of any pocket.

"Now, Johannes, if you really have a pocket, tell me where I can find it."

"In me new trowsers," chirped the kid.

NEW YORK CITY

Modern Theological Education

BY GEORGE F. MOORE, D.D.

PROFESSOR OF THEOLOGY IN HARVARD UNIVERSITY

IN the following brief survey I wish to point out the changes in the subjects and methods of theological education which have come to pass in recent years or are still in progress.

The study of the Bible in the old curriculum was mainly exegetical. History, as well as law and prophecy, gospel and epistle, was inspired, infallible, authoritative. The task of the scholar could only be to ascertain, by philological methods, its meaning. Other Biblical disciplines occupied an entirely subordinate place. The canonicity, authenticity, and integrity of the books were treated as a branch of apologetics, rather than of criticism; history was only a harmonistic retelling of the Biblical narrative; antiquities were largely learned curiosities.

To modern scholars the books of the Bible are sources for the history of Israel or of New Testament times. The establishment of the text, the philological exegesis, the critical investigation of the age, origin and historical value of the writings, are the methods by which the student prepares for historical interpretation and construction. His end is not the meaning of a passage or of a book, but a comprehensive understanding of the history.

In the pursuit of this end scholars have come to see that the New Testament cannot be understood without a knowledge of contemporary Judaism. The sources of Jewish history in the two centuries following the Maccabean struggle are therefore necessarily included, with the

Old Testament and the New, in our study. What some one, with peculiar ineptitude, once called the "four centuries of silence," are allowed to speak for themselves.

The center of Biblical studies in the modern theological seminary is not exegesis, but history—the history of the religion of Israel—of Judaism in New Testament times, and of the origin of Christianity and its development in the Apostolic age. The name Biblical Theology, sometimes given to this study, is misleading; our aim is a history of religion in all its aspects, not merely of religious ideas. To this central study the history of the Israelite kingdoms and the Jewish Church, the history of Hebrew, Jewish and early Christian literature, are ancillary.

The methods and processes, philological and critical, by which these results are attained belong to the technical training of the historian rather than to the ordinary education of the minister. They should be so explained and illustrated to the student that he may understand their nature, and use with intelligence the work of scholars in this field; not as tho he were going to practice them himself. With regard to the original languages, which the older curriculum treated as equally essential, it is plain that from the historical point of view they do not stand on the same footing. The documents of Christianity, the words of Jesus and the teachings of the Apostles, are in Greek, and I do not see how an interpreter of Christianity, such as the minister is, can be willing to attempt his task without knowing his sources in the original. With the Old Testament the case is different; it will hardly be maintained that it is as important that a Christian minister should be able to read the Hebrew scriptures for himself as that he should read the New Testament. If a student can bring from college a good grounding in Hebrew, it will give him a great advantage in the critical study of the Old Testament literature and religion; but the reasons which led, in the old curriculum, to requiring Hebrew of every student are no longer valid; and in experience a very meager knowledge of Hebrew—insufficient for any use—is fre-

quently acquired at the expense of much more important and profitable studies.

The history of the beginnings of Christianity in the New Testament passes over without a break into the history of the succeeding ages. In the modern treatment this continuity is recognized. The external influences, Jewish and Hellenic, social, philosophical, and religious, which affected the development of Christianity, are justly appreciated. The formation of Christian dogma is treated without apologetic or controversial animus, as a historical problem. The Reformation and its consequences are discussed with the same fairness and dispassionateness. The attention of the student is not concentrated on doctrine and polity to the relative neglect of other manifestations of the Christian life, nor on the ancient age, as tho the modern were of less significance; on the contrary, the period since the Reformation, and especially since the last century, is properly discussed with the greatest fullness. The history of theology since Kant is of no less importance to us than the three centuries before Nicæa.

The heart of the old curriculum was dogmatics, the exposition and demonstration of a system of "Revealed Theology," conformed to the confession of the Church to which the school belonged. To this edifice "Natural Theology" often served as a fore-court. The Protestant denominations differed from one another on various points; all of them differed from the Church of Rome on the relation of the Church to the salvation of the individual, involving the sufficiency of Scripture, the doctrine of justification and the like. But the chief dogmas—the Trinity, the Person of Christ, the Atonement, Revelation, the Hereafter—were held in substantial unity by Catholics and Protestants alike. These fundamental dogmas were an attempt to interpret and construe Christianity in conformity with ancient philosophy. The development of theology in turn reacted upon philosophy, and created the medieval system of Christian philosophy. Thomas Aquinas represents the outcome of the scholastic period, and the Protestant scholastics at most points do not get much beyond him.

The philosophy which underlies and

pervades the traditional dogmatics is obsolete; the universe, as science reveals it, cannot be construed on its premises or in its terms. The conception of Scripture and the method of interpreting it by which theology was harmonized with philosophy and the specifically Christian dogmas were derived or proved is also obsolete. But the facts of Christian experience and religious history remain; the Christ of the Gospels remains; and these facts are no less intelligible or significant in our way of thinking than they were to the Greek Fathers in theirs.

The task of the constructive theologian to-day is to put in the place of the old dogmatics and apologetics a philosophy of the Christian religion, in which the facts of Scripture, history and Christian experience are interpreted in conformity with modern conceptions of the universe and God's relation to it, and of the nature and destiny of man. To this central discipline philosophy, psychology, the philosophy and history of religion are subsidiary.

If we turn to the practical discipline we note changes hardly less great. Preaching is still the first business of the minister, and to make preachers is one of the chief ends of the theological school. The character and conditions of preaching are, however, no longer those of our fathers' days, and the preparation must be modified accordingly. The old instruction in homiletics—or, as it was often significantly called, sacred rhetoric—was often of a formal and barren kind, dealing mainly with plans and "skeletons," and with matters of literary style—things which the student ought to have learned in school and college. The most important matter received the least attention. The modern teacher of this subject is aware that the branch which the ancient rhetoricians called "invention" is fundamental—the discovery of a subject, material, an original method of handling. He recognizes that bad form and style oftenest come from having nothing of consequence to say, and that the best remedy is applied, not to the superficial symptoms, but to the disease. He realizes, also, that the historical interpretation of the Bible and the philosophical interpretation of Christianity need to be supplemented by the practical interpreta-

tion of both for ends of religious instruction and edification. It cannot be expected that the student will be able without guidance to translate what he has learned as science into a form suitable for preaching. As a matter of fact, he sometimes preaches his notebooks undigested, and sometimes makes little use of his learning because he does not know what to do with it.

The modern minister has a large field of usefulness out of the pulpit. He is by his office and training a natural leader in the religious education of the community. The pastoral catechetics of former times are—not superseded, but—supplemented by other instrumentalities, such as the Sunday school and adult classes for the study of the Bible or of religion. If he is to use his influence and these agencies wisely, he needs to be familiar with the principles of education, and especially with the psychology of religious development in childhood and youth; and the theological school provides the opportunity to acquire this knowledge.

Again, the modern conception of Christianity involves a new apprehension of the social function and obligation of the Church. The minister ought to have studied the economic as well as the ethical aspects of questions of labor, charity and reform, and to be acquainted with the manifold ways in which men are trying to realize the whole value of Christianity as a social force. Another large and important field of study is thus added to the division of "Practical Theology:" studies instinct with the reality which was so often lacking in the old branches of Pastoral Care, Catechetics, and Church Polity.

An elective system is the necessary consequence of this enrichment of the theological course. The question how far freedom of choice should go is one on which agreement is not yet reached, and it cannot be discussed here. The best plan seems to me to be to require every student to take the fundamental course in each of the great departments—say, the religion of Israel and Judaism, the beginnings of Christianity, the outlines of Church history, the philosophy of the Christian religion, and preaching; and for the rest to allow entire freedom either

to supplement these by the several subsidiary courses, or to concentrate, according to the student's aptitudes and previous training, upon one or two fields. The two radically bad methods are the election of scraps of subjects and a group system which heads toward specialization.

The method of instruction will, of course, vary with the subject and the available apparatus. In general two principles may be laid down: *first*, the fundamental pedagogical doctrine that we become masters of our knowledge, not by reception, but by production; not by being told, that is, but by telling; not by being shown, but by seeing and do-

ing; and, *second*, that the instruction in the professional school should be real; the student should employ the sources, methods and instruments which he will use in the actual practice of his profession, so that he may go to his task, not merely with a certain stock of knowledge, but having learned how to gather, criticize and verify, combine and interpret facts for himself. This method in the class room is effectively supplemented by "seminars" for more advanced students.

Thus, both in its course of study and its methods of instruction, the modern theological school adapts its work to the needs and conditions of our own time.

HARVARD UNIVERSITY.

The Need for Municipal Knowledge

BY CHARLES DWIGHT WILLARD

SECRETARY OF THE MUNICIPAL LEAGUE, LOS ANGELES, CAL.

THE doctrine of "knowledge is power" applies to municipal work as it does to every other phase of human life and activity. This phrase is the key that unlocks many seeming mysteries in politics and government.

"How does it happen," asks the reformer, "that Billy Gorman has such tremendous influence at the city hall? He owns no property except his saloon-residence on the corner. He is illiterate and ill-bred and seemingly without personal qualities that would make him popular. What is the touchstone that gives him such power?" And the answer is: Knowledge. He possesses a vast fund of specialized information about the city government, and the people that come in contact with it, which makes him almost indispensable to the city officers. The reformer places a low estimate on the boss's intelligence, calling him ignorant and uneducated because his branch of knowledge happens to be of a different order from his own; and he regards the boss's influence as a manifestation of the black art—something achieved through witchcraft over the dotting simplicity of his followers. Bosses are neither born nor made. They make themselves, com-

ing up from the ranks in spite of every effort of their companions to tear them down, and holding pre-eminence solely through the effective quality of their peculiar knowledge.

If the good citizen is to compete with the boss for influence at the city hall, he must bring something more than dignity and self-complacency to the contest. He, too, must have knowledge of an available sort. He may not be equipped to secure the political information that forms the basis of Mr. Gorman's stock in trade, but, as far as actual familiarity with the city government itself is concerned, there is no reason why the good citizen should not be the equal of any one. If he cannot accomplish it individually, he may be able to accomplish it collectively through his organization and its paid agents.

The boss knows personally every officer of the city government and most of the deputies. He knows the past history of each, his political strength, or to whom he owes his appointment. He takes note of his ambitions and hopes, advises with him and assists him. He knows every contractor that is doing business with the city government, or is likely to in the future, and he is familiar with the terms

of every contract and observes the manner of its execution. He knows the political attorneys of the corporations and comprehends their methods of work. He is acquainted with every newspaper man of consequence in the city, and will secretly convey a "beat" to a reporter on the very journal that is "roasting" him most fiercely. In his inmost circle of friends are the lesser lights of his own kind—the men that are "doing politics" in the various wards—and through their reports and by his own investigation he knows the workers of importance in every section of the city. You may call him ignorant and illiterate if you like, but he possesses an intellect that is as keen and alert as that of a high-grade lawyer, and it is stored as full of digested and classified facts as that of some eminent college professor.

If organizations of good citizens are coming to be influential and effective—as they are in many cities—it is because they are learning to base their efforts on specific knowledge of municipal matters rather than upon mere discontent and fault-finding. A municipal league that people understand is intended to be permanent, which is supported by ample funds to admit of the employment of competent help, which devotes its energies, first of all, to the acquiring of definite practical knowledge of the condition of the municipality and its daily working, and then disseminates this knowledge in the widest possible manner—such an organization must be of far-reaching value, even if it attempts nothing beyond this. If it should supplement this knowledge of local conditions by a study of work in other municipalities, in order to show comparisons and to develop new and improved methods, its practical efficiency would be greatly increased. And if it should add to its other lines of effort a political bureau for the acquirement of knowledge about the character and career of every man who enters politics either to seek office or to accumulate influence, and will use the knowledge thus gained to defeat the unworthy and assist the reputable and competent, then the good citizen may be assured that his efforts will soon bring in substantial returns.

The theory that a man who knows lit-

tle or nothing about a given situation can jump in and promptly set it to rights, chiefly by a process of giving advice to those better informed than himself, is something that we would not accept as reasonable in any other business, so why should we adopt it regarding a municipality? The average good citizen knows surprisingly little about his city government. I venture to say that if you were to go into any American city and select ten bank presidents and match them against ten saloon keepers in a competitive examination on municipal affairs, the bankers would fall down miserably in the comparison.

Local municipal information is not difficult to obtain. Nearly all American cities now publish an annual statement showing the amounts expended through each department; and by following the reports of city affairs in a conservative newspaper one can get at the facts as they develop from day to day. A comparison of one's own city with others is not so easy, by reason of a lack of uniformity in systems of accounting. There is a surprising dearth of reliable statistics and of scientific treatises on general municipal topics. The absence of an adequate literature in this line reflects the lack of public interest in municipal matters—a lack that must be remedied if conditions in our cities are to be improved. With the spreading of a wider knowledge of what our best cities are doing, and with the awakening of a sense of loss among the citizens of less favored places, and with the growth of a civic competition like to the commercial competition that already exists between our cities—with these things will come the long-looked for reform in American municipalities. The case as it stands shows many points of improvement. The good citizen is certainly coming to understand the necessity for greater knowledge, and is in search of it. Municipal organizations are constantly becoming more practical in their lines of work, and hence more effective. Magazines and newspapers are giving us more to read on municipal topics. There is a vast field for work in making the facts known; but at least a beginning has been made.

The Mazes of a Kentucky Feud

BY R. L. M'CLURE

[In the course of many years' work in journalism in Kentucky, Mr. McClure has had occasion to investigate, thoroughly and repeatedly, the endless feuds that have made the State notorious, and the conditions to which they owe their origin. An expert on the subject, he was requested to present an adequate study of the Jett-Marcum murder, the superficial aspects of which alone are known beyond the limits of the commonwealth. Mr. McClure's article, touching briefly but effectively upon existing conditions, affords one of the most surprising résumés of series upon series of murders, one linked with another, that has ever come to the knowledge of the American public. Practically, it shows whole communities bound together in conspiracies for assassination, either by active participation or by a humiliating connivance. Not the least interesting feature of the article is his incidental reference to the propaganda of peace recently instituted by men who, like General O. O. Howard, have canvassed county after county, preaching abstinence from indulgence in the chronic blood lust and, it is hoped, laying the spiritual foundation for at least some modest measure of reform.—EDITOR.]

AN attorney employed by the prosecution of Caleb Powers, at Georgetown, for conspiracy in the murder of William Goebel in front of the State House building, in 1900, held his large audience spellbound by reading some startling statistics upon homicide in Kentucky. He found that Kentucky had twenty times as many killings during the last five years as New York State and one thirtieth of the number of executions. He found that there was not a place on the face of the whole earth, inhabited by civilized people, where lawlessness was so prevalent as in Kentucky. Many aver that the statements do grave injustice to the State, and that, while its feuds are deadly, there are not the fatal riots and

strike disorders which bring the names of sister States into reproach.

The attorney was right when he declared that there have been but nine men hanged in Kentucky during the past five years, but his statement that, within this period, there have been 798 homicides can scarcely be credited, altho he gathered his figures from the coronors of the various counties, excepting in one instance—Breathitt county—where, for the past three years, no one could be found who would accept the office of coroner.

No man has ever been able to solve the feud problem of Kentucky, tho scores preaching anti-feud doctrines have canvassed the State for years. Educate the people, say some. Build churches and

good roads, say others. But both methods are slow and uncertain, and, in point of fact, feuds exist where there are good schools and churches in abundance, and men have fallen dead by feudists' bullets on the doorsteps of the churches. "Old Man Bill" Strong, leader of the Strong faction in the Strong-Amy feud, which originated during the Civil War, was shot from his horse while riding to church accompanying his daughter, and with his granddaughter riding behind him. At Jackson, the scene of the Hargis-Cockrill feud, now raging, there are good schools, a number of churches and two railroads. A railroad penetrated the section of country dyed with blood shed in the Hill-Evans feud and in the Craig-Tolliver feud. William Goebel was shot from a window of the office of the Secretary of State in the Executive building at the State Capital; and at the Capital Hotel in the same city, in the crowded lobby, ex-Congressman D. G. Colson and Lieut. Ethelbert Scott, allowing the feud passion to take possession of them, shot at each other as long as their revolvers would fire, Scott and one other man being killed by Colston's bullets. On the steps of a national bank in Covington

William Goebel and John Sanford met after being avowed enemies but a short time, and Sanford was killed. In the post office at Lexington, William Cassius Goodloe and Hon. A. M. Swope, local Republican leaders, fought a deadly duel with bowie knife and revolver, and were both killed.

Altho these were fights in the open and not of the class which, in Breathitt County, has so startled the country of late, they were feud fights, nevertheless. Colston and Scott were avowed enemies

and had sworn to kill each other on sight. Goebel and Sanford were rivals in politics, and each was seeking the life of the other, as was the case with Goodloe and Swope.

The feuds in Kentucky have not all been confined to the mountainous section of the State, where the people are presumed to be less educated and individually more isolated than in the Blue Grass or the Pennyroyal districts. The "pistol toter" is to be found everywhere. Altho the laws of the State make it a fine punishable by imprisonment for twenty days and a fine of \$25 to \$100 for carrying concealed weapons, the very members of the legislature go armed when traveling about the State, canvassing in a political campaign or in pleasure tours.

There is not a commonwealth in the Union that furnishes the United States officers more trouble by moonshining than Kentucky. The mountains are full of moonshiners, and the men who fill themselves with the fiery liquor, made from their peaches or corn, are ever ready to resent an insult or even offer one for an excuse to kill. The man killer is often lionized. It is no uncommon ex-

pression to hear a mountaineer called a "man killer." The leader of a feud is often wine and dined as a hero. The murderer may be fairly snowed with sympathizing letters, and women crowd the court rooms and admire the assassin, telling their children how brave and handsome he looked beside his array of leading lawyers.

The causes of feuds may concisely be said to be absence of educational advancement, moonshine whisky, and a native personal prejudice in their favor; yet lax

A. Floyd Byrd, Commonwealth's Attorney, Who Prosecuted Jett and White

administration of the law does more to foster and keep feuds alive than any other one thing. The courts fail to enforce the law, and, too often, there is no arrest, altho the slayer be well known and the slain popular and respected. The friends of the man killed know that the conditions of the courts are such that a conviction cannot be had; and the grand

into the conduct of the officers of the lower courts.

In one county—Breathitt—there were thirty-seven homicides in a space of two years. Until the outraged people of the State began to cry out, few arrests were made. Of the thirty-seven men who shed their blood in feudal hatreds eighteen were shot from ambush. Dur-

Curtis Jett, Who Was Convicted by a Jury at Cynthiana, Ky., of the Assassination of Lawyer J. B. Marcum, and Was Given a Life Sentence for the Crime

juries pass the tragedies by without serious investigation. Often the county judge, or the sheriff, or both, are allied with one faction of a feud, and, wielding great influence in the community, the Circuit Court officials pass over the chronic local sore under penalty of defeat for re-election if they are inquisitive in ferreting out assassins or inquiring

ing the past year three prominent men—James Cockrill, the town marshall; Dr. B. D. Cox, a leading physician, and James B. Marcum, town trustee, trustee of the Kentucky State College, lawyer and politician—were victims of assassins, two of them, Cockrill and Marcum, being shot from the courthouse.

While both Dr. Cox and Mr. Cockrill

were prominent and numbered friends everywhere, Marcum was so widely known that the people of the State demanded an investigation. Grand juries had met and ostensibly investigated both the other murders, and had returned no indictments, altho the names of the assassins were on the lips of one-half the population of the little mountain town. It was known that Marcum had been threatened. Men had followed him and

He made an affidavit, which Marcum filed in court, stating that he had been assured the prosecution should not be pressed against him if he would kill Marcum.

Marcum, finding his steps dogged on every side, and knowing he had ample cause to fear the bullet of a hired emissary, decided to leave the place. He did leave; but, when he tried to dispose of his property he learned that his foes were

Tom White, a Co-Feudist with Jett, in Charge of the Kentucky State Officers and Militia Who Effected His Capture

lay all night in the bushes near his home, waiting for him to go to the spring. One of those who said he was hired to aid in the assassination informed Marcum of his danger and played the part both of the conspirator and spy, keeping Marcum fully informed. He had killed his man in Perry County, in the French-Eversole feud, and there was an indictment against him, the case having been transferred to Jackson for trial. Marcum was his counsel, and he was known to be on intimate terms with the lawyer.

trying to buy it. The last ignominy preyed upon his mind. He resolved to go back and take his chances.

The assassination was the most dastardly of any in the history of Kentucky's merciless ambushes. He had gone to the courthouse to transact some business. He was emerging from the building by the front door when a friend stopped him, and they engaged in conversation. Where should a man feel more secure? He was standing in the front door of the courthouse of his home town, the

county judge and sheriff at the doorway of a store just across the street and in plain view, deputy sheriffs obvious at several points near by, and scores of people walking about in every direction. Yet two shots rang out from the interior of the courthouse, and Marcum fell dead. There was a short pause; then men rushed in and carried him across the street. The county judge and the sheriff both remained away, and the man with whom Marcum had been conversing—a deputy sheriff—was sent into the courthouse after a certain length of time to make a search.

The murderer, according to the jury at Cynthiana which found Curtis Jett guilty of having fired the shots, walked around the interior, came out of a side door, and mingled with the crowd viewing the remains of the murdered attorney. Scores of people saw Jett go in the side door just before the reports of the pistol shots were heard, and they saw him come out just afterward. The deputy sheriff standing with Marcum recognized the assassin as he advanced, with his revolver grasped in both hands, and fired the second bullet into the brain of the victim to make sure of the deed. And yet none dared admit the facts. On the witness stand, after one man had finally revealed the details of the tragedy, these other witnesses said they were afraid they would be killed if they told what they had seen. They said they were afraid because they knew the assassins were still at large, and the men who hired them to do murder would leave no witness if they felt their necks in danger of the hangman's noose. So there were no arrests.

Days passed, and no action was taken by the local authorities. Public sentiment became thoroughly aroused. The Governor was appealed to. Then it was that the brother of the murdered town marshal, Tom Cockrill, swore out a warrant for the arrest of Jett, believing that he was also one of the men who murdered his brother. Jett had left Jackson and had gone to the home of his mother, in Madison County. A posse of men, heavily armed, made the capture at 2 o'clock in the morning, taking the desperado completely by surprise. Jett was tried first in the home town. One man of the jury compelled disagreement, and the

case was transferred to Harrison County, where one man, convinced that Jett was guilty, succeeded in making the other eleven come to him and vote the prisoner a life sentence.

The county judge of Breathitt, James Hargis, an uncle of Jett, came to the young man's assistance, altho he said he had not been on friendly terms with him for several months. He gave as his reason that during the war relatives of the Marcums, who were in the Union army, looted his father's house, turning himself and brother out in the cold without shoes and without food. His half sister, Jett's mother, took them in and rode to the mill through the cold and the snow to get bread for them. It was due her now that he come to her assistance by giving her financial aid.

Hargis, who is worth \$100,000, made his money in timber and mineral lands. The killing of his brother, John G. Hargis, by Jerre Cardwell, inaugurated the feud. Both men aspired to the office of town marshal, and their political hatred caused them to swear vengeance against each other. The Cockrill boys were nephews of Jerre Cardwell and, altho Cardwell was sent to the penitentiary for the killing of Hargis, the Hargis partisans had no friendship for the relatives of Cardwell. At the fall election in 1901 James Hargis was the Democratic candidate for county judge and "Ed." Callahan was the candidate for sheriff. The Republicans contested their election, and Marcum was an attorney for the Republican claimants. Tom Cockrill and Ben Hargis had a fight over the election in one of the peculiar local institutions known as "a blind tiger," and Hargis was killed. Dr. Cox, who was the guardian of the Cockrill boys, set himself the task of having Tom Cockrill cleared of the murder charge which was lodged against him; and Dr. Cox was called out of his home at night and killed by an assassin, who hid under a woodshed across the street from his home. Next, Jim Cockrill, who was town marshal, was shot from a second story window in the courthouse. Marcum was next in turn.

Others have been marked for death, but now feud assassinations are at a standstill in Breathitt County until the charges pending against Jett shall have

The Breathitt County Jury, with its Guards, that Was Compelled to Disagree Upon the Verdict Regarding the Guilt of Curtis Jett by the Action of One Man, Burns Fitzpatrick, the Central Figure in the Foreground Marked with a Cross at His Feet

been disposed of. He is popularly believed to be responsible not only for the murder of Marcum, but for that of Dr. Cox and Jim Cockrill; indeed, it is averred that there are three eye-witnesses to the Cockrill murder.

Jett is as desperate a character as one would expect to find in a day's travel, even in Kentucky. He is absolutely fearless, as he is conscienceless and wholly brutal in his talk. His broad, red face never expresses shame. His eyes, small and round, are set deep under a broad, flat forehead. His mouth expresses determination of the sort which causes the bulldog to snarl at an intruder. He is of medium size, weighing 145 pounds and standing a fraction under medium height. He has spent much time in jail in his home town, having been convicted of many different crimes. He was never known to work for any length of time, and he cared nothing for friends or foes. He is as little learned in letters, being scarcely able to write his name, as he is proficient in arms. He boasts of his marksmanship. He says there is not a man in Jackson who can "hit a dime or a man further away" than he. He always carried a .44 Colt's revolver buckled about his waist, and, when he posed for one picture he appropriately sat with a large revolver lying across his knees.

The Baker-Howard feud, in Clay County, was probably the most deadly of any of Kentucky's bloody strifes of recent years. Again, in this contest between neighbors, the county officials—the Whites and their relatives—took sides, and were unable to cope with the situation. The feud brought to the Baker faction powerful allies in the members of the Philpots clan, numbering among them men who had represented the county in the State legislature. To the Howard faction the Griffins are a constant fealty. The local war extended

Lawyer J. B. Marcum, who, while Talking to Deputy Sheriff B. J. Ewen on May 4th, 1903, Was Assassinated at the Door of the Court House in Jackson, Breathitt County, Ky.

over a period of ten years. The Griffins and the Philpots met in open battle upon one occasion, when four men were slain on the roadside and a half dozen others were dangerously wounded. Tom Baker, recognized as the head of the Baker faction, was finally murdered in 1899. He had been a power in the feud, having killed six men. Baker had surrendered to the State troops that were sent to Manchester in June of that year to hold the feudists in check while the courts were in session. He was standing one morning in the door of his tent, on the courthouse square, when a shot rang out from the house of Sheriff White, three hundred yards away. He fell, a corpse, at the feet of his wife and two officers of the militia who were conversing with him. The assassin was never found, altho the troops charged the house. The window had been raised and a blind had been merely drawn aside. The smoking gun was found lying near by.

Jim Howard, a leader of the Howard faction, who killed several of the Bakers,

it is charged, was procured to assassinate and did assassinate William Goebel, at Frankfort, early the following year. He had been convicted of murdering old George Baker and sentenced to the penitentiary. The death of Goebel was to be the price of his pardon. He has been three times convicted and has an application for another appeal pending. The last man killed in the French-Eversole feud was "Uncle" Josiah Combs, the circuit judge, before whom a number of the murderers in this feud had been tried and who had incurred the enmity of the French faction. Joe Eversole, the leader of the Eversole faction, was killed from ambush, but B. Fults French, leader of the French faction, survives. He is an attorney employed by the defense in the prosecution of Jett and White for the murder of Marcum, in the Hargis-Cockrill feud.

The pardoning power of the Governor of the commonwealth had had a great deal to do with the unbridling of lawlessness in Kentucky. Beginning with

the pardon record of Governor John Young Brown, in December, 1889, 1,131 persons, before they entered the penitentiary walls, have been pardoned of crimes of which they were convicted by the courts; 120 men sentenced to life imprisonment have been set free after they served an average of seven and one-half years, and 247 persons, who committed some kind of felony, have been also set free. Governor Brown pardoned 51 murderers; Governor Bradley, 58, and Governor Beckham, in four years, has set free 11 men. Many of the men pardoned were feudists. In every instance where a feudist was convicted by the courts pressure of the strongest kind was brought to bear on the Governor for a pardon, and they were usually freed.

The two central figures in Kentucky's now great feud, which has cost the State for military services and witness fees something over \$8,000—Curtis Jett and Tom White—have both been given liberty at one time by pardon. White was a French feudist in the French-Eversole

General O. O. Howard Canvassing the Mountain Districts in Kentucky, Where He Preached Against Feud.

war, and he shot a man who was throwing stones at a friend. He secured a pardon and was set free. Jett was given a long sentence in jail in Breathitt County for detaining a woman, and Governor Beckham pardoned him. Among the petitioners for a pardon for

Jett appears the name of James B. Marcum, the attorney of whose assassination he has been convicted, and it was Marcum who presented the petition to the Governor, asking that Jett be given his liberty.

LEXINGTON, KY.

The True Story of Eliza

BY GEO. L. WEED

"The incident of the mother's crossing the Ohio River on the ice is a well-known fact."—*Mrs. Stowe.*

"I jumped right on the ice; and how I got across, I don't know."—*Eliza.*

MRS. STOWE claims that the separate incidents that compose the narrative of "Uncle Tom's Cabin" are, to a very great extent, authentic. Her "Key" to the volume establishes her claim. While she speaks of the incident of the mother on the ice as a well-known fact, I do not find the particulars of it in the "Key," as they were known to me before she wrote, nor the sequel, which I suspect she never knew.

Mrs. Stowe says Eliza is not a fancy sketch, but one whom she has seen, a quadron of beauty and personal attractions. As we read the story our tenderest sympathy is excited. We watch her trembling at the door while she overhears the conversation between her master and the slave dealer concerning the purchase of her little Harry; or that other between her master and mistress—he defending his act of sale on the ground of a necessity which his tender-hearted wife fails to appreciate. We stand with her by the bedside of the sleeping boy, and echo her words: "Your mother will save you yet," and when we hear her prayer, "Lord, help! Lord, save me!" we earnestly say, "Amen." We follow her to the cabin of Uncle Tom, where she pauses long enough to warn him of his impending fate, and to leave a loving message for her husband with little hope of meeting him this side of heaven. By the dim starlight we watch her steps, soon made weary by her most precious burden. With her we count the long hours of

night and day until, exhausted and foot-sore, she stands on the brink of the river which separates her from freedom's soil. We share her disappointment that no ferryman can take her across because of the raging current and the great piling cakes of floating ice. We tremble with her during those precious moments in which she listens for the fleet steps of her more angry pursuer; and we stand aghast when he comes into sight, and, dismounting, almost seizes her, as with a mingled cry of despair and prayer, she leaps upon the ice which bears her unsteady feet until they press the other shore.

Mrs. Stowe has told the story, and who may speak after the queen? But because she has spoken and thrilled all our hearts, and because every incident related thereto is of interest, I supplement her story with what was told me long ago.

Those college days—how fresh they always remain. The echo of their songs never dies, and their stories are never forgotten. One of my fellow-students, Horace Newton, was a hero because of his exploits in the rescue of fugitive slaves. Alone he had guided sixty such, and in company with others as many more, from the border line of slavery into liberty. It was always an entertaining and exciting hour when we drew from him the narrative of his experiences. Especially was this true of those connected with the woman and her child crossing the Ohio River on the ice. I little imagined in what different circumstances, in after years, in a distant land they would be recalled.

My first opportunity of reading "Uncle Tom's Cabin" was some time

after the volume was published. Having wandered a year in three continents, I was glad to rest among missionary friends in Syria. I think it was Mr. John P. Jewett, the publisher, who—recognizing the fact, which some have denied or forgotten, that missionaries are not expatriated, and desire information and need recreation as much as their friends at home—sent several copies to the Syrian Mission. I happened to reach Beirût about the time “Uncle Tom” did, and found my friends recreating in his company. So, beneath the snows of Lebanon, I read the book, which suddenly carried me back to college days, and transported me from the eastern shores of the Mediterranean to my home on the Ohio, the scene of the incident on which, I could not doubt, the story of Eliza was founded.

After these many years the first form of the story is still fresh. I do not know that it has ever been written. The first narrator will never tell it again, and my thought at this moment is, that I am among the remaining few who in those college days heard it from his lips.

Let us recall the time of his adventures.

The Ohio River was the dividing line between slave territory and free soil. Public sentiment in Cincinnati, my home, was divided on the question of slavery. Abolitionists were unpopular, as I have occasion to remember because my father’s house was barricaded against the threatened attack of a pro-slavery mob. The pulpit was almost silent, merchants guarded their Southern trade by a prudent attitude toward the vexed question. Northern creditors often received their dues in the form of slaves. Fugitives from slavery found their way across the river, and sympathizing friends received and concealed them until they could be secretly conducted Northward. Cincinnati was a station of the “Underground Railroad”—a term very significant in those days, referring to the arrangement by which fugitive slaves could be sent from one point to another through Ohio until they were safe in Canada.

Forty miles above Cincinnati, on the northern bank of the river, was the town of Ripley, another and more important station. There the antislavery spirit was strong, and earnest endeavors were con-

stantly made to assist the fleeing fugitives. The presiding genius of the place was the Presbyterian minister, the Rev. John Rankin, whose home was back of the town on an elevation which could be seen from the Kentucky shore. The only guide of many a slave was the North Star. When he reached the river he looked across and beyond for the minister’s house of which he had heard, also known as the North Star.

On a neighboring hill lived a man whose sympathies were with the South, and who declared that if he ever had the opportunity he would return a fugitive slave.

With these circumstances in mind, we are prepared for the true story of Eliza, tho we must detract somewhat from the romance and daring of the adventure, as pictured in books, or acted on the stage, or especially as described by Mrs. Stowe’s facetious character Sam, as follows:

“Lizy’s done gone over the river into ’Hio, as ’markably as if de Lord took her over in a charrit of fire and two hosses. . . . She went down de river bank. Down she come to the river, and thar was the current running ten feet wide by the shore, and over t’ other side ice a-sawin’ and a-jiggling up and down, kinder as ’t were a great island. . . . She gin such a screech as I never hearn, and thar she was, cl’ar over t’ other side the corrent, on the ice, and then on she went a-screechin’ and a-jumpin’—the ice went crack! c’wallop! cracking! chunk! And she a-boundin’ like a buck.”

While Sam’s story is founded on fact, and we would not say of it, as a humorous writer said of his, that in it “truth is more of a stranger than fiction,” my informant’s story is the reality without the romance. He was a resident of Ripley, and knew the condition of the river. For several days it had been frozen over; but for three days had been considered unsafe, and none had ventured upon it. A few hours after Eliza crossed the ice broke up, a floating mass.

Her adventure was in the night. She made her way, as she supposed, to the home of Mr. Rankin, and, entering the kitchen, laid herself and child on the floor and slept. But she had mistaken the house, and little dreamed that she was under an unfriendly roof. It happened to be the master thereof who first entered

the kitchen before daylight, and stumbled against something which he immediately recognized as a crying child. The mother roused immediately and made herself known, expecting the sympathy and aid which she had so daringly sought. Fortunately the master of the house became master of the spirit which had hitherto possessed him. He relented. A fellow-feeling was suddenly excited. He had not the heart to execute his threat of returning the first fugitive who came into his power. He caught the spirit of the neighboring hill, as was manifested in his giving shelter to the mother and child during the day, which his wife and daughter spent in providing clothing for them. He, moreover, sought our college hero, who was a conductor of the Underground Railroad, his section being the first ten miles from Ripley, and said to him: "There's a slave woman and her child at my house. Come and take them away if you want to." During the next night the two passengers were taken to the next station, a friendly home of rest and concealment during the following day. So each day found them in a new Saints' Rest, and each night they journeyed under a new guardian and guide, until they reached the country which then was—in a sense which the United States could not claim—the land of the free.

Here endeth the first chapter of our story. The second is the sequel, which does not appear in "Uncle Tom's Cabin."

Months had passed since Eliza and her first guide parted. One day he was standing in a street in Ripley when a colored woman came toward him, and, grasping his arms, began shaking them violently, and crying out: "God bless you, Mr. Norton; God bless you, Mr. Norton." Not recognizing her, he asked: "Who are you?" She replied, "Don't you know me? I am the woman that crossed the river on the ice?" Astonished, he inquired whither she was going. "Tired of freedom; going back to slavery," was her strange reply. But tone and manner revealed another motive, even before she spoke of the six children she left in Kentucky when she escaped with the youngest. She was planning for a united family in Canada. Again she crossed the river, but in a very different way from what she did before, and again trod the

soil whence she had fled. For several days she concealed herself in corn fields, whose green ears were her only food. During the nights she visited the different plantations where her children were owned, and arranged for the starting on their journey northward on a certain night. It came. No messenger nor telegrams could keep the faithful sentinel on the Ohio shore informed of their movements, but at last his listening ear caught the sound of dipping oars. Once more he took her and hers in charge, a rejoicing group, yet saddened by the thought that one was left behind, for whose coming at a later day the persevering mother was already planning. The half dozen passengers on the Underground Railroad had a prosperous journey, escaping detection and recapture, tho' hotly pursued, and were placed in charge of the friendly captain of a Lake Erie steamer bound for Detroit.

Meanwhile there had been commotion on certain neighboring plantations in Kentucky. So much live stock must not be allowed to wander without effort to secure return. The chattels were pursued. The pursuer went as far as Detroit, feeling that even from there he could bring them back. From the upper deck of his steamer he discovered that the fugitives had been—not his *fellow* passengers, but—transported on the same boat. Calling the captain, he offered him a liberal reward if he would detain his boat one hour, intending to improve it in securing necessary legal means for the return of the fugitives. That officer assured him that there was no need of haste, as his boat would lie there all the afternoon. His sympathies were with the anxious group below. Calling to some of the crew, he commanded: "Put those passengers ashore." The rough but good-hearted fellows, taking in the situation, and well knowing which shore their captain intended, quickly obeyed. So, within sight of the Southern master—such no longer—not in the darkness of night, but the broadest light of day; not with timid oar, but bold and dashing stroke; not with trepidation, but exultation and thanksgiving, Eliza and her children crossed the river, whose further shore became their Canaan of rest and safety.

Living Out of Doors

BY E. P. POWELL

AUTHOR OF "WINDBREAKS, HEDGES AND SHELTERS," ETC

HOUSE is Saxon for hiding place and dwelling is Saxon for stopping place. I cannot see that either was originally a word that meant developing or living in the full sense of the word, or that a house was intended for much beyond a shelter—a place to hide in when out of doors was unsafe. It consisted at first of only one huge room, and the old Long House was a shelter for five to twenty families, or even more. These were partitioned off or railed away from each other. We have gone on elaborating the original house until it undertakes to define the whole soul-life and growth. We have made quite too much of house evolution. The result is artifice and a clipping away of some of our noblest faculties. There is the cooking room, and the eating room, and the sleeping room, and the book room. Other differentiations are mostly modifications of these. No wonder that man has crept out of his hiding place and gone to the saloon and the club; and there is little wonder that woman is following hard after, while the children take to the streets. I was invited to attend a meeting of a famous woman's club, and I saw how much more womanly and full of life-growth those women were than in their own homes. Our house life is slavish and full of conformity. The chief implement is a broom, and we can't run one without "help"—that is, foreigners, with alien instincts and worse habits—but worse atmosphere. In the place of freedom we meet restraint at every turn. You have heard of the hermit crab, who never grows a house of his own but squeezes himself into the cast-off shells of other crabs. How different is that from the effort of human beings to get into houses, thought out and felt out by other folk, and call them home? Other crabs believe less in conformity, and have common sense to grow their natures out into shape, and their houses to fit. How many people nowadays grow houses? Then, when it comes to

occupancy, we don't occupy but a small part of the house that we have obtained. We have one room shut off for visitors—the "parlor," or possibly "reception room." This is got up for show and pretense. Kitchen means anything but the home room that it once was, the laboratory that it will be. At present the kitchen is a place in which to shut up the foreigner as far as possible—a sort of cage for something dreaded. The woman of the house must stay out of it as a place beneath her rank, while the man of the house must absolutely ignore it. The dining room is given over to ceremony and display of crockery and courses. The family room, when there is one, is nearer a real home, provided it be not a place for loafing.

We make too much of indoors altogether, now that we no longer need a castle or a fence for our stolen goods. There is not enough of either altruism or individualism indoors. We have got into habits of conforming to house regulations which entirely dominate. Health is not possible in the shade of fashion. We have too many curtains to shut out the sunlight, and our fate is tied up with infinite *bric-a-brac*. House dust is the worst of poisons. Try a bit of it in a spectroscope and you will get lines that astound you. House air, with a hot air furnace, is charged with carbon dioxides. The heat in winter is irrational and debilitating; in summer our only hope is to let in as much as possible of out of doors. That is the most comfortable house into which we can import the largest amount of flowers and let in the largest amount of sunshine. Civilization has carried us too far along the line of house evolution: we have evolved our master rather than our home.

The house should look outward as well as inward. It should make inside furnishing less conspicuous and less in contrast with nature. Did you ever take note on cleaning days of the comical unfitness to the outside world of the arti-

cles that are brought out for the convenience of scouring and dusting? There is hardly an easy, homeful thing in the lot, and a nice shower would spoil the whole of them. They are paste and glue and fashion—the implements for making home uncomfortable. They require a lot of human care, and when cleaning day comes the dust in them is deadly. Furniture should be such that it could stand a half day's sunshine and a half hour's rain, and a bit of banging by the children. We are looking hopefully that way. There are more seats that can be set safely on the veranda or lawn without their dissolving. But our windows have not yet found their real meaning. Did you ever sit in a sun-bath window? It comes all round you; there are no dust-catching, germ-holding curtains, but you sit folded in the morning shine, and the birds sing to you—all the screens needed are vines. The true house has few blinds; it was built not to shut out light and air, but to let them in.

There are abundant ways for making the house look outward. Instead of having an architect draw up a pretty picture of a building, which will look just as well set on a hill or in a hollow, get a brainy carpenter to go to the spot where you will place your house, and let him, with you, study the location. First of all see clearly how many helpful and beautiful things there are to look at, and resolve that your walls shall not shut out one of them. Why put up a screen against a lovely brook; why another to prevent seeing the valley, where far away the houses nestle in orchards? Why forget that the sunrise over the eastern hills is a blessed inspiration to birds and to men? Then there is the orchard, and alongside it your shrubbery of lilacs and roses. Must you build a wall to shut it out from view, and then paste paper over the wall, and invite your friends to sit down behind the wall and admire the paper? Well, if rich, you may buy a Corot or a Landseer, and while you shut out the sheep in your own pasture, and a sight of the cherry blossoms in your own garden, you can look at some imaginary sheep that cannot move and trees that have no fragrance. This is all very well before you get waked up. It is true that a man must be born again before he can

see the Kingdom of God—even his physical realms.

But this only begins the revolution. We have too much inside to our houses and too little outside. Verandas and balconies should be cultivated until they are ample, everywhere and welcoming. I will describe an ideal veranda. It is broad, not less than twelve feet wide, and better twenty. It extends around three sides of the house, or possibly four; for the help should have out of doors and hammocks, as well as the rest of us. We do not cultivate enough the home instinct of those who do our menial work. The kitchen is degraded in its relation to the house, and its workers can find relief only by spending their wages on pretentious dressing and escaping as often as possible from all associations with our houses. The ideal veranda is large enough to be family room, reception room and play room. On the east side of the house you must have your study; a writing desk that can be shoved back into the wall, with a book case large enough to hold a few reference volumes. When out of use shove it back in its niche and lock it up. Besides the ordinary hammocks, which are the ideal resting places for tired people, there may be couches, where of a summer night one may sleep. Banish altogether those showy and extravagant hammocks and seats which undertake to turn your veranda into an outside parlor—a place for show, and more dust, and more hard work. There may be mats if you desire, but let them be of some material easily cleaned. In other words, don't cumber yourself with much serving. What we want here is simplicity—Japanicity one of my friends calls it—that is, freedom from fussiness. In a nook of her veranda, just around the ell of the house, she has a pile of soft mats, as our Oriental friends do, forming a most delightful couch. Many of the seats on your veranda, all of which are weather proof, may have seats on hinges, which, being lifted, show excellent receptacles for overshoes and waterproofs. One may hold the children's playthings, while the seat of a double chair or bamboo couch may be a receptacle for your croquet mallets and tennis furnishings. Such verandas are incomplete without arrangements for

eating your meals out of doors when the weather permits. For this purpose small tables may be used, instead of one long one. The same table or tables may be at other times used for games, or as sewing tables and reading tables. It is not impossible to have an outdoor fireplace, and it will certainly be very wholesome to spend your cool evenings in this fresh air, slightly modified by a fire of wood. I have recently seen a housemaid doing her ironing on a veranda and heating her irons at an outside fire. She looked fresh and cool and happy. It was an education in the right direction. Another arrangement is possible, that the back of the chimney be openable and arranged for a temporary fireplace when desired. On one side, or in one angle of the house, the veranda may be without a floor—that is, may have the ground for a floor. Here may be a fountain playing, with roses or with fruit trees in pots. Dwarf oranges, dwarf lemons, the guava tree and other tropicals are not all that we may grow; peach trees in pots bear abundantly at three feet high. In fact, such a nook can be made to express the taste of the owner in many ways.

The ideal vines for your verandas are first grapes. There is no other vine so sweet in flower, so well adapted to either shade or sun, so generous in foliage and so helpful with fruit. Several of the clematis are ideally good for this work, especially *paniculata*, while *Jackmani* and the other large flowering sorts are admirable for screens and pillar work. Where the air and sun permeate thoroughly, honeysuckles are charming, so also are bittersweet; but both of these get badly covered with aphids if partly shaded. In the summer our veranda becomes a natural reception room as well as a family room. It is democratic and a good place for smoking—no, it is not; it is the very last place for doing that which annoys any one else and separates the family. We have got to get rid of habits which drive away true ladies and leave the men to masculine seclusion and enjoyment. These habits belong to a false idea of comfort and rest. In the winter the east veranda, or the south, or a part between the ells, may be closed with sash and so made into a cold weather sun-bath. This need not be an expensive

luxury. Pipes from the furnace may pass into such a room and make it very genial in its atmosphere. With such arrangements as I have suggested an invalid may almost live on the veranda. But, in fact, we are all of us invalids. I have never yet seen a man or a woman that had not a complaint. We may as well own it up and then stop talking about it. Live out of doors and let nature get a chance to make us as healthy as she makes the cows and the birds.

You will suggest, of course, that I am on the wrong track altogether; that most people are compelled to take their houses as they get them and are glad to get anything to cover their heads. I am not so easily beaten in this contest. The price that was paid to purchase those cartloads of inartistic as well as unnatural furniture, that are dragged around from dwelling to dwelling, would have gone a long way toward creating a simple and homeful country house, verandas, porches and all the rest. I would not have a chair about a house that would not last a good hundred years. The one thing that I do contend is that poor people have the advantage of the rich in this matter. Give the poor half a chance at out of doors and see how quickly they take up to mother nature. Rich people have to lug about too many wraps and notions. It is just as well for them to go to resorts and pay costly bills for the very comforts they could have at home if they would build for them. A cheap house can be modeled over to common sense more easily than one that is built for architectural display. However, the very poorest people continue to put up such boxes for houses as European laborers are glad to get. Some one should get up a book of designs for houses not to exceed \$1,200 in cost. One-half of these could be designed for homes costing under \$900. These should invariably include the idea of living largely out of doors. There is no excuse any longer for the dreadful domicile of the common laborer. I will show you a set of houses where a lot of furnace workers are homed. These houses are considerably better than they were four years ago, when the furnace was run by the Mark Hanna Company. Who needs verandas and rest and comfort and the beautiful

more than the man who blisters in the puddling furnace or the rolling mill? Whose wives need more a chance to sit under an apple tree to do their mending, or a spreading elm to shade their wash tubs? Why shall their children have only the street for a playground? Physical and moral misery breed a moral disease that is infectious. There is a tendency of civilization to drop down. A small outlay would make your working-man's house something more remote in character from a barn and stable.

I have placed emphasis on the verandas because they are so capable of elaboration. They are not yet so conventionalized that a man or a woman may not make upon them an imprint of originality. In many cases, especially along our hillsides, the veranda may be two stories high, which is as high as any country house should go without a good excuse. The second story of your veranda is ideally adapted to quiet and to rest—to the afternoon nap, to the student's retreat, or the housewife's sewing. I will give you a picture of a woman's sewing balcony or second-story veranda. Here there is no roof, except that formed by a huge grape vine running over a strong trellis. It is eighteen feet square and is a bower all summer, excluded from every eye and from all visitors, except the most intimate. Here the woman, sung to by the birds and by the breeze, can lighten her work from its most vexatious features.

Nooks, retreats and shelters may be created everywhere about a country home; and when you have once begun to think about it you will be surprised to find how much of the beautiful and the restful can be evolved out of your home-making. Just let Mother Nature alone along a fence line and see what she will do with your old rails or your hemlock boards. She will run them all over with ivy, bittersweet and clematis, and then fill up the corners with elder berries and wild roses, and build arbors of thorn apples and grape vines. Heaps of stones she will cover with Virginia creeper, and old stumps she will set on fire with the October blaze of crimsoned woodbine. You can do no better than adopt some of these exuberant fancies as your own. I have a neighbor who has created a rock

arbor of limestone fossils. These curious stones lie about in great abundance on twenty farms, but they do not contribute to home anywhere else that I have seen them. The possibilities that lie in such things need eyes and souls to see them. This neighbor has an instinctive knowledge of nature. He has drawn these stones five miles and then woven their meaning into his own daily life. His arbor, half hidden among shrubs and apple trees, and hugged by vines, is a nookery where I think Thoreau would have been contented—especially as there is considerable wildness and untamableness about my neighbor and all that he occupies. I especially advocate such an arrangement as will provide quiet retreats and shelters for cattle as well as men. They know very well what to do where the wild grape vines run over the thorn trees and where the hemlocks give good shade and a little privacy. Birds are just as quick to recognize a home where there is a chance for being well hid from prying eyes. You will be astonished at the number of new sorts of birds that will gradually come to you and share your home when it has become natural instead of artificial.

Living arbors are, in my opinion, of great importance on a country place, and they are easily constructed. They can be brought to perfection in just about the time that we are getting good sized trees out of the stock that we first transplant. They should at first consist of a circle—preferably of arbor-vitæ—say twenty feet across. Trim the young trees, as they grow, so that the outside of the circle shall have a conical outline, while you trim the inner limbs less than the outer. Gradually limbs will reach across the intervening space and make a solid roof. This ought to be well brought about in eight or ten years; but it will be twenty years before the arbor is complete, and it will grow in strength and beauty for fifty or seventy-five years. No trimming is needed after the trees are fifteen feet high and beyond compassing with a step ladder. A living arbor of this sort is a living house, open to the purest air and cutting off the heat of midday. They furnish delightful retreats for those who need to be absolutely let alone. But they need not be entirely unsocial. Such an

arbor constitutes a capital place for solid rustic seats. The old hickory chairs are just in place in such an arbor, five or six of them, and in the center either an old hickory table or one that you have made yourself. A home-made table is one of the easiest things to prepare. Get an old rejected millstone and set it on bowlders. In the hole in the middle fix a large vase to hold flowers. Or, if you will, saw a section of a big tree three feet through and three feet high. Let the bark remain on such a table, and, lest it cleave off, drive in a few nails. I am using sections of smaller trees for seats also, and similar sections serve admirably well for seats elsewhere, as, for instance, about your croquet ground and in sheltered nooks behind the hedges. I have three living arbors and consider them most delightful features, because they are so entirely natural, looking like a large, solid tree. I find that the birds approve of these dense evergreen growths as much as I do, and they nest overhead and sing without being disturbed by their human neighbors. If you prefer, swing hammocks across, and you will say that you have found the perfection of rest.

Concerning arbors of wood, I say little, and about all those structures put up by the carpenter the less that is said the better. They are out of place and out of taste, unless it be to hold up vines. And I have seen rustic work carried clear out of natural proportions and made fantastic. The most artificial country place I ever saw was made up of arbors, rockeries, grottoes, evergreens sheared into hens, fountains where spouting geese vied with negroes grinning in the pools and stone dogs in the grass. Such things are abhorrent to nature and do not constitute a home. I think the people catch the spirit of this sort of work from some of our public parks. If a trellis of wood or wire be needed, let it be strong and simple, and demonstrate its fitness by its utility. I have seen a great many wooden arbors about the country, as I have seen many observatories on the tops of houses, but I rarely ever saw any one inside them. They are artificial and superfluous, as a rule—not always.

Living out of doors involves liberal preparation for games. Not only young people but old people should play. Work

is not the end of existence, but the means for existence. It is rare that a home life cannot be adjusted to an hour of fun together each day. The family room should be the largest, heartiest room in the house; with billiards, music and whatever recreation is agreeable; but the out of doors should also have its tennis or bowling or croquet, or all of these. I like croquet because it is a good family game. We shall not see better days so long as the young folk have all the fun and the old folk are left out. It breeds division and selfishness. There is no reason why old and young shall not play together, as well as pray together, or work together—there is more reason why they should. Laugh your family laugh, sing your family song, and live your family life. At all events do not create a country place with nothing prominent indoors or out but working tools—indoors the kitchen, outdoors the stable. You can do nothing with a family without play. It will not cohere. Work is centrifugal; play centripetal. Human nature is bad mostly for lack of a good vent. The principal duty of a parent is not to stop up all the vents to exuberance—nor is that the duty of society. By playing together we commingle the spirit of a finer and broader experience with the buoyancy of youth.

Yet there are some people who cannot live out of doors, so far as I can see; they have nothing out here to live for or to live with. Indoors they have a lot of furniture that they sympathize with, and they make up the rest with conventionalism. Half our country houses might as well be in Sahara so far as trees, flowers, birds, brooks, hedges, nooks and common sense are concerned. Birds never go near such houses. A few trees are set out for a show; a row of something on exhibition—birds never nest in such things. Then an agent comes along and sells four white cut leaved birches, and these are set out in another exhibition row, but birds never nest in them. Then the people bethink themselves of a row of evergreens, which they keep trimmed into solid cones, such as a good mechanic could turn out of wood and paint green and set in rows across the lawn. Finally two weeping willows are set just in front of the house, expressive

of nature's grief over such ludicrous conceptions of the beautiful. The only salvation for such a place is that, by and by, neglect will kill four-fifths of the trees, and the rest will be left out of line, and so make a tolerable lawn. Study nature before you dare to go into the country to build a home, or at least study it before you undertake to create a house. Learn first of all that nature abhors conventionalism; never repeats herself; does not inquire what folk will say; gets in love with beauty and truth, and then plants gardens for no other reason in the world than because she does love the beautiful and the true. Those who have not been born again to see the world about them, who really have no acquaintance among the trees, and no friends among the birds, constitute a class by themselves. I will not say that they are degenerate, but they are certainly incapacitated for comprehending Out of Doors. I shall be obliged to leave them, rejoicing in the artificial absurdities which go together to constitute indoors life. We will not quarrel, we will simply let each other alone. After a while reason always gets control, and reason is nothing in the world but the voice of Nature speaking through our souls.

I have spoken plainly, but none too strongly, about the average house. It is the ugliest thing in our country landscape. It has rarely a line of beauty or of peace, or a suggestion of rest inside or outside of it. It is just the barn for human folk. It is not quite as healthy

as the average barn, and not generally as pretty. The animal barn has a fitness, but the human barn has no meaning. It is a relic of our earlier civilization, surviving into days of universal education. Yet I feel quite sure that there is a great change coming about. The country house that will be will be very different from those boxes that stand in rows in some of our villages, and equally different from the conventional cottages that are built from pictures in architects' books. It will become very individual, possibly a little cranky, in its defiance of the They Family; at any rate what "They say" is losing its influence in all directions. A house should be a part of the property, of the acres—all of which we occupy. If your lot is nine acres, we ought to be able to find you or some of you all over those acres. It should all of it be your residence. The garden should suggest your idiosyncrasies, and the hedges and the hiding places should be your features. This sort of home we shall have by and by. What I mean to say is, get out of doors and stay out most of the time; work outside, play outside, eat outside, sleep outside. Form your sympathies with nature; talk garden, think flowers and fruit, study bugs and butterflies. Then lie down on the sweet sod, under your blossoming apple trees, and let your soul sing, Our Father who art in the heavens, and in the apple blossoms and in the roses also, Thy name be hallowed.

CLINTON, N. Y.

Autumn Eve

BY ROSAMUND MARRIOTT WATSON

"La flûte amère d'Automne pleure dans le soir anxieux."

AUTUMN'S melancholy lute

Calls so clear and calls so sweet
Through the forest brown and mute,
Down the white-walled village street.

"Follow now, O follow now,
Burns the leaf upon the bough;
Cross the mountains hoar and old
To the land of sunset gold."

Autumn beckons as she goes—

"Follow me, O follow me!
Would you 'scape the winter snows
And the Happy Valleys see."

Autumn's amber-colored veil

Floats along the evening breeze
Like a gilded galleon's sail
Beckoning on to splendid seas.

Autumn's lute sounds low and clear,
Autumn's melancholy lute,
"Follow here, O follow here!"
Over woods and meadows mute.

"Come away, O come away!

Sundown calls you home from day,
Night is near and earth grows cold,
Follow through the sunset gold."

CHISWICK W. LONDON, ENGLAND

Literature

The Anglo-Saxon Century

THE unification of the English-speaking people is a theme naturally suggested by the practical movement for imperial consolidation now being developed in Great Britain and her self-governing colonies. Mr. Dos Passos, whose racial enthusiasm sometimes underestimates the historic barriers of prejudice, has caught the glow and vision of a wider movement than that which inspires the efforts of Mr. Chamberlain or Lord Rosebery, and he has formulated a plan by which, he thinks, an Anglo-Saxon union may be attained.* And he deserves credit for the courage of conviction, which goes beyond mere vagueness and platitude. He has not stopped to gush over the listed grandeurs of the notion, but has declared plainly that the only way to possess them is to split the British half of the race into two parts, so that the annexation of Canada to the United States may produce that political consistency in Western Anglo-Saxons without which racial unity would be impossible. Canada, according to Mr. Dos Passos, is the sole remaining cause of irritation and possible war between the United States and Great Britain, and her nascent nationality must be obliterated before the race can be reunited.

Let it not be supposed, however, that this obliteration is to be accomplished by military force or commercial pressure. Both methods have been tried; but they must not be tried again. The incorporation of Canada with the Republic must be entirely voluntary, after which the remaining Anglo-Saxon communities will come together in a union making for the peace of the world.

We have emphasized the proposed elimination of Canada because Mr. Dos Passos has made it the pivot of his scheme. But, the Dominion transformed into a congeries of American states, what remains to be done? Our author thinks that a union, not a federation, could be best attained by a treaty between the

United States and the British Empire, under which a common citizenship would be created, absolute freedom of commerce established between the two branches of the race, a more convenient coinage arranged, and an arbitration tribunal constituted to decide all questions that might arise under the treaty. For these practical measures Mr. Dos Passos thinks—and he is quite right—that common ties of blood, language, literature, similar principles and ideals of domestic life and political liberty have done much to smooth the way.

And now, having outlined the scheme, why do we find ourselves unable to consider it of any practical value whatever? Because it proposes no energetic initiative within a measurable future; it simply pleads for the recognition of a political drift, a tendency which the author evidently believes to be operative without the application of military force, laws of Parliament or Congress designed to hasten events, or political agitation which would stir up bitter sectional feeling. He practically concedes that the scheme ought to wait until Canada voluntarily incorporates herself with the United States. How long will that be? Of all British colonies Mr. Dos Passos has designated that one which is first and foremost to manifest a coming destiny contrary to his expectation. Australia, New Zealand or South Africa would, so far as past or present political signs go, be more likely to ask for annexation than Canada. There is as much absence of annexation feeling in the Dominion as there is absence of all ill-will toward or attempted rivalry with this country in any but the friendly competition of agricultural settlement and industrial progress. The Canadians have strongly set their faces in a different political direction, and tho Mr. Goldwin Smith, whose arguments have, in part, influenced Mr. Dos Passos, has been preaching for thirty-five years that the Dominion cannot divorce herself from her continent, she is at least making very successful attempts to live her own life in it. Nor has the United States shown any

* THE ANGLO-SAXON CENTURY. By John R. Dos Passos. New York: G. P. Putnam's Sons. \$2.25 net.

desire to interfere with that experiment. Mr. Dos Passos has, therefore, taken an untenable position, we think, in ascribing to the Canadian factor undue importance in his scheme. Why did it not occur to him that the movement for imperial federation should be left to prove its vitality or otherwise before Canada was set down as the natural impediment to an Anglo-Saxon reunion? Why should the latter, which would undeniably be a benefit to the world, be made to wait upon an assumed change in the whole life and outlook of one British colony?

In rejecting a close alliance, or a federation, as the form of the race union, Mr. Dos Passos would leave the way clear for each part of the union to enjoy practically the same liberty as it does now. What he hopes for is the preponderant, if not predominant, moral effect of such a combination in securing the peace of the world and advancing the cause of civilization. This aspect of his academic scheme none could find fault with, and he has presented its advantages so clearly that his interjection of the Canadian difficulty is the more to be regretted.

To us the real value of the book consists in its luminous statement of the many causes, political, social and economic, which make for some form of closer Anglo-Saxon union than at present exists. Time and again these causes have been separately set forth and discussed in pamphlets, review articles, and in the daily press; but they are collected and analyzed in this book with exemplary clearness and fullness. We do not agree with some of the author's conclusions from them; but he has made an admirable contribution to a discussion which must grow in interest year by year.

Home Life Under the Stuarts

It cannot be said that Miss Godfrey has produced a book* of special research or of substantial originality. Most of her material comes from familiar sources such as Howell's Letters, the Verney Memoirs, the Memoirs of Colonel Hutch-

* HOME LIFE UNDER THE STUARTS (1603-1649). By Elizabeth Godfrey. New York: E. P. Dutton & Co. \$3 50 net.

GEORGE VILLIERS AND HIS BROTHER
("Home Life Under the Stuarts.")

inson, the Life of Kenelm Digby and the like. She has, however, brought her material together in a thoroughly entertaining manner, and, by joining into a single narrative what could hitherto be found only in scattered volumes, has created a really intimate portrait of the daily life of the upper classes in Stuart England.

Beginning with the care of a child in the nursery, she carries him through his (or her) school and college days, through the romance or prosaic barter of courtship and marriage, into the great life of the world. The houses and gardens of the period are described. The clothes of Cavalier and Puritan, the habits of the servants,* and a hundred other details are included which go to round out the picture. The most thoroughly interesting parts of the volume to most readers

Cavalier Hat

Linen Night-Cap

Embroidered Gloves

will be the chapters which give the romantic career of Ralph Verney and his wife, or the still more romantic adventures of Sir Kenelm Digby and his beautiful Venetia—stories, more entertaining than most novels, which may be read elsewhere, but which are here presented in abridgement and not without considerable literary skill. The general impression one gets from these relations, and from the various letters between husband and wife, or father and son, or master and servant, is that of great fulness and dignity of life. Many of the women—especially those of the cavalier families, for the Puritan lady was vastly more restricted in her interests and less honored by her husband and sons—were educated in a manner and enjoyed a large and wholesome industry such as quite passed away in the following century, and in some respects has never been recovered.

To other readers, perhaps, the most entertaining parts of the volume will be the more out-of-the-way details, which throw so vivid a light on the intimate habits of the people. It would be easy to fill pages with extracts of this kind, telling how gloves and nightcaps were stitched and a thousand other little matters of the wardrobe. So, for instance, in a quotation from Jasper Mayne's "City Match" we learn of the singular Puritan

custom of embroidering texts upon articles of apparel:

"Nay, sir, she is a Puritan at her needle, too: She works religious petticoats; for flowers She'll make Church histories; besides, My smock-sleeves have such holy embroideries

And are so learned, that I fear in time All my apparel will be quoted by Some pure instructor."

Not a few recipes are given from old housewife books, some of them appetizing enough, others, such as snail soup, rather dubious. The following brings up a pleasant picture of olden days:

"They must be 'pick't very clean; to each Pound of Flowers allow about a lb. of Loaf Sugar, and a pt. of White Wine Vinegar, which boil to a Syrup and cover it scalding hot. Thus you may pickle Clove Gilly-flowers, Elder and other Flowers which being eaten make a very agreeable Sallet."

Not the least amusing letters quoted are those about servants and the management of the household. So Howell writes to a friend:

"Sir,—You writ me lately for a footman, and I think this bearer will fit you: I know he can run well, for he hath run away twice from me, but he knew the way back again; yet though he hath a running head as well as running heels (and who will expect a footman to be a stayed man?) I would not part with him were I not to go post to the North. There be some things

in him that answer for his waggeries: he will come when you call him; he is faithful and stout, and a lover of his master. He is a great enemy to all dogs, if they bark at him in his running; for I have seen him confront a huge mastiff, and knock him down."

Miss Godfrey promises us a second volume on the larger life outside during the period, and for this we shall look with interest.

George H. Hepworth

WHATEVER differences of judgment there may be as to the value of Dr. Hepworth's work as a preacher or as a journalist, no one can deny that both in his personality and in his outward career his was a life of unusual interest. Few are the events of the past forty years, either in the religious or the political history of this country, in which he did not bear some part and make his influence felt.

By his inward temperament he was called to be a religious preacher, by his outward sympathies he was no less distinctly called to be a man of affairs, and it may fairly be said of him that in his whole career he was equally responsive to these two calls. A man who saw visions and dreamed dreams, who had a deep and abiding sense of the reality and the supremacy of the spiritual world; he never allowed himself to be abstracted by that vision from the affairs of every day life. A man of the world, at home among all its varied conventions, interests, duties and pleasures, he never forgot the higher vision that had been revealed to him, and never failed to witness to its truth. Thus, in spite of the many changes in his outer life and activity, giving to many the impression that he lacked consistency and steadiness of aim, there was to his life a real and essential unity and continuity, and one needs only to look away from the outer circumstances to the spirit of the man to see that in all his changes he was true to himself. He became a minister of the Gospel because he had a gospel to preach and because he loved his fellow-men. He gave up the Church of his childhood, and entered the ministry of another communion, because in that change that same

gospel and that same love seemed to find a larger scope and a freer expression. He gave up the pulpit for a career in secular journalism, because here he saw a still larger field for the ministry of faith and love in which he had entered. As to the wisdom of these changes, many may feel doubtful, but they marked no deviation or change in the spirit, purpose or aim of the man. Whether in the pulpit or out of it, from the beginning to the end of his career he was a preacher of a large faith, of an inspiring hope and of a noble charity.

With such a subject, it has not been difficult to produce a biography of unusual charm and interest. This work of Miss Ward's* is not unduly eulogistic, and it shows a minute fidelity to facts, figures and dates. It gives lucidly and fairly the story of that creed contest which led Dr. Hepworth to withdraw from the Unitarian denomination when its Convention refused to pledge itself to loyalty to Christ; and equally it describes his mission of mercy to Ireland and of inquiry to Armenia; and we learn why his short editorial sermons in the *New York Herald* were so much valued. It is a noble character that is intelligently and sympathetically portrayed.

Standard Oil History

MR. MONTAGUE'S work on the Standard Oil Company† is in effect a brief for the defense. The company, he contends, gained the dominance which compelled the railroads to grant it discriminating rates, solely by superior efficiency. That the railroads should thereupon grant it special rates was but natural, an inevitable outcome of the railway economy of the period. As to the repeated charges that the company suborns the employees of its competitors, and that it resorts to unfair tests and adulteration of its oil, the author has little other comment than that "the evidence is at best vague and inconclusive." He has evidently heard of Mr. Henry D.

* GEORGE H. HEPWORTH; PREACHER, JOURNALIST, FRIEND OF THE PEOPLE. *The Story of His Life, Told by Susan Hayes Ward.* New York: E. P. Dutton & Co. \$2.00 net.

† THE RISE AND PROGRESS OF THE STANDARD OIL COMPANY. *By Gilbert Holland Montague.* New York: Harper Brothers. \$1 net.

Lloyd's "Wealth Against Common-wealth," since he mentions it in a note; but of the many citations therein to court records relating to Standard practices he has no word whatever.

Mr. Montague denies that previous to 1870, "so far as may be known," any refiner had "exact[ed] of the railroads better freight rates than were granted to his competitor." Miss Tarbell, however, in her elaborate history, shows conclusively, from the testimony of Mr. Alexander and General Devereux, that the Rockefeller firm was profiting by special rates in 1869 and even in 1868. Doubtless the progenitors of the Standard were able and energetic in ordinary as well as extraordinary business methods; and doubtless, also, Mr. William H. Vanderbilt's testimony that they were much "smarter fellows" than he was, which Mr. Montague prints with great gusto—was quite true. Yet it is shown, despite Mr. Montague, that certainly within a year, possibly less, of the organization of the firm of Rockefeller, Andrews & Flagler, that firm's "superior efficiency" was being largely supplemented by unfair advantages in transportation rates.

Very complacent is Mr. Montague over the compact by which the railroads and the South Improvement Company sought, in 1872, to throttle the independent producers and refiners. "To attempt to judge the situation," he remarks with philosophic severity, "without first ascertaining the standards set by the railway management of the time is not merely unfair, it is subversive of all historical accuracy." This compact, be it remembered, gave into the hands of the South Improvement Company, of which the Standard Oil Company was the leading spirit, the right to apportion and "even up" shipments and to inspect all way bills of independent shippers, and a rebate ranging from 25 to 50 per cent. "To appoint a group of the largest shippers 'eveners,'" writes the author, "and in return for a special rebate require them to apportion traffic among the roads, seemed at that time a practice both inevitable and legitimate."

That any railroad officials were ever financially interested in the Standard Oil Company, Mr. Montague admits, has been charged, but declares the charge

unproved. Yet Mr. William H. Vanderbilt admits, in testimony quoted by the author, having "disposed of my [his] interest" therein. Miss Tarbell confirms this statement, declaring that Mr. Vanderbilt acquired stock soon after the affair of the South Improvement Company, tho she concedes that he was the only one of the railway "kings," so far as she knows, who did so. But of railway men of lesser rank than "kings," who acquired stock she instances Truman P. Handy, Amasa Stone and Stillman Witt, "officers and stockholders in one or more of the railroads centering in Cleveland."

Under the guise of an economic study Mr. Montague has furnished a specious plea for the "father of the trusts." It has its value, however, even tho it is a plea, and tho some of its data are inaccurate. It is concise and readable; and it carries a lesson which may reach further than its author or the magnates desire. That is, in the words of Mr. John D. Archbold, which Mr. Montague seconds, that there is a certain amount of monopolistic power coming from the aggregation of capital itself. It is a lesson that needs to be more widely diffused, and this little book will aid in the work.

The Influence of Emerson. By Edwin D. Mead. Boston: American Unitarian Association, \$1.20 net.

It is not often that books written on this plan prove enduring reading to the end. To pick out from a voluminous writer all the sentences on a particular subject and then to string these together with a meager thread of comment is a pretty sure method of attaining tediousness. We may read in Emerson the same thought repeated a thousand times if the context adds continually a new application and emphasis to his philosophy, but to read this thought a thousand times without any such variety of sidelights is not calculated to increase our interest in his works or our understanding of them. Mr. Mead's book is also somewhat contaminated by that peculiar flabbiness which almost invariably manifests itself in the avowed inheritors of Boston transcendentalism. Transcendentalism, at its best, was not without a taint of

anæmia and loose inconsequence; unfortunately, in its present-day followers these feeble traits have persisted, while the stronger qualities have all but perished. We cannot refrain from pointing out in the first two essays in Mr. Mead's volume ("The Philosophy of Emerson" and "Emerson and Theodore Parker") something of this faded transcendentalism. Nor in the third essay, on "Emerson and Carlyle," is this defect totally absent. It shows itself, for instance, in such a sentence as this:

"He [Emerson] would have said that a first qualification for a great man of letters is to have something of import to say; and he would have named a dozen poems of Lowell's—to go no further—as beautiful in word and form as anything of Poe's, with the additional merit of import."

That is the echo of a dispute which never redounded much to the credit of New England, and which, if truth must be told, sounds a little silly to-day. But apart from this defect, not indeed very noticeable, this third essay on the two prophets of their age is well conceived and well written, containing within itself certain elements of progression. It does, moreover, bring together a large amount of interesting material, gathered from numerous sources. It is sufficient to render Mr. Mead's volume a significant contribution to the constantly growing literature about our great Concordian.

The Main Chance. By Meredith Nicholson, Indianapolis: The Bobbs-Merrill Co., \$1.50

A novel of Western life written after the literary manner of the East, and the result is remarkably interesting. Dramatic interest does not depend so much upon natural conditions as it generally does in stories from this section; but the characters in it have the situation well in hand from the start, and it is with their performance that the author is chiefly concerned, rather than with droughts and famines. The scenes are laid in a Missouri town, where the financial pulse fluctuates indeed, but not enough to overwhelm anybody; and it is evident that the author has something more than a romantic notion of "Traction" stock, bank intestines and cattle sales. Yet all is carried forward in an actual way rather

than with the heat and passion usually displayed by Western capitalists in fiction. There are some attractive women in the story, but, as is usual in novels of this character, the male element predominates. And the author deserves credit for the psychic wit with which he distinguishes between the real gentleman, like Raridon, and a man like Wheaden, who is apparently just as good until the test comes. In no other book of the year has the point been made with such tragic clearness than many men are barred by some limitation of nature from the nobler heights of manly consciousness. Wheaden lacked neither in honesty nor sense, but he lacked the courage of fancy, by which a man dares to become better than he really is. This is a faculty peculiar to thoroughbreds like Raridon.

Stay-at-Homes. By L. B. Walford. New York: Longmans, Green & Co., \$1.50.

A social climber invades the sacred precincts of an exclusive British rural society, and the result can better be imagined than it is described in this rather tame and tiresome story. Nothing of real importance happens throughout the course of the tale, and one is detained, without being in the least charmed with the trivial and irrelevant concerns of a limited and niggling neighborhood. Mrs. Walford has done vastly better work than this, and it is to be hoped that the cunning her hand has, for the time being, lost will speedily be regained.

Lyrics of Love and Laughter. By Paul Laurence Dunbar. New York: Dodd, Mead & Co., \$1.00.

This is another volume of Mr. Dunbar's darkey rimes, with sundry others in the literary dialect interspersed. They make just the kind of thing, we fancy, which those will like who like that kind of thing. The first, "Two Little Boots," is perhaps as good as any:

"Two little boots all rough an' wo',
Two little boots!
Laws, I's kissed 'em times befo',
Dese little boots!
Seems de toes a-peepin' thoo
Dis hyeah hole an' sayin' 'Boo!'
Evah time dey looks at you—
Dese little boots."

Editorials

Removal of the Vali of Beirût

WHEN the first uncorrected news came to this country of the murder at Beirût of the American Vice-Consul THE INDEPENDENT said that the trouble probably grew out of the inefficiency and dishonesty of the bigoted Vali of Beirût, and that Beirût needed a competent, honest and impartial governor, such as is the Vali of Damascus, who treats Christians and Moslems alike. What we wished then has become a fact now. The Vali of Beirût has been removed from office and Nazim Pasha, Vali of Damascus, has been put in his place, and received with enthusiasm by all the people. Under his firm rule conditions of peace and confidence again prevail.

Now let us review the case, and look at it in its larger aspects.

On the Turkish side it will appear to the people in about this way: An American subordinate official, a Vice-Consul, was shot at and not hit. Immediately the American Government, for his protection and that of other Americans, sent a fleet to Beirût, and demanded and secured the removal of the incompetent and corrupt Governor, under whom a condition of danger and violence had arisen. When America took the lead the other Powers joined in the demand for his removal; but it was the United States that first made the demand, and it was the United States that accomplished it. This cannot but greatly increase the prestige of the United States among the Turkish people. They have seen our American citizens everywhere engaged in works of mercy, establishing schools and hospitals, the chief enlightening and elevating influence in the country; and now they see that this country is quick to protect its citizens, even to the removal of one of the highest officers in the Turkish Government. This is seen and will be felt by the people, and not less at the Porte itself. The United States has not had the prestige at Constantinople that Powers have which threaten war, Russia and Germany and Great Britain and

France; but now a little incident has taken stout American ships of war to a principal port, and they have seen our Admiral ready to land a force of marines at a word's notice to protect American citizens; and in fear of such an eventuality the Sultan has been quick to disgrace and replace the Vali of the district. This will be remembered at the Porte. It will have its effect in securing respectful and compliant attention to our other reasonable demands. We may now expect that the same privileges will be given to American schools in Turkey that are given to the Russian, and the same permission to explore and excavate the ancient ruins that is given to Germans.

But how will this affair appear to the European Powers? It will not be so welcome to all of them, and least of all to Russia and Germany. The United States is no part of the concert of the Powers. We have had nothing to do with the treaties and conferences which have settled the bounds and character of Turkish rule. What has the United States to do, they will ask, with Turkey? Let the Monroe Doctrine satisfy the United States to control affairs on the American Continent and keep off European interference there; but let America leave Europe and Asia to us. We are not surprised that to some nations the interference here of the United States is very disagreeable. We are "a parvenu nation," they say. Nevertheless if we have very properly taken the lead in this case our good friends, the English and French, if not the Germans and Russians, have joined with us and seconded our demands. We have kept within our international rights and have protected the citizens of all the nations, even if one or two Powers have been surprised to see us so ready and handy at the work which they would rather have done themselves. The course of our Government has been fully justified by the event and will have the final approval of history. The United States must be reckoned with in international affairs. We are an Asiatic as well as an American Power,

and while our policy is not meddlesome, yet we must protect our own citizens and our influence must tell for liberty and good government everywhere.

The Wickedness That Isn't So

It has always been an interesting question of practical morals whether the evil that men do and that never is discovered exceeds the wickedness which they don't do but are charged with committing. Is mankind worse or better than it thinks it is? We have been reflecting on this ancient theme all through the dog days, and being of an optimistic turn of mind, we have satisfied ourselves that the wickedness that isn't so is a bigger quantity than the wickedness which remains undiscovered.

In dog days every year we read the newspapers. It is a queer experience, really to read a newspaper! Until one has undergone it one cannot predict what effect it will have upon him. It may bring on an insomnia from which he will never recover. Those who take life too seriously and believe everything they hear had better not run the risk. For the cheerful skeptic whose nerves are strong, assiduous newspaper reading may become a gentle sedative, promoting sleep, and adding much to the restful relaxation of a dog day vacation. In these curiously unlike effects on unlike natures the newspaper resembles the old time sermon, which aroused the spiritually sensitive to agonies of "conviction," while it put healthy sinners into a refreshing sleep.

The other day in commenting upon Mr. Pulitzer's School of Journalism at Columbia University we gave an example of sensational news manufactured at the order of a managing editor with a mind for bigness. That news is thus produced in large quantities in many newspaper offices is alleged by reporters and editors who have been called upon to create it; and most individuals who have had personal knowledge of actual occurrences that have become the basis or the excuse for newspaper narratives are prepared to believe that the newspaper man

needs no academic training of the creative imagination, whatever he may require from the professors of Political Science or from instructors in English composition.

Naturally it is in the domain of conduct that the creative journalist finds his most boundless opportunities. He has succeeded to the functions of the village gossip of olden days, and he has raised scandal-mongering to the dignity of a learned profession. The conditions of modern life afford him materials and opportunities which he himself succinctly describes as "rich." Population, once sparse, has become dense and heterogeneous. The activities and interests of life have multiplied. Accidents, crimes and unusual doings in great variety have therefore of necessity become more frequent than they used to be. The creative journalist has only to ignore such stupid mathematical complications as the proportions which facts bear to one another in order to produce news which the managing editor feels to be quite important enough for scare heads. He has only to leave out those modifying circumstances that would make his story "heavy" if he "lugged them in," to create an impression of perilousness or spicy wickedness, which is as stimulating to some appetites as it is unsubstantial to the truth-loving mind.

The turn of a phrase often suffices to create a widely diffused popular belief in the wickedness that isn't so. A few days ago one of our most trustworthy newspapers published a carefully worded story of the romantic career of a young woman who had attracted the attention of the Sultan of Sulu when she lived in the Philippine Islands with her father, an American official, and of her recent marriage to a Boston lawyer. To make the story dramatically complete, the narrator remarked that the bridegroom in the case, who already was a married man when he became "infatuated" with this young woman who had turned down a live Sultan, had "divorced his wife" in order to unite himself to the object of his more recent affection. We should greatly like to know how many readers of that delightful story saw the in-

herent absurdity of it, and how many swallowed it with a sad reflection upon the "decay of the family!" Optimistic to the last, we are unwilling to believe that there were not readers here and there with a surviving sense for both facts and humor, to ask whether, in the commonwealth of Massachusetts, gentlemen who wish to experiment with new domestic relations are in the habit of managing the matter by a simple "writing of divorcement," in the good old Hebrew or Roman way. We cling to a cheerful faith that a "remnant" reflected that the man who secures a divorce does not usually offer his own misconduct as the basis of his petition. Indeed, our confidence in the intellectual endowment of mankind is great enough to make us certain that at least one or two readers of the romantic story suspected that the first spouse of the infatuated bridegroom must have given him some cause for estrangement before he was able to obtain a right to remarry at the hands of a Massachusetts court.

There is one thing that would instantly destroy the professional success of the creative journalist who daily serves up his column of the wickedness that isn't so. If he should happen some morning to remember that a sense of proportion is allied to a sense of humor, and that inherent absurdity isn't funny until some solemn fellow takes it seriously, he would have to look for another occupation.

Religious Freedom in the Philippines

UNDER the Spanish rule there was no religious freedom in the Philippines. Only one religion was allowed to exist, and those that differed from the dominant ecclesiasticism did so at their peril.

The change to the rule of absolute religious liberty may be expected to be attended with difficulty and disorder; and many complaints are likely to be made on both sides, which should be listened to with caution. The old established Church will regard every effort of a Bishop Aglipay or of the

American missionaries as lawless meddling with the faith of the people, while these promoters of new faiths will complain of the partiality of the officials and the lack of protection. On this side of the Pacific the chief complaint we hear is that Governor Taft has not encouraged the friars to go back to their unwilling flocks, and has not promised them the full protection of his constabulary. We have no doubt that he has been ready to protect any who chose to return; and we also have evidence that the authorities in the Philippine Government are determined that there shall be no interference with the religious services of those of other faiths.

At Calumpit, on April 4th, a little Methodist service was being held in a private house. A man broke in and with loud threats and show of force broke up the meeting. He boasted that he was backed by certain rich and influential citizens who would not allow any such services to be held. Complaint was made to Manila, and the case referred to the Attorney-General's office. Orders were sent to the local Fiscal, or Prosecuting Attorney, a Filipino, to have the guilty man and his backers arrested. He delayed, then arrested the wrong men, poor men, and had to be warned, when he finally arrested the offender and his two rich backers. The latter were discharged for "lack of evidence," and their tool sentenced to prison for three months. The next day the Fiscal wrote to Manila that the criminal had escaped and probably fled to Manila, and that he had written to the Manila Secret Service people to look for him. But no such letter came to the Secret Service people. The Fiscal was then notified to have the case of the two backers appealed from the Justice's decision to the Lower Court, and that the escaped convict must be arrested. The result is that the man is in prison and his backers under bonds to appear for trial.

The Presbyterians have had a similar case in the town of Bacoar, province of Cavite. There the local Presidente, or Mayor, went into a little service, after it had been dismissed, and while the people were chatting together, and

arrested them all, charging them with disturbing the peace by holding an "unlawful assembly." Again appeal was made to Manila, and after inquiry Governor Taft suspended the Presidente for unlawful exercise of his authority. And then a Catholic organization published a sarcastic paper approving the Government's action and asking that the friars be similarly protected.

The effect of these cases must be great. The people will understand that no religion can have a monopoly, and that no one is to have better protection than the others. Our American priests who have gone as bishops and Archbishop to the Philippines will be able to understand the reasonableness of this position. Quite in harmony with this doctrine of equal tolerance is the attitude of Archbishop Marty toward the Filipino clergy who had been so contemptuously crowded down by the Spanish friars. He says he wishes to honor and depend on them. Said the Bishop of Jaro in his testimony before the Philippine Commission, Document 190, page 119:

"The morality of the native priests is bad. Being Indians, they can take their habits off and get in with other Indians unknown, whereas a Spaniard with a white face would be recognized as not one of them. The Spaniard does not have the chance for evil-doing as the native has."

The Bishop of Vigan said of the native priests (page 129) that, as students in the seminaries for twelve to fourteen years, they were quick to learn, but soon forget it all. As to their moral character he said:

"They are very weak, very frail. The immense majority of the men in the regular orders [Spanish friars] are pure and good. It is just the opposite with these; the immense majority are frail and weak."

Doubtless there was a large element of prejudice in these statements, because so many of the native priests joined the insurgents and were bitter against the Spanish ecclesiastics who had kept them in subordinate positions under the local Spanish priests. They wanted equality of treatment, and this the American Archbishop proposes to give them. Equal rights, equal privi-

leges, equal treatment, is the only fair rule, whether in religious or secular affairs. Religious liberty is the necessary accompaniment of civil liberty.

Pensions

THE tremendous expense of our pension system is made clear by the annual report of Pension Commissioner Ware. He tells us that the pensions of the Revolutionary War cost seven million dollars; those of the war of 1812 cost six millions; those of the Mexican War thirty-three millions; while those of the Civil War have cost already over three thousand million dollars. Before they come to an end they will cost much more than the War itself.

This is an enormous sum, and yet the country does not begrudge it. The result in national unity is well worth all the cost. But what we do begrudge is the fraudulent pensions that have been paid under bad administration. Commissioner after Commissioner has asked for improved legislation from Congress, but they have not been able to get it. Every effort was made to drive the last Commissioner out of office because the pension agents did not like his honesty. The present Commissioner recommends that any man convicted of an infamous crime shall forfeit his pension, and that no pensions be granted to widows who marry soldiers after they become pensioners. This is to meet the case of young women who marry old soldiers for the sake of life maintenance. He also makes a radical suggestion of great importance as to the method of examining applicants for pensions. He would have this work done by a board of experts, appointed under civil service rules, who shall go from place to place, so that testimony can be received on the ground. These suggestions are wise and ought to be accepted by Congress, but we fear they will not.

Yet another suggestion looks to the extension of the pension system to Government employees who are not soldiers. He thinks some provision must be considered for superannuated clerks in Government employ. There are in the Pension Bureau alone five hundred employees

who are sixty years old or over. They have served perhaps thirty or forty years at a very moderate salary in a position valued because regarded as permanent. They are likely to be kept in their positions out of respect to their record and their needs when their efficiency is impaired. Our Government takes boys, gives them a fine education in West Point or Annapolis, pays all their expenses, then gives them their salary with increasing honors and pay until they are 62 or 64 years old, and then retires them on half pay for the rest of their lives. We are satisfied that what is done for the Army and Navy ought to be done for the Civil servants of the Government who have reached advanced age and have been for thirty or more years in service. This will apply principally to clerks. It will very seldom apply to the higher offices, to which men are not appointed until they have attained eminence. It will be no more than is done by the nations of Europe, behind which we lag so much in many matters of government which look toward the welfare of the people.

Church Union Among the Lutherans

ONE of the most important conferences for Church union ever held in this country was attended in Milwaukee last week by eight hundred professors and pastors of the various Lutheran Synods, with a view to their ultimate union. This is their second conference, the first having convened in Milwaukee in April, attended by two hundred members. These conferences are entirely unofficial, as it is not thought best as yet to pledge the Synods for or against the proposed union. When it is considered that these separate Lutheran denominations represent nearly a million and a quarter members, it will be seen how important is this conference, inasmuch as the feeling for union is so strong that it seems impossible to resist it.

It is not easy to make it clear to the uninitiated non-Lutheran mind what it is that separates these denominations. In Germany the Lutherans are far beyond the intricate theological question in-

involved. They are talking about inspiration, the Apostles Creed, the Virgin birth and miracles. Here the Lutherans have hardly heard of these discussions, but are still arguing about election and reprobation. They are all confessional Churches—that is, they all hold to the historic symbolical books of Augsburg, etc.—but are arguing as to how certain sections are to be interpreted. Twenty years ago the advocacy of election *unto* faith by the powerful Missouri Synod, instead of election *in view of* faith, caused a rupture of the Synodical Conference, the largest of all the Lutheran bodies in the country, the Ohio being the chief synod that severed its connection at that time. Now the feeling is dominant that the time for a reunion is at hand, and the enthusiastic conference in Milwaukee is evidence of the fact.

At the first conference in Milwaukee last April Professor Pieper, the leading theologian and the President of the Missouri Synod, presented a paper for discussion on the subject of Divine Grace. It was warmly discussed, and it was then unanimously decided to hold this second conference of last week, when Dr. Ahlwardt, of the Synod of Ohio, presented an exegesis of all the passages in the Confessions, which are of prime importance for the doctrine of Predestination. We do not suppose that any other religious assembly in the country could have presented or have been interested in so thorough a discussion of this subject which Calvinists and Arminians threshed out generations ago.

A full agreement was not reached at this second conference, but progress was made, and a third conference will meet in Detroit in Easter week next. The program of discussion will cover—if our readers can understand what the words mean—the principle of the Analogy of Faith in its bearing on the *sedes doctrinæ* of the doctrine of election and predestination.

It would be a discredit to Christianity if these Lutheran bodies fail to come together. We are glad to see that it is the most strictly confessional of the Lutherans who are most earnest for the consummation of a closer union. These bodies are in absolute agreement in accepting the same standards, and yet

they have refused to practice fellowship in the pulpit or at the communion table, and have been erecting opposition altars in places where two or more have been represented. The indications are that this scandal will end by mutual tolerance. That is the way that the Old School and New School Presbyterians came together thirty years ago, after a separation on a similar question of the interpretation of a creed the language of which both accepted.

The Rural Labor Problem

For the first time since the Civil War the labor problem has shifted from the cry for more work to a cry for more workmen. From California a commission has been scouring the East, in search of not less than "ten thousand laborers." These are needed to gather and preserve the ripening fruits of that section of the Pacific Coast. The Commission has gone so far as to insist that "unless enough of the immigrants that reach our Atlantic States can be obtained, Chinese labor must be admitted into the fields of California." Canada appeals for not less than twenty thousand laborers to meet the most pressing needs of the farmers of the Dominion. The appeal of Kansas for help in her harvest fields reached even our college boys, and sent some hundreds of athletes into her wheat fields. That they have found fourteen hours a day of binding grain and tossing it a severer tax on their muscles than a game of football is not surprising. Meanwhile the farmers of New England and New York are nearly as hard put to it. They report that it is impossible to get sufficient help at any price, while the quality is inferior. At a recent gathering of agriculturists, one of the speakers said:

"What little help I can secure is of such a quality that I am obliged to remain constantly at home as an overseer. The old-fashioned farm hands, who could be hired in the Spring for six or eight months, are no longer to be found. I think most of them have been absorbed in the cities and large towns."

Another speaker complained that the men whom he had been accustomed to hire at one dollar and fifty cents per day were

now getting their two dollars and fifty cents per day in neighboring factory towns. It makes but little difference in which direction we turn, the complaint is the same.

The trouble is not local, but universal—a crisis that was bound to come sooner or later. The labor of the United States has been trained during nearly a hundred years to love the town. Naturally fond of herding, the independence of distributed country life is not tasteful to the majority of our day laborers. They have not been educated to know the trees; nor do they read either sermons in stones or books in the running brooks. Meanwhile the reaction toward country life has begun by bringing out the well-to-do; those whose new homes require help, rather than afford it. These newcomers into the country, as a rule, are able to pay higher wages than the neighboring farmers. So it comes about that, for a time at least, the increased popularity of country living panders to big wages and decreases the supply of farm help. After a while we may be confident that the disintegration will go further, and that the laboring classes will be won over from their love for the tenement.

What becomes of the eight hundred thousand foreigners who came to us during 1902; and to what points are drifting the one million of the present year? We are told that about one-half of these people are absorbed by the larger cities, while the other half go very largely into race settlements. Norwegians and Swedes and other nationalities have created large colonies in the Northwest, to which their countrymen generally betake themselves. Immigration that reaches us at present is not largely from the agricultural sections of Europe; nor do most of them take kindly to the dissociated work on our farms. We have succeeded—almost for the first time in history—in making farmers of Jews. Still, looking over this problem from any standpoint, we find it difficult to account for the fact that our help problem is so slightly relieved by the enormous annual immigration.

There is a growing tendency, especially during the strikes, to appeal to the Southern negro. It would have been dif-

ficult for New York during the present season to get on without an importation of this sort of help; and it proves to be quite as good as the average from Europe. It is not impossible that the help problem will go a long way toward working out a solution of the whole Southern problem, and teaching us what to do with the black man. If it places him more in demand, if it gives to him a wider range of work, and scatters the congested black population, we shall learn that, after all, the negro is not only an important, but a necessary factor in American life. Make him valuable, by giving him plenty of work outside the Southern States, and he will be of more importance there as elsewhere.

Among our other resources, at present, seems to be some change in our alien laws, admitting more freely the dependent classes of Europe. Canada is already insisting upon this as an essential relief to her agricultural pressure. California farmers ask for a modification of Chinese exclusion, urging that there are no laborers anywhere in vineyards and orchards comparable to the Chinaman. Our lawgivers will certainly have to consider this question from a new standpoint. We are not nearly as likely to be overrun with hordes of cheap laborers as we are to have our enormously increasing field and orchard crops go to waste for lack of hands to gather them.

We have suggested that the movement countryward has so far had very little effect upon the day laborer. It is also true that the wages paid to the mechanic and artisan are still higher than those which can be paid by the farmer. As a consequence, there are hosts of men out of employment nearly all the time in our larger cities. These people do not readily comprehend the fact that, in the long run, steady employment at moderate wages is preferable to chance employment at high wages. The ranks of tramps and degenerates get nearly the whole of their recruits from this class of laborers. When employed upon the farm the agriculturist finds that they need constant and costly supervision. Successful farming is fully as much dependent upon skilled labor as any other of our industries.

The Panama Canal

On Wednesday of next week the period will end within which the Canal Treaty with Colombia must be ratified, and there is no likelihood that the Colombian Senate will ratify it. What will be the next step? We presume it will not be the opening of negotiations with Nicaragua. The Panama route is the best and that will be adhered to. We might begin over again with Colombia, but that is unlikely. There will be a necessary delay, and it is not unlikely—for such things are constantly happening there—that there will be a revolution which will change the conditions entirely. Venezuela is threatening war with Colombia with the view of helping a revolution which may be benevolently viewed by the friends of the canal. Or there may be a secession from Colombia of the Panama Isthmus. The interests of the people are with the building of the canal by the United States, and a successful secession would settle the matter. When Texas seceded from Mexico the United States was not concerned until Texas sought admission to our sisterhood of States, which we were willing to grant, just as we should be willing to admit Canada if she cared to secede from Great Britain. But there is another alternative to be considered which is suggested by the *Paris Matin*. It calls attention to the Treaty of 1846 with Colombia, then called New Granada, which includes the following provision:

"The Government of New Granada guarantees to the Government of the United States that the right of way or of transit across the Isthmus of Panama by all means of communication that exist or may come into existence shall always remain open and free to the Government and to the citizens of the United States, and for the transport of all products, manufactures and lawful merchandise whatsoever belonging to the citizens of the United States."

The right of way includes transit by canal, and it is to be well considered whether Colombia will have the right to obstruct the commerce of the world, and our right of way. We doubt, however, if this provision will, as *Le Matin* seems to think, allow us to take possession of the Isthmus by force. The Hague Tribunal would have something to say about that.

Limits of Labor Unionism

It ought to be pretty well understood by this time that labor unions have no place in the public service. The public service is pure socialism, and under socialism there can be no labor unions. It is an absurdity to think of a labor union in the Army or the Navy, to control wages or the hours or character of work. This matter has lately been threshed out in the Australian railroad service, which is run by the Government. Occasionally it crops up in this country, in postal or other service; and the other day, at the meeting at Atlantic City of the International Association of Chief Engineers, the Chief Engineer of the fire service in Tampa, Fla., read a paper in which he showed from experience at Tampa how ruinous to all efficiency would be the introduction of labor unions into the fire service. Suppose a business house to have incurred the displeasure of a union, and to be boycotted, and then a fire threaten its buildings; as Chief Harris said: "The results in the case of a union fireman are horrible to contemplate." Politics are bad enough in a fire department, but this would be more dangerous. Labor unions have their valued place in civil life, not in the public service.

Typhoid Infection from Oysters

In the published comments upon the official inquiry and report concerning the origin of an epidemic of typhoid fever affecting the guests who attended banquets given by the Mayors of Winchester and Southampton (England) in November last, we have seen no reference to the fact that the first thorough and convincing investigation of a typhoid epidemic caused by infected oysters was made in this country. Of the guests at these banquets, 117 were taken ill, in 21 cases the illness was developed into typhoid fever, and 5 of the fever patients died of the disease. An investigation by the Local Government Board, the conclusions of which were recently given to the public, shows that the agents of infection were raw oysters which had been taken from a bed situated within 100 feet of the outlet of the main sewer of the village of Emsworth, where they were constantly exposed to contamina-

tion. The investigation in this country, of which we have spoken, followed an epidemic of typhoid at Wesleyan University, Middletown, Conn., in October, 1894. It was made under the direction of Professor Conn, and was a marvel of painstaking inquiry as to conditions of infection which up to that time had attracted no attention. The epidemic of 25 cases, with 4 deaths, was unquestionably due to typhoid bacilli conveyed by raw oysters which had been eaten at a fraternity banquet. These oysters had been taken from a bed at Fair Haven, situated near the outlet of a private sewer connecting with a house in which there were at the time two cases of typhoid. Professor Conn's admirable and convincing report was republished in London by the Local Government Board, and the effect of it there was to cause an inspection of all places where bedded oysters might be exposed to dangerous contamination. Warning was then given concerning these bedding places near Emsworth, from which oysters for the banquets of November last were taken, but it does not appear to have been effective. American investigators were the pioneers in the work of inquiry which proved that typhoid fever may be due to such agents. Their examinations and reports with respect to typhoid epidemics caused in other ways do not suffer in comparison with those made in any part of the Old World. The risk of infection from oysters is slight, because it does not often happen that an oyster bed is exposed to dangerous pollution. But there would be no risk whatever if oyster beds were subjected to occasional sanitary inspection.

The Law's Failures

Justice Brewer's assertion that laxity and delay in the enforcement of law in criminal cases is responsible for a considerable part of the lynching finds its illustration in the case of George White, who was lynched some weeks ago at Wilmington, Del. One who knew him well tells the story of his life. As a boy he was a thief, but was never punished. When about fifteen years old he was reprimanded by a colored woman for some offense, and he waylaid her and broke her skull with a club, so that she died

soon after. For this crime the State of Delaware inflicted no punishment. Next he robbed a house and was caught with the things in his pockets, and was sent to jail for a short term. Afterward he assaulted a colored girl, who died of her injuries, and he was sentenced for only five years. As soon as he was free he attacked an Irishman and shot him, the wounds resulting in death later. For this offense a sentence of five and a half years was imposed. Then, when free, he committed the assault for which he was lynched. It appears to us that it would have been a saving of life and credit if punishment had been surer and more adequate.

Some enterprising citizens in Texas, with the encouragement of our Department of Agriculture, are attempting to develop the rice industry in Texas, and have secured a number of skilled Japanese rice farmers to introduce the methods used in Japan. It is like what has been done in West Africa, where the American negroes have been taken to introduce the cotton industry; but the editor of the Texas State Grange organ, published in Dallas, is very angry, and declares that "Texas has no more use for Japs than for Chinese," and that Mexican labor also should be driven out. He does not hesitate to recommend violence:

"If they don't 'get,' make them. A coat of tar and feathers to some agent managing such an enterprise would be a salutary object lesson."

The same journal praises the people of Alba, Tex., as "the right sort of people." There a coal company had imported about twelve Mexicans to work in the mine, but the citizens appointed a committee to wait upon the manager, requiring immediately to withdraw the obnoxious element, and he bowed submissively.

Dr. Baart raised a very important matter which is giving trouble in calling attention to the oath taken by the members of the typographical union, that their "fidelity to the union" and their "duty to the members thereof shall in no sense be interfered with by any allegiance that I may now or hereafter owe

to any other organization, social, political or religious, secret or otherwise." The oath is defended by one of the officers on the ground that all it means is that no member shall be favored or discriminated against on account of his creed or politics. One would think that it would have been easy to say just that, if it was what was meant. The language would be naturally interpreted to mean a great deal more. It would be well to take a leaf out of the methods of the Presbyterians and have a Declaratory Statement made as to what it does mean, or else a New Creed—we mean, a new oath.

Mr. W. J. D. Croke, one of the most reliable Roman correspondents of our Catholic journals, thus quotes the new Archbishop of Manila, Mgr. Harty:

"It is proposed to give the religious [the friars] in the Philippines the same position as that their brethren occupy in the United States. That is the Philippine settlement in a nutshell. What I tell you is a whole volume, and you can develop it at length from your knowledge of American conditions. In the United States the religious stand on their own merits; their position is regulated according to the common law of the Church. They give missions, retreats, courses of sermons; they aid the clergy in the pastoral offices. They are the auxiliaries of the diocese."

That is, the friars are no longer to rule the Church there. That is good news. It is now clear why those who knew most have said least in defense of the friars. They have left that task to the "blind mouths."

That the President of the United States should make an occasional official tour of the country is right and wise. The people want to see and hear their President, and those who live on the Gulf or Pacific Coast should have the chance as well as those who live in Washington. It is easier for the President to go to California than it is for California to go to Washington. And, equally, the President should not be expected to pay the expenses of the trip. The railroads can afford, with the extra patronage it gives them, to give him and his party a special train. This has been the custom, and it is all right, notwithstanding

some late criticisms. The alternative is for Congress to make an appropriation for the purpose, but that might excite partisan opposition.

The number of doctors of philosophy does not increase rapidly. *Science* says that the degree has been conferred this year on 266 candidates by 27 reputable institutions, only 10 more than received the degree in 1901. The requirements for this degree are very strict, except in the case of some disreputable institutions. Thus Taylor University, in Upland, Ind., gave the degree in 1901 to no less than 45 candidates. The institution is reported by the Commissioner of Education as having no productive funds, while its income from tuition and fees was only \$4,000, and but \$500 from all other sources. Degrees are cheap there. Not even Yale or Harvard or Columbia or Johns Hopkins or Chicago has given as many.

The Nashville *American* says:

"A thousand Booker Washingtons would solve the race question, so-called. Is there a white man who if a thousand times multiplied would solve it? We know of no such man."

That is a sad statement, and we do not believe it. A thousand white men like the author of "Our Brother in Black" who should as vigorously proclaim the gospel of equal rights, equal treatment, equal privileges of education, would solve the race question. How so? Because that question is simply how to harmonize the will of the negro to rise with the will of a considerable body of men of the Vardaman type that because he cannot rise therefore he shall not.

So far as the navy is concerned the much vexed question of a national anthem has been settled. An order of the Navy Department, dated September 3d, proclaims the "Star Spangled Banner" the National Anthem, and orders all officers and men to stand at attention when that tune is played. Those musically or poetically inclined may still hesitate to thrill patriotically at the song, but their fastidium will have little to do with the matter. "My Country" is good enough for us. And

it has the advantage of being the same in tune as our Mother Country's.

We cannot understand the removal of Miss Todd as postmistress at Greenwood, Del. When she asked why she had been removed the answer of Postmaster-General Payne was in substance: "You have been removed because you were particularly and personally obnoxious to Senator Allee." But what of that? She was not responsible to him. Why should he dictate the removal of a competent official to make room for one of his political friends? We neither understand nor like it. It is not in the line with the President's civil service policy.

The advantage of growing up with a new field appears in the person of the Presiding Bishop of the Episcopal Church in succession to Bishop Clark. The office goes with seniority of consecration. Bishop Tuttle, of Missouri, graduated from the General Theological Seminary in 1862, and was ordained deacon in that year and as priest in 1863. Only four years later he became Missionary Bishop of Utah, Idaho and Montana. Such speedy promotion would have been impossible in the slower East.

In an article in *Harper's Monthly* Professor Lounsbury speaks of the difficulty of throwing the accent of a word back to the fourth syllable from the end, as in *indisputable* and *inexplicable*. But how about *per'emptory*, if we allow a pronunciation much affected, and still more, *per'emptorily*, with accent thrown back to the fifth? It used to make the court room start to hear Rufus Choate, when an opposing counsel made some proposition, reply, "I *per'emptorily* decline," with no secondary accent.

The United States keeps the America Cup and wins another yacht race, but Great Britain keeps command of the sea. We pay to British vessels sixty million dollars a year to carry the passengers and freight which we have no boats for. And Congress still refuses to allow vessels built abroad to carry the American flag.

Insurance

Causes of Fires

IN London during twelve months' time fifteen hundred and forty-eight fires took place, which were due to causes tabulated below:

Airing linen.....	17	Gaslight, paper blown on.....	1
Bleaching baskets.....	3	Gaslight, sunblind placed too near.....	1
Boiler, overheating of.....	8	Glue heating.....	1
Boiling acids.....	1	Hearth, defect in.....	4
Boiling over of chemicals, oil, pitch, spirits, tar, &c.....	23	Hearth, fire on.....	4
Burning out paint pot.....	1	Hearth, adjoining, fire on.....	2
Candle flames.....	187	Hot ashes.....	37
Chemicals, bottle of, breaking.....	1	Hot plate, overheat of.....	1
Chemicals, explosion of.....	1	Hot iron.....	2
Children playing with cartridges.....	1	Hot rivets.....	3
Children playing with fire.....	21	Hot soldering-iron.....	1
Children playing with matches.....	29	Incendiarism.....	11
Clothes coming in contact with fire.....	7	Intoxication.....	6
Copper, overheat of.....	1	Kiln, overheat of.....	2
Copper, leaking.....	1	Lamp, bag falling on.....	1
Cylinder, overheat of.....	1	Lamp, lighting.....	1
Damper, defect in.....	1	Lamp, lighted, falling on benzoline.....	1
Detonating caps.....	1	Lamp, gas, upset.....	1
Doubtful.....	14	Lamp, curtains or window-blinds coming in contact with.....	2
Drawing off paraffin oil.....	1	Lamp, oil, upset.....	1
Drying apparatus, overheat of.....	1	Lamp, paraffin, explosion of.....	3
Drying-room, overheat of.....	1	Lamp, spirit, upset.....	41
Fire, goods placed too near.....	1	Light thrown down.....	115
Fireplace blocked up.....	2	Light thrown down area.....	9
Fireplace, defect in.....	1	Light thrown from street.....	19
Fireplace adjoining, defect in.....	1	Lighted paper.....	2
Fireworks, explosion of.....	1	Lime-slaking.....	7
Fireworks, setting off.....	1	Lime slaked by rain.....	5
Flues, blocked up.....	10	Matches.....	43
Flues, defective.....	58	Oven, overheat of.....	5
Flues, foul.....	24	Paraffin oil coming in contact with lighted candle.....	1
Flues, overheat of.....	10	Phosphorus.....	3
Flue, timber in.....	1	Pipe-stove, overheat of.....	6
Flues, adjoining, defect in.....	15	Pipe, steam, overheat of.....	2
Flues, adjoining, foul.....	5	Plumbers at work.....	3
Flues, adjoining, overheat of.....	4	Rags, overheat of.....	1
Flues, copper, defect in.....	4	Roasting chickory.....	1
Flues, copper, overheat of.....	4	Smoke-hole, overheat of.....	1
Flue, furnace, defect in.....	1	Smoking tobacco.....	36
Flue, furnace, overheat of.....	3	Sparks from fire.....	172
Friction of machinery.....	6	Sparks from copper fire.....	1
Friction of vesuvians.....	1	Sparks from copper flue.....	1
Fumigating bugs.....	4	Sparks from copper flue adjoining.....	2
Furnace, overheat of.....	5	Sparks from furnace.....	5
Furnace, hothouse, overheat of.....	1	Sparks from locomotive.....	9
Furnace, adjoining, overheat of.....	1	Sparks from oil lamp.....	3
Gas, escape of.....	45	Sparks from oven fire.....	1
Gasfitters at work in houses.....	6	Sparks from smoke-hole.....	1
Gasfitters at work in street.....	1	Spontaneous combustion.....	15
Gas, lighting.....	6	Spontaneous combustion of red fire.....	1
Gas, seeking for an escape of, in street.....	17	Still, overheat of.....	1
Gas, swinging bracket.....	21	Still, leaking.....	1
Gaslight.....	2	Stove, overheat of.....	11
Gaslight, curtains or window-blinds coming in contact with.....	8	Stove, adjoining, overheat of.....	3
Gaslight, goods coming in contact with.....	12	Stove, improperly set.....	4
Gaslight, goods placed too near.....	4	Stove, drying, overheat of.....	11
Gaslight, overheat of.....	7	Stove, drying, adjoining, overheat of.....	1
Gaslight, holly placed too near.....	1	Stove, drying, rags falling on.....	1
		Stove, ironing, rags falling on.....	1
		Stove, ironing, overheat of.....	1
		Stove, ironing, linen falling on.....	1
		Stove, gas, overheat of.....	10
		Sun, heat from.....	2
		Tar pot upset.....	1

(Continued on page 2250.)

The 1903 Harvests

THE September report of the Department of Agriculture was given out last week, and is practically a harvest report. Altho the statistics indicate conclusively that there will be no "record breakers," still all the crops would seem to be above the average.

The current harvest of corn is estimated at 2,289,900,000 bushels; the total wheat 669,841,000 bushels; and the total oats at 765,403,000 bushels. This is more favorable than was expected, and altho the statistics may not be perfect, there is reason to believe that there was an improvement during the month of August in corn, wheat and cotton. The only danger now confronting the crops is an early frost, from which, however, judging from past experience, we are not likely to suffer very much this fall.

All this, as the *Journal of Commerce* reminds us, should impress upon our people the real source of their material welfare. In the last analysis wealth comes from mother earth, and it is the people's industry, skill, ingenuity and enterprise applied to the products of the earth that makes them prosperous.

We may conclude, therefore, that our period of prosperity will continue for another year; at least there are no signs yet of any slump in the great tide of prosperity that continues to sweep over the land. As we said some weeks ago, capital and labor were never getting so much for their effort as they do to-day. The middle class, however, which is becoming a salaried class, is not participating in the general prosperity, for prices are rising while salaries remain fixed. One of the great economic problems, therefore, before the American people is to prevent the great middle class from being ground between the upper millstone of capitalism and the nether millstone of labor unionism.

THE Quarterly Report of the Western Union Telegraph Company (Incorporated) for the quarter ending September 30th, 1903, shows a surplus July 1st, 1903, of \$13,019,724.55. The net

revenues for the quarter ending September 30th, inst., based upon nearly completed returns for July, partial returns for August, and estimating the business for September, will be about \$2,400,000.00. From which, appropriating for interest on bonded debt \$286,300.00, it requires for a dividend of $1\frac{1}{4}$ per cent. on capital stock issued about \$1,217,015.00. Deducting which, leaves a surplus after paying dividend of \$13,916,409.55. A dividend of $1\frac{1}{4}$ per cent. on the capital stock of the company has been declared, payable on and after the 15th day of October next.

.....Dividends announced:

Commercial Cable Co., quarterly, 2 per cent., payable October 1st.

Manhattan R'way Co., quarterly, $1\frac{1}{2}$ per cent., payable October 1st.

Mergenthaler Linotype Co., quarterly, $2\frac{1}{2}$ per cent., payable September 30th.

International Paper Co., quarterly, $1\frac{1}{2}$ per cent., payable October 1st.

International Silver Co., quarterly, 1 per cent., payable October 1st.

Southern Railway Co., Preferred, $2\frac{1}{2}$ per cent., payable October 19th.

Otis Elevator Co., Preferred, quarterly, \$1.50 per share, payable October 15th.

(Continued from page 2249.)

Turpentine upset.....	1
Vapor of spirits coming in contact with flame	8
Varnish coming in contact with flame.....	1
Unknown	276
Total.....	1548

From the foregoing list it would appear that unknown causes of fires are most to be feared. Next in frequency are fires started by candles. London experience shows that sparks from open grates are very dangerous, after which comes the throwing down of lights as a fire hazard. Defective flues, escaping gas, hot ashes, matches, smoking tobacco and spontaneous combustion are all causes of risk that may well be viewed with alarm by American as well as by the London underwriters. Fire insurance companies in this country may well learn a lesson from their London contemporaries, and profiting thereby enforce measures, such as a more rigid system of inspection or other means, to avoid some of the losses named in the present table. The table cannot but be interesting and most suggestive to underwriters and property owners.

The Independent

VOL. LV NEW YORK, THURSDAY, SEPTEMBER 24, 1903 No. 2860

Survey of the World

In the Field of Politics

The removal of Miss Huldah B. Todd, Postmaster at Greenwood, Del., has raised an interesting question as to the application of the civil service rule to post offices of the fourth class. Miss Todd was summarily removed by Postmaster-General Payne at the request of Senator Allee, who represents the Addicks faction in Delaware, because, as Mr. Payne says, she was "politically and personally obnoxious" to the Senator. There were no charges relating to her official conduct. When Senators Allee and Ball were elected they agreed to a territorial division of the patronage, but Senator Ball says that the agreement was not intended to disturb persons then in office. Miss Todd was displaced on the 15th by Jacob L. Houseman. The President has directed that an investigation be made. Mr. Payne asserts that the civil service laws and rules do not apply in any respect to such offices. But Civil Service Commissioner Greene, Secretary Goodwin, of the Civil Service Reform League, and others contend that the rules signed by the President on March 20th do clearly place fourth class post offices in the classified service, as far as removals are concerned, and forbid removals "because of political or religious opinion or affiliations."—Senator Carmack, of Tennessee, announces his purpose to introduce in the next Congress a bill for the repeal of the Fifteenth Amendment to the Constitution.—Bishop William M. Brown, of the Arkansas Diocese of the Episcopal Church, said last week:

"While I do not justify lynching, I can find no other remedy adequate to suppress the crime for which this has been made a punishment by

the people of the South. I am a Northern man, and used to look with horror on lynching; but since I have been South my eyes have been opened. Imprisonment does no good. It would be well to leave the solution of the negro question to the Southern people; they know best what to do. The enfranchisement of the negroes has been a serious mistake. Very few of them have any convictions, and their votes are cast as a rule for the man who pays the most money."

—The municipal campaign in New York has been enlivened by a long letter from District-Attorney Jerome, who opposes the renomination of Mayor Low not because he has been false to the cause of reform, but because, Mr. Jerome says, of his "unlovable personality, egotism, self complacency and constitutional timidity," and for the reason that, in his opinion, the Mayor cannot be re-elected. The District-Attorney also complains that Mr. Low's letter of acceptance had "not a scintilla of humor," and was "destitute of every indication of capacity for leadership." If, however, Mr. Low must be nominated, Mr. Jerome will work for the ticket and the cause. On the other hand, many prominent Democrats have signed a statement in support of Mr. Low, and those Democrats who hold important offices in the present government commend him, and consent to be renominated in association with him. There are some indications that Tammany will nominate Congressman George B. McClellan, son of the late General bearing the same name.

The Canal Treaty

In a message to the State Department, dated on the 17th, Minister Beaupré expressed the opinion that there was no hope of

ratifying the treaty at Bogota. On the other hand, reports from Washington at the end of last week pointed to a possible compromise at the Colombian capital within a few days. In unofficial dispatches it was stated that the purpose of the opponents of the original treaty was to compel the French company to pay \$10,000,000 for the privilege of selling its rights for \$40,000,000, and that the demand upon the United States for \$20,000,000 (instead of \$10,000,000) was inserted in the new bill at Bogota merely to support temporarily this demand upon the canal company. In these dispatches it was asserted that if the company should concede this payment, the original terms of the pending treaty with the United States would be accepted.—Senator Obaldia, recently appointed Governor of Panama, has published a statement saying that a solution of the problem can be reached only by the election of Gen. Rafael Reyes to the Presidency, and that the rejection of the treaty was the work of President Marroquin's political enemies. The appointment of Senator Obaldia has been the subject of a sharp debate in the Colombian Senate, where it was said that it was dangerous to place the isthmus under the control of a man so clearly committed to the support of the treaty. In the House a Representative from Panama replied that the Government had heretofore persisted in withholding home rule from the isthmus, and by giving all the offices to non-residents had encouraged a spirit of revolt. No signs of insurrection or secession are reported from Panama, but the possibility of secession continues to be discussed in the American press. The officers recently elected by the Colombian Senate are supporters of the candidacy of General Reyes for the Presidency. On the first Sunday in December the Presidential election will take place, and the electors then chosen will meet on February 1st.

The Postal and Land Frauds

To the long list of persons indicted in connection with the postal service frauds has been added State Senator George E. Green, of New York, formerly Mayor of Binghamton and President of the State League of Republican Clubs, and now interested as

officer or director in many railway, coal and insurance corporations. Senator Green was arrested at the end of last week, having been indicted at Washington with George W. Beavers, whom he is charged with bribing in connection with contracts for the purchase of time recording machines. It is said that the Department has on hand about 10,000 of these machines, or enough to supply its wants for many years. They are manufactured by the International Time Recorder Company, of which Senator Green is President. He denies that he is rightfully accused.—At the request of President Roosevelt, Secretary Hitchcock has designated Mr. Charles J. Bonaparte (recently retained for the prosecution of the postal fraud cases) to make a thorough investigation of irregularities and frauds in the disposition of Indian lands. His inquiry will cover the acts of the Dawes Commission and the interests of members of that Commission in land and financial companies. It is said that Indian Inspector Churchill was selected to assist him before it was known that this officer must answer charges relating to his connection with the sale of Indian lands. As the Inspector had enjoyed the confidence of the Department and had collected a part of the evidence used by Mr. Brosius in his report, the announcement that charges were pending against him caused much surprise.—At the instance of Secretary Hitchcock, Surveyor-General Hugh M. Price, of Arizona, has been removed, and W. E. Murphy, his chief clerk, has been suspended, for exacting illegal fees in payment for hastening the issue of survey patents to the owners of land claims. It is alleged that the surveys were unnecessarily delayed in order that these fees might be obtained.

Labor Controversies

The questions involved in the case of Miller, whom Mr. Roosevelt ordered to be reinstated in the Government Printing Office, are to be considered by organized labor throughout the country. Resolutions adopted by the Washington Central Labor Union have been forwarded to all similar organizations, of which there are several hundred. These resolutions say that the President has "com-

mitted himself to the policy of the open shop," assert that his order in the case of Miller was an unfriendly act, and urge that he be asked by general petition not only to dismiss Miller, but also to modify his announced policy of no discrimination against non-union men in the Government service. It is said that this appeal has been favorably received by Central Labor Unions having a total membership of more than 1,000,000 men. The Miller case has directed attention to the condition of the Government Printing Office, which employs 4,000 persons and for which a new building has recently been erected at a cost of \$2,000,000. There will not be room enough in this building unless type setting machines and other labor saving devices now excluded are used in it. Congress will probably be asked to provide for the use of such machines. The investigation caused by the Miller case shows that the cost of production in the Printing Office is very high, owing, it is said, to the exclusion of machines and to a restriction of workmen's output by the unions. Estimates for civil service manuals required by the Philippine Government were recently given and were so high that the War Department had the work done by a firm in Baltimore. It is reported that the results of the inquiry will be laid before Congress and that the President will ask that the Printing Office be placed under the control of Secretary Cortelyou's Department.—A manufacturer of hats in Danbury, with the support of the Anti-Boycott Association, has brought suits in both the Federal and the State courts for damages alleged to have been caused by a boycott of his goods, ordered because he declined to employ only union men. The first suit is against President Gompers and other officers of the Federation of Labor, and it asks for threefold damages under the Sherman Anti-Trust law, alleging that the boycott is a conspiracy and combination in restraint of trade. The second suit asks for \$100,000 damages and an injunction, and in connection with it the homes and bank accounts of members of the Danbury Hatters' Union have been attached. With the aid of the Anti-Boycott Association similar suits have been brought in Chicago in the interest of two contractors (Stiles and

Rysdon), who asserts that the unions, in alliance with certain contractors, have conspired to ruin them. The unions in the building trades there have voted to tie up work on all school buildings unless the contracts with Rysdon for metal construction are canceled.—The State Labor Commission of Nebraska has discovered that nearly 1,000 children are unlawfully employed in the Omaha packing houses, and they will be dismissed.—Michael Walsh, formerly President of the Typographical Union, says that the union's oath will be changed. It was never intended, he asserts, to make allegiance to the union paramount to that which is due to the Government or the Church, altho the oath as it stands is open to that interpretation.—In Thurber, Tex., the striking miners have won a victory. All of them were leaving the town, which in their absence would have been almost completely deserted. On the 19th this movement was checked by the action of the Texas and Pacific Company, which consented to recognize the union and to adopt the union scale, with provision for arbitration.—The Steel Corporation's fleet of 117 ore-carrying boats on the lakes has been tied up by a strike. All the boats will now go into winter quarters. The Corporation has ore enough on hand for six months work. This strike, directly affecting 2,500 men in the lake trade, will make thousands of men idle at the mines.—The strike at the Philadelphia textile factories has been a failure. It began three months ago. Of the 60,000 employees who quit work, only 3,700 are now out, and the manufacturers have made no concessions either in hours or in wages.

The Philippine Islands

A law recently enacted by the Philippine Government provides that 100 native young men shall be sent to the States every year to be educated and fitted for positions in the insular civil service. By competitive examination 100 are to be chosen, and from these the Governor may select those who are best qualified. He is also authorized to select and appoint 25 without subjecting them to competitive examination, but the whole number sent to the States in the first year must not exceed 100. For the

support of each student the Government will pay \$500 a year, and those who go to the States under these conditions must sign an agreement binding them to return after the completion of their education and to take an examination for appointment in the civil service. It is expected that while they are in the States these young men will live with American families.—For the Philippine exhibit at the St. Louis Exposition, 1,200 natives and 10,000 tons of freight will be brought from the islands.—There have recently been 100 cases of plague (with 80 deaths) in Tondo, the northern suburb of Manila; 12 cases are reported in Cebu, where cholera also prevails.—E. B. Bryan, of Indiana, has been compelled by ill health to resign the office of General Superintendent of Education, and David P. Barrows, of California, has been appointed in his place.—The British Government, through its Embassy at Washington, has directed the attention of the State Department to the conflicting claims as to certain small islands lying near the coast of British North Borneo, of which our navy has taken possession, but which are regarded by Great Britain as not included in those islands of the Sulu group which we acquired from Spain by treaty or purchase. They give shelter to pirates, and the question of ownership is raised in order that Great Britain may ascertain whether she has a right to send to them a punitive expedition. This action of the British Government is probably designed to smooth the way for an amicable adjustment of the question as to the ownership of these and several other islands on which one of our gunboats recently raised the American flag.

Cuba and Porto Rico Two of the Commissioners appointed to inquire in this country and in Europe concerning the projected Cuban loan of \$35,000,000—Gen. Mario Menocal and Dr. Mendez Capote, President of the Cuban Senate—have recently arrived in New York. The chairman of the association of Cuban bondholders, in a letter to President Palma, asks that the certificates with which the soldiers are to be paid shall be direct obligations of the republic, in order that they may be easily transferred, and also requests that the

\$3,100,000 in bonds issued by the Junta in 1896 be funded. President Palma's Secretary recently declared that the issue was \$3,100,000, and not \$10,000,000, as some had asserted.—It appears that the little revolutionary band which was pursued and attacked last week, in Santiago Province, was composed of men who had been dismissed from the Rural Guard or had failed to pass examination for admission to that organization. Castillo, the leader (formerly a captain in the Rural Guard), was killed in a fight between two factions of these outlaws; other officers have been killed or captured, and the band has been dispersed.—In Porto Rico, Eduardo Conde and Leonidas Guillot, two Socialists who abused the Government and denounced the American flag at a recent meeting of the Federation of Labor, have been tried before Judge Kopel and sentenced to be imprisoned for six months. They advised the workingmen to parade under a black flag and suggested the assassination, it is said, of Governor Hunt if their demands were not granted. The judge assured them that anarchists and persons who attacked the American flag could expect no mercy in his court. Several hundred acres of sea island cotton have been planted on the island as an experiment, which, it is expected, will be very successful. Judge Wilcox, of the Ponce District, who was recently in New York, explains that the jury system is not yet in full operation because the people, accustomed to Spanish methods, do not fully understand what their rights are. It is optional with the accused to be tried by a jury, but juries were used in only 25 of the 600 criminal cases heard in his court last year. The intelligent people of the island, he adds, realize that if Porto Rico should become a State a large part of the revenue now available for local use would go to the national treasury. By special legislation the customs and internal revenue receipts are now retained on the island, and these are more than three times the sum that is raised by direct taxation.

Mr. Balfour and English Politics

Politics in England are revolving entirely about the proposed tariff reform and the attitude of the various members of the Cabinet toward this

proposition. On September 14th there was a meeting of the Cabinet at Downing Street, which was evidently of considerable importance, but the secret of the discussion was kept so closely that the newspapers the next morning gave utterly contradictory reports of what had occurred. Mr. Chamberlain, who came up from Birmingham to attend the meeting, was loudly hooted by a crowd of laboring men employed on the new Government buildings near by, and by other persons who had congregated in Downing Street. The demonstration became so noisy that the police were finally obliged to form a double line from Mr. Balfour's house to the Foreign Office. The next day Premier Balfour issued a pamphlet on the subject of "Insular Free Trade," which he announced to be a fitting preliminary to the speech he is to make at Sheffield on October 1st. In the pamphlet he declares that he is a free trader, but not of the pattern which holds that the doctrine of free trade is so universal in its application and so capable of an exact expression that every conclusion to which it logically leads must be accepted without hesitation and without reserve. He points out that as a result of England's policy, made for a free trade country in a world of free traders, not for a free trade country in a world of protectionists, the rate of her export trade has seriously diminished. The manufacturers are, he says, handicapped in their competition with those of other countries. In regard to the Zollverein, he declares that "The most momentous, perhaps the most permanent, victory for free trade was won when rather on national than on economic grounds inter-state tariffs were forbidden in the United States." Notwithstanding the decrease in imports he still maintains that the total wealth and the diffused well-being of England are greater than they ever have been before. The pamphlet has naturally created a good deal of excitement in England, as its publication came entirely unexpectedly. A number of the better journals censure this manner of reaching the public, and especially criticise the arrangement by which the press is allowed to quote only one thousand words textually from the pamphlet. *The Outlook* esti-

mates that the profits on 100,000 copies will be more than \$17,000, and the present indications are that the pamphlet will reach a sale of one million copies. Two days after the publication of Mr. Balfour's pamphlet came a Government Blue Book of 500 pages, dealing with the various aspects of British trade and industrial conditions. The statistics show that exports from the United Kingdom to the United States declined from \$145,000,000 in 1890 to \$97,000,000 in 1902, while the imports from the United States rose from \$485,000,000 to \$635,000,000. The total exports to all foreign countries in this period declined \$90,000,000. The book points out that while the yearly imports are about \$800,000,000 in excess of the exports, this is balanced by the income from foreign investments, calculated at \$312,500,000, added to the earning of the British merchant fleet engaged in foreign trade, calculated at \$450,000,000.

Mr. Chamberlain's Resignation

The most striking event in the present political drama came on September 17th, when, late in the night, the following official statement was given out at Downing Street:

"The following Ministers have tendered their resignations, which have been accepted by the King: The Right Hon. Joseph Chamberlain, Secretary for the Colonies; the Right Hon. C. T. Ritchie, Chancellor of the Exchequer, and Lord George Hamilton, Secretary for India.

"The accompanying correspondence passed between the Premier, the Right Hon. A. J. Balfour, and Mr. Chamberlain."

Then follow two letters, one from Mr. Chamberlain, dated Birmingham, September 9th, and beginning "My dear Balfour," the other a reply from Mr. Balfour, dated September 16th. In the former letter, the Colonial Secretary, in giving the reasons for his resignation, admits that "for the present, at any rate, a preferential agreement with our colonies involving any new duty, however small, on articles of food hitherto untaxed, even if accompanied by a reduction of taxation on other articles of food equally universal in their consumption, would be unacceptable to the majority of the constituencies"

No good Government, in a democratic country can, he says, ignore such a decision, however regrettable it may be. He feels, accordingly, that there is no possibility now of bringing up successfully the question of preference to the colonies, altho there is a strong feeling in favor of the other branch of fiscal reform which would give fuller discretion to the Government in negotiating with foreign countries for a freer exchange of commodities,—thus in his language changing the suspicious term “protection” to “a freer exchange of commodities.” He goes on to say that with absolute loyalty to Mr. Balfour’s Government and with no fear of embarrassing it in any way, he feels he can best protect the cause he has at heart by working from the outside. The conclusion of the letter has rather a curious tone, coming as it does from a subordinate to his chief:

“Accordingly, I would suggest that you limit the present policy of the Government to an assertion of our freedom in the case of all commercial relations with foreign countries, and that you should agree to my tendering my resignation of my present office to His Majesty and devoting myself to the work of explaining and popularizing those principles of imperial union which experience has convinced me are essential to our future welfare and prosperity.”

In his reply Mr. Balfour says it seems paradoxical that Mr. Chamberlain, with whose ideas he is in sympathy, should be leaving the Cabinet at the same time that others of his colleagues are leaving it who disagree with them both on the subject of fiscal reform. He declares that Mr. Chamberlain has done more than any other man, living or dead, to bring home to the citizens of the empire the consciousness of imperial obligation and of the interdependence of the various members into which the empire is geographically divided. As to the imputed difference between him and Mr. Chamberlain, if this ever existed, it was only with regard to the practicability of the question. The announcement of Mr. Chamberlain’s resignation came as a complete surprise to London. Naturally the Liberals were jubilant over what they regard as a victory, while the Conservatives contemplate the event with

different emotions, according to their attitude toward Mr. Chamberlain’s fiscal policy. Since then Lord Balfour, of Burleigh, Secretary for Scotland, and Arthur Ralph Douglas Elliot, Financial Secretary to the Treasury, have resigned, making four Cabinet places and one secretaryship for the Premier to fill. The Conservatives, it is expected, will put off an appeal to the country as long as possible, and many people believe that if they are then returned to power Mr. Chamberlain will re-enter the Cabinet. *The Spectator* prophesies that Mr. Balfour, when he appeals to the country, will be beaten and that Lord Rosebery will form a Cabinet which will last, however, only for a short period.

The German Socialist Congress

Delegates to the German Social Democracy, which recently polled more than 3,000,000 votes, have just held their annual congress at Dresden. The press reports are meager and to some extent confusing. It is evident, however, that the antagonism of recent years between the “revisionists,” represented by men of the Bernstein type, and the “Auld Lights,” led by Bebel, has again resulted in a victory for the latter. The debates are declared to have been characterized by the bitterest feeling. So far as we know, none of the revisionists openly demands the elimination of the party’s declaration for a co-operative commonwealth. But the plea which they make for a greater insistence upon immediate issues naturally draws upon them the suspicion of the orthodox, who charge them with a desire to compromise the party’s historic policy and to overthrow its ideals. As in the last previous Congress, the revisionists were condemned by a large majority. World politics, militarism and the present naval and colonial policies were also condemned, and the party’s members in the Reichstag were forbidden to accept election to one of the vice-presidencies of that body—an honor to which the party is legally entitled. Perhaps the fiercest debate of the session arose over the question of the contribution of Socialist writers to non-Socialist publications. Many

of the most brilliant men of the party earn their livelihood in this manner. It does not appear that any one of these was charged with writing anti-Socialist matter, but only that by reason of their reputations they were adding to the prestige and influence of anti-Socialist publications. By a sweeping resolution, passed by a large majority, members of the party are forbidden to contribute in any manner hereafter to newspapers hostile to the Social Democracy.

Austria-Hungary Emperor Francis Joseph has just issued an order in which he denies absolutely the claim of the Magyars to use the Magyar language in the Hungarian contingent to the imperial army. The dispute over this point has been a bitter one, as every question of the kind is that comes up between the Magyar and German elements of the empire. Austria has contended that the Hungarian army is short of its full complement of men and officers, and maintains that Hungarian troops accustomed only to Magyar words of command would be a source of confusion in any campaign where imperial troops of different races fought together. Only four of the forty-seven Hungarian regiments are composed of Magyars alone. Three contain 90 per cent. of Magyars, and six contain 80 per cent. The Magyars, on the other hand, contend that the use of their language in the army would bring the other people of Hungary into sympathy with the Magyar element. The Emperor Francis Joseph, on returning from the army maneuvers September 17th, issued an order declaring that he would never consent to the demands of the Hungarian party in this matter. "I will never," he said, "give up the rights and prerogatives which are guaranteed to me as the supreme commander. United and undivided as it is, so shall my army remain." Count Hedervary, who recently resigned his place as Hungarian Premier, has just been received twice by the Emperor at Vienna, and it is said that the result of these consultations will be the formation of a new Cabinet either by Count Andrassy or De Szell. The possibility of such a

peaceful issue to the political imbroglio is due in large part to the patriotic attitude of Francis Kossuth, who forbade any street demonstration on the anniversary of his father's birthday, and declared emphatically against anything in the form of a Magyar resolution.

The Balkans As has been stated, Bulgaria, through its foreign representatives, has sent a note to the Powers setting forth the state of affairs in Macedonia, pointing out how Turkey has mobilized her whole army in a manner threatening to Bulgaria, and concluding with the statement that Bulgaria will be compelled to enter into war unless the Powers intervene to put an end to the atrocities. The note seems to have had no effect on the European Governments. Count Lamsdorff, the Russian Foreign Minister, and Count Goluchowski, the Austro-Hungarian Foreign Minister, have addressed a circular to Great Britain, France, Germany and Italy, proposing that a communication be sent to Turkey and to Bulgaria stating that neither country can expect aid from the Powers in case of war. It is also said that representatives of three of the Powers have repeated their counsel to Bulgaria to remain quiet, since she can expect no foreign aid in case of war. Another report states that England, France and Italy propose to see that order is maintained in Macedonia, but so far nothing has happened to show that this report is more than a rumor. Indeed, almost no news which can be absolutely relied on comes to us in regard to the situation in Macedonia, or to the political actions of the various Powers. The foreign office in Sofia has received what it calls trustworthy information to the effect that the Turks have destroyed the town of Kastoria, thirty-six miles south of Monastir, and have massacred the population. The details of this massacre are not known, but if the report is true this atrocity surpasses anything which has yet occurred in Macedonia, for Kastoria is a town of some 10,000 inhabitants. Through a correspondent of the *London Times*, who telegraphs from Rilo Monastery, we learn that with the Melnik outbreak the revolt has become general in Northern Macedonia, except in the

Razlog district, where it is purposely retarded. Twenty thousand revolutionaries, including children and women, are according to this report encamped on the Perim Mountains, where they have abundant stores and provisions. They reckon on nearly ten thousand fighting men in Melnik and Demir-Hissar, and are ready for any action. In estimating the forces opposed to each other, it is calculated that Bulgaria would have a total of two hundred thousand men in the field. Turkey could bring together a much larger army, but her men would not be so well organized as those of Bulgaria.

The New Revolutionary Parties in Russia

Something more
than spontane-
ous explosions

of political and economic discontent must be looked for to account for the disturbances which are now of such frequent occurrence in Russia. No one doubts that the discontent is there, deep and widespread, but all this would be in vain without men of trained ability and well-equipped organizations to manipulate and utilize the forces of disaffection. It is now known that no less than three revolutionary bodies have within a comparatively recent period taken the field against the Government. The names of the three revolutionary parties are as follows: the Russian Socialist Revolutionary party, the Russian Social Democratic party and the Liberal Revolutionary party. These parties work along varying lines and with different tactics and have diverse ultimate ideals, but they are as one in the belief in the absolute need of abolishing the existing autocracy. In 1901 the first named of these parties issued a newspaper at Tomsk, in Siberia. The secret printing press used was, however, discovered shortly after the issue of the second number. Dr. Pavloff, his wife and others concerned were arrested and dispatched to Russia, where they remained in a Moscow prison until about two months ago. Some of the prisoners will answer for their part in the movement, inspired by the conditions now prevailing in Russia, at a great trial to take place in St. Petersburg. Others have been deported to Eastern Siberia for from five to eight years. After the failure at Tomsk, the Socialist

Revolutionary party printed its paper, *Revolutionary Russia*, in Western Europe. Its publication has now been continued every two weeks for the last 18 months, and it has so large a circulation in Russia that the police have given up imprisoning for long terms those found in possession of a copy. They are generally released in a day or two if there is no other evidence against them. Another organ of the party is a serious theoretical review of about 400 pages called the *Messenger of the Russian Revolution*, which appears twice a year. A third organ is the *Cause of the People*. It is written especially for peasants and workmen, but its appearance is irregular. The fourth paper is called the *Past*. In it Shishko, the editor, prints the documents and relates the history of the past Russian Revolutionary movements. Many pamphlets have been and still are issued. One of the most successful of these was entitled "The Tsar Famine." Under the guidance and instruction of emissaries from the new revolutionary party the peasants in ever increasing numbers now gather together more frequently and systematically to consult each other. That the Socialist Revolutionary party has succeeded in stirring the peasantry to action is proved by a circular issued under the authority of M. de Plehve. This document is dated from the Ministry of the Interior, June 13th, 1903. Department of General Security. The number of this circular is 4,328. It is addressed to the Governors and the chiefs of the *gendarmes* of the various Governments. In it appears a *résumé* of what has recently been done in a revolutionary way. To the great amusement and satisfaction of the revolutionary party, the Government thus in its official circular helps to propagate subversive doctrines. Since April, 1902, much violence has been current in the carrying out of the work of the new revolutionary parties in Russia. Among the crimes chargeable to the revolutionary movement are the murder of the Minister of the Interior, Sipiaguine, by Stephen Palmascheff, the attempted assassination of Prince Obolensky by Thomas Katchour, in the disturbances which followed some 60,000 peasants participated, and the murder of M. Bogdanovitch, the Governor of Ufa.

“Strenuous Life”

BY GOLDWIN SMITH, D.C.L.

WE in Canada are not altogether free from danger of being infected with the lawlessness which is spreading through the neighboring Republic and has reached Northern States. We have a negro population, formed at the time when Canada was the asylum of the fugitive slave. Prejudice is contagious. A black member of an association was turned off the other day from a Canadian hotel, and some workmen have refused to work with a black mate. When a little girl was cruelly murdered and a black tramp was suspected of the crime, we were rather afraid that if the man was caught the people might follow a bad example and, instead of leaving justice to the law, take it into their own hands. Submission to the law in Canada has hitherto happily been complete.

We are grateful, then, to President Roosevelt on our own account as well as on the general account of humanity for his vigorous denunciation of lynching as subversive of law and civilization, and we trust that if his words have not the desired effect they will presently be followed by deeds.

To say that President Roosevelt himself had ever directly or consciously done or said anything that could possibly contribute to the existence of a reign of violence would be the height of injustice. But is it certain that he does not indirectly and unconsciously do something in that way by his constant preaching of “strenuous life”?

The assertion that lynching is confined to cases of rape and is intended to spare the injured woman the pain of appearance in court has been statistically disproved. Besides, indignation at rape would not lead to the running of a special train to see a man burnt alive. Beneath professed regard for woman lies deadly antipathy of race. But beneath antipathy of race, again, lurks lust of violence, that remnant of the savage which lingers in coarse natures and bursts out when passion and opportunity give the word; as it did in the atrocities of the

Reign of Terror, which were more cannibal than political, in the Jamaica massacre, and the other day in the outrages committed in China by the soldiery of the European Powers.

There can be no doubt that a spirit of violence is just now abroad in the world, and is manifesting itself especially in the treatment of the weaker races. Jingoism is its international phase. It presents a strange and disappointing contrast to the spirit of philanthropy, international amity and peace which seemed to be prevailing two or three generations ago, perhaps partly as a reaction of sentiment after the Napoleonic wars. It is difficult to fix upon the cause of this sudden recrudescence. It may be the prevalence of physical theories of evolution by survival of the fittest, the fittest being taken to mean the strongest—which it does not, so far as the human race is concerned. It may be the loosening, under the erosive influence of science and criticism, of belief in Christianity and the Christian brotherhood of man. “I am sick,” said a politician, the other day, “of this turning of the other cheek business.” He probably did not think whence his words were taken, but he gave expression to a feeling not confined to himself. It does not seem certain that in the present temper of the British people the abolition of slavery would be carried. Emancipation was mainly the work of the evangelical party and closely connected with their religion. It is not for an English writer to speak to Americans about the matter of the Philippines. But no one who reads American newspapers can fail to have come across language at variance not only with Christian principle but with what has hitherto been deemed ordinary morality. “Anyhow we’ll do it,” has been the tone.

Now, is there not some reason to fear that President Roosevelt, with his great influence upon opinion, may be indirectly and unconsciously flattering this spirit by his constant preaching of a “strenuous life” and denunciation of what he designates as weakness. By strenuous

life he no doubt means something noble and heroic—the life, in a word, of a valiant Rough Rider. By weaklings we may assume that he means people whose character is weak and contemptible. But men of a nature inferior to his may be apt to fancy that submission to moral restraints is weak, and that strenuousness is shown in hustling your neighbor, and if he demurs, treating him with the watercure or burning his farm.

Some men have been detailed by nature as Rough Riders. Let us acknowledge their services and pay them the honor due. But the mass of us are destined to a life not “strenuous,” but devoted to the quiet earning of our bread and performance of our social duties. We are not a herd of animals crowding each other, but a co-operative community of men.

After all, in the history of civilization, have not the greatest effects been produced by men whom President Roosevelt, had he come across them personally, might have been apt to class among weaklings and deem unworthy of his notice? What affinity to the Rough Rider have the leaders of science, literature and religion, who assuredly have done as much as the warrior to promote and direct the progress of mankind? Nay, the Founder of Christendom, who for so many ages has been casting the world in his own mold—would he, to the outward observer, have appeared “strenuous”—would he not have appeared weak?

On the other hand, the appearance of strenuousness is not seldom affected by those who are really among the weakest of the weak. At the time of the repression of the Sepoy mutiny, and again at the time of the Jamaica massacre, no yells for blood were louder than those of some literary eunuchs.

The literary prophet of strenuousness is Carlyle. I yield to nobody in recognition of the brilliancy of his literary genius and the new life which it gave to the writing of history, tho his hero worship exceeds all measures of reason, and the moral paradoxes of his later works, especially of his Frederick the Great, are astounding in themselves and are clearly at variance with the teachings of “Sartor Resartus.” Nor would I fail to acknowledge the good which he did in rebuking the excesses and the self-complacency of democracy, extravagantly cynical as his rebukes are, for it is not true that the thirty millions are mostly fools, that they have no power of self-guidance, and can be kept right only by despotic rule. But since the publication of Carlyle’s papers by a too faithful friend the inner man has been laid open to us; we see much that is not only interesting, but fine; yet we surely also see plainly enough that we should hardly have been following genuine strength any more than we should have been following deliberate wisdom in surrendering ourselves to the teaching of Carlyle.

TORONTO, CANADA

Watching the Ships

BY ERNEST NEAL LYON

THESE wingéd sea-birds outward slip,
Neath twilight skies.
I view them,—with a trembling lip,
And wistful eyes.

O happy sails! For you attain
Your bright Cathay.
The harbors of my hope remain
A dim Someday.

A face I loved is lost in mist
Of falling tears,
And where are lips, with laughter kissed,
O robber years?

The ships depart,—joy-confident
Of ports to be.
Shall I await,—in like content,—
The Ebbing Sea?

BROOKLYN, N. Y.

The True Life Story of a Nurse Girl

BY AGNES M.

[The only assistance given Miss Agnes M. by the representative of 'THE INDEPENDENT, who interviewed her, was in the asking of the questions and in the literary construction. Otherwise, her story goes to the reader just as she herself told it.—EDITOR.]

I WAS born just twenty years ago in the old, old city of Treves, in what was once France, but is now Germany. There were eight children in our family, five girls and three boys, and we were comfortably off until my father died, which happened when I was only three years old.

My father was a truckman, carrying goods from the railway stations to the shops; he had a number of wagons going and had built up a good business, tho he was always ill from some disease that he contracted when a soldier in the war with France. It was consumption, I believe, and it finally carried him off. We were living at the time in a fine new house that he had built near the Moselle, but we were soon obliged to move, because tho my mother was a good business woman, every one robbed her, and even my uncle made the mortgage come down on our house without telling her—which she said was very mean.

By the time I was five years old my mother had lost everything except the money she got from the Government, which was enough to keep her, but the family had to break up, and I went away to a school kept by Sisters of Christian Liebe, in another city. The Government paid for me there on account of my being a soldier's orphan—all of us children had allowances like that.

From the time I went away to that school till I was fifteen years of age I did not once see my mother, but stayed in school during all the holidays. But in spite of that I was not sad. It was the pleasantest time of my life, and I often wonder if I shall ever be as happy again.

The school was for Catholics, and I was glad I was a Catholic it was so good to be there; and I heard that at the school to which the Lutheran children went the teachers were very severe. However

that might be, our Sisters were among the kindest women that ever lived and they loved us all dearly.

Every one at the school made much of me because I was so little—a gay little thing with fuzzy, light hair and blue eyes, and plenty to say for myself and a good voice for singing. I learned quickly, too, and when play time came I played hard.

We got up at half past six o'clock each morning, and had mass three times a week and morning prayer when there was no mass. At eight o'clock school began and lasted to ten, when there was half an hour for play, then an hour more school, then more play and then lunch, after which we worked in the garden or sewed or sang or played till six o'clock, when we had dinner, and we all went to bed at eight. We did not always go to sleep tho, but sometimes lit candles after the Sisters had gone away and had feasts of apples and cakes and candies.

There were about eighty boys in this school and fifty-five girls—none of them older than fifteen years. We had a very large playground, and tho the boys and girls were kept separate they yet found means of conversing, and when I was eleven years of age I fell in love with a tall, slim, thoughtful, dark-haired boy named Fritz, whose parents lived in Frankfort. We used to talk to each other through the bars of the fence which divided our playground. He was a year and a half older than I, and I thought him a man. The only time I was ever beaten at that school was on his account. We had been talking together on the playground; I did not heed the bell and was late getting in, and when the Sister asked what kept me I did not answer. She insisted on knowing, and Fritz and I looked at each other. The Sister caught us laughing.

Whipping on the hands with a rod was

the punishment that they had there for very naughty children, and that is what I got. It did not hurt much, and that night at half past nine o'clock, when all the house was still, there came a tapping at our dormitory window, and when it was opened we found Fritz there crying about the way I had been whipped. He had climbed up one of the verandah posts and had an orange for me. The other girls never told. They said it was so fine and romantic.

Fritz and I kept up our friendship till he had to leave the place, which was when I had grown to be nearly thirteen years of age. He climbed to our dormitory again to bid me good-by, and tell me that when I was free from the school he would seek me out and marry me. We cried together as he told me his plans for being a great man, and all that night and the next night, too, I cried alone; but I never saw him again, and I'm afraid that his plans must have miscarried.

When I was fifteen years of age I left school and returned to my mother, who was then living in a flat with some of my brothers and sisters. Two of my brothers were in the army and one of my sisters was in America, while another sister was married in Germany.

I did not like it much at home. My mother was almost a stranger to me, and after the kindness of the Sisters and the pleasantness of their school she seemed very stern.

I went to work for a milliner. The hours were from eight o'clock in the morning till six in the evening, but when there was much business the milliner would keep us till nine o'clock at night. I got no money, and was to serve for two years for nothing as an apprentice.

But the milliner found that I was already so clever with the needle that she set me to work making hats and dresses after the first two weeks that I was working for her, and when I had been there six months I could see that I had nothing more to learn in her place and that staying there was just throwing away my time.

Needlework seemed to come naturally to me, while I disliked cooking and was not much good at it. My two elder sis-

ters, on the other hand, were stupid at sewing and embroidery, but master hands at cooking. My eldest sister was such a good cook that her husband started a restaurant so that she might have a chance to use her talents; and as for my second eldest sister, within two months after she landed in America—where she was sent by my eldest sister—she was earning \$35 a month as a cook for one of the rich families.

My sister in America sent money for my eldest brother to go to her when his time in the army was done. We were all glad to see him go, because he had been a sergeant and was so used to commanding that he tried to command everybody he met. He even tried to command me!

Such ways won't do outside of the army. Another thing that we disliked was that, having been a sergeant, he was too proud to work, so we were glad to see him go to America. He lived for awhile by borrowing money from my sister till she got married to a mechanical engineer, who would not have him about the house when he heard of his actions.

So he had to do something, and became a butler, and a very good one, too, making plenty of money but spending it all on himself. He is employed by a family on the east side of Central Park now, getting \$60 a month. When I went to see him a year ago he pretended that he did not know me. He has also forgotten my sister who helped him to come out here, and he has never sent a dollar to mother.

I heard about how easy it was to make money in America and became very anxious to go there, and very tired of making hats and dresses for nothing for a woman who was selling them at high prices. I was restless in my home also; mother seemed so stern and could not understand that I wanted amusement.

I was not giddy and not at all inclined to flirt, but I had been used to plenty of play at the school, and this all work and no play and no money to spend was hard.

If I had been inclined to flirt there was plenty to do in Treves, for the city was full of soldiers, young fellows who, when they wore their uniforms, thought that a girl could not fail to be in love with them; but they made a mistake when they met me. They used to chirrup after

me, just like birds, but I would turn and make faces to show what I thought of them—I was not quite sixteen then.

There were officers there, too, but they never noticed me. They belong to the high families, and go about the streets with their noses up in the air and their mustaches waxed up, trying to look like the Emperor. I thought they were horrid.

I grew more and more tired of all work and no play, and more and more anxious to go to America; and at last mother, too, grew anxious to see me go. She met me one night walking in the street with a young man, and said to me afterward:

“It is better that you go.”

There was nothing at all in my walking with that young man, but she thought there was and asked my eldest sister to lend me the money to go to America to my second eldest sister, and a month later I sailed from Antwerp, the fare costing \$55.

My second eldest sister with her husband met me at Ellis Island and they were very glad to see me, and I went to live with them in their flat in West Thirty-fourth street. A week later I was an apprentice in a Sixth Avenue millinery store earning four dollars a week. I only paid three dollars a week for board, and was soon earning extra money by making dresses and hats at home for customers of my own, so that it was a great change from Germany. But the hours in the millinery store were the same as in Germany, and there was overtime, too, occasionally; and tho I was now paid for it I felt that I wanted something different—more time to myself and a different way of living. I wanted more pleasure. Our house was dull, and tho I went to Coney Island or to a Harlem picnic park with the other girls now and then, I thought I'd like a change.

So I went out to service, getting twenty-two dollars a month as a nursery governess in a family where there were three servants besides the cook.

I had three children to attend to, one four, one six and one seven years of age. The one who was six years of age was a boy; the other two were girls. I had to look after them, to play with them, to take them about and amuse them, and to teach them German—which was easy

to me, because I knew so little English. They were the children of a German mother, who talked to them in their own language, so they already knew something of it. I got along with these children very well and stayed with them for two years, teaching them what I knew and going out to a picnic or ball or something of that sort about once a week, for I am very fond of dancing.

We went to Newport and took a cottage there in the summer time, and our house was full of company. A certain gentleman there once told me that I was the prettiest girl in the place, with a great deal more of the same sort of talk. I was dressed in gray, with white insertion, and was wearing roses at the time he said that. He caught me passing thro the parlor when the others were away. Of course I paid no attention to him, but it was early in the day. It was generally late in the evening when gentlemen paid such compliments.

I enjoyed life with this family and they seemed to like me, for they kept me till the children were ready to go to school. After I left them I went into another family, where there were a very old man and his son and granddaughter who was married and had two children. They had a house up on Riverside Drive, and the old man was very rich. The house was splendid and they had five carriages and ten horses, and a pair of Shetland ponies for the children. There were twelve servants, and I dined with the housekeeper and butler, of course—because we had to draw the line. I got \$25 a month here and two afternoons a week, and if I wanted to go any place in particular they let me off for it.

These people had a fine place down on Long Island to which we all went in the summer, and there I had to ramble around with the children, boating, bathing, crabbing, fishing and playing all their games. It was good fun, and I grew healthy and strong.

The children were a boy of ten and a girl of eight years. They were restless and full of life but good natured, and as they liked me I would have stayed there till they grew too old to need me any more, but that something awful happened during the second summer that we were spending on Long Island.

It was one night in June, when the moon was very large and some big stars were shining. I had been to the village with the housekeeper to get the mail, and at the post office we met the butler and a young man who sailed the boats for us. Our way home lay across the fields and the young man with me kept stopping to admire things, so that the others got away ahead of us.

He admired the moon and the stars and the sky, and the shine of the water on the waves and the way that the trees cast their shadows, and he didn't seem to be thinking about me at all, just talking to me as he might to any friend. But when we walked into a shadowy place he said:

"Aren't you afraid of catching cold?" and touched my wrap.

"Oh, no," I said.

"You had better draw that together," said he, and put his arm about it to make it tight. He made it very tight, and the first thing I knew he kissed me.

It was done so quickly that I had no idea—I never saw a man kiss any one so quickly.

I gave such a scream that one could hear it a mile and boxed his ears, and as soon as I could tear myself away I ran as fast as I could to the house, and he ran as fast as he could to the village.

I was very angry and crying. He had given me no warning at all, and besides I did not like him enough. Such impudence! But I probably would not have said anything about the matter at the house, but that the next day all the people in the village were talking about it, and some of them had the mistress in my place. She heard of it and called me in, and I told her the truth; but she seemed to think that I could help being kissed, and I grew stubborn then and said I would not stay any more.

I am of a very yielding disposition when coaxed, and anything that I possess I will give away to any one who persists in asking me for it. That's one of my faults; my friends all tell me that I am too generous. But at the same time, when treated unjustly, I grow stubborn and won't give way.

And it was unjust to blame me for what that young man did. Who would have thought he would dare to do such a

thing as kiss me? Why, he was only the young man who sailed the boat! And as to my screaming so loudly. I could not help it; any girl would have screamed as loudly if she had been kissed as suddenly.

I went back to my sister's house in New York after I left this place, and stayed there a month resting. I had been nearly four years in the country, and in spite of sending \$6 a month to mother during all that time and sending money to bring my second eldest brother here I had \$485 in the savings bank.

A girl working as I was working does not need to spend much. I seldom had to buy a thing, there was so much that came to me just the least bit worn.

After I had rested and enjoyed a holiday I secured another situation, this time to mind the baby of a very rich young couple. It was the first and only baby of the mistress, and so it had been spoiled till I came to take charge. It had red hair and green eyes, and a fearful temper—really vicious.

I had thought that the place would be an easy one, but I soon found out that this was a great mistake. The baby was eighteen months old, and it had some settled bad habits. The maid and its mother used to give it its own way in everything.

"It won't go in the carriage," said the maid to me when I first took charge.

"It will with me," said I.

"It sleeps all day and cries all night," said the maid.

"It's been spoiled by getting its own way, that's the trouble," said I.

So I put it in the carriage and took it out to Central Park, in a shady place down by the lake. It fought and struggled and howled as if it would like to kill me, but I had brought a good book and I paid no attention to it.

It had an orange, a bottle of milk and some cakes, and threw them all away. I didn't even look at it. It cried for nearly four hours steadily, but we had the place to ourselves and I didn't mind.

When I was good and ready I took it to the restaurant and gave it a little ice cream, for I knew that it was sure to be hot and thirsty. I was sorry for doing that, however, because it cried and fought me again when I put it back in the car-

riage. It wanted me to carry it all the way in my arms, which I was determined not to do.

So the first day that I had it in charge the baby did not get any sleep, and was good and tired when its proper bedtime came. The maid told me that it would not go to sleep without being rocked; but I said that I was in charge of that baby now and it would have to give up its crankiness. I put it to bed and it did not wait for any rocking; it went right off to sleep.

The mistress came in and said that I was a clever, good girl, and she was sure that I would get along finely with the baby—that all it needed was some one who understood and sympathized with it. She also said that it looked like a little angel. I wondered at her taste in angels.

Next day I carried the baby out to the park again for another lesson. It was in a dreadful temper, and when it was being dressed it beat the maid. It used to slap its mother and the maid in the face, but it never treated me in that manner. I would not allow it. I would hold up my finger and say, "B-a-a-a-a-by!" and it would understand and stop. It saw something in my eye that made it keep quiet. I have great influence over children.

We went down by the lake again that second day, and I read a good German book and let the baby rage. When it was crying it could not be sleeping, and it was far better to have it cry in the daytime than at night, when it disturbed the whole house.

The baby threw everything out of its carriage, even its coverlets and pillows, and tried to fall out itself, but it was tied in. It cried till it exhausted itself inventing new ways of screaming. I sat at a distance from it, so that its screaming would not annoy me too much, and read my book till it had finished. Then I went and got some ice cream for myself, and gave the baby very little. I wanted to teach it to do without things. It had been in the habit of getting everything it cried for, and that had made it hard to live with. That night, again, the baby went to sleep without rocking, and the young mother was much pleased with my management and gave me a nice silk waist.

Day after day we went on like that. I took the baby some place where it could have its cry out without disturbing anybody, and I didn't allow it to sleep in the daytime, and so had it good and tired when night came on and other people wanted to sleep. It never failed to cry and struggle and throw its toys and food away, to show its rage, but I would have made a good baby of it had it not been for the mother and the maid. When I wasn't on hand they spoiled it by giving it all its own way. Even when I was on hand the mother was constantly running into the room and petting the baby. At its slightest cry she would come to see what it wanted, and hold things up for it to choose.

This made discipline impossible, and in the end the baby was too much for me. I was made to carry it about, and to get up and walk with it in the night, and at last my health broke down and I actually had to go to a hospital.

When I got out I stayed at my sister's for a month, and then went as a nursery governess in a family where there are three children, none of them over eight years of age. I have to teach them their lessons, including German, and to take them out driving and playing. I have recovered my health, but I will never again undertake to manage a strange baby. The duties are light; I have two afternoons a week to myself and practically all the clothing I need to wear. My salary is \$25 a month.

Wherever I have been employed here the food has always been excellent; in fact, precisely the same as that furnished to the employers' families. In Germany it is not so. Servants are all put on an allowance, and their food is very different from that given to their masters.

I like this country. I have a great many friends in New York and I enjoy my outings with them. We go to South Beach or North Beach or Glen Island or Rockaway or Coney Island. If we go on a boat we dance all the way there and all the way back, and we dance nearly all the time we are there.

I like Coney Island best of all. It is a wonderful and beautiful place. I took a German friend, a girl who had just come out, down there last week, and when we

had been on the razzle-dazzle, the chute and the loop-the-loop, and down in the coal mine and all over the Bowery, and up in the tower and everywhere else, I asked her how she liked it. She said:

"Ach, it is just like what I see when I dream of heaven."

Yet I have heard some of the high people with whom I have been living say that Coney Island is not tony. The trouble is that these high people don't know how to dance. I have to laugh when I see them at their balls and parties. If only I could get out on the floor and show them how—they would be astonished.

Two years ago, when I was with a friend at Rockaway Beach, I was introduced to a young man who has since asked me to marry him. He is a German from the Rhine country, and has been ten years in this country. Of course he is a tall, dark man, because I am so small and fair. It is always that way. Some of our friends laugh at us and say that we look like a milestone walking with a mile, but I don't think that it is any of their business and tell them so. Such things are started by girls who are

jealous because they have no steady company.

I don't want to get married yet, because when a girl marries she can't have so much fun—or rather, she can't go about with more than one young man. But being engaged is almost as bad. I went to the theatre with another young man one night, and Herman was very angry. We had a good quarrel, and he did not come to see me for a week.

A good-looking girl can have a fine time when she is single, but if she stays single too long she loses her good looks, and then no one will marry her.

Of course I am young yet, but still, as my mother used to say, "It's better to be sure than sorry," and I think that I won't wait any longer. Some married women enjoy life almost as much as the young girls.

Herman is the assistant in a large grocery store. He has been there nine years, and knows all the customers. He has money saved, too, and soon will go into business for himself.

And then, again, I like him, because I think he's the best dancer I ever saw.

NEW YORK CITY.

Politics in the Philippine Islands

BY T. THOMAS FORTUNE

[Mr. Fortune is editor of *The Age*, the leading Afro-American paper of the Northern States, and has been active on all race questions. He was sent by President Roosevelt on a Commission to visit our new Colonial possessions, and has lately returned from this mission. The nature of his report our readers can gather from this article.—EDITOR.]

THE Philippine Islands is the last place that an American would expect to find a political atmosphere as dense as that of Tennessee or Kentucky, governed by similar partisan ethics and morality, with race hatred and personal vituperation dominating the discussion in the public prints and determining the administration of civil and military affairs; and yet such was the condition of affairs at Manila when I arrived there in February last. I reached the Oriente Hotel late at night. Soon after going to my room the American

porter placed on my table a large batch of Manila newspapers, saying that he had saved them against the day of my coming and that he was sure I would find many things in them to interest me. I scanned the papers leisurely, and became more and more surprised to find that the Afro-American, and misrepresentation and abuse of him, occupied such a disproportionate amount of the editorial and news columns of the papers. But such was the case.

The fact that I had been in the Territory of Hawaii for some time and was

expected in the Philippine Islands was, in the main, the provocation, if not the sufficient excuse, for this attitude of the editorial mind and temper. One newspaper called upon the American residents of Manila to invite me not to leave the steamer on which I should arrive, but to return to the United States, as I, or any other Afro-American, was not needed or desired in the Philippine Islands.

All of this was strange and shocking to me, who had been received with open-armed hospitality and courtesy by the descendants of New England missionaries in the Territory of Hawaii, who had planted there a civilization based on the Christian virtues in which race prejudice had no part—in State, Church or society—and in which the resources of the Territory have been so developed as to represent millions of dollars in negotiable assets. Wherever I went in Hawaii I was received and respected as an American seeking to learn about the country, its resources and its people, and every possible assistance and courtesy was extended to me in my quest. But at Manila I found that the daily press, voicing public opinion in its business and civil relations, as I found later, was hostile to me and the people with whom I am allied wholly in sympathy, if only partially in consanguinity.

What indefinable force was there in the atmosphere created by New England culture, thrift and fair dealing in Hawaii which made me feel, all unconsciously, buoyant and self-reliant, even as I gazed out upon Honolulu through the palms and other tropical growths that embowered the Royal Hawaiian Hotel before penetrating beyond, while a feeling of numbness and indecision possessed me on my first morning in the treeless metropolis of the Philippine Islands? I have been possessed by the same feeling in going out of the free atmosphere of New York into the prejudiced air of Washington or other Southern cities.

When the morning came I went forth to mingle in the life of Manila, and thereafter for some thirty days I was constantly on the go, in high and low places, in all sections of the great city, seeking to learn what there was in it of thought

and feeling and activity; and, again, after forty days in the provinces of northern and southern Luzon, for thirty days more I haunted the places in Manila where people thought and did things, where they lived and labored and worshipped and chased the mad phantom of diversion and pleasure; and, wherever I went, among Americans—in civil, military, business and social life—I was confronted with coldness of manner, *hauteur* and curtness of speech, and nervous impatience not induced by the perpetual heat and humidity. Only among Filipinos, Chinese and Afro-Americans did I find warmth of manner, uniform courtesy and an obliging disposition.

And what a different person is the Chinese we hear of and read of from the Chinese we know and understand, and who knows and understands us. The Chinese are among the best and most sympathetic and reliable people that I met in the Philippine Islands; albeit law and public opinion have marked them as victims. Behind the average Chinese stolidity and taciturnity, if you can penetrate it, there is a real man of flesh and blood, who has learned "to labor and to wait," who can laugh and be merry, who can love and hate. Some day the world will learn his real character and cease to make him the object of extortion and ostracism.

A close study of the peculiar conditions growing out of the American conquest and occupation of the Philippine Islands enabled me to resolve the population into three distinct political groups, as follows:

1. The Philippines for the Filipinos, composed of the entire body of natives, who regard Governor W. H. Taft as their patron saint, and who gave him such an ovation on his return from the United States, by way of Europe, last year as no other man had ever received before, and in which very few Americans not connected with the public service participated.

2. The large percentage of the American residents, some 6,000 in number, who want the Philippine Islands governed in their interest, and not that of the Filipinos; who want to monopolize all the best offices in the civil and military establishments, excluding as far as pos-

sible Filipinos and negroes; who insist that the Chinese be allowed to enter the islands without restrictions as manual laborers, under contract at ruling Oriental wage rates, with which no other labor force in the world can compete; and who demand that the land, mineral and forestry laws shall be so revised as to enable them to exploit the resources of the islands on the largest possible scale. This political group is dominated in its attitude and sentiment by Southern white men, who remained in the islands after the volunteer regiments were disbanded, mostly Tennesseans and Kentuckians, and by an abnormally large number of Southern white men who were appointed to high civil and judicial positions by President McKinley, who had a fatal weakness for appointing Southern Democrats to controlling positions in the civil and military establishments in the insular possessions. This group, by far the most noisy and insolent, if not the strongest, in the islands, dominates the civil, military, business and social life in Manila, at least, and is backed up by all the American publications, some ten in number, except three—the *Cablenews*, the *Daily Times* and *Justice*—and is rancorously malignant against the Taft administration and the policy of the Republican party in the United States, and especially the party's alleged "open door of opportunity" for Afro-American citizens, whom they would keep "in their places," together with the Filipinos, as "hewers of wood and drawers of water." These Manila newspapers are as violently Democratic and race-hating as those of Memphis or Atlanta. This group regards Vice-Governor Luke E. Wright, of Tennessee, as its political Moses; and, when I was in Manila it preached from the house-tops its hope for the time when Governor

Taft should be recalled and Vice-Governor Wright should succeed him. When the latter returned from the United States, in May last, the white Americans gave him an ovation such as was never before seen in the Orient. Very few unofficial Filipinos or negroes took any part whatever in the demonstration, and Governor Taft was absent, recuperating in the mountains of Benguet. Stranger far than fiction, General Wright has been slated by President Roosevelt to be Governor of seven million people, whose language he does not understand, whose hopes and aspirations he cannot share, and who comes of that element of the American people which cannot successfully govern others because it has not first learned to govern itself.

3. A considerable number of the best Filipinos, who have accepted American control as a fixed fact and wish to make the most of it; a few white Americans and Europeans, engaged in legitimate business enterprises; and all of the American negroes in the islands, some three hundred, mostly discharged soldiers—employees of the Government, business men and manual laborers—who believe that the Philippine Islands should be governed in the interest of all the people, native and foreign born, with justice for all and special favors for none. This minority group has no acknowledged leader and no newspaper organ, but it will and should, I believe, become the dominant political power in the Philippine Islands. In it lies the only hope for a harmonious and prosperous condition in the politics and social and business life of the Islands that I could discover, growing out of the regnant condition of confusion, distrust and commercial and agricultural prostration.

NEW YORK CITY.

The Newspaper Poet—His Trade

BY W. D. NESBIT

[Mr. Nesbit is the "funny man" of the *Chicago Tribune*, and, as our readers will remember, has twice before written for us on the trade of the newspaper joke-maker.—EDITOR.]

IT is quite probable that if we could go back into the history of the majority of the newspaper poets of to-day we should find them to have been the boys who could rattle off a couplet about the school teacher or improvise a quatrain on the subject of the "terrible example" of the village having been arrested again. This trait may have been discovered by the editor of the village paper, who viewed it more kindly than the school teacher, and then the columns of the paper would be brightened periodically by rimes on local happenings. Twenty years ago, the writer remembers, a village paper rose nobly to an occasion. A waggish painter, at work on a high ladder, "accidentally" upset a bucket of paint on the local busybody. The entire poem escapes recollection, but the concluding stanza ran thus:

"The paint came down in awful flood,
And made of him a sandwich.
It gave his clothes a ruddy hue
And colored all his language."

We might carp somewhat at the attempt to rime "sandwich" with "language," but we should remember that a country village does not afford the facilities of a larger city, where literary work has wider scope. And, just as people like to see some local event turned into verse, so do they enjoy reading a few stanzas on some happening of national or international importance. However, the newspaper poet does not, and need not, confine himself to the news of the day for his subjects. He may produce either serious or humorous verse along general lines. Doubtless he will find that the constant watch for ideas in what is going on about him will give him newer views on mankind and life. Then, if he has it in him to develop materially, he could ask no broader avenue along which to progress. If he succeeds in catching the popular vein, as concentrated in the eyes and minds of some

twenty-five exchange editors, he will have the happiness of seeing his verses copied widely. Otherwise, he may rest content with the approval of the circle of readers possessed by his paper. The exchange editors of the other papers are a great help to him, tho. The public does not realize that these trained handlers of newspapers have so much to do with the selection of its popular poems. Yet one exchange editor, by clipping a comparatively obscure poem, has thus set the pace for his fellows, and in the end has given a modicum of fame to a writer.

Rudyard Kipling and James Whitcomb Riley are the most conspicuous examples of living newspaper poets. Mr. Kipling continues to give his poetic work to the world through the newspapers first. Mr. Riley, after beginning his career on the *Indianapolis Journal*, has earned the ease and luxury which he now enjoys. Mr. Kipling began in India, Mr. Riley in Indiana—and there is a chance for some one to elaborate upon the idea that the addition of one syllable puts half a world between two people. Neither of these men went farther than his elbow for his inspiration. Mr. Riley said, not long ago, to the writer: "Once, when I was a great deal younger and was filled with the joy of writing, I said to a friend: 'I believe, honestly, that I could write a poem every day for a whole year.' He thought then, and I presume I did, too, that I was overestimating my capacity. But look what the newspaper poets do now. A poem a day—or two or three poems—is easy work for them."

But not many of them are writing "In the Night," "Good Bye, Jim," "An Old Sweetheart," or "Old Glory" every day.

The man who takes up the writing of newspaper poetry as a means of gaining a livelihood is going into a profession which is pleasant some days and extremely discouraging on others. There will be days when he will find so many

ideas that he will not know which one to use. Again—on the other days—the world will be barren of suggestion, and his brain seemingly on a vacation. Then he is fortunate if he has had the forethought to keep something in reserve. It is the “dry” day that ends the career of the beginner. Sometimes it is amusing to watch the course of a new man in the newspaper poetry field. At other times it has its element of sadness. For a week or two his work is pleasant. He is using all the good ideas he has been aching to see in print. Pretty soon, tho, he reaches the end of them; then it comes harder. At last he grows so discouraged that he cannot remember that when all else fails, the coal man, the janitor, the iceman or housecleaning are always with us. He pauses to reflect. “Good heavens!” he muses. “I’ve got to write this much stuff for to-morrow, and for the next day, and the next. Why, a year from to-day I’ll be at the same old grind!” He quits. He has failed to weather that mental storm wherein a man permits himself to think of a whole year’s work instead of only one day’s. Sufficient unto the day is the evil thereof, and there is no use bothering over what must be fretted about in due turn.

As a general thing, the first work a man turns out is reasonably sure to be in dialect. The beginner is prone to believe there is a public clamor for dialect verse. So he produces something which combines sentiment and humor under some such title as “Th’ Ol’ Fence Corner,” whether or not he has ever seen a stake-and-rider fence. Or he will attempt German or Irish dialect, in the latter using “Oi” for “I,” and making the former as Weberfieldian as possible. The stage is to blame for our mistakes in dialect. A man who would devote his life to composing dialect verse should never go to the theater. No Irishman ever said “Oi” for “I,” unless he was a made-up imitation behind the footlights. Also the counterfeit stage darkey must bear the blame for the alleged negro dialect we get at times. Burnt cork—ever on a colored man—spoils his flow of language and gets him away from his racial peculiarities of speech. After a while the beginner at newspaper poetry-making

finds that there are other lines he can handle better.

To come down to a work-a-day consideration of the newspaper poet and his trade, it may be well first to consider how he gets his ideas. He must produce a regular grist of “stuff,” and he must find something to write for that grist. He reads the newspapers, the magazines, the weeklies, the show bills, the advertising cards—he reads everything that may hold a thought for him. There are subjects everywhere in the newspaper, even in the advertisements. The trouble usually is that a man never sees them until the next day. His is a wider field than that of the cartoonist, but against that advantage is the point that while the cartoonist uses only one idea a day, he must find several. So he patiently goes over the field, beginning with the telegraph news and ending in the police news. Perhaps some one has said something in an interview which permits of being treated with good natured raillery. Or it may be the other way about. Some public man may have said something he should not have said—something which is sure to be misconstrued. This is the newspaper poet’s cue. He goes ahead and misconstrues it. Often he misconstrues it before anybody else does, but that, as the Texan statesman remarked, is “what he is there for.” As an example, the following verses may be quoted, the writer begging modestly to explain that he uses them as an illustration simply because he has no fellow-laborer’s work within reach:

“ME AND MY FRIENDS.”

(Mr. Baer says that coal will advance in price again. Asked why the price had not been reduced, he said: “Because you and your friends have succeeded in raising wages and getting up the cost of necessities, so that profits are less.”)

You and your friends had to come and stick
your old proboscises
Into all our business and criticise its processes;
Had to come and quiz us on our dealings
carboniferous,
Then go saying wicked things in language
most vociferous—
Now, see what me and my friends
Do to you and your friends.

You and your friends had to go and utter
things calorified—
Things about our deals that left me and my
friends horrified;
Had to egg our workers on until there was no
pleasing them
Other than to make their wages suit them by
increasing them—
Now, see what me and my friends
Do to you and your friends.

You and your friends spoke of our divine
rights disrespectfully.
Treated all our edicts and all our rules neglect-
fully.
Now it's our turn—wait until winter time's
frigidity;
Prices will be climbing up with intense
rapidity.
Then see what me and my friends
Do to you and your friends.

No doubt this was considerably more
than Mr. Baer meant, but just at that
time the average coal consumer was in
a mood to appreciate anything which
turned his thoughts from his yawning
furnace.

Then there are the politicians. In the
news columns of the papers they scarcely
begin to tack "Hon." to a man's name
before the staff poet has put him, or his
actions, or his words, in a poem. There
are, too, the scientists, the college pro-
fessors, the health culture faddists, the
religious disputers, the germ discoverers
—all of them are prolific of inspiration
for the man, who, like the rabbit that
climbed the tree, "has to do it." Some-
times the food enthusiasts suggest such
a literary output as this:

THE SCIENTIFIC LIFE.

("Before the breakfast has been prepared,
or after it has been served and eaten, the
housewife should add up the different amounts
of proteid, fat and carbon hydrate found in
the foods. The computing cards should be
used at each meal. In the evening you can
find out whether you have taken too much of
one kind of food or not enough of another.")—
MARY MOULTON SMITH.)

Mother's slow at figures, but she always has
to count
The proteids to see that we secure the right
amount.
She keeps a pad of paper and a pencil near the
sink,
And estimates our victuals—all the things we
eat or drink.
She lists our carbon hydrates and she scrib-
bles down the fat,

And our specific gravity—she always watches
that.

Mother's slow at figures, but she wants to do
her best.
She's listened to the lecturers until she is pos-
sessed
Of scientific demons and a regulating card—
And while she chews her pencil all the eggs
are boiling hard.
She gets bewildered with it, and she has to
balance up
And the coffee is so sturdy that it almost
cracks the cup.

Mother's slow at figures—so our breakfast's
always late;
The proteids and hydrates make the task for
her too great.
We never get a luncheon, for she figures on
till noon,
And finds we've overdone it, and that almost
makes her swoon.
Mother's tabulating every pennyweight we
eat—
Except the meals we smuggle from the res-
taurant down street.

But it need not all be gentle ridicule or
ribald burlesque. Humor and pathos are
close kinsfolk. Often it seems that they
are variations of the same sentiment, and
to a great extent depend upon the force
or softness with which one chord is
struck. With all the buffoonery, one
should avoid pessimism or cynicism. It
used to be the thing to be bitterly sar-
castic. But the public has gone away from
that. People can furnish their own pes-
simism. Consequently they do not buy
papers to have a column of it thrust
upon them. Just so with overdone opti-
mism. It is all right to slap a man on the
back once in a while, but keep it up con-
stantly and he will dodge when he sees
you coming. If one observes what work
of his is clipped and copied by the ex-
change editors he will get a fairly correct
impression of the sort of matter the pub-
lic demands. How the exchange editors
know it is too deep for one to compre-
hend, but it is a fact. The main thing
is to be good natured. A good natured
man cannot help writing his good nature
into his work. Conversely, if he tries to
write good naturedly he will unconscio-
usly instill that blessed attribute into him-
self, and be all the better for it.

In the matter of sentiment, one never
goes far wrong when he touches upon

boyhood memories. It would seem that all men have lived in the same fields and towns. When the morning papers bear no fruit, when even the trusty notebook yields no suggestion that induces work—when even the work itself has temporarily lost its charm—such a thing as a railway advertisement of vacation excursions may help out. Thus:

“SOMEWHERE.”

Somewhere the roses are brave and red;
And apple blossoms are sweet and spread
A wistful perfume that scents the day
And clings to zephyrs that croon away
When night comes slowly and bids them stay.
A wondrous fragrance the blossoms bear—
And wouldn't you like to be there?

Somewhere the meadows are stretching green,
As clear as jewels, and soft and clean,
With dandelions in spangled show
That nod and beckon when breezes blow,
Somewhere the meadows—But don't you know
The tone and tang of the bracing air?
And wouldn't you like to be there?

Somewhere there reaches a country road,
With crickets chanting a twilight ode;
And bending branches to paint a shade
Where moonbeams glimmer and gleam and
fade,
And will-o'-the-wisps in the distance wade.
Somewhere the fire flies flash and flare—
And wouldn't you like to be there?

Somewhere—You know it; O, who but holds
A memory that his heart enfolds—
A memory of the leaning trees
And soothing song of the honeybees
And all of the boy-day melodies!
Somewhere you lived in it all—somewhere—
And wouldn't you like to be there?

Again, the people, as a whole, like “flag poetry.” It is always hard to say new things, or to say the old things in a new way, about the flag, but once in a while a chance offers. Not long since Gen. John C. Black, in a public address, commented upon the travels of the flag and wondered where it would go next. There was another idea in what he said:

WHERE OLD GLORY GOES.

(“I wonder where the old flag will go next,”
Gen. John C. Black.)

Up and down in all the lands and all the seas
between;
Brave and bold against the sky, and clear and
fair and clean;
Winding through the wilderness, or on the
beaten track;

Half the way around the world—and more
than that, and back.

Whither will Old Glory go? But whither has
it gone?

Mark the way of honor that it has not smiled
upon.

Snapping from the halyard blocks of argosy
and fleet,

Fluttering to fife and drum that time the
marching feet;

Beating back the driven spray, and blazing o'er
the sands—

It has led a starry way—a way through all
the lands.

Whither will Old Glory go? But whither has
it gone?

Where the spot it has not held the glory of
the dawn?

Men have gone beneath it o'er the hills and
o'er the waves;

Men feel its caresses while they slumber in
their graves.

Red and white and blue it glows against the
bending sky,

Bringing everywhere it goes new luster to the
eye.

Whither will Old Glory go? But whither has
it gone?

Tell the miles it has not traced—the way it
has not won!

It may seem strange at first thought that a purveyor of newspaper verse should draw upon the Bible for ideas. But the men who wrote that book were men of ideas, and they scattered them thickly through its pages. A little series of poems, under the general heading of “Sermons in Song,” each based on some particular text, has proven reasonably popular with the considerate readers of the *Chicago Tribune*. This one happens to be in dialect, because the man who dropped the remark which seemed to fit the text had a homely way of speaking:

A COMMUNION.

“The flowers appear on the earth, the time of the singing of birds is come, and the voice of the turtle is heard in our land.”—The Song of Solomon ii, 12.

The common kind o' flowers? Lord, you made
a lot o' them!

The daisy in the medder is as clean as any
gem;

The wild rose in the thicket is the ripest kind
o' red—

It's purty, and it's happy—look at how it holds
its head!

Them little Dutchmen's breeches is a favorite
o' mine;
I like to stumble on 'em with my eyes, an'
catch their shine.
An', then, the johnny-jump-ups, noddin' soft
when I go by,
An' as blue an' glad an' helpful as the ca'm
midsummer sky.

The blazin' dogwood blossoms! How they
flash along the road—
Come a-bloomin' in a minute, till a feller thinks
it's snowed!
Lord, the hawtree holds a sermon that is sent
direct from you;
An' the bendin' cherry branches, an' the elder
bushes, too.

There's the perky dandelion bobbin' up so
fresh an' bold,
Till the whole enduring hillside has its polky-
dots of gold;
An' the blossomin' May apple, hidin' under-
neath the trees,
Sends a tinglin' sort o' flavor till its coaxes out
the bees.

The common kind o' flowers! Lord, I guess
they like to grow
An' to fill the air with gladness just because
you love them so.
Lord, I try to understand them an' my heart
beats in accord
When I bend an' whisper to 'em: "For this
blessing, thank the Lord!"

The newspaper poet does not write for posterity. Most of his work must of necessity be ephemeral. The paper is sure to come out to-morrow, and he must have his work in shape. Hence he may not always wait to prune and polish. He must train himself to see quickly and to write quickly. He would better let his riming dictionary gather dust. Time is lost in taking it down and turning the pages. Yet he may comfort himself with the conceit that tho his work be of the day and done with the day, still in his own weak way he is contributing to the gayety of nations, and perchance unknowingly turning out something which brings a few moments of enjoyment into some one's life. It cannot always be a grand, sweet song to him, but he may once in a while strike the lyre and ring a true note.

This is the place to put in a word of gratitude toward the average newspaper reader. In him the newspaper poet finds the most patient, appreciative audience that could be asked. He is so kind about forgetting the poor work and remembering the good. If it were not for this the newspaper poets would have had a short shrift.

CHICAGO, ILL.

Some South American Observations

BY CHARLES M. PEPPER

[Mr. Pepper is now making an extensive trip through South America as Special Commissioner for the Second International Conference of American States for the purpose of investigating the great projected Pan-American Railway. In 1901 he was one of the delegates from this country to the Pan-American Congress at the City of Mexico. Besides many newspaper and magazine articles, he has written a book entitled "To-morrow in Cuba."—EDITOR.]

SOUTH AMERICAN traits are not unlike the characteristics of other countries in being seen best at home. Abroad they are not manifested aggressively. If anything, they are asserted apologetically. With the exaggerated courtesy of old Spain, when you enter the home of the South American it is yours. But being in his country and having come to it with the notion that there is only one country in

the world, which is the United States, he may be pardoned for reminding his guest by polite suggestion and by indirection that there is more than one America and even more than one United States—for example, the United States of Brazil and the United Mexican States, as well as the disunited States of some other Latin American nations.

It is the attempted appropriation of

the broader term of America that causes the keenest and justest irritation. A New York woman who had cheerfully come with her husband for an indefinite residence was seeking to adapt herself to the surroundings, making acquaintances and trying to form friendships. For a long time her most annoying hindrance was a habit of speech which invariably brought the inquiry, sometimes good-naturedly polite, sometimes frigidly resentful:

"Which America?"

When she learned not to refer to her own country as if it were the only America, she found she was no longer giving offense and her friendships progressed rapidly.

In the highly cultured and traveled society the point is insisted on without rudeness, yet still with firmness. The term Yankee, in the Spanish form *Yanqui*, is used in self-defense, for its local application to New England is perfectly well known. Either that, or North American, for the South American, while readily admitting our bigness, enterprise and general superiority, will not let us have the monopoly of the name American. He has a sentiment about it as well as we.

Another habit of assumption gets a shock in a voyage down the Pacific Coast. To most persons distances are vague if the measurement is across the border. An old friend wrote to the Minister from the United States of North America to Chile, requesting the favor of a Panama hat to be sent him to San Francisco. The answer was that if Panama were the place to buy hats, which it is not, the purchase could be made as easily in San Francisco as in Valparaiso, for it is as near to one city as to the other, and is about 3,000 miles distant from either.

Yet there is more kinship of interest and of feeling in the ports between Panama and Valparaiso than among those from Panama to San Francisco. The capitals lie back in the Andes, and the coast towns, through lack of railway communication to the interior, are in closer touch with one another of different nations than with the inland populations of their own countries. From Panama to Valparaiso it is like a very

long, crooked street, with Guayaquil and Callao at the main corners and with numberless stopping places between. What concerns one concerns all,—the yellow fever, the bubonic plague, the strike of the longshoremen, or the latest exactions of the steamship companies.

As the large commercial houses have branches at the chief ports, there is a constant movement of persons, as well as of freight. A Valparaiso merchant thinks no more of "running up" to Callao, 1,300 miles, than a New York importer of crossing over to Hoboken. Not only trade talk, but family and personal gossip is carried and social visits are made from coast town to coast town as tho it were only a matter of going two or three blocks up the street. It is the lack of swift communication and their isolation from the interior centers of population that make near neighbors of distant ports.

Of the passengers on a west coast steamer who travel first class, about one-third may be South Americans and their families. The remainder will be mostly Europeans. If as many as four or five North Americans find themselves together the size of the party is remarked. Three out of four of them will be interested in mining exploitation or railway building. The commercial traveler or drummer from the States is not common. Manufacturers and shippers in the United States adapt themselves slowly to the conditions of trade in the Southern Hemisphere, tho a vast volume of it awaits them whenever they seek it systematically and patiently, and send out representatives who know the language and who understand both the trade practice and the social customs of the people.

The English are numerous, for their investments include mines, railways, bank shares and the nitrate fields. In a measure, they adapt themselves to the countries in which they are doing business and out of which they are taking money. They do not disdain to learn the common speech. At first they use it with blundering condescension, giving the native to know that it is his own fault if he does not understand his own tongue on the lips of the superior Anglo-Saxon. But in time they get

over this, and make themselves at home not only in the language, but in their environment.

It is the German, however, who masters the customs of the countries whose trade he seeks. He knows everybody who is worth knowing and everything that should be known. When wanting detailed and accurate information about persons and places, I never have found myself astray in applying to my German fellow passengers. The German commercial traveler in Spanish speaking countries knows not only Spanish and Portuguese, but his mental baggage includes English and French, and often Italian. He digests everything he sees and hears, and always with the one idea of utilizing it for trade. German capital in South America has been persistent rather than aggressive. It is invested in general commerce, banks and shipping. It is overcautious in regard to mines, railways and development enterprises.

The number of Frenchmen on the west coast is not in proportion to the amount of money invested and bearing good returns. French interests include harbor works, mines, mortgage loan banks and some exploitation projects in the interior of the different countries. As a rule, the Frenchmen who come out to the Pacific Coast speak Spanish, and they have the further advantage that the public officials, professional men and many of the merchants are familiar with their language.

Italy has two important commercial colonies. One is at Lima and the other at Valparaiso. Both are engaged in the retail trade. In Lima the Italians form the largest foreign colony of Peru, with the exception of the Chinese. In Valparaiso they do not leave the wholesale commerce entirely to the Germans and English, but their preference is for the retail branches. The architecture of the newer business buildings in Valparaiso bears a marked Italian stamp.

The impress which these European colonies have made on South American customs seems to me less decided than is commonly thought. Spanish traditions, tho preserved, are not so pronounced as in Mexico or Cuba, but Paris, Berlin, nor London, have not im-

posed themselves distinctly. Lima, in the days of the annexes—that is, the days when the guano discoveries and the nitrate fields ushered in the era of prodigality—planned itself as the Paris of South America. Reverses changed the gayety and extravagance, but did not alter the love for music, the fine arts and literature which gives it to-day as highly cultured a society as can be found anywhere on the Continent. It still tolerates the bullfight in a modified form, but shows its preference for the opera and the drama.

Santiago has a distinctive club existence and social life. It is a pleasure loving city, prone to late, or rather early morning, hours; yet its trend as to manly sports. The races are a feature of the amusements without overshadowing athletics. The visitor is sure to be struck with the evidences of outdoor sports, cricket, baseball and the like. In one respect, the wealthy classes follow English custom. They have their winter homes in Santiago, their country estates and their seaside cottages, all of which must be occupied in turn.

The native social life in all the countries is in a measure self-contained, and is said to look askance at foreigners. This is only partly true. The foreigners form themselves into colonies of their own, which is natural; but in doing it they assume that a gulf divides them from the people among whom they live. Their isolation is of their making, if not of their deliberate choice. But while social intercourse is not established in South American countries as informally as among some other peoples, and while credentials are not despised, a *rapprochement* is not so difficult. For the visitor who comes with claims to recognition the hospitality is almost oppressive in its thoughtful attentions.

North American character is adaptive where it chooses to be. It can make itself at home in any surroundings. Commercial and industrial opportunity now lies before it in the whole of South America. In the sense of international polity the Monroe Doctrine is asserting itself without the aid of academic and abstract discussions. The larger results of the war with Spain for the

liberation of Cuba are in their early fruitage. The weaker countries have felt themselves drawn closer to the United States. The stronger and more aggressive ones have come to realize that they cannot alienate themselves from their neighbors, big or little. That they do not wish to sink their own self-respect and appear as mere dependencies of the one nation which is capable

of holding Europe in check is no discredit to them. Recognition of what is stable and progressive in them is their due. With this recognition and with a sympathetic understanding of both political and social customs, a new era of industrial gain and commercial growth is before the North American in South America.

SANTIAGO, CHILE.

The Making of an Anarchist

BY VOLTARINE DE CLEYRE

[Miss de Cleyre is one of the most active propagandists of anarchy in the United States and Europe, and the intimate friend of leading anarchists here and abroad. To those intimately acquainted with the spread of the socialist, communist and anarchist idea, it will appeal as a remarkably candid sketch of one representative career, and an exposition, equally frank, of the principle of one great branch of the anarchist order. To those uninformed on the general subject, it will present many surprises—not the least of them being the revelation of character on the part of the writer herself.—EDITOR.]

“**H**ERE was one guard, and here was the other at this end; I was here opposite the gate. You know those problems in geometry of the hare and the hounds—they never run straight, but always in a curve so, see? And the guard was no smarter than the dogs; if he had run straight to the gate he would have caught me.”

It was Peter Kropotkin telling of his escape from the Petro-Paulovsky fortress. Three crumbs on the table marked the relative position of the outwitted guards and the fugitive prisoner; the speaker had broken them from the bread on which he was lunching and dropped them on the table with an amused smile. The suggested triangle had been the starting-point of the life-long exile of the greatest man, save Tolstoy alone, that Russia has produced; from that moment began the many foreign wanderings and the taking of the simple, love-given title “Comrade,” for which he had abandoned the “Prince,” which he despises.

We were three together in the plain little home of a London workingman—Will Wess, a one-time shoemaker, Kropotkin, and I. We had our “tea,” in

homely English fashion, with thin slices of buttered bread; and we talked of things nearest our hearts, which, wherever two or three anarchists are gathered together, means present evidences of the growth of liberty and what our comrades are doing in all lands. And as what they do and say often leads them into prisons, the talk had naturally fallen upon Kropotkin’s experience and his daring escape, for which the Russian Government is chagrined unto this day.

Presently the old man glanced at the time, and jumped briskly to his feet: “I am late. Good-by, Voltarine; good-by, Will. Is this the way to the kitchen? I must say good-by to Mrs. Turner and Lizzie.” And out to the kitchen he went, unwilling, late tho he was, to leave without a hand-clasp to those who had so much as washed a dish for him. Such is Kropotkin, a man whose personality is felt more than any other in the anarchist movement—at once the gentlest, the most kindly and the most invincible of men. Communist as well as anarchist, his very heart-beats are rhythmic with the great common pulse of work and life.

Communist am not I, tho my father

was, and his father before him during the stirring times of '48, which is probably the remote reason for my opposition to things as they are; at bottom convictions are usually temperamental. And if I sought to explain myself on other grounds, I should be a bewildering error in logic; for by early influences and education I should have been a nun, and spent my life glorifying Authority in its most concentrated form, as some of my schoolmates are doing at this hour within the mission houses of the Order of the Holy Names of Jesus and Mary. But the old ancestral spirit of rebellion asserted itself while I was yet fourteen, a schoolgirl at the Convent of Our Lady of Lake Huron, at Sarnia, Ontario. How I pity myself now, when I remember it, poor lonesome little soul, battling solitary in the murk of religious superstition, unable to believe and yet in hourly fear of damnation, hot, savage and eternal, if I did not instantly confess and profess! How well I recall the bitter energy with which I repelled my teacher's enjoinder, when I told her that I did not wish to apologize for an adjudged fault as I could not see that I had been wrong, and would not *feel* my words. "It is not necessary," said she, "that we should feel what we say, but it is always necessary that we obey our superiors." "I will not lie," I answered hotly, and at the same time trembled lest my disobedience had finally consigned me to Torment!

I struggled my way out at last, and was a freethinker when I left the institution, three years later, tho I had never seen a book or heard a word to help me in my loneliness. It had been like the Valley of the Shadow of Death, and there are white scars on my soul yet, where Ignorance and Superstition burnt me with their hell-fire in those stifling days. Am I blasphemous? It is their word, not mine. Beside that battle of my young days all others have been easy, for, whatever was without, *within* my own Will was supreme. It has owed no allegiance, and never shall; it has moved steadily in one direction, the knowledge and the assertion of its liberty, with all the responsibility falling thereon.

This, I am sure, is the ultimate reason for my acceptance of anarchism, tho the specific occasion which ripened tend-

encies to definition was the affair of 1886-87, when five innocent men were hanged in Chicago for the act of one guilty who still remains unknown. Till then I believed in the essential justice of the American law and trial by jury. After that I never could. The infamy of that trial has passed into history, and the question it awakened as to the possibility of justice under law has passed into clamorous crying across the world. With this question fighting for a hearing at a time when, young and ardent, all questions were pressing with a force which later life would in vain feel again. I chanced to attend a Paine Memorial Convention in an out-of-the-way corner of the earth among the mountains and the snowdrifts of Pennsylvania. I was a freethought lecturer at this time, and had spoken in the afternoon on the life-work of Paine; in the evening I sat in the audience to hear Clarence Darrow deliver an address on socialism. It was my first introduction to any plan for bettering the condition of the working classes which furnished some explanation of the course of economic development, and I ran to it as one who has been turning about in darkness runs to the light. I smile now at the recollection of how quickly I adopted the label "socialist" and how quickly I cast it aside. Let no one follow my example; but I was young. Six weeks later I was punished for my rashness, when I attempted to argue for my new faith with a little Russian Jew, named Mozersky, at a debating club in Pittsburg. He was an anarchist, and a bit of a Socrates. He questioned me into all kinds of holes, from which I extricated myself most awkwardly, only to flounder into others he had smilingly dug while I was getting out of the first ones. The necessity of a better foundation became apparent: hence began a course of study in the principles of sociology and of modern socialism and anarchism as presented in their regular journals. It was Benj. Tucker's *Liberty*, the exponent of individualist-anarchism, which finally convinced me that "Liberty is not the Daughter but the Mother of Order." And tho I no longer hold to the particular economic gospel advocated by Tucker, the doctrine of anarchism itself, as then conceived, has

but broadened, deepened and intensified itself with years.

To those unfamiliar with the movement, the various terms are confusing. Anarchism is, in truth, a sort of Protestantism, whose adherents are a unit in the great essential belief that all forms of external authority must disappear, to be replaced by self-control only, but variously divided in our conceptions of the form of future society. Individualism supposes private property to be the corner-stone of personal freedom; asserts that such property should consist in the absolute possession of one's own product and of such share of the natural heritage of all as one may actually use. Communist-Anarchism, on the other hand, declares that such property is both unrealizable and undesirable; that the common possession and use of all the natural sources and means of social production can alone guarantee the individual against a recurrence of inequality, and its attendants, government and slavery. My personal conviction is that both forms of society, as well as many inter-mediations, would, in the absence of government, be tried in various localities, according to the instincts and material conditions of the people, but that well founded objections may be offered to both. Liberty and experiment alone can determine the best forms of society. Therefore I no longer label myself otherwise than "anarchist" simply.

I would not, however, have the world think that I am an "anarchist by trade." Outsiders have some very curious notions about us, one of them being that anarchists never work. On the contrary, anarchists are nearly always poor, and it is only the rich who live without work. Not only this, but it is our belief that every healthy human being will, by the laws of his own activity, choose to work, tho certainly not as now, for at present there is little opportunity for one to find his true vocation. Thus I, who in freedom would have selected otherwise, am a teacher of language. Some twelve years since, being in Philadelphia and without employment, I accepted the proposition of a small group of Russian Jewish factory workers to form an evening class in the common English branches. I know well enough that be-

hind the desire to help me toward making a living lay the wish that thus I might take part in the propaganda of our common cause. But the incidental became once more the principal, and a teacher of working men and women I have remained from that day. In those twelve years that I have lived and loved and worked with foreign Jews I have taught over a thousand, and found them, as a rule, the brightest, the most persistent and the most sacrificing of students, and in youth dreamers of social ideals. While the "intelligent American" has been cursing him as the "ignorant foreigner," while the short-sighted workingman has been making life for the "sheeny" as intolerable as possible, silent and patient the despised man has worked his way against it all. I have myself seen such genuine heroism in the cause of education practiced by girls and boys, and even married men and women with families, as would pass the limits of belief to the ordinary mind. Cold, starvation, self-isolation, all endured for years in order to obtain the means of study; and, worse than all, exhaustion of body even to emaciation—this is common. Yet in the midst of all this, so fervent is the social imagination of the young, that most of them find time besides to visit the various clubs and societies where radical thought is discussed, and sooner or later ally themselves either with the Socialist Sections, the Liberal Leagues, the Single Tax Clubs, or the Anarchist Groups. The greatest socialist daily in America is the Jewish *Vorwaerts*, and the most active and competent practical workers are Jews. So they are among the anarchists.

I am no propagandist at all costs, or I would leave the story here; but truth compels me to add that as the years pass and the gradual filtration and absorption of American commercial life goes on, my students become successful professionals, the golden mist of enthusiasm vanishes, and the old teacher must turn for comradeship to the new youth, who still press forward with burning eyes, seeing what is lost forever to those whom common success has satisfied and stupefied. It brings tears sometimes, but as Kropotkin says, "Let them go; we have had the best of them." After all, who are the

really old? Those who wear out in faith and energy, and take to easy chairs and soft living; not Kropotkin, with his sixty years upon him, who has bright eyes and the eager interest of a little child; not fiery John Most, "the old warhorse of the revolution," unbroken after his ten years of prison in Europe and America; not gray-haired Louise Michel, with the aurora of the morning still shining in the keen look which peers from behind the barred memories of New Caledonia; not Dyer D. Lum, who still smiles in his grave, I think; nor Tucker, nor Turner, nor Theresa Clairmont, nor Jean Grave—not these. I have met them all, and felt the springing life pulsating through heart and hand, joyous, ardent, leaping into action. Not such are the old,—but your young heart that goes bankrupt in social hope, dry-rotting in this stale and purposeless society. Would you be always young? Then be an anarchist, and live with the faith of youth, tho you be old.

I doubt if any other hope has power to keep the fire alight as I saw it in 1897, when we met the Spanish exiles released from the fortress of Montjuich. Comparatively few persons in America ever knew the story of that torture, tho we distributed fifty thousand copies of the letters smuggled from the prison, and some few newspapers did reprint them. They were the letters of men incarcerated on mere suspicion for the crime of an unknown person, and subjected to tortures the bare mention of which makes one shudder. Their nails were torn out, their heads compressed in metal caps, the most sensitive portions of the body twisted between guitar strings, their flesh burned with red-hot irons; they had been fed on salt codfish after days of starvation and refused water; Juan Ollé, a boy nineteen years old, had gone mad; another had confessed to something he had never done and knew nothing of. This is no horrible imagination. I who write have myself shaken some of those scarred hands. Indiscriminately, four hundred people of all sorts of beliefs,—Republicans, trade unionists, socialists. Free Masons, as well as anarchists,—had been cast into dungeons and tortured in the infamous "zero." Is it a wonder that most of them came out anarchists?

There were twenty-eight in the first lot we met at Euston Station that August afternoon,—homeless wanderers in the whirlpool of London, released without trial after months of imprisonment and ordered to leave Spain in forty-eight hours! They had left it, singing their prison songs; and still across their dark and sorrowful eyes one could see the eternal Maytime bloom. They drifted away to South America chiefly, where four or five new anarchist papers have since arisen, and several colonizing experiments along anarchist lines are being tried. So tyranny defeats itself and the exile becomes the seed-sower of the revolution.

And not only to the heretofore unaroused does he bring awakening, but the entire character of the world-movement is modified by this circulation of the comrades of all nations among themselves. Originally the American movement, the native creation which arose with Josiah Warren in 1829, was purely individualistic; the student of economy will easily understand the material and historical causes for such development. But within the last twenty years the communistic idea has made great progress, owing primarily to that concentration in capitalistic production which has driven the American workingman to grasp at the idea of solidarity, and, secondly, to the expulsion of active communist propagandists from Europe. Again, another change has come within the last ten years. Till then the application of the idea was chiefly narrowed to industrial matters, and the economic schools mutually denounced each other; to-day a large and genial tolerance is growing. The young generation recognizes the immense sweep of the idea through all the realms of art, science, literature, education, sex relations and personal morality, as well as social economy, and welcomes every accession to the ranks of those who struggle to realize the free life, no matter in what field. For this is what anarchism finally means, the whole unchaining of life after two thousand years of Christian asceticism and hypocrisy.

Apart from the question of ideals, there is the question of method. "How do you propose to get all this?" is the question most frequently asked us. The

same modification has taken place here. Formerly there were "Quakers" and "Revolutionists;" so there are still. But while *then* neither thought well of the other, *now* both have learned that each has his own use in the great play of world forces. No man is in himself a unit, and in every soul Jove still makes war on Christ. Nevertheless, the spirit of peace grows; and while it would be idle to say that anarchists in general believe that any of the great industrial problems will be solved without the use of force, it would be equally idle to suppose they consider force itself a desirable thing, or that it furnishes a final solution to any problem. From peaceful experiment alone can come final solution, and that the advocates of force know and believe as well as the Tolstoyans. Only they think that present tyrannies provoke resistance. The spread of Tolstoy's "War and Peace" and the "Slavery of Our Times," and the growth of numerous Tolstoy clubs having for their purpose the dissemination of the literature of non-resistance, is an evidence that many re-

ceive the idea that it is easier to conquer war with peace. I am one of these. I can see no end to retaliations unless some one ceases to retaliate. But let no one mistake this for servile submission or meek abnegation; my right shall be asserted no matter at what cost to me, and none shall trench upon it without my protest.

Good-natured satirists often remark that "the best way to cure an anarchist is to give him a fortune." Substituting "corrupt" for "cure," I would subscribe to this; and believing myself to be no better than the rest of mortals, I earnestly hope that as so far it has been my lot to work, and work hard, and for no fortune, so I may continue to the end; for let me keep the integrity of my soul, with all the limitations of my material conditions, rather than become the spineless and ideal-less creation of material ease. My reward is that I live with the young; I keep step with my comrades; I shall die in the harness with my face to the east—the East and the Light.

Out of Door Paragraphs

BY MARY A. MASON

IF one will only keep his eyes and ears open there is no reason why something shouldn't go in.

What is good for the early bird is bad for the early worm.

Autumn is a sort of bridge between summer and winter, over which everything that passes has to pay toll.

If one rises to heights and feels at home, it is easy to stay there.

We have a tendency to dwell in the hollows instead of on the heights, and to build little fences of limitations which shorten our range of vision.

For an old world this planet of ours has a wonderful way of looking young at certain sweet seasons of the year.

Do not always imagine that the fruit

hanging high is better than the fruit within reach.

God giveth the increase, but he leaves it to us to see that the seed is good and that we plant it where it is likely to spring up.

This is getting to be a pretty crowded world, but when a man's in love there are only two people in the Garden still—he and she!

In passing through life's garden we are wont to give more attention to the day lilies than to the everlastings.

There are some days in summer when Father Time must be tempted to hang up his scythe and to search among his gray locks to see if one hair does not still remain brown!

BINGHAMTON, N. Y.

The Kansas Invaders

BY RICHARD WASHBURN CHILD

[Mr. Child graduated from Harvard last spring, and has spent part of his vacation this summer among the Kansas wheat fields.—EDITOR.]

THIS year every one has heard of the high rate of wages offered and of the humorous and sometimes pathetic experiences of dapper brokers, clerks and adventurous college men who came out of the East rejoicing and returned with lame backs and blistered hands. Reports of the harvest have been romantic, startling and imaginative; in Kansas there is great longing to have the truth told.

The crop was not the largest ever raised in Kansas. So far back as two years before the flood—the Missouri flood of last June—they harvested more wheat than this year. But this spring the waterways in Kansas expanded, the house that was not founded upon a rock went journeying toward New Orleans, the man in the tree was screaming for a row boat and the iron and stone bridges went out with rhythmic crashes. When the water had gone upon its natural way, leaving a few feet of caking mud over the face of the land, a large part of the population were helping themselves or some one else to banish the wilderness of bed springs, pianos, barn floors and all things which float, and to restore runaway houses to their proper owners. This diverted many hundreds from their usual summer employment in the wheat fields and created a lively demand for willing workers among the farmers of middle Kansas. To make matters worse, the Director of the Free Employment Bureau found that the visitation of the flood having benefited the wheat crop quite unexpectedly would make it necessary to import from other States at least 29,000 laborers. This is a large army; probably even more came.

They came from all places and nationalities, leaving behind them all kinds of vocations, eager for the largest pay and reluctant to take the hardest kind of work. Some came for a vacation, some for their health, some for their pocket-

books and some for the sake of adventure; many took advantage of the "colonist rate" offered by the railroads at the request of the State and many were arrested for stealing rides on the trains; a few went here and a few there, some went back the next day, and some who have fallen under the spell of Kansas are never going back. From first to last they suffered from ignorance of the country and its conditions, from inexperience in harvesting and thrashing and from lack of stamina to stand the physical rigor of the Western fields. The Kansas farmer is well stocked with tales of the incompetency of this type of "hired man."

One wheat raiser in Barton County employed ten men, no one of whom could put a collar on a horse; another in Ellis County had a man from New York who insisted upon calling a reaper "the lawn mower." Many men who left clerkships in the Atlantic States, being suspicious of the wild West and determined not to be included in the tenderfoot class, came into the homes of peaceful folk armed to the teeth. A few towns were almost terrorized by this offensive display, but some of the farmers, not lacking in humor, soon made these bloodthirsty gentlemen from the East subjects of ridicule.

"What's that you've got there, my boy?" asked a lanky old Kansan, pointing at a six inch dirk knife in the youth's belt. "You ought to have a fork to go with it."

These green immigrants were, in general, a sorry looking lot. Among them were college men, with brawn and grit, and "hardy annuals" from everywhere, who were brought up on manual labor; but in the main the men were undersized, with soft, white hands. One old veteran of the fighting Kansas days stood on the platform at Topeka when a party of fifty arrived to see the State Employment Bureau about the locality of work. "Pretty brittle looking," commented the

old statesman; "my boy is having a hard time to stand the harvest pace, and I reckon he could lick this whole crowd."

So came this untried host; heedless they went into the fields. Many had conceived the idea that wheat was grown within a few miles of any station, and few knew the list of counties forming the wheat belt that strips across Kansas from south to north.

In lower Kansas the harvesting began about June 26th; at August 1st it was ending on the Nebraska border. Thrashing, which is done immediately if the wheat is sheaved, but only after it has "sweated" if stacked, lasts late into the summer; wages are paid according to the bushels thrashed. Thus a really good man can either go through one harvest and stay to do thrashing, or he may "follow the harvest" as it travels north into Dakota. Wages range from two dollars and a half to four dollars a day, and, as the Kansans say, a hired man's "keep" or "found" is free.

The harvest hands are well treated, wholesomely fed and, if the "pitching" is too hard at first, the farmers are almost always willing to let a man do easier work around the house or barn. Reports have been printed to the contrary—doubtless gathered from the tales of some disgruntled individuals who came late and returned early. These reports make Kansas mad. A typical letter of protest against such reports was shown to the writer by the authorities in Topeka. "I inclose a clipping," the author said, "which I found in a newspaper. It reports that a farmer in my county charged a harvester \$1.50 per day for board. Please find out if this is true and also the name of the farmer. If the charge is true we will make it hot for him."

There is little question about the good-heartedness of Kansas. It may be provincial—they are always showing you a map of Kansas—it may be short in art and long in simple customs and suspenders, but whatever else it is, it is hospitable and kind.

On the other hand, the wheat raisers have probably overestimated the incompetency of the imported harvesters. Communications were received every day by agents of the State Employment

Bureau pleading with the director to send no more "fragile loafers." These reports made Kansas laugh; ridicule was poured upon the "effete East." Yet among the men who came were college pitchers and half backs, Atlantic long-shoremen and city expressmen that learned to turn a pitchfork with the best men that ever sweated on a Kansas field. When the blisters came they grinned, when their shoulders were sore they laughed, when the harvest was over they went away with clinking dollars in their pocket. "It was not so bad," they said.

Of course the work was hard. It is hot in Kansas; sometimes the wind blows up a powdery, burning dust and the wheat to be cut, blessed by the tie that binds and thrashed, seems hopeless in its extent—yellow top for acres and acres in front and bristling stubble for acres and acres behind. There is the hot, singing reaper, the onslaught of the Kansas flies, the cooing whistle of the wild doves that follow the harvest, the perspiration that rolls into your smarting eyes and the blisters on your hands, trained only to hold a pen or book. At first your head swims with the drudgery; your heart bounds with joy when the farmer's wife waves a table cloth from the piazza roof to call you to dinner. You go to bed stiff of limb, to wake up at five by the farmer's lusty call—stiffer!

But the recompense comes. The sunburn becomes a ruddy tan, and when you strip at night you begin to notice that your stomach muscles are getting hard as a washboard, that your mind is clearer and that you will be glad to stretch out, sigh once and sleep. This is health!

Your fellow workers are a curious and motley band. There is the lanky Kansan and the stocky Michigan lumberman, who came to Great Bend on the trucks of a freight train; the college sophomore from Iowa, who insists upon wearing white shirts at dinner because there are two pretty girls in the family; the New York dry goods clerk, who has more real sand than any of them, but, dyspeptically pale and consumptively thin, is a constant worry to that hooked nosed and bony individual—that good, kind Christian soul, the housewife.

Such is the queer army that invaded Kansas and such was their work; prob-

ably the State will never need so large a host again. The flood may not do such spectacular destruction in the future years and the population will doubtless increase enough in time to reap what it has sown. Then, too, the Employment Bureau of the State will be better able in future years to foresee the demand for harvesters and furnish the supply. Their custom is to begin in March to estimate the labor needs of the wheat belt, and, through various agents, reconsider the situation in June, to arrange railroad rates and distribute the incomers according to the farmers' demands.

This year the fault was in the wide

misconception of the work and its pay, especially among the adventurous horde that descended upon the State uninvited. Decorated newspaper stories were misleading, the truth about the wheat harvest did not walk abroad, and among the farmers themselves there was always a temptation to encourage an oversupply of labor in order to reduce wages. At the present time men who have returned to the East are telling tales of hardship and privation. It should not be forgotten that these men were among those who left the work; the real harvesters are only now leaving the fields of Kansas.

TOPEKA, KANSAS.

The New Transit System and the New New York

BY JULIUS WILCOX

THE American daring spirit which feels drawn to undertake things because they are impossible has not yet considered moving the East River to its proper place; but, humanly speaking, it must be plain that this estuary should have been some miles east of its present bed. For what has been an inappreciable gain to Long Island has been the incalculable injury of Manhattan, cramping the flow of the human tides between workshop and bedroom into one narrow stream. This has been getting worse for forty years; but now that it has become plain that not even the certainty of the heaviest passenger traffic in the world could make private capital alone undertake the problem of local transit, and now that electricity has made tunnels feasible, we are at last in a new and unprecedented construction of public works.

No. 1 on the accompanying map is the present bridge, now in its twenty-first year of use. No. 2 is the "Williamsburg" bridge, which may be open by the end of this year. No. 3 is the "Manhattan" bridge, from Flatbush Avenue in Brooklyn to Canal Street and the Bowery in Manhattan; at present only the foundation of the Brooklyn tower is com-

pleted. No. 4 is the Blackwell's Island bridge, from Sixtieth Street and Second Avenue to Ravenswood. No. 5 is the tunnel from Whitehall Street, joining the subway with Joralemon Street in Brooklyn, thence to the Borough Hall and the terminus of the Long Island Railroad at Flatbush and Atlantic avenues; that road has also nearly finished its improvement by which, partly by open cut, partly by viaduct and partly by tunnel, the track is to reach the surface at a point beyond the city limits, thus relieving that wide but unfortunate street, once fondly expected to become a commercial continuation of Broadway. No. 6 is the bold and colossal scheme of the Pennsylvania road, now just beginning actual construction. Starting at Weehawken, west of the Palisades, the track will come to the surface in Long Island City, thence going across Ward's and Randall's islands, with the two intervening strips of water to the mainland at Port Morris. No. 7 is the old Haskin tunnel, three-fourths completed, to be opened as a trolley line in a year or less. It has been rumored and denied that this tunnel will be used to give the railroads from New Jersey an entrance into Manhattan; it is also reported, with more plausibility, to be the

intention of the recent tunnel scheme to reach Cortlandt Street. The subway itself is not shown on the map, but its line is already quite familiar.

Nor does this showing exhaust the list of works and connections which have reasonable prospect of being soon undertaken. The old plan of the Pennsylvania Railroad to reach South Brooklyn is not abandoned, and if the main line under Manhattan is kept exclusively for passengers, according to the assurances given, a freight connection to the east across Brooklyn may be expected. A tunnel under the East River from Fourteenth Street is also projected. The New York Central is about to begin extensive work which, without adding any new lines, will substitute electricity for steam in and near the city, and will bring a close relationship with the urban lines.

The following shows the population of the constituents of the consolidated metropolis at several recent periods:

	Area, sq. miles.	Population.		
		1890.	1900.	Jan. 1st, 1903.
Manhattan...	21.93	1,441,216	1,850,093	1,906,551
Bronx	40.65	88,908	200,507	255,955
Brooklyn....	77.82	838,547	1,166,582	1,270,450
Queens	129.51	87,050	152,999	177,532
Richmond....	57.19	51,693	67,021	71,671
Totals....	326.90	2,507,414	3,437,202	3,682,159

The movement of increase, however, is of more interest than the absolute population, and this is shown thus:

	Increase of population.			
	1870-80.	1880-90.	1890-00.	1900-03.
Manhattan...	222,381	276,543	408,877	56,458
Bronx	14,587	36,928	111,599	55,448
Brooklyn....	179,574	239,052	328,035	103,868
Queens	11,091	30,491	65,949	24,533
Richmond....	5,962	12,702	15,328	4,650
Totals....	433,595	595,716	929,788	244,957

The following is the ratio of increase in each section in each period of time:

	1870-80.	1880-90.	1890-00.	1900-03.
Manhattan.....	23.60	23.74	28.37	3.05
Bronx	39.00	71.04	125.52	27.72
Brooklyn	42.76	39.88	39.13	8.90
Queens	24.39	53.91	75.80	16.04
Richmond	18.06	32.65	29.70	6.93
Totals.....	29.34	31.17	37.09	7.13

The relative progress of the sections is shown again by comparing the percentage which each contributed, in each period, to the absolute increase of population in the total, thus:

	1870-80.	1880-90.	1900-00.	1900-03.
Manhattan.....	51.30	46.42	43.98	23.05
Bronx	3.36	6.19	12.00	22.64
Brooklyn	41.41	40.14	35.28	42.40
Queens	2.55	5.12	7.09	10.02
Richmond	1.38	2.13	1.65	1.89
Totals.....	100.00	100.00	100.00	100.00

It thus appears that Manhattan has maintained neither its absolute nor its relative rate of increase, but is falling behind Bronx and Brooklyn. The largest absolute increase recently is in Brooklyn, but the largest ratio of increase is in Bronx, Queens coming next. By the last comparison there has been a striking change of positions; Brooklyn has now taken the place of Manhattan by furnishing over four-tenths of the total increase, and Bronx has risen and Manhattan fallen until they stand nearly equal.

Suburban railroad travel has heretofore been chiefly to New Jersey. The upper part of Manhattan, and the further land along the Hudson as far as the villa region near Tarrytown have been kept back by high prices and the lack of lines of travel. The Central and New Haven roads have done comparatively little to attract commuters, but have had the excuse of being cut off from downtown, for all suburban troubles are referable back to the wrong location of the East River. It may be that these roads will now bid for settlement even beyond Bronx into Westchester, and it may be that the roads into New Jersey will increase their efforts. With the obstacle of the Hudson removed, New Jersey will gain a point; on the other hand, there is a strip to be crossed whose natural undesirability may seem greater when compared with other territory now drawing nearer. The distance to Richmond (Staten Island) is such as to make an under-water route seem not feasible, at least for the present; but that is a region naturally very desirable, and as it has been held back by miserable means of access, it may be expected to improve greatly if the reasonable suggestion of the Mayor that the city build modern boats and lease them with the ferry franchise is carried out.

In taking up the interesting query as to the directions of the comparative redistribution of population during the recent ten or fifteen years, we may note incidentally that Bronx has been much

helped in the last two years by being nearer in time to immediate transit betterments than the other boroughs. The prospect of completion of the subway has been an attraction; the service on the elevated roads has improved, and whatever overflow they have carried across the Harlem has been credited to Bronx; hence it is not certain that the growth of that district will keep on at its recent relative rate. On the other hand, it will share the aid given to Westchester by the completion of the Portchester electric road.

The present bridge was intended only as a faster and surer ferry, and until the trolley lines were forced upon it, five years ago, people were dumped on the Brooklyn side and left to re-assort themselves there as best they could. It is now notoriously at its maximum efficiency and is incapable of any increased aid in the transit problem until it comes into working relations with the other means of crossing. All these means must positively be treated as parts of a comprehensive scheme in a movement which shall in general be divergent from Manhattan and convergent to it; they must be connected, and must gather and discharge at some central spot. Strict precision is not expected or possible now in such a statement; but since the struggle of every worker is to get into a through car for home as soon as possible—a fact which the present bridge crush proves—we must assume a central spot, say at or somewhere near the City Hall.

The present distribution of population as to density is about thus:

	Population per sq. mile.	Area in sq. miles.
Manhattan	86,938	21.93

Bronx	6,296	40.65
Brooklyn	16,368	77.62
Queens	1,378	129.51
Richmond	1,253	57.19
Totals	11,264	326.90

Bridge No. 2 will be ready next, and in date not far from that of the opening of the subway. The bridge travel which now turns toward Williamsburg will naturally be first directed to the new structure, relieving the old one to that extent, while that which bears to the east, southeast and south, plus the fraction that merely crosses and then walks or rides for short distances, will naturally keep to the familiar way. Since bridge No. 2 inclines to the northerly section, it is reasonable to suppose that bridge comparatively favorable to Queens, the larg-

est of the boroughs and thus far the "roomiest" next to Richmond. The Blackwell's Island bridge also points to Queens and is already well under way; and since movement of population not merely follows but anticipates completion of new lines of travel, in order to share the expected rise of values, the large growth of that huge region may be accounted for. It may also reasonably be expected to continue.

Looking in other directions, the Flatbush section of Brooklyn and the section between the Park and Coney Island are in especially rapid development. The tunnel to Joralemon Street and also bridge No. 3 (for both of which we must wait several years) apparently favor both of these sections; the southerly one has the advantage of apparent nearness to Manhattan as well as the ocean, while the Flatbush section and the land directly east have the tunnel tending thither, for tunnel and bridge go substantially to the Long Island road's terminus.

This brings to mind another factor in the problem: the new part the railroads are to take in suburban and urban travel. Drawing mile circles from the Manhattan Hall as center, the line at the further edge of Bronx takes in all but an extreme bit of Queens and cuts into Nassau; and to carry the assumed line of suburban availability as far as Mt. Vernon or New Rochelle (say 15 to 17 miles) includes a considerable part of Nassau. The mono-rail or the suspended type of electric road—recalling the old "Boynton bicycle" and akin to the Barmen-Elberfeld road in Germany and the expected one between Manchester and Liverpool, are in reserve as possibilities; such structures are mechanically feasible, could be quickly supplied, and if they seem to be wanted as instruments of rapid transit, will not lag. Meanwhile, the Long Island road is practically a branch of the Pennsylvania. It will be electrically equipped across Queens even into Nassau, and its trains will come both to and into Manhattan. Beyond doubt, it is a large factor in the Pennsylvania's plan, which must be assumed to include the great development of the island, not only as a truck garden for the great city but

as a residential suburb. It is a singularly isolated, backward and unknown region. As such it is unique, and it is mistakenly supposed to be flat, barren and undesirable; but now its deliverance is at hand, and the largest meaning—at least, the largest local meaning—of the Pennsylvania's colossal scheme may be expressed thus: ~~THE~~ LONG ISLAND.

Nor will Brooklyn miss its share in this new development. Brooklyn has never been fashionable. To the Manhattaner even Harlem has seemed less disreputable, for Brooklyn has been "so far;" and as for the great island, which lies like a stranded fish along the coast, its remoteness has been estimated, in the ancient manner, by day's journeys, and it has been supposed to be a land more like Egypt than Canaan. Brooklyn's extensive water front is now in course of discovery. There is no insurmountable reason why foreign liners may not dock there, for it is not more distant or more unattractive than Hoboken. Its commercial and factory uses must also certainly enlarge, and its old reproach as being merely the bedroom of New York will be taken away.

The respective shares of the boroughs in the growth and redistribution of population must be left to conjecture, with the aid of the indications just suggested; but in considering the scheme as a whole imagination may well have a free rein. For electric transit and subway work are still so new that there is no precedent from which to argue; moreover, the situation here is unique. The largest urban population in America is also, in some spots, the most compact in the world, and this statement brings us again to the geographical conformation which is the working factor in the trouble. Radial, instead of parallel, movements in the flow of travel are now to become possible. This means that the pressure within a sort of lane 10 miles long and $2\frac{1}{2}$ miles wide has at last burst its bounds, for when the inclosing rivers cease to be interruptions and become merely unnoticed portions of a continuous through journey they cease to exist in the old sense. This is the mighty change which challenges imagination and has no restraint from precedent.

NEW YORK CITY.

Tammany Hall

(BEING A SLIGHT TRAVESTY ON "LOCKSLEY HALL")

BY LA TOUCHE HANCOCK

COMRADES, leave me here a little, for I'm in a mournful state;
Leave me here, and, till I call you, let me calmly meditate.
This the place, and all around it, as of old, the Simons pure
Seeking favors and positions that would be a sinecure!
Tammany, that in the distance overlooks the City Hall,
While the crying need of office now and then begins to pall!
Many a night I've seen the Pleiads, when I've looked upon the wine,
Braided up in such a tangle that all liquor I'd decline!
Here about the rooms I've wandered, nourishing the youths sublime
With the fairy tales of office, which will surely come in time!
When I dipt into the future, far as human eye could see,
Saw the vision of the graft, and all the profit there would be!
In the fall a fuller color comes upon the Tiger's breast!
In the fall reform will surely take a well deserved rest!
In the fall, with great bravado, we will cut a livelier dash!
In the fall the young brave's fancy instantly will turn to cash!
His assurance then was boundless—how he got it, we all asked,
While in smiles of peers and princes he magnificently basked!
And we said, "Ah! tell us, Croker, speak and speak the truth to us;
Trust us, Chieftain, let us share it, and we will not care a cuss!"
Then he turned, his bosom shaken—well, you know how he can look
When on his return from Europe he brings renegades to book!
Saying, "I have hid the secret, I will hide it still for aye!"
Saying, "Quite sufficient for you is the boodle of to-day!"
Oh! our Croker, shallow-hearted! Oh, our Croker, ours no more!
Oh! the Club erstwhile so crowded, never now as 'twas before!
Louder than the loudest trumpet, harsh as harshest ophicleide,
Shall our objurgations reach you smiling on the other side!
Is it well to wish you happy? Having known you, we decline.
'Midst nobility we leave you in your glory to repine!
They will hold you, when your presence shall have spent its novel force.
Little better than an expert of a champion dog, or horse!
What is that? He is relenting? Don't believe it! Oh, no, no!
He's already said his farewell very many months ago!
He will answer to the purpose, living in another land!
Better he were building dairies than the leader of our band!
Better we should have a Shepard, or a Devery for our fate!
Better Sport, Two Spot, and Joke! Yes, better a triumvirate!
Cursed be the social wants that win away the democrat!
Cursed be the pomps alluring! Cursed be th' aristocrat!
Cursed be the maladies that made you take a frequent change!
Cursed be the ancient moat, and cursed be the moldy Grange!

* * * * *

Oh! 'tis well that we should bluster—much we're like to make of that—
And, maybe—there is no knowing—we are talking through our hat!
Shall it not be scorn for us to harp on such a great has-been?
We are shamed through all our nature for our weakness to be seen!
Weakness to be wroth with weakness! Party weakness! There's the rub!
Oh! for just another Croker, and for just another Club!
We're the lesser men, we know it; all his influence matched with ours
Is as China was defying all the other mighty powers!
Fools! again the futile fancy, and we know our words are wild,
Oh! that Pelion in November will not be on Ossa piled!
Comes a warning o'er the ocean—we have heard those tones of old—
And it makes the very marrow of our shaking bones grow cold!
See! it falls upon the Wigwam—"Figureheads may come and go.
I'm your Chief, altho at present I am merely 'lying low!'"

NEW YORK CITY.

Literature

The Cambridge History of America

THE reason for placing the history of the United States* in the seventh volume of the famous series of twelve is that the history of each people should be taken up at the point at which it was drawn into the main stream of human progress, as represented by the European nations. The history of the North American colonies thus joins the main stream of history in the latter half of the eighteenth century, during the Seven Years' War and the War of Independence.

Because the whole series is one of the greatest historical undertakings of modern days, and because this volume will doubtless for a time be the standard European history of our country—the book by which we shall be judged—for these reasons the accuracy of the scholarship and the fairness of presentation are matters of much concern. On the whole, it may be viewed with satisfaction, but on some crucial points the editors and writers have erred in a most vexatious way. An outline view of the book will help us to understand its merits and faults.

The first two chapters, dealing with the first century of English colonization, and the English colonies up to 1763, are written by the English historian, John A. Doyle. As the author of "The English in America" and the "English Colonies in America," Mr. Doyle was well chosen for this work. He looks at everything with English eyes, and seems to have little acquaintance with the American point of view, but he has good judgment and temper and has an intimate acquaintance with the sources of information in the British archives. His style is dry, but clear.

The next chapter, on "The French in America," is done by Miss Mary Bateson, of Newnham College. She is quite un-

known to fame, and the reason for choosing her for the work is not clear. A vast amount of erudition, not well digested, and presented in a heavy style, would have been better received in more humble company. The subject does not, however, touch vitally our American *amour propre*, and can be forgiven the editors, who have more wisely chosen A. G. Bradley, of Trinity College, Cambridge, to write "The Conquest of Canada." He writes with the same clear and distinct style and the impartiality found in his "Fight with France for North America." He knows the conditions and the locality, and his narrative is consecutive and not encumbered with unimportant detail.

Chapter five, "The Quarrel with Great Britain," is written by Mr. Doyle. In spite of his famous essay, written over forty years ago, dealing with the causes of the American Revolution, he was not just the man to write this chapter or the seventh, on "The War of Independence." He has little sympathy with the American political theories, and he puts too much stress upon the agitation and too little on the real grievances of the colonists. He is too sure that independence was all along the real desire of the patriots, instead of a mere redress of grievances, as was surely the case. Finally, he is by no means thoroughly acquainted with his subject. No man who had deeply studied the events of the Revolution would say that "on July 4th, 1776, Congress passed the resolution which made the colonies independent communities, issuing at the same time the well-known Declaration of Independence." The facts are that the *resolution* was passed on the 2nd of July, and the declaration *adopted* on the 4th, but not *issued* until the 6th. Such an error makes no difference with the spirit of the work, but it indicates a sad lack of acquaintance with the subject.

Why Prof. Melville M. Bigelow was selected to write on the subject, "The Declaration of Independence," is not plain. He is not an historian, and, tho a lawyer and the editor of the fifth edition

* THE CAMBRIDGE MODERN HISTORY. Planned by the Late Lord Acton, LL.D., Regius Professor of Modern History. Edited by A. W. Ward, Litt.D., G. W. Prothero, Litt.D., and Stanley Leathes, M.A. Vol. VII. The United States. New York: The Macmillan Co. \$4.00 net.

of Story's "Commentaries on the Constitution of the U. S.," he writes an involved, confused style that leaves us somewhat in doubt as to what the Declaration of Independence really was. He is somewhat clearer in the use of his subject matter in the eighth chapter, "The Constitution," but still one wishes that it might have been handled by an historian.

The real masterpiece of the volume is the treatment by John B. McMaster of the three chapters, "The Struggle for Commercial Independence," "The Growth of the Nation" and "Commerce, Expansion and Slavery." In an easy, flowing style, without any ornament except clarity and vigor, we are given in compact form the results of the ripest scholarship. Years of patient, tireless, devoted study; long days and nights of toiling through hundreds of pamphlets and thousands of newspapers and musty manuscripts; many hours of thought and wearisome work with the pen, and five great volumes of published history are here compressed into some ninety pages. This volume of *The Cambridge Modern History* would be a great boon if it gave us nothing but this crowning work of a master hand.

The chapter on "States Rights" (1850-1860) is by President Woodrow Wilson, of Princeton. The beauty of the style and fascination of the narrative make one forget the lack of research, which often mars the work from the point of view of scientific history. President Wilson does not pretend to be an historian, but a political scientist. It is this fact and his instinct for human interest which lead him to deal chiefly with Douglas, the repeal of the Missouri compromise, the rise of Lincoln and John Brown's raid, omitting the conditions and the attitude in the lower South during his period, which helped greatly to bring on the crisis. Free-soilism, the warfare on the frontier and the evolution of the Union party appeal more to his political interests.

Four chapters on the Civil War are by the late John G. Nicolay, who, with John Hay, wrote our best life of Abraham Lincoln. Again his hero is the center of his story, which in a history

is a defect. The story of the great war is well told, the style never dull, and often brilliant. The old, very doubtful, theory of a Southern conspiracy to bring on the war is adhered to. There is a trace of partisan spirit running through the story, but it is open and undisguised and perhaps unavoidable.

"The Naval Operations of the Civil War" are told by H. W. Wilson, of Oxford University, who also wrote on the "War of 1812." Tho Mr. Wilson has written nothing on this subject previously, his treatment is not unworthy. "The South During the War" is the work of John C. Schwab, of Yale University.

"Political Reconstruction" is well and forcibly done by Professor Theodore C. Smith, of the Ohio State University. There is a freshness of spirit which can only come of scholarly research. "The U. S. as a World Power" is written by Professor J. B. Moore, of Columbia University, and "The Economic Development of the U. S." is dryly but ably told by Professor H. C. Emery, of Yale. Barrett Wendell, professor of English in Harvard, closes the book with a chapter on "The American Intellect," a treatment of good literary, but doubtful historical, value. He falls into the old error of attributing the origin of American Revolution theories to French writers. They certainly had very little influence, as recent writers are fully agreed.

The Truth as to Alcohol

No more representative body of men of trained practical intelligence could well have been selected than those which form the committee of fifty to investigate the liquor problem. The previous literary contributions to the solution of the subject, "The Liquor Problem in Its Legislative Aspects," "The Economic Aspects of the Liquor Problem" and "The Substitutes for the Saloon," have all deservedly attracted widespread attention. The present volumes* are not only likely to be of special interest for the informa-

* PHYSIOLOGICAL ASPECTS OF THE LIQUOR PROBLEM. *Investigations Made by and Under the Direction of W. O. Atwater, John S. Billings, H. P. Bowditch, R. H. Chittenden and W. H. Welch, Subcommittee of the Committee to Investigate the Liquor Problem. Vols. I and II.* Boston: Houghton, Mifflin & Co. \$4.50 net.

tion they present, but even more particularly because they controvert a number of false notions that have in various ways obtained very generally with regard to the physiological action of alcohol on the human system.

Probably the chapter of most general interest is in the first volume. It is the report on the present instruction in the public schools on the physiological action of alcohol, by Dr. H. P. Bowditch and Dr. C. F. Hodge. With regard to their report the sub-committee says in the introduction:

"It is believed to be a correct representation of the facts that much of the methods and substance of the so-called scientific temperance instruction in the public schools is unscientific and undesirable. It is not in accord with the opinions of a large majority of the leading physiologists of Europe, as shown by the statement printed on page 18."

The sub-committee adds the comment, "This appears to us to be a matter of grave importance." Some of the letters from distinguished foreign physiologists who were consulted by the sub-committee with regard to the physiological instruction on alcohol now in vogue in our public schools make extremely interesting reading. As among those consulted are such well-known authorities as Kuehne, of Heidelberg; Richet, of Paris; Voit, of Munich; Forel, of Zurich, and Kronecker, of Bern, it can readily be understood that this portion of the work has a very high scientific value.

Besides Professor Chittenden's article on "The Influence of Alcohol and Alcoholic Beverages on Digestion and Secretion," there is in the first volume a collection of data relating to the use of alcoholic drinks among brain workers in the United States, by Dr. J. S. Billings, which will doubtless be widely read. Early in 1895 a circular letter of inquiry was sent to about 1,500 men in the United States engaged in mental work of a high class. (How one would like to have that list.) To this circular 892 replies were received. The total abstainers were 167, the occasional drinkers 579 and the regular moderate drinkers 146, with the presumption that the majority of the 600 who did not answer were probably at least moderate drinkers, since it is those

with a special interest in temperance who would be most likely to send replies.

In the second volume is to be found Dr. Abel's article on "The Pharmacological Action of Ethylalcohol," in which the conclusion is that

"In all these avocations of life, where keen senses, sharp attention, ready and immediate use of a clear judgment or great concentration of the mind are called forth, alcohol in any form or amount is injurious when taken during the performance of the duty in hand."

On the other hand, Dr. Abel expresses the opinion that it is "a question well worth considering whether the continued presence of alcoholics in the world is not more conducive in the long run to the evolution of an efficient self-control, than would be its total abolition."

In this second volume is also to be found Professor Atwater's article, of nearly 200 pages, on "The Nutritive Value of Alcohol," portions of which have already appeared from time to time in various forms and have been the subject of much discussion, not infrequently of a rather acrimonious character, in the daily newspapers. One of the most interesting sets of observations in this article are those in which it seems to be demonstrated that the cheapest kinds of spirituous liquors, sold to the very poor in large cities, are no more harmful in their quality than the high priced liquors sold in clubs and fashionable *cafés*.

A very curious little chapter is that of Professor Bowditch on temperance drinks, in which attention is called to the fact that not a few of the so-called temperance drinks contain more alcohol than many admittedly intoxicating beverages. As Professor Bowditch says, one of the foremost advocates of total abstinence has permitted her picture to be used as an advertisement of one of the most alcoholic of these drinks. Most of the temperance drinks thus deprecated are the so-called tonic proprietary remedies of various kinds, practically all of which contain, as shown by the analysis of the Massachusetts State Board of Health, a noteworthy proportion of alcohol, some of them being stronger in this respect than the ordinary whisky sold in saloons.

Buddhist India

THOSE who turn to Professor Rhys Davids's volume on *Buddhist India** expecting to find a history, in the ordinary sense of the word, will be disappointed. The simple fact is that the material for a history of that epoch does not exist, and, despite the enthusiastic predictions of the author, it is not in the least likely that any amount of excavation and study of texts will ever discover more than a few scattered data to this end. India, during the six

women, too, might enjoy the higher blessing of the new religion. Nay, said the Master sadly, without women the faith may endure in the world for a thousand years; let them enter the fold and it will perish in five hundred years. The order of nuns was, nevertheless, established, and after the lapse of about five centuries the faith had begun to decline; five centuries more, speaking loosely, and the great revolution came which drove the religion from India. To-day not a single Buddhist can be found in the land of Buddha's birth and preaching. Was the Master's prophecy fulfilled?

But this is a digression. Professor Rhys Davis does not, could not, indeed, write a history, but he sets forth a description of Indian life and letters of the period with a fulness of knowledge that no other English scholar could begin to rival. We could desire a little more order and construction in his presentation of the subject, but that is a failing to which we have long been accustomed in the popular works of Orientalists. At first one might be inclined to resent the evident tone of partisanship with which he takes up the battle for Buddhist India against the

traditional view of the Brahmins, who to him were in those days low born, and whose mischievous perversion of history he never misses an opportunity to revile. On the whole, however, this frankly partisan attitude rather lends vivacity and actuality to the book. India is so far away from most of us, and her religious debates are so unreal, that we need this enthusiasm of one who takes her civilization seriously for the proper kindling of our imagination.

We note particularly the learning that Professor Rhys Davids has brought to bear on the language question of India. But here again it seems to us that he has been just a little misled by his Anti-Brahmin prejudices. Because during the Buddhist centuries Sanskrit drops out of view and again

Ancient Indian Head-dress. (Illustration from "*Buddhist India*")

or seven centuries after the death of Buddha, with the exception of Asoka's brilliant reign, and indeed during all her Aryan period, was caring for other things than the creation of historic annals. There is a curious story in one of the early books in regard to the duration of this era which may be called Buddhistic. On one occasion Buddha was implored by a faithful disciple to institute a body of nuns corresponding to the monks, or *bhikkus*, in order that

* *Buddhist India*. By T. W. Rhys Davids. [*The Story of the Nations Series*.] New York: G. P. Putnam's Sons. \$1.35 net.

gradually becomes prominent as Buddhism dies away, it does not necessarily follow that the language did not exercise its full sway before the general acceptance of Buddha's doctrine. We cannot, moreover, see the wisdom of throwing over the old designations of Northern and Southern Buddhism. It is not a question of where these two main divisions of the doctrine originated or took their final form, but where they exist and where we find them to-day. The names are perfectly justifiable on this score, and are too convenient to be lightly discarded. Professor Rhys Davids reverts to the old spelling of the word *Brahmin*, rejecting the form *Brahman* as neither good English nor Hindu, and for this we are grateful. The cheap pedantry which would throw confusion into the language by such unnecessary, and often ill considered, changes as brought the word *Brahman* into existence is a public nuisance.

An English Garner. A Reissue in Twelve Volumes of Professor Arber's Ingatherings from English History and Literature. New York: E. P. Dutton & Co., \$1.25 net a volume.

Stuart Tracts. With Introduction by C. H. Firth.

Voyages and Travels, mainly of the Seventeenth Century. Ed. by C. Raymond Beazley. 2 vols.

Social England in the Seventeenth Century. With Introduction by Andrew Lang.

Critical Essays and Literary Fragments. With Introduction by Churton Collins.

Fifteenth Century Prose and Verse. With Introduction by Alfred W. Pollard.

Six volumes of this most welcome reprint are now ready, and those that are to come, especially the two new volumes of Elizabethan sonnets edited by Sidney Lee, promise to make this *English Garner* more useful in its present form than it was in the old. The Introductions are entirely new, and a certain amount of fresh material has been added. Such a collection of "ingatherings" is necessarily somewhat arbitrary and defective. Thus to take the volume of *Critical Essays*, the selection neither comprehends all the essays of the sixteenth and seventeenth centuries that have distinct historical importance so as to give in one volume a rapid survey of the growth of

criticism, nor, on the other hand, does it exclude essays that are easily procurable elsewhere and confine itself to what is rare and curious. We should have been better pleased if Professor Arber's industry and Mr. Collins's judgment had given us a volume of the latter sort. But even as it is, the volume is of considerable value to the student of English literature and cannot be too highly recommended to those who, while not familiar with the byways of the subject, have yet some curiosity to travel away from the beaten course. This volume has, perhaps, the greatest claim to general interest; others, such as *Social England Illustrated*, are richer in material not readily procurable elsewhere. Only two of these volumes, the *Critical Essays* and the *Voyages*, are indexed, and this we regard as unpardonable negligence in both editors and publishers. The whole series in its new form will take a place in every English library of any importance.

Prince Hagen. By Upton Sinclair. Boston: L. C. Page & Co., \$1.50.

Some believe, or affect to believe, that, in a society like that which now exists on earth, if a man were bold enough and unscrupulous, adroit and rich enough, he could gather into his fists all wealth, all power, all command, and become a world despot, absolute as fate and strong as God. Such is the belief of Prince Hagen, the hero of this story, and he attempts to prove his theory. America is made the scene of his initial operations, and the author pays no compliment to our country when the Prince is represented as coming within a hair's breadth of realizing his magnificent and evil dreams. The violent and sudden death of the man is the *deus ex machina* who extricates the world from the clutches closing upon it. The story considered merely as a story is entertaining, but it takes on added interest as a study of modern society, and the room in such society for the play of an evil genius. This study is not too heavy and serious, as, indeed, it should not be in a "phantasy." Neither is it intense and lurid. But it is a bit of clever work, done with restraint, with lucidity, with humor and irony, and with a good deal of imaginative insight.

In the Guardianship of God. By Flora Annie Steel. New York: The Macmillan Co., \$1.50.

Keeping strictly to her chosen *locale*, India, Mrs. Steel deviates a step from her customary course and gives us in her latest book a collection of short stories, instead of the usual extended novel. But the distinguishing feature of her work—that which excites for it the keenest interest—remains, with this difference only, that while in the longer narratives the episodes are co-ordinated through the inter-relation of the characters they involve, here they are frankly blocked off into separate tales, each with its own particular *personnel*. Mrs. Steel at all times writes well of places, people and things she knows well; but one is almost tempted to feel that she is at her best in such stories as these where the action is punctual, the impressions immediate and the outlines crisp and well proportioned, and where her effects are not obscured in a sort of blur of ineffectual detail.

Lord Leonard the Luckless. By W. E. Norris. New York: Henry Holt & Co., \$1.50.

"Character is destiny" says Novalis in what George Eliot calls "one of his questionable aphorisms." Certainly the dictum is less disputable when one considers *character* as applying to a group of persons rather than to a single individual, for so inextricably are we involved one with the other, so interdependent and un-independent that it would seem impossible to conceive of a destiny that was the result of the character of a mere unit uninfluenced by any other. At all events, it is no more than just to say of the luckless Lord Leonard that his fateful destiny was the result quite as much of the character of those four persons who stood in closest relation to him, as of his own. A fatherless boy, sensitive, reticent, introspective, "a very decent chap" who "knew not how to simulate what he did not feel" is "transformed at a moment's notice from the impoverished and ignored son of a younger son into a great and wealthy nobleman." With a cold, calculating mother, an unfaithful sweetheart, a disloyal friend and an immoral, scheming little adventuress as associates, what wonder that his fate was luckless? The book

is not a cheerful one, but its author is no tyro in the art of tale-telling, and we owe it to his cleverness that our interest, if not our sympathy, is sustained to the end.

Pebbles

ALPHABETICALLY EXPRESSED.

He: O, L N, U R O K.

She: O, I B, B I? N U, U R A J.

He: O B E Z, L N, D R.

She: O G! U R N G. C?

—*The Kindergarten Review*.

.... "That summer boarder caught some fish this morning," said Mrs. Cornloss. "Says he threw his line into a school of 'em." "Any fish that was foolish enough to let him catch 'em didn't belong to a school," rejoined her husband. "That must have been an asylum."—*Washington Star*.

.... "I understand that your husband was one of the lambs in Wall Street," said the woman who likes to talk things over. "Whoever said that doesn't know anything about Charley's disposition," said young Mrs. Torkins. "He was more like a raging lion than a lamb."—*Wall Street News*.

.... One of the novelists, referring to his hero, says: His countenance fell. His voice broke. His heart sank. His hair rose. His eyes blazed. His words burned. His blood froze. After reading this, one is puzzled to know whether the hero was a plumber, a bankrupt or a human thermometer.—*Memphis Commercial*.

.... An Atchison man, newly married, was sounding his wife's praises to his men friends. "Why, she is so much better than I," he said, "I don't see how she came to marry me." His friends all agreed to this so promptly that he got mad; said he was as good as his wife any day, and wanted to whip the crowd.—*Atchison Globe*.

.... "I like to go to church," announced Dottie, aged five, "because they sing nice hymns about flowers and insects and things to eat, and the man in the nightgown talks about birds." "Why, Dottie," said her mother, "I don't think there are any hymns about insects and things to eat." "There is so," insisted Dottie. "Last Sunday we sang a beauty hymn about 'Bringing in the Cheese,' and to-day we sang one what began, 'Just As I Am Without One Flea,' and when we got through the man talked about a hawk and two pigeons." Subsequent inquiry revealed the fact that the text had been, "Why halt ye between two opinions?"—*Lippincott's*.

Editorials

The Privilege of College

AT this season of the year, when the schools of all grades are opening, the old question comes up for settlement with many parents and many youth whether it is worth while to get an education. We still have those who hold that absolute illiteracy is better for the working classes—it makes them better contented with their lot. We need, they say, a lower class of hand workers in field, plantation or kitchen, unskilled, who will want little and get little beyond the necessities of existence, but whom a knowledge of what is better will make dissatisfied, uneasy and rebellious. Education will unfit them for their place; it will injure the labor market. Others would allow the knowledge how to read and write, but provide no further education, for the same reason. There are yet others who allow yet a little more schooling—the grammar school, and perhaps the high school, but to whom anything beyond this seems an utter waste of money-making time. Rich bankers and merchants are quoted who declare that they want no college men in their employ; only young boys who shall have got a good training as clerks by the time the college boy is ready to begin.

To such people education is a luxury, not a necessity. A plantation hand or a stevedore can live and grow muscle and laugh and sing with no alphabet. To be able to write a bill and sign a receipt and add a column of accounts is enough for a clerk, and Horace will not help him in mercantile business. Let those go to college who can afford it, they say, but let poor folks understand that college is no necessity—a pure luxury of no real use.

Such people cannot be expected to see the use of it. How can a blind man see? He has no comprehension of what is beyond the narrow circle of his own knowledge and experience. His own life is good enough, and he sees no use in anything larger. He is like the country swain who

“thought the visual orb that girt him round
The world’s expanse.”

What contented him, he thinks, ought to content other people.

Granted that a slave can sing, that a half-educated man can get rich, it does not follow that education is a luxury. It may not be a necessity of bare existence, for a wild horse or ass can scare up a living, but it is no more for that a luxury; it is a privilege. And the distinction between a privilege and a necessity is a very narrow one. As a people advance in culture, what before was beyond their hopes becomes a necessity. Sand or rushes on the floor was enough for our great grandparents; we need rugs and carpets; poor folks must have them. They speared their food from wooden trenchers; separate porcelain plates are hardly good enough for us. The man ought to have lived two centuries ago who would be satisfied with a dame’s school for his children.

Yet there are those to whom college is a luxury rather than a privilege. It is those boys of pampered wealth who lack ambition, and go to a fashionable college not to study but to enjoy themselves, to do the least possible work, who elect the “snaps” that require no application, and are satisfied if the course of time brings them a supposed scholarly tag to their name at the end of four years of idleness. That may be called luxury. Perhaps it was a luxury to the forty college graduates in Sing Sing Prison. But to the ambitious youth, who has the sense of real values, whose aspiration is starward, the opportunity to learn is a privilege so much longed for that it is almost or quite a necessity. Such are the youth that should go to college.

It does not make so much difference about the other youth. If a boy has not learned to love study in the common school or the academy, if he looks longingly for the time when he will no longer be driven to his lessons, if he lacks the sense of real values, then it is a mere luxury to send such a boy to college. He

may gain something by it—he probably will—but not much is lost to the world or to himself if he goes directly into business. He will perhaps have as little success in business as he found in school. It is an old saying that it does not pay to give a thousand dollar education to a ten dollar boy. That may not be true. Base metal is somewhat improved by gilding; and yet the improvement is not deep or great.

The president of one of our largest Broadway banks died the other day at the age of nearly ninety years. He kept his position until within a few months of his death. He began life as an ignorant driver of a Broadway stage. He was ambitious, saved his money, became proprietor of a stage route, graduated into a bank, and was its President for more than a generation. He had the sense to feel the loss he had sustained by his lack of early education, which was evident to every one who heard him speak. He had one consuming desire in life; it was that his large wealth should go to giving to youth of small means, in country districts, the educational privileges which he had not enjoyed. His money went to academies and colleges—not to the large and fashionable ones which it is to so many a luxury to attend, but to institutions in Western or agricultural districts where a thousand dollar boy could get a two or three hundred dollar education. We honor such an unlettered man far more than the gilded youth who rattle through college, or than the bankers whose brains have turned quite to gold. A college education is no mere luxury; it is a high privilege, none higher to the youth who is worth it.

The Break Up of the British Cabinet

No one expected Joseph Chamberlain to resign from the British Cabinet, but it was the logical thing to do or to expect. To be sure Mr. Balfour, the head of the Cabinet, agrees with him, but only academically; he is not willing to do anything to promote the cause he professes to favor. That is not the kind of a man that Joseph Chamberlain is. With him to think is to work, to believe

is to do. He has no place in an inefficient do-nothing Cabinet.

We do not suppose that Mr. Chamberlain is first a Protectionist. Probably he cares very little for protection as a theory or a policy. But he has a grand belief in a Greater Britain. As Colonial Secretary he has studied the forces that tend to disrupt the British Empire. Once our Thirteen Colonies set up their independence. That has been an example for other colonies. Canada knows, Australia knows, South Africa knows, that when any one of these great colonies is agreed that independence is desirable it would not be refused in Downing Street or in Parliament. The chain which binds the larger colonies to the home land has been wearing very thin. There is a loud cry of "Australia for the Australians," "Canada for the Canadians," "Africa for the Africans." Australia has federated, and adopted a constitution based more on ours than on that of Great Britain. The institutions of all the self-governed colonies are more American than British. Their school system, their free Church system are purely American. But for the custom house an American or Canadian would not know when he crossed the border. How strange, almost disloyal, it seems that these colonies should all put a tariff charge on the imports they receive from Great Britain just the same as on those from the United States. They treat England as if it were a foreign country.

The danger of separation Joseph Chamberlain sees and fears, and he proposes actually to do something to prevent it. And money is the root of the evil and the key of the situation. A preferential tariff will, he believes, hold the colonies to the mother land. But England cannot ask the colonies to put a lower tariff on English than on American or German goods, unless she is willing to give in return a favor to colonial productions. That is, England must change her long commercial policy; she must give up free trade; she must impose a tariff on Russian and American meat and wheat, before she can remit that tariff on Canadian and Australian meat and wheat thus giving her colonies preferential treatment. Free trade has become a gospel in Great Britain and the free loaf is its holy banner. Can

England give up its creed and its nearer interest for the sake of keeping its colonies? Half Mr. Balfour's Cabinet says "No;" Mr. Balfour himself says, "One of these days;" Mr. Chamberlain says it must be done speedily or the colonies will go. Therefore he leaves the Cabinet because the Prime Minister is only lukewarmly favorable, while several other members leave it because of the academic acceptance of a policy which they detest.

International conditions have amazingly changed since free trade became the English policy. Since then all other nations have adopted the contrary policy, the policy of commercial or tariff war. For the Millennium doubtless free trade all over the world will be better, just as now it is better between the States of our Union. Then we may have a Parliament of the world, and no custom houses. We believe in the admission of Porto Rico and the Philippines as Territories, with the abolition of the custom house between them and us. But while they have no rights in our Congress they must have custom houses of their own, even against us. So it is with Canada or Australia. It would be ideal if those colonies could do without custom houses, but they feel they cannot, and they must tax English imports, and it will probably come in the end that England will tax meat and wheat and sugar and other colonial products just that she may remit the tax to her colonies. Mr. Chamberlain will devote his strength to popularizing this policy.

We, too, in the United States are to have our tariff discussion and tariff reform. The change must be in the opposite direction from England's, for on many productions our tariff is now too high. A responsible English authority estimates our tariff against English products as averaging 75 per cent. That is much more than is needed. The Iowa Republicans will soon find recruits in the East. THE INDEPENDENT has long favored a reasonable protective tariff under our present conditions, in order to build up infant industries. It has not favored and does not favor tariffs that create monopolies, or that build impassable walls, or that forbid reciprocity, or that shut out or heavily tax objects of art, ancient or modern, to the injury of culture at home and abroad.

Exit Anti-Imperialism

A FEW American newspapers still play the rôle of anti-Imperialistic organs, and there is a grim humor in the fact that the most dutiful ones are journals which in the early days of "independent journalism" took endless delight in applying the word "organ" to their partisan contemporaries. The men who then conducted the newspapers to which we refer have passed to the beyond, one long ago, the other recently. Mr. Godkin lived to see the war with Spain and the annexation of the Philippine Islands, and to disapprove; Mr. Samuel Bowles died while Springfield, Mass., was still a better known town than Manila. Mr. Godkin had an almost unequaled command of sarcasm. Mr. Bowles had a sense of humor. Were he living now it is safe to say that the "boys," as he used to call them, in the Springfield *Republican* office would see through his eyes a great light which their own optics have not yet discerned.

During the Franco-Prussian war, as the story goes, Mr. Bowles spent a few weeks in Europe. A gentleman widely known as a student of charities and as a disciple of the gentle Emerson occupied the editorial chair. With admirable learning he demonstrated the hopelessness of the German cause and the overwhelming victories that awaited the French at Gravelotte and Sedan. One morning Mr. Bowles appeared unexpectedly in the sanctum. The temporary editor was summoned into his presence. The greeting was not unkind. Mr. Bowles had had the pleasure of reading the columns of his newspaper among acquaintances in English club rooms who had been so inconsiderate as to ask him where he got his information. "Well, young man," he remarked, as his blushing lieutenant stood before him, "I don't know whether you are a military genius or not, but you have given me a ——— interesting summer." We wish the genial Mr. Bowles could drop into the Springfield *Republican* office again in the same unexpected way.

These well-known organs, with a few newspapers printed in Boston and not well-known elsewhere, will doubtless continue to harp indefinitely upon the downfall of the American political sys-

tem, and the "atrocities" which, according to their exclusive information, our soldiers are daily perpetrating upon the helpless natives of the Pacific Islands; but nothing could be deader as an issue than the ideas which they represent. The almost imperceptible accommodation of the American mind to the new order of things has been one of the most interesting and significant facts in our history. In 1900 it was still possible to try to make party capital out of the Treaty of Paris. To-day an anti-Imperialistic plank in the Democratic platform would be as useless a bit of lumber as the quadrennial compliment to the ever-blessed memory of Thomas Jefferson.

We have been governing the Philippine Islands now for seven years. Civil order has been restored, the natives live on terms of peace with one another to a degree never before attained, educational and sanitary reforms are being quietly but very resolutely carried forward, and the outlook of the archipelago for commercial prosperity and general happiness and intelligent self-government is brighter than it has ever been. Meanwhile, the American republic has not fallen into ruin. It goes on its way, rejoicing in vigorous life and commanding the respect of the nations of the earth as never before in its history.

Anti-Imperialism has thus become a dead issue because of the singularly sure discernment which the American people seem always to have of the essential truth in bewildering masses of contradictory stories about all things political which the newspapers put before us. The average man has no way of sifting the material that has been published upon our rule in the Pacific, as an expert might sift it. He cannot summon and cross-question witnesses who have been on the ground. Much less can he himself make long journeys to view the situation with his own eyes. Nevertheless, he gets at the facts. Representatives of the average man from every section of the country have been at Manila, and their reports have come back in unstudied letters to kindred or friends. In almost every hamlet some soldier or school teacher who is living or who has lived in the islands is personally known. His or her testimony is accepted at the

same value it would have "among the neighbors" if it pertained to matters of home interest. In almost every instance it has given a radically different account of the situation in the East from that which the anti-Imperialistic organs have set forth. Usually it has contained allusions to the blood-curdling narratives of the organs and has shown them up as without foundation or as ridiculous. This testimony, unheralded in the press, and little remarked upon, has quietly converted the American people to a thoroughly sane view of our policy, and has laid the bugbear of "Imperialism."

It is an essentially sound and practical people which thus forms its judgment upon great questions from the testimony of the common man. In saying this we do not undervalue the work of the expert, but there is always danger of forgetting that great social or political questions are not those which call for expert investigation. They are questions of simple fact, open to the observation of thousands; of simple expediency, upon which the concurrence of thousands of minds is better than the refined opinions of a few; of plain right and wrong, upon which the unsophisticated conscience is qualified to speak. The question of our ownership and administration of the Philippine Islands is such an issue, and on this broad, common-sense basis the people have decided it.

What the Sultan Fears

THE attempted assassination of our American Vice-Consul at Beirût and the consequent prompt dispatch of our European Squadron to Turkish waters may have a wholesome effect in the settlement of other long standing claims of America on Turkey which no amount of diplomacy nor interchange of fair words has been able to achieve.

Among this accumulation of trivial yet important matters that the United States has waited upon the traditional slowness of the Turk to settle, is the fulfilment of the long standing irade giving permission to rebuild schools and churches destroyed during the Armenian massacres, and the erection of new ones, the unjust imprisonment of teachers in American institutions of learning, as was the case

at Van, the prohibiting of colporteurs from traveling through the country and the manifold obstacles laid in the way of students attending our colleges. One special case in point is that of seventeen school boys who have been attending the Marsovan College, who were arrested six months ago and thrown into the Turkish prison because one of their number was found reading a book taken from the library shelf. The book in question was one published by permission of the Turkish censor, who had affixed his official seal to it. Later the Government had prohibited its use, but no notification had been sent the missionaries, and the book was therefore still in circulation. These young boys are still in prison despite the best efforts of Dr. Herrick, President of the college, to obtain their release, because the policy of the Turkish authorities in Marsovan is to handicap our educational work. Now the fanatical attitude of the Turks at Harpüt, which is fast becoming beyond control, furnishes another justifiable reason for the immediate presence of our American Navy along the Syrian coast.

There is nothing that brings the Sultan so quickly to his senses as "those bull-dogs of the giaours," as the Turks are pleased to dub the war vessels of the Christian nations. Ever since Sultan Aziz, the present Sultan's uncle, was dethroned by his own pet navy, Hamid II has looked with suspicion upon all navies and naval demonstrations, no matter how insignificant. Every private yacht passing through the Bosphorus or the Dardanelles, every steamer—merchant or marine—is subjected to the closest scrutiny before permission is given to anchor or proceed. If even a six-inch gun, used simply in firing salutes, pokes its black muzzle from a pleasure boat, many explanations and, as instanced lately, the peremptory demands of a fair American woman, are required before the Sultan's timidity allows its entrance to the harbor.

European diplomats in Constantinople have learned to play upon this abject fear of the Sultan, realizing that there is nothing more potent to bring him to terms in the adjustment of diplomatic affairs than the threat of utilizing one of their thirteen-inch guns. For this purpose

each European ambassador is provided with a gun boat in the harbor of Constantinople—its guns kept pointed toward the palace at Yildiz—in order to assure the safety of the respective embassies and act as a lever in the speedy adjustment of difficulties that may arise.

While we have had no American man-of-war stationed in the harbor, their occasional presence there and off the coast of Asia Minor has served a number of times to remind the Sultan of his obligations toward our Government. It was an American monitor, commanded by Admiral Farragut, that prompted the Sultan to fulfil his promise of issuing his firman for the building of Robert College, when all other means had failed. It was an American man-of-war that opened the prison doors in Alexandretta to liberate an American missionary, the Rev. Geo. P. Knapp, unjustly accused and imprisoned for inciting the Armenians against the Turkish Government, while the presence of our American men-of-war in the harbor of Smyrna on their way to Manila gave impetus to the speedy adjustment of the \$95,000 indemnity which our Government had tried in vain for six years to collect through diplomacy. It was the appearance of the French Admiral Caillard's squadron off the island of Mitylene, last November, that secured justice from the unscrupulous Ottoman Government for the official recognition of French schools and religious and charitable institutions in Turkey, while a similar move on the part of the Austrian Government obtained a quick settlement for the seizure of the Austrian mail by the Turks in Alexandretta.

While all navies are terrorizing in general, the Russian Navy is naturally the most to be dreaded by the Porte, who trembles in his *babouches* and hastens to settle all scores whenever rumor has it that the Russian fleet is meditating a trip Bosphorus-ward. Odessa is not as far to-day from the Bosphorus as it used to be in the time of the slow sailing galleys, and no Genoese castles with caldrons of boiling pitch, catapults of stone and heavy iron chains thrown across the narrow passage block entrance to the Ottoman capital. Within eighteen hours after leaving the Russian port a man-of-

war may easily anchor in front of the palace itself, while from its iron throat belching forth fire and smoke come the genii of destruction. Turkey to-day is practically at the mercy of the Russian navy, as the Black Sea, since the Crimean war, has become simply a Russian lake under the constant surveillance of the Russian Eagle.

That was not an idle boast made last fall by the Grand Duke Alexander Mikhailovich, the most hardworking commander in the Russian Navy, when, after investigating Turkish ports, he said, "I know more about Turkish coasts and the Black Sea than all the Ottoman naval officers put together." From year to year the indefatigable Russian Navy has been visiting every crook and nook, inlet and outlet, of the Turkish ports on the Asiatic coast, at the same time strengthening its own ports to make them as impregnable as possible, and increasing its armament in the Black Sea, with an eye to Constantinople as its goal. Meanwhile Turkey's fleet lies rotting in the Golden Horn, and her defenses are practically worthless. When, during the Armenian massacres, the Sultan had half a mind to fortify the Bosphorus, the Czar sent a courtly rebuke, urging that such an enterprise would be construed as an insult to his good friend Russia.

Altho the Bosphorus is admirably equipped by nature for defense, with high and precipitous hills flanking each side of its narrow entrance, and a deep channel that can be filled with torpedoes, its capture under existing circumstances would not be at all difficult. In old days these Straits of Hieron, or the "sacred opening of the Bosphorus," as it was called, were always regarded as the first line of maritime defense of the capital against the attacks of Northern barbarians and were fortified accordingly. To-day all that is left to dispute its entrance are the two fortifications, Rumili Kavak on the European side and Anatoli Kavak on the Asiatic, neither of them sufficiently well equipped for actual defense.

It may be that the present threatening attitude of Russia, her fleet already within striking distance of the Bosphorus, may arouse the Sultan from his lethargy to see that the historic channel receives

a more up-to-date equipment of guns and torpedoes, and force his hand for the speedy introduction of reforms in Macedonia, while the timely appearance of our navy will add to our prestige in the domain of Turkey and compel the Porte to take a more serious consideration of our claims, instead of falling back upon his traditional policy, which says, "*Bakallum*" (We shall see); "*In-shaa-allah*" (If it please God); "*Yarum gel*" (Come to-morrow).

Progress in Parasitology

As medical science progresses in its determination of the causes of disease, the marked tendency is decidedly away from the idea of indefinite atmospheric or general meteorological factors in the production of disease and of the conditions of its distribution toward the acceptance of specific causative agents, some of which, because of the apparent triviality of their effects, seem at first totally inadequate to produce the serious consequences that have been attributed to them. This is very well illustrated in the history of the rise of bacteriology during the last fifty years, and the universal recognition at the present time that practically all of the infectious diseases, even to the dread supposedly inherited consumption, are due to microscopic plants. In recent years the announcement of the discovery of the mosquito as the only active distributing agent of such serious widespread diseases as malaria and yellow fever has added to the impression that only living things are responsible for the ills to which flesh is heir.

Within the last few years there has been even more striking illustration of this surprising fact. When our troops went to Porto Rico there existed in the island a series of supposed endemic fevers, considered to be special to that climate, and with regard to which very little was known. They were producing fatal results in large numbers. Anemic conditions of the most severe type were known as the result of these supposed endemic fevers, and a large part of the population, especially in country places, was affected by them. Within the first

year of American occupation it was found that Malta fever, a disease hitherto considered to be endemic only in the islands of the Mediterranean, and especially in Malta, existed in Porto Rico, and that the bacterium which causes this disease was probably widely distributed in the American tropics. A still more important discovery was to follow. It was found that the supposed post-febrile anemias occurred in persons in whom certain intestinal parasites of the nature of very small worms, formerly known only in Egypt and certain parts of Europe, could be demonstrated.

These parasites, called *uncinaria*, or hook worms, because of the apparent hooklike process which projects from the head end, by which they are able to anchor themselves in the intestinal tract, were first found in Europe among workmen in the St. Gothard Tunnel. The workmen, mainly from Italy, suffered from a peculiar anemic condition, that for a long time was thought to be due to the foul air, the heat of the workings and the noxious gases from explosives, which could not be entirely gotten rid of, especially in the deeper part of the excavations. As soon as the hook worms were found, however, and it began to be realized that these were the cause of the anemic condition it was not long before great improvement was possible in the health of those engaged even in the deepest part of the workings. The disease was communicated by the eggs of the parasite, and its distribution was due mainly to the uncleanly habits of the workmen.

Within a very short time after this discovery at St. Gothard a number of peculiar anemic conditions in various parts of Europe, which, because of their progressive character and eventually fatal termination, had been grouped under the heading of progressive pernicious anemia, proved to be due to the presence of *uncinaria* in the intestinal tract. This was especially true in underground workings and in certain of the brick-making districts along the Rhine. A few simple precautions were all that were necessary to protect the workmen from the spread of the disease, and it was even found that in cases which were not too far advanced the use of a simple para-

siticide like thymol was sufficient to kill the *uncinaria*, when the patient at once began to improve in health. It was thought, then, that these parasites were limited to Europe, and care was taken so that they should not be introduced into other countries, and especially, because of the immigration, not into the United States. The discovery in Porto Rico showed, however, that the *uncinaria* had a much wider distribution than was formerly considered, since the special form of anemia caused by them has been known as a form of disease quite common in Porto Rico for many years.

And in a number of places throughout the South scattered over at least five States *uncinaria* have been found where their presence was hitherto unsuspected. After a little experience in investigating the subject, a commission sent out by the Bureau of Animal Industry was able to pick out by their general appearance inmates of orphan asylums, almshouses and asylums for the blind suspected of suffering from the presence of these parasites, and found their conclusions in the matter nearly always justified by the result of further study of the cases. The main features of the affection caused by the presence of the worm are an intense pallor with a sodden, pasty complexion and a fixed, fishlike stare of the eye. This latter point is said by one of the investigators to be so characteristic as to be almost pathognomonic of the presence of a parasite. Members of the commission feel sure that in most of the Southern States this parasite is very common, and do not hesitate to assert that anemic conditions of severe character should always be considered as due to this cause rather than to any other until some definite evidence to the contrary has been found.

It would seem, then, that many of the supposed incurable anemias, most of them hitherto ordinarily considered to be due to malaria, are really the result of the ravages made upon the blood by these little worms, which may exist in hundreds in the intestinal tract, and the provision for whose nutrition constitutes a serious drain upon the system of the host. As the chronic malarial anemias, so-called, were usually extremely obstinate to treatment, and were utterly unaffected by quinine, while the anemia due to the in-

testinal hook worm, unless it is of very advanced degree, is curable by rather simple means, we have here a distinct and very practical advance in medicine that is likely to save many lives and an almost untold amount of suffering. Many of the extremely pallid children working in the mills and factories of the South owe their unfavorable appearance not alone to their long hours of labor or their poorly ventilated working quarters, but also to the ravages of these little parasites that so easily escape detection unless looked for particularly.

The Miller Case

It is startling that there should be any possibility of a struggle between the American Federation of Labor and the United States Government, but it is seriously threatened. It has been and it ought to be the rule that in Government employ all citizens have equal rights, and that no combination of citizens shall shut out other citizens. The principle is, that government by the people is, as far as it goes, a Socialism of all the people; it is partial Socialism. There should be no control of a Government business, post office or shop, by a union representing only a fraction of the people. But W. A. Miller was discharged from the Government Printing Office at the demand of a Washington labor union, and was reinstated by order of President Roosevelt. Now the Washington Central Labor Union has adopted a long series of preambles and resolutions declaring that "the order of the President cannot be regarded in any but an unfriendly light," and the labor organizations throughout the country are requested to deluge the President with requests "to modify his order for no discrimination, and order W. A. Miller's dismissal from the Government service." They seem to suppose they will influence the President through fear of losing labor votes. We think not. Mr. Roosevelt is a good politician, but not that kind. It will be remembered that Foreman Miller had required a full day's work in the bindery instead of the slack day's work which the union ordered, and for this reason he was expelled from the union and then immediately dropped by the Public Printer, un-

til reinstated by the President. This is the "flagrant non-unionism" with which he is charged, all the "moral turpitude" known when he was expelled. We trust that the Executive Council of the Federation of Labor, and their convention to be held in Boston before long, will be very conservative in this matter.

Emerson and German Personality

It has long been a matter of regret in the study of our literature that no one with sufficient education and industry has undertaken to point out the exact relationship between Emerson and the German romantic writers by whom, whether directly or indirectly, he was certainly inspired. In the case of a writer like Emerson, whose essays and lectures have had an appreciable effect on the formation of national character, such a study would have a double value, practical as well as literary. We turn with interest, therefore, to an article in the current *International Quarterly*, by Prof. Kuno Francke, a German scholar domesticated at Harvard, who takes up this question from the point of view of one who is perhaps more genuinely concerned with the present influences of Emerson's works on German public thought than with the original sources of Emerson's inspiration. And this reflex influence, if we may believe Professor Francke, is not entirely negligible. At the present moment a second and ambitious edition of Emerson's works is being published at Leipzig, and there are signs that the cry will soon become general: Less Nietzsche and more Emerson! We are obliged to say, however, that Professor Francke's analysis of the relation between Emerson and the great Germans who preceded him is in part singularly misleading. In one respect he is right in finding that the Teutonic spirit of the romantic revival had the profoundest effect on Emerson's views, altho this influence came to him indirectly through Coleridge. He says:

"Goethe, Schiller, Novalis, Tieck, Jean Paul, Kant, Fichte, Schelling, Hegel, however much they differed in temper and specific aims, all agreed in this, that the whole visible manifold world was to them the expression of the same infinite personality, the multiform embodiment

of one universal mind; they all saw the crowning glory and divinity of man in his capacity to feel this unity of the world, to hear the voice of the world spirit within him, to be assured of its eternity in spite of the constant change and decay of visible forms."

That is good Emersonian mysticism and comes undoubtedly from German writers. But when Professor Francke finds a further parallel in their common insistence on personality, he seems to us, either to use the word personality in a loose sense or else to miss the truth rather curiously. If by "insistence on personality" is meant a tendency to extreme individualism running at times into mere license, certainly such a similarity existed. But if Professor Francke means by personality the development and dominance of character, as his essay would seem to imply, he has in reality placed his finger on the essential point of divergence between Emerson and the German romanticists instead of on a subject of resemblance. One cannot read much in the productions of the Schlegels and Tiecks and *id genus omne*, or look far into their lax lives, without observing that character was the one thing furthest removed from their interest. Their tendency was to dissolve character in unrestrained revery. Now it is just because character is after all the last word of Emerson that his works have an enduring value while already we begin to smile at the vagaries of the revolutionary romanticists.

Pope Pius's Prayer

Our readers will remember that we published translations of Pope Leo's two last Latin poems, the first a prayer to the Virgin Mary, and the last, concluded only a few days before his death, a prayer to Jesus Christ, such as any Protestant might offer. We have now Pope Pius X's first official document, bearing his signature, issued September 8th, for the occasion of the Feast of the Nativity of the Virgin. He confirms the Cardinals as a Commission for the Dogma of the Immaculate Conception. It is a prayer to the Virgin, and the Pope accords an indulgence for three hundred days to those who will recite it once a day. It may interest our readers to read the prayer, which we translate from the Italian text, "*Vergine Santissima*":

Most Holy Virgin, who pleased Our Lord and became his Mother, immaculate in body and soul, in faith and love; in this solemn Jubilee of the proclamation of the Dogma, which announced Thee to the universal world as conceived without sin, mayest thou benevolently regard those miserable ones who implore thy potent patronage! The malevolent Serpent, against which was hurled the first curse, continues, unfortunately, to combat and insinuate itself among the suffering children of Eve; mayst Thou, O! our blessed Mother, our Queen and Advocate, who since the first instant of thy conception crushed the head of the enemy, gather the prayers which, united with Thee in only one heart, we implore thee to present at the throne of God, that we may never yield to the insinuations which assail us, so that we shall all arrive at the harbor of everlasting life, and in the midst of many dangers the Church and Christian society shall sing once more the hymn of liberation, victory and peace. *Amen.*

The Argument for Zionism

The demand of Zionism is for a country which the Jews can rule, in Palestine or South Africa. The argument for it was sharply put by Max Nordau in this way, and was vociferously applauded by the Zionist Congress at Basel:

"I claim it as a great service rendered by Zionism that it has put an end to the humbug about being happy and contented. . . . We are not contented. We regard a fundamental change in our situation as a vital necessity. After the humiliating attempts we have made at assimilation with other peoples we have taken counsel with ourselves and we desire to live in our own way."

What Zionists ask, says Mr. Zangwill, is "Jewish home-rule, Jewish national customs, and a Jewish Governor." We regard this claim as suicidal. The Jews have been fighting in all Western Europe for equal rights, and they have gained them there and in this country. They have hitherto denied that they were an unassimilable population. Now we are told by Jews themselves that equality will not satisfy them, that they cannot get along on the same terms with other people, and that now that their demands have been fairly granted they must escape to some place where they can be by themselves. Goldwin Smith has talked about the Jews' "tribalism," and has asked, "Can Jews be patriots?" But

here are Jews accepting the implication of the question, and making the charges of Anti-Semitism their central doctrine. British Jews, with their Lord Mayors, their members of Parliament, their titled aristocracy, are actually asking to have a separate province in Rhodesia set off to them where they can practice their own customs out of the sight of other people. Are we to have it thus confessed that the Jews are invincibly unassimilable? If so, we shall find it harder to reply to the defenses which Russia and Rumania make for their Anti-Jewish legislation.

President Crogman At the conclusion of the Civil War, when a public school system was inaugurated in the South, the position of teacher in the colored schools of South Carolina and other States was sought and reserved for white women who needed support. But this policy was soon changed, and now only colored teachers are allowed in the colored schools. A different policy prevailed in the missionary institutions supported by Northern money. Here the teachers were almost wholly white, as few others had the necessary training. It was thought that the best teachers were none too good, and the best were white. But gradually fully competent and well trained colored teachers are produced, and such men and women ought to be made use of, even in the highest institutions attended by colored youth. Among these we may mention Clark University, South Atlanta, a principal college controlled by the Methodist Church. Since 1876 Prof. William H. Crogman, a colored graduate of Atlanta University, has been one of its teachers, having held for over twenty years the chair of Latin and Greek under white Presidents. Now he has been elected President, with white and colored teachers in his faculty. Clark University stands high among the institutions for colored education, and its lands and buildings represent an investment of \$500,000. Its new President was born in the West Indies in 1841. At fourteen he ran away from home and went to sea, until, at the age of 27, he entered Pierce Academy, Middleboro, Mass., graduating two years later, when he taught in South Carolina. He then

entered Atlanta University and graduated in its first class in 1876 at the age of 35, and has ever since been teaching in Clark University. We should count him among the half dozen most accomplished scholars that call themselves negroes, altho white blood predominates in his veins. No higher honor has been achieved by any colored man in the country than this which he has earned by his character and ability.

The Russian Armenians Among the many brutal acts of the Russian Government few are more arrogant than the seizure of the Church property of the Armenian Church. We are not surprised that riots have followed, that revolutionary proclamations have been distributed, that priests have been arrested, that one of them has pronounced an anathema against the Russian Government, and that Chrimian, the aged Catholicos of the Armenians, has sent in his resignation. The Armenian is a well-behaved Church, with some hundreds of thousands of followers in Russia, which was attending to its own business and paying its own way. Now the Government seizes its property and proposes to pay over the income and thus subsidize and control the clergy. Can it be imagined that such conduct will attach the Armenian population in Turkey to the absorption of Eastern Turkey, where most of them live, to Russia? They would rather live under Turkish rule. The Armenians had until recently about 400 private schools in Russia. Five or six years ago the Government took possession of the schools and of their property and put in Russian teachers. Part of the funds for the schools belonged to the churches, and part was annually contributed. The contributions fell off, of course, and now the Church funds are seized, and the Armenians are told that school expenses will first be paid, and if anything is left, it will be given to the clergy! But the Russian Government has no sense of religious liberty; it wants to force every Christian into the Orthodox Greek Church.

A single issue of the London *Times* for September 4 gives a long column to the brief reports of "passive resistance

to the Education Act." On the preceding day a second batch of 40 "passive resisters" were arraigned, and their property ordered sold to satisfy the school tax. At Bishop-Stortford, on the same day, 9 prominent Nonconformist tradesmen were summoned and their goods distrained. At Kingston-on-Thames a member of the Surrey County Circuit was held in default among others. At the Berkshire petty sessions a number of well-known residents and householders were distrained. At Wolverhampton 40 defaulters were summoned, including 7 ministers and 3 members of the town council. At Barnstaple 10 ratepayers appeared, and orders were rendered against them. And so it goes on all over England. This kind of protest is criticised by the Church of England people as absurdly silly, but it is accomplishing its purpose, and it seems certain that the law will be changed. The agitation will be a strong factor in the next election.

Facts published in a Consular report from Hamburg minimize very much the likelihood of the Germanization of Southern Brazil. According to this report the total number of new German-speaking immigrants, including Austrians and Swiss, to all Brazil last year was only 500, the others being generally old colonists or their sons. Brazil used to offer free passage to German immigrants, and at one time as many as 5,000 came in a year, chiefly of destitute families. There is one center, in the state of Santa Catherine, of 30,000 German-speaking people, but immigration practically stopped when free passage was no longer given, altho passage to Brazil is offered for considerably less than to New York. The colonization companies are straitened for capital, and some of them are threatened with bankruptcy. German emigrants prefer to pay more to be brought to this country.

Our new interest in Colombia gives some importance to the fact that it is beyond, perhaps, any other country, the land of lepers, there being 27,000 lepers credited to the 4,000,000 of population, or one to 148. India has been called the land of lepers, altho a very large estimate gives 200,000, out of a population of 300,000,000, or one in 1,500—that is,

leprosy is more than ten times as prevalent in Colombia as in India. The doctors are now laying its prevalence to the eating of badly cured fish, especially on fast days. If they prove it, the Catholic Church, which has done so much for lepers, will have occasion to do something more radical, and change its rules of fasting.

It is a flat statement which a recognized representative of American Anarchism makes in our issue this week. Speaking of the "communistic idea" of Anarchism, she says that until the last ten years it was chiefly narrowed to industrial matters, but now,

"The young generation recognizes the immense sweep of the idea through all the realms of art, science, literature, education, sex relations and personal morality, as well as social economy, and welcomes every accession to the ranks of those who struggle to realize the free life, no matter in what field. For this is what anarchism finally means, the whole unchaining of life after two thousand years of Christian asceticism and hypocrisy."

We are glad for so bald a confession. Its frankness shows it detestable.

We have occasion to applaud the conduct of Senator Simmons, of North Carolina. His father was murdered by "parties unknown." A negro was strongly suspected and arrested, and there was danger of a lynching until Senator Simmons himself appealed to the men to do no violence but let the man have a fair trial. Such an act was greatly to his credit under most painful circumstances, and Senator Simmons, who has been regarded as no friend of the negro, deserves all praise therefor.

The Post Office investigations have so far shown no person appointed upon competitive examination to be involved in any wrongdoing. Yet unceasing efforts are being made to "let down the bars" of the civil service.

The British Cabinet is in a most anomalous and amusing position. Chamberlain goes out, and his son is promoted to a higher position in the Cabinet his father has left; and father and son are in the closest consultation.

Insurance

Testimonial to the Oldest Known Life Insurance Policy Holder

MR. CHARLES HENRY BOOTH, of Englewood, N. J., is an interesting person at the present time, because upon information and belief he is considered by those in a position to know about such matters to be the oldest living life insurance policy holder in the world. Mr. Booth was born in Stratford, Conn., on September 13th, 1803. He was therefore one hundred years of age on September 13th, 1903. He has convicted the psalmist of error in placing the age limit at seventy years, and he has defied the actuarial tables in which it is written that no person who takes out life insurance is expected to survive beyond the age of ninety-six. It may be said in passing that Mr. Booth still lives.

He has never used tobacco or alcoholic stimulants, tho a more probable explanation of the longevity of Mr. Booth may be found in the fact that for many years he has been and now is a constant reader of THE INDEPENDENT.

He celebrated the passing of his hundredth year very quietly, because the anniversary fell upon Sunday, and Mr. Booth is a strict Sabbatarian. Notwithstanding his age, Mr. Booth enjoys comparatively good health. Much of his time is spent out of doors, and he has made it a pastime to rake the mown grass and fallen leaves

from off the lawn in front of his Englewood home. In his youth young Booth worked in a dry goods store. Later he was a member of the firm of Booth and Tuttle in Cedar Street. He retired from active business thirty years ago. In politics he was first a Whig, but subsequently joined the Republican party. He was an abolitionist before the Civil War. Mr. Booth has the extraordinary record of having been absolutely free from sickness during the last seventy-five years.

When a young man Mr. Booth became interested in life insurance, and took out a policy in the Mutual Life Insurance Company of this city on February 7th, 1843, or one week after the company named began doing business. The amount of this policy was \$2,000, and it was numbered 22. The figures quoted below showing the continued increase in value of Mr. Booth's policy are very interesting. They are as follows:

CHAS. H. BOOTH,
The World's Oldest Policy Holder

Age 39. Annual premium, \$62.20.

LIFE PLAN.

Amount	\$2,000.00
Total additions declared.....	\$5,763.22
Additions surrendered.....	1,932.30
Additions in force.....	\$3,830.92
Add policy...	2,000.00

Total Insurance\$5,830.92

Total premiums paid...\$3,794.20
Cash dividends used to pay premiums... 1,555.00

Net premiums paid...\$2,239.20

In recognition of Mr. Booth's remarkable longevity, and because of his long con-

THE OLDEST AMERICAN COMPANY TO ITS OLDEST POLICY HOLDER,

Greeting:

CHARLES HENRY BOOTH,
of Englewood, N. J., was born in Stratford, Conn., September 13, 1803 and insured in this company February 7, 1843, sixty years ago, by Policy No. 22, which has been kept in force until this day.
THE MUTUAL LIFE INSURANCE COMPANY OF NEW YORK.

this 13th day of September, 1903, in behalf of the hundreds of thousands who are his associates in its membership, and of the millions of the insured throughout the world, of all of whom he is the senior and dean, tenders its

CONGRATULATIONS

on the completion of his hundredth year of a serene and happy life.

RICHARD A. McCURDY, President.
WILLIAM J. EASTON, Secretary.

The Booth Testimonial

(Continued on page 2306.)

The Steel Trust's Shares

NOTHING more puzzling to the average investor has been seen in the securities market for many years than the prolonged decline of Steel Trust shares and the extremely low price to which the common stock has now fallen. At the end of last week the common shares were sold at \$17, a price at which the annual dividend is equivalent to 23½ per cent. The preferred stock was selling below \$68 at the same time, although no one thinks that the annual 7 per cent. dividends are in any danger whatever. Why should the common shares of the world's greatest corporation, on which a dividend of 4 per cent. has been paid since organization, be sold in large quantities at \$17? Every one knows, or may know, what the Steel Corporation's earnings are, and that up to the present time they have been much more than sufficient to pay the 4 per cent. dividend. The Corporation's annual and quarterly reports to shareholders and the public have been remarkably frank and full. They have included more information than the new Bureau of Corporations at Washington will ever exact from this or any other similar organization. Neither in these reports nor in the present condition of the iron and steel industry is there anything that points to a probable reduction or suspension of the dividend. The consumption of pig iron is still maintained at a high rate; the decline in the price of such iron is favorable, rather than injurious, to the Corporation; the price of rails is sustained, with the mills carrying orders for eight months to come; at the recent meeting the pool price of billets was not reduced; labor controversies have temporarily checked consumption of structural steel, but the work thus affected has only been deferred; the crops are abundant; tariff changes are not impending, and the condition of general business does not point to approaching depression. Officers of the company, whose names are not given, say they can foresee a continuance of the dividend for two years. And still the shares have for a long time been falling steadily, and are now marketable at only \$17 or \$18.

If this were a company organized in

the dark and conducted with all possible avoidance of publicity, it would be reasonable to suppose that the decline foreshadowed revelations of an alarming character. But there has been abundant and voluntary publicity, and everybody believes, we think, that the Corporation's reports have been truthful. No one expects a disclosure of anything discreditable or dishonest in the management of the Steel Corporation. No one can be led by the official reports to expect a reduction of the dividend. Because this is the world's greatest manufacturing corporation, and for the reason that it has so taken the public into its confidence, the inexplicable decline of its shares has a disquieting effect and even causes alarm. Investors are beginning to ask why the great capitalists connected with the company and familiar with its condition permit this slaughter of stock, if the official reports are trustworthy and if the dividend is to be continued. The time has come, it seems to us, for an authoritative statement, from some representative of the Corporation, that will tend to correct false impressions and preserve that public confidence to which, we believe, the management is fully entitled.

THE price of British consols fell last week to 88 13-16, the lowest quotation since the Franco-Prussian War in 1870.

....Dividends announced:

New York Air Brake Co., quarterly, 2 per cent., payable October 15th.

United Fruit Co., 1½ per cent., quarterly, and 1 per cent. extra, payable October 15th.

N. Y. Dock Co., Preferred, 1 per cent., payable October 15th.

Buffalo & Susquehanna R.R. Co., quarterly, 1¼ per cent., payable October 1st

(Continued from page 2305.)

nection with life insurance, and in appreciation of his aid and patronage when the Mutual Life Insurance Company began its business career sixty years ago, a handsome testimonial has been prepared for him under the direction of the Mutual Life Company. The testimonial has been engrossed upon parchment, and was specially bound in selected leather. This testimonial is reproduced on the preceding page.

The Independent

VOL. LV

NEW YORK, THURSDAY OCTOBER 1, 1903

No 2861

Survey of the World

Politics and Washington Topics

The chairman of the National Populist Committee, Ex-Senator Butler, of North Carolina, has permitted a publication of his views concerning the attitude of his party toward the Democrats. There is no doubt, he says, that the Democratic party will be controlled by the gold men and that "their candidate and platform will be such that Populists who voted for Mr. Bryan can never go with them." Even if Mr. Bryan should remain in the party he could not induce his Populist followers to vote with him. The main feature of the Populist platform, Mr. Butler says, will be a demand for the Government ownership of railroads and telegraph lines. He thinks that a majority of the people are really in favor of such a change and that even the stockholders of the railroads would be glad to see it take place. As for the railroads, the Government, after paying a fair price for them, could so operate them as to pay interest on the bonds and, by sinking fund provisions, to pay off the debt in twenty years. Freight and passenger rates could then be reduced.—The negro Republican organization of Alabama has applied to Chairman Hanna, of the National Committee, for a hearing in support of a protest against a recognition of the Lily White Republicans of that State in next year's national convention.—It is expected that Mr. Olney will be the candidate of the Democrats of Massachusetts for the Presidential nomination. Senator Bailey, of Texas, prefers Senator Gorman, who, he says, could carry Illinois, Utah and Montana, and easily defeat Mr. Roosevelt in New York.—There are in-

dications that at the coming session of Congress the Democrats will insist upon investigations concerning the Post Office Department, the Indian service, the Government Printing Office and other executive branches of the Government, with the expectation that campaign material will thus be obtained.—At the recent session of the Farmers' National Congress, at Niagara Falls, resolutions were adopted calling for a postal telegraph, postal savings banks, the election of Senators by direct vote, additional legislation for the restraint of Trusts, and the admission of Oklahoma to the Union of States. Reciprocity with Canada was opposed, and there was no support for ship subsidies.—A report was published last week that the Northern Securities Company had offered to employ as counsel in its controversy with the Government Judge Peter S. Grosscup, of Chicago, whose decision against the Beef Trust attracted much attention, and that he was thinking of retiring from the Federal bench to accept this offer. But President James J. Hill denies that such an offer has been made.—The time allowed for a ratification of the Panama Canal treaty by Colombia expired on September 22d. At 5 p. m. on that day Minister Beaupré cabled from Bogota to the State Department that there had been no discussion of the new canal bill in Congress, and that the situation was unchanged. At last accounts there had been no message as to what action, if any, was taken in the remaining seven hours of the day. The Colombian Minister at Washington expects, it is said, that there will be a new agreement under which the canal will be built by the United States. It is remark-

able that immediately after it was known that the time limit had expired without favorable action at Bogota on the treaty, the price of Panama Canal shares advanced on the Paris Bourse. The new Governor of Panama, Senator Obaldia, sent to President Marroquin, on the 19th, a message affirming his loyalty and saying that all was quiet on the isthmus. This message was placarded in the streets of Bogota, apparently to reassure those who feared that the rejection of the treaty would cause a revolt in the northern provinces.

New York's Municipal Campaign

The latest developments in New York's municipal campaign are the Tammany leader's willingness to second the Reform or Fusion party's nominations for two important offices, and what seems to be the intention of Lewis Nixon to run as an independent Democratic candidate for Mayor. District Attorney Jerome's published attack upon the candidacy of Mayor Low was so sharply criticised that in defense he gave to the press several letters sent to him by Thomas A. Fulton, for several years past Secretary of the Citizens' Union, which is the leading element in the Fusion party. These letters asserted that there was much opposition to Mr. Low on the part of some district leaders of the Union and suggested that continued "pounding" would constrain the Mayor to decline a renomination, thus giving the Union much relief. Mr. Fulton was speedily forced to resign his office. The reports in his letters do not appear to have been warranted by the facts. Mr. Low was renominated unanimously in the Republican and Citizens' Union conventions, together with nearly all of the old ticket. On the other side there is a quarrel between Charles F. Murphy, the Tammany leader, and Hugh McLaughlin, the old Democratic leader in Brooklyn. Murphy insists upon the nomination of Congressman George B. McClellan, whom McLaughlin opposes, who says he wants a man "whose recognized integrity and force of character would furnish assurance to the people that honesty and not graft would flourish under his administration." It was understood on Monday last that Mr. Murphy,

owing partly to McLaughlin's attitude, would offer the support of Tammany to Edward M. Grout, the present Comptroller, and Charles V. Fornes, now President of the Board of Aldermen, both of whom the Fusionists have renominated. They are Reform Democrats and would accept such indorsement if no conditions were attached. The Brooklyn Democrats will probably ask for the nomination (against Mayor Low) of Lewis Nixon, the ship builder, who held Croker's place for a short time and was chairman of the Tammany Committee on Vice. Mr. Nixon stands for reform in Tammany. He says he is a candidate for the Democratic nomination, and some expect that he will be an independent candidate.

The Negro Question

In the Alabama House of Representatives, last week, in the course of a debate upon a bill appropriating \$2,500 for a negro school in Montgomery, a Representative from Tuskegee bitterly attacked Mr. Booker T. Washington's Institute, asserting that two of the students had been legally hanged for rape, that many others were guilty of crime, and that not one student in the county was earning an honest living. Other members said that this speaker did not represent the sentiments of the South. Representative Verner, of Tuscaloosa, remarked that the people of Alabama owed the negro something and should pay the debt. "There is not a man on the floor of this House," he added, "that has not got money from the sweat of the brow of the negro, who has worked and toiled for him." The bill was passed by a vote of 41 to 39.—At a meeting of the Presbytery of Philadelphia, Dr. Worden, superintendent of missionary work, said that Mr. Washington was giving an exaggerated importance to industrial education and was subordinating the education of spiritual and religious influences. The Presbytery, he thought, should choose its own agents for the higher education of the negro. Others spoke in the same strain, and the published reports say that only one was found to defend Mr. Washington and his methods.—At Lynchburg, Tenn., on the 25th, a negro named Allen Small was lynched by a mob. Small was

in jail, having been arrested for attempted assault upon a white woman. The charge had been so modified at the preliminary hearing that this does not appear to have been such an offense as has in many instances been punished by lynching. When the mob demanded from Sheriff Davidson the keys of the jail he refused to surrender them. Altho he made such resistance as he could, and shot one of the lynchers, the jail doors were battered down and Small was killed in the corridor. Three of the lynchers were captured, and it is said that they will be prosecuted.—In his charge to a grand jury, last week, Chief Justice Lore, of Delaware, spoke of the lynching of George White, in Wilmington, last June, when the State was “invaded for the first time by this revolting crime.” Continuing, he said:

“Lynching is a crime against the law of both God and man. Every willful participant in such an act is a murderer. No man has a right to commit that crime because he believes or fears that some other person who is intrusted with the execution of the law will fail, or has failed, in the performance of his duty. Lynching and mob law, their promoters and encouragers, whether they be of high or low degree, should receive no favor at the hands of thoughtful and patriotic men. There must be government or no government. The line of cleavage is clear. All history teaches that the prevalence of mob law is the end of free government. Obedience to law is the life-breath of our republic. In obedience to the oath you have taken and to your duty to your State, we ask you so to act that the crime of lynching may be suppressed in this State, so far as by your action that end may be attained, and that the perpetrators of this crime and the authors of the disgrace that has come upon us through their crime shall be dealt with according to their just merits.”

The Miller Case

A controversy between the Government and the organized workingmen of the country over the Miller case has been deferred, if not prevented, by the conservative action of the Executive Council of the Federation of Labor. The question was referred by the Council to a sub-committee, whose report is not expected within less than three months. This action was due in some measure to the influence of President John Mitchell, of the Coal Miners' Union, who is a member of the

Council. The Executive Board of the Knights of Labor has published resolutions deprecating any controversy with Mr. Roosevelt, “one of the best friends of organized labor,” and suggesting that the Miller case be referred to Senator Hanna for a decision. An authoritative statement is made that the President will not confer with labor leaders or others as to the principle involved in his reinstatement of Miller. His position with respect to discrimination against union or non-union men has been defined in his letters to Secretary Cortelyou, and will not be changed. He may, however, grant a hearing to those who ask for the dismissal of Miller on the ground that the latter is unfit to be employed because of unlawful acts alleged to have been committed by him. Miller was expelled from the union upon the charge that he had not been loyal to the union's interests. After his reinstatement the union searched the record of his life and accused him of committing bigamy some 25 years ago. This is one of the charges on account of which it asks now for his dismissal. Miller asserts that he is innocent.

Other Labor Controversies

Further depression of the building industry in New York has been caused by the support which Samuel J. Parks—the walking delegate recently convicted of blackmailing and extortion—obtained at the recent convention of the International Union of Bridge and Structural Iron Workers in Kansas City. Parks's local union had been suspended by President Buchanan, but Parks, who is still to be tried under four indictments, was regarded as a hero, and his union's representatives were admitted by an almost unanimous vote. Having won this victory and been sustained in other ways by the convention, Parks promised to order many strikes upon his return to New York and even to tie up work on the new East River bridge. For this reason it may be expedient, the associated employers say, to order a general lockout and discontinue all work until an enduring agreement can be reached. Work upon buildings representing an investment of \$100,000,000 has been partly or wholly

suspended for several months. This latest proof of Parks's power has caused a canceling of contracts and the withholding of \$50,000,000 which capitalists were intending to invest in new buildings. It is expected that not more than half of the skilled workmen in the building industry at New York will find work this winter. The local unions of Pittsburgh, Buffalo, Cleveland and Wheeling have decided to withdraw from the International Union if Parks elects his candidate for President at the Kansas City convention.—A stringent law against boycotting, blacklisting and picketing has been passed by the Alabama Legislature.—In the Steinway piano factories a strike, the first in twenty years, has been ordered because the company declines to employ union men exclusively.—In Pittsburgh, Chicago and several other cities the employers of marble workers have closed their shops, giving notice that they will soon be opened for the employment of non-union as well as union men.—It is stated that the recent unsuccessful strike of 100,000 textile workers in Philadelphia caused a loss of \$12,000,000 to the manufacturers and \$8,000,000 to the employees. One result was the introduction of labor-saving machinery which displaces 2,000 men.—At the time of the railroad strike riot in Bridgeport, last May, Mayor Mulvihill interfered to prevent the arrest of one Matthew J. Reilly. The latter was tried and found guilty last week and sent to jail for 45 days.—Suspension of work in two or three plants of the Steel Corporation and in several of its ore mines is reported. The General Electric Company has laid off 2,000 men, and 27,000 anthracite miners are now working only two-thirds of the time.

The Islands Eduardo Condo and Leonidas Guillot, the two Socialists who were sentenced by Judge Kopel at San Juan (Porto Rico) to be imprisoned for six months for insulting the American flag at a meeting of the Federation of Labor, and threatening the life of Governor Hunt, have been released by the unanimous decision of the judges of the District Court. Certain newspapers still abuse the Governor and ask for a parade of the workmen, under a black flag, on the day

of his return from the States, but the Federation has decided that it will make no demonstration of that kind. Letters from the island say that many of the people are suffering from extreme poverty, owing partly to the loss of the old foreign markets for coffee and tobacco. In many instances taxes have not been paid. Laborers are going, it is said, to Mexico, Cuba and South America in search of work.—In the Philippines, several leaders of the recent insurgent movement are now in custody. One of these is Dominador Gomez, formerly a Spanish officer, who organized the society known as the Union Obrero and started an insurrection in Rizal, Bulacan, Laguna and Cavité provinces, with some assistance from the juntas in Hong Kong and Japan. He is charged with rebellion or treason. Another revolutionist, arrested for inciting revolt and carrying on guerrilla warfare in Northern Luzon, is Kolbaza, the President of the Nationalist Party. General Ola, leader of the recent revolt in Albay province, has surrendered with 28 of his men. This is said to be the end of the revolutionary movement in that part of Luzon. The Government is distributing rice in Batangas, Negros and Cebu, owing to the destruction of crops there by locusts.—At Princeton, Ind., a Filipino boy, of twelve years, has been excluded from the public schools by the Board of Education, because of his color. The boy was brought from the Philippines by one of the school teachers, and the action of the Board was due to the protests of the people.—A report from our Consul-General at Havana shows that Cuba's exports in the calendar year 1902 were \$65,000,000, of which \$49,500,000, or 76 per cent., came to the United States, against only \$33,000,000 in 1900. The imports into Cuba were \$62,000,000, of which only 42 per cent., or \$26,000,000, was brought from the States, the island's purchases from other countries having been \$10,000,000 from Spain, \$9,000,000 from England, \$8,000,000 from South America, \$3,600,000 from Germany, and \$3,200,000 from France. Our sales to Cuba have been declining, while those of Germany and Spain have shown some growth. It is pointed out that under a treaty of reciprocity our exports to the island would

be largely increased, altho for some years there probably would be no considerable addition to our imports from it.—In Hawaii, the Federal Grand Jury is about to investigate the proceedings of the recent session of the Territorial Legislature. It is expected that certain members of the House will be indicted for concealing or destroying vouchers of expenditures, if not for a misuse of public funds.

The British Cabinet

Conjecture is busy to determine who will occupy the places recently made vacant in the British Cabinet. The only thing that seems quite certain is that Chamberlain's place, the Colonial Secretaryship, has been offered to Lord Milner, the High Commissioner of South Africa. But he apparently is reluctant to accept the position. It is commonly supposed that Austen Chamberlain will be made Chancellor of the Exchequer in succession to Mr. Ritchie, that Mr. Arnold Forster will be the new Secretary for War, and that Mr. Brodrick will be the new Secretary for India. After getting his slate ready, Premier Balfour proceeded to Balmoral to have the names confirmed by the King. The common report is that Mr. Balfour was surprised to find the King quite determined to exercise his veto so as to make the Cabinet conform to certain ideas of his own. Ordinarily ministerial vacancies are filled by the Premier, with the mere formality of the sovereign's consent. King Edward is determined to make his veto felt in the Government. There is a story in circulation to the effect that the King, who was in Vienna when the War Commission's report came out, was subjected to a good deal of unpleasant banter from his royal friends on the condition of his army, and that he is set on straightening matters out. Mr. Balfour was willing to defer the reformation in the management of the army until a later date, but the King insists that the newly completed Cabinet shall deal with this subject instantly and decisively. Meanwhile Mr. Chamberlain, now a free lance, is working for his political ends without the hampering restraints of a Cabinet position. He has escaped from the odium attached

to the Government in consequence of the Education Act and the War Commission's report, and thus can work for his own designs more effectively.

The British War Department

In connection with King Edward's determination to mold the Cabinet so as to bring about a reform in the War Department there is special interest in some of the revelations made before the War Commission and now given to the public. Lord Lansdowne, upon whom as Secretary of War the onus of blame has fallen, was, it appears, not personally responsible for much of the maladministration of affairs before the war. He shows that a great deal was done to increase the efficiency of the army between 1895 and 1899. One of the chief reforms to which Lord Lansdowne refers was the introduction of a short service system, for which he and Lord Wolseley fought long and hard. The chief difficulties when the war began were due to the fact that the old policy of the Government was based on certain estimates of the relative value of British troops and Boer commandoes given them by their advisers, which estimates proved wholly deceptive. As early as August 12th, 1899, Lord Lansdowne put the situation with regard to the delays that would result if certain preparations were not made perfectly plainly before the Cabinet. The error of judgment of the Cabinet was due to the fact that they had no competent military advisers. The individual impressions of Lord Wolseley and Sir Penn Symons as to the forces required were worthless, and were bound to be worthless. Only a general staff, which had made a careful study of the whole problem of a South African campaign could have given such information as the Cabinet needed. The evidence given by Sir W. G. Nicholson, the Director-General of Mobilization and Intelligence, shows in what way the War Department had come to be without the advice of a general staff. This thinking department of the army, under the old title of the Quartermaster-General's branch, was, in the Duke of Wellington's time, the admiration of foreign soldiers

and the principal factor in England's military success. The duties of the Department at that time comprised the movement, quartering and encamping of troops; the disposition of troops in the field, the preparation of plans of defense, military surveys and reconnoissances, and the maintenance of a depot of military plans, maps and memoirs, and of a military library. A Quartermaster-General's staff was at this time assigned to all British armies in the field, and to all commands at home and abroad. In peace, Assistant Quartermaster-Generals of districts were, under the "General Regulations and Orders for the Army," dated 1811, charged under the orders of the General Officer Commanding with the duty of quartering, encamping and the marches of troops. In coast districts they were expected "to possess accurate information as to practical points of landing, the best positions for defense in their immediate vicinity, and the particular winds and periods of tide which afford an enemy facility in approaching the coast." In all districts they were expected to have a perfect knowledge of the state of the roads and the features of the country applicable to defense; also of the course of rivers and the power of inundation. They were required to attend the embarkation and disembarkation of troops. Officers employed in the Department, as a rule, received special training at the Royal Military College, which was founded originally at the close of the first French Revolutionary War as a school of instruction for young officers of the staff. The duties of the Department had been gradually curtailed until 1888, when it was completely reorganized and deprived of its powers. As an instance of the inefficiency of the general arrangement General Nicholson pointed out that England had twenty officers to do the work in his Department which was accomplished by one hundred and fifty men in Berlin, and about as many in Paris. The Topographical Department is in the same state, and, although thirty million pounds are spent in the army, money could not be found to enable the officer to devote six months to working out a scheme for utilizing voluntary services in England and the Colonies.

The New Irish Land Act

The first case of a completed transaction under the Wyndham act is reported from County Wexford, Ireland. On September 11th, one William Browne met his tenants at their solicitor's office in Wexford and arrangements were mutually agreed upon which amount to an all-round reduction of 25 per cent. Rents have been fixed for a first judicial term, the tenants obtaining a reduction of about 40 per cent. on their old rents. The landlord, on his part, received about twenty-three years' purchase and three years' bonus—a total of twenty-six years' purchase. According to the dispatch both tenants and landlord are satisfied, which is the most important thing. Nearly half of Wexford County has now passed into the hands of the occupiers. A marked improvement has attended the change and County Wexford is no longer what it once was, one of the most disturbed districts in Ireland. The sale of Mr. Browne's estate, so far as can be learned, was effected without interference on the part of paid "organizers" of the United Irish League. Irish tenant farmers, it would thus appear, are in certain cases at least quite capable of calculating how much it will pay them to give for their holdings. The terms accepted by Mr. Browne in Wexford—twenty-three years' purchase—are identical with those refused by Mr. Archdale in Fermanagh. Three evictions took place last week on the O'Grady estate, in County Roscommon. This estate adjoins the properties of Lord De Freyne and Mr. Murphy, where the "no rent" campaign was in force a year ago.

German University Theology

Recently some two hundred pastors of the Province of Schlesweig Holstein sent a formal petition to the Prussian Government asking for the removal of Professor Baumgarten, who holds the chair of practical theology in the University of Kiel, because of his prominent activity in favor of a radical type of theology, while officially the confessional status of the provincial chant is based on the Augsburg Confession. A counter petition was sent in by the theological students of the university, in which the piety and earnest

zeal of the professor in the search of truth was emphasized. The Cultus Ministry of Prussia has now sent an official reply, in which that body refuses to yield to the entreaties of the pastors, because the principle of "the liberty of scientific research" (*Lehrfreiheit*), with which the university systems of Germany stand and fall, would be violated and restricted by this removal. The Kiel case is typical of what is going on in almost every part of Germany, the Church at large protesting against the advanced theology that is represented in nearly all of the Protestant theological faculties. The Government, however, firmly adheres to the principle of having both tendencies, the conservative and the confessional, represented in the faculties.

The Balkans

On September 22d Premier Petroff, of Bulgaria, had an interview with Ali Feruh Bey in which the whole Macedonian situation was carefully considered. The demands of Bulgaria contain the following conditions: First, the Porte to grant a general amnesty and stop the persecution of the Bulgarians in Macedonia; second, a mixed commission to be formed, the Bulgarian members of which should be nominated by the Bulgarian Exarch, and never be in a minority on the commission, to elaborate administrative reforms, arrange for an extension of local administrative autonomy, insure the safety of the highways and the equality of Christians and Mussulmans before the courts, reform the taxation and gendarmerie, and provide for personal security. The commission, after accomplishing these tasks, would probably sit at Salonika as a council of the Inspector General. Bulgaria also asks that Turkey give assistance in rebuilding the burned villages. Two days later the Sultan promulgated an irade sanctioning a program of reform to be carried out by a mixed commission, and appointing Hilmi Pasha to superintend the execution of the reforms. An order was also given to suspend the persecution of the Bulgarians. How closely these concessions conform to the demands made by Bulgaria is not known, but it is hardly probable that they will put an end

to the dispute. There is no excitement in Sofia, but the Government and army go on preparing diligently for war. To the circular note of Bulgaria to the Powers England and Italy have not yet replied. France has given a guarded answer. Austria and Russia declare that if war breaks out it will be localized, the *status quo* afterward maintained and the reform scheme carried out. They further declare that Turkey has the unquestionable right to mass troops on the frontier and that Bulgaria's representations in this respect cannot be considered. Germany agrees to the answer of Russia and Austria.

Armenia

Samuel G. Howe, it will be remembered, went to Greece in his early days to take part in the war of Independence against Greece, and again, later, was concerned in the Cretan insurrection of 1867. It connects the past with the present to receive information about the action of Turkey in Armenia from a committee of which Mrs. Julia Ward Howe is the President. It seems that for some time pressure has been put upon the Armenians in the Caucasus to induce them to leave the Armenian for the Greek Church, grants of Government land being held out as a bribe to those who changed their faith. The Armenians, however, are tenaciously attached to their own Church, and few of them yielded to these inducements. Now the Russian Government has violently seized all the property of the Armenian Church. The population of the Caucasus was already in a state of exasperation against the Government, and the workingmen of all races, Georgians, Persians and Armenians, seemed on the verge of an outbreak. This attempt to confiscate the property of their Church has aroused intense indignation among the Armenians, and the proposed spoliation is being vigorously resisted. In Alexandropol, where the population is almost wholly Armenian, all the shops were shut and the buildings hung with black; the people congregated in the streets, and the chief of police, who tried to interfere with the demonstration, was clubbed. In Erivan also there was a great demonstration of protest, which the soldiers and police were unable to sup-

press. Thousands of the inhabitants, headed by the Bishop, marched to Etchmiadzin, the See of the *Catholics*, or head of the Armenian Church, and urged him not to hand over the Church property to the Government. The *Catholics* and his clergy held a meeting and decided that they would not voluntarily give it up. The Minister of the Interior has telegraphed to the *Catholics* that he must obey. The *Catholics* answered that he should appeal to the Czar. Soldiers have been sent by the Government to surround Erivan and Etchmiadzin. Great excitement prevails. It is announced that a large and splendid monastery of the Greek Church is about to be built on land belonging to the Armenian Church at Etchmiadzin, close to the ancient Armenian monastery, at the foot of Mt. Ararat, which has been the See of the Armenian *Catholics* from time immemorial. This monastery was preparing this summer to celebrate its sixteen hundredth anniversary, but the celebration was forbidden by the Government. It is reported that many of the high officials in Russia were opposed to the confiscation of the property of the Armenian Church, and that the Minister of Finance said such an act of wholesale robbery would injure Russian credit. The Government guaranteed the Armenian Church the secure possession of its property by a formal agreement entered into nearly a century ago.

Manchuria and Korea

It is believed that Japan and Great Britain have come to a mutual determination in regard to the Russian occupation of Manchuria and have decided to protest separately to the Peking Government against Russia's demands. Should their protest prove ineffectual, it will be the next move of Japan to break off negotiations with Russia in regard to the respective rights of the two countries in Manchuria and Korea, and to make a definite demand of the St. Petersburg Government that it order an evacuation of Chinese territory. Meanwhile Chang-Chi-Tung, Director of Commerce, is calling upon the various ministers to use their influence

over Prince Ching, President of the Foreign Office, to persuade him to reject the recent proposals of Russia. These proposals China has not yet subscribed to, and her action will be determined probably by the amount of pressure brought to bear on her from various sides.—A Russian periodical contains an article by A. A. Radzig, the well-known statistician and economist, on trade in Manchuria. He gives figures to show that during the years 1896-1900 trade there averaged 48,573,000 roubles (about \$25,000,000) annually for both imports and exports together. In 1901 they increased to 59,074,000 roubles, but again decreased last year some seven million roubles. The cotton textile trade is now chiefly in the hands of Americans and Englishmen, and he thinks that the conditions of manufacture in Russia put her at a great disadvantage in the competition with countries which enjoy freer trade. His views diverge radically from the opinion of Mr. Miller, the American Consul at New-Chwang, which were printed recently in THE INDEPENDENT.—Baron de Rosen, the Russian Minister to Japan, has left Tokyo for Port Arthur, and this is regarded as having some political significance, since his influence has been strongly in favor of peace. The Russians on the lumber concession at Yon-gam-Pho, in Korea, have been annoyed by Chinese brigands, and M. Pavloff, the Russian representative at Seoul, has applied to Korea for protection. Korea's answer was that the Russians were not occupying a treaty settlement and that they must take their own risk. M. Pavloff replied that it would then become necessary to employ Russian soldiers for protection of the lumber concession. Korea, under the emphatic instigation of Japan, has up to the present time rejected the new terms of concession by which Russia would obtain control of Yon-gam-Pho. The agreement proposed by Russia contained the following provision:

"The term of the lease shall be fixed as in the original timber-felling agreement at twenty years. After the expiration of that term Korea shall not be allowed to sell the land to any foreign country. In case Korea is obliged to do so, Russia shall have the right of priority in purchasing the land."

The Emerald Isle

BY JOHN GREENLEAF WHITTIER

[The first poem of Whittier's ever printed was "The Exile's Departure," which appeared in Garrison's *Free Press* June 8th, 1826. The next was "The Deity," published June 22d of the same year, and both these are collected. The third appeared in the *Free Press* August 3d, 1826, and was never collected. He was eighteen years old when these lines were written, and had not yet the advantage of the Academy, nor of any library except that of the "wise old doctor" whom he mentions in "Snow-Bound," Dr. Elias Wold.—S. T. PICKARD]

*Brightly figure thy shores upon history's pages,
Where names dear to fame and to science long known,
Like unsetting stars through the lapse of long ages,
From the sea-girded isle of Hibernia have shone:
Fair island! thy vales are embalmed in the story
Which history telleth of ages gone by,
When Ossian's proud heroes strode onward to glory,
And ocean's wave answered their loud battle-cry.
The wild vine is creeping,—the shamrock is closing
Its foliage o'er many a dimly seen pile,—
Where entombed on the fields of their fame are reposing
The proud, peerless chiefs of the Emerald Isle.*

*And in far later years, with the purest devotion,
To the high cause of freedom full many a son
Of the green shores of Erin, the Gem of the Ocean,
Fair evergreen laurels of glory has won.
The martyred O'Neal and the gallant Fitzgerald
On the bright list of glory forever shall stand,
And fame circle Emmet, the eloquent herald,
Who wakened the spirit and pride of his land.
They are gone! they are gone! but their memories that linger
On the shores where they perish no wretch shall revile,
No slave of a tyrant shall dare point the finger
Of scorn at those sons of the Emerald Isle.*

*Hibernia! tho tyrants may seek to degrade thee,
Yet proud sons of science acknowledge their birth
On thy sea-girded shores, whose high genius has made thee
The Gem of the Ocean, the wonder of earth.
Long, long, has the halo of glory surrounded
The memory of Brian, the pride of thy shore;
And o'er thy dim lakes and wide valleys have sounded
The heart-touching strains of Corolan and Moore:
O, soon may the banners of freedom wave o'er thee,
Green island of Erin! may Liberty's smile
To the luster of primitive ages restore thee,
The Gem of the Ocean,—the Emerald Isle!*

The Past and Future of Joseph Chamberlain

BY LEO LE GAY BURLEY, A.M.

SINCE he is neither an aristocrat nor a barrister, neither a sportsman nor a scholar, since he is lacking in reserve and wanting in caution, Mr. Chamberlain, tho the most commanding figure in English politics, is by no means a typical English statesman. Men are apt to resent the way in which the public life of this country is monopolized by lawyers, and Lord Rosebery, voicing the desire felt in England also that there should be more manufacturers and merchants in politics, said, whether in jest or in earnest, that he should like to see a Cabinet of business men; he went so far as to name Sir Thomas Lipton as a man eminently fitted for such a position. Lord Rosebery might have remembered that in

Mr. Chamberlain England had one such statesman. Mr. Chamberlain is the only Englishman prominent in public life who before entering politics made a fortune in trade. In his young days he pushed forward the screw-making business of the firm of Nettlefold & Chamberlain, buying out smaller concerns in the manner of the modern trust. In scholarship, too, Mr. Chamberlain presents a striking contrast to Harcourt, formerly professor of international law at Cambridge; to Rosebery, biographer of Pitt; to Balfour, an accomplished philosopher; to Morley, a

voluminous writer; to Bryce, Wyndham, Dilke and others who are publicists as well as statesmen. Indeed, his ignorance of history has more than once given his enemies "cause to blaspheme," as when he showed that it was his impression that

the French and Indian wars occurred *after* the American revolution. Mr. Chamberlain is, in fact, a product of the English middle class, which at best is not a well educated class. He has had neither college training nor aristocratic friends to smooth for him the rough path that leads to fame. He owes his success entirely to his splendid abilities and to his capacity for hard work.

As is the case with many an American statesman, it was in municipal politics

JOSEPH CHAMBERLAIN.

that Mr. Chamberlain first displayed the qualities which his political adversaries have since learned to dread. In the early seventies he was elected to the Town Council of Birmingham, and in 1873 he was chosen as Mayor, an office usually held for one year only, but to which he was thrice triumphantly elected. It should be explained that the Mayoralty of an English city offers much less opportunity for the display of administrative ability than the similar office in this country. In England the Mayor is little more than the chairman of the City Coun-

cil. He has no power of appointment and almost no independent authority; it is the council, not the Mayor, which rules the city, and over the council the Mayor has only so much influence as his own force of character enables him to obtain. Mr. Chamberlain, however, was not slow to see his chances and to seize them. Under his guidance Birmingham became one of the model cities of the Empire; gas and water, dearly and inadequately supplied by private companies, became municipal properties cheaply and plentifully bestowed; slums gave place to handsome streets and broad boulevards, board schools were built, public baths were provided, parks were laid out, a noble free library was established, an art gallery was founded, and a school of art and a college of science were started. The latter, greatly enlarged, has since developed into the University of Birmingham. In 1876 his grateful city elected him without opposition to Parliament, and he has represented Birmingham ever since.

The story has often been told of the staid Tory members, who, having heard of the daring radical Mayor, who was vaguely suspected of favoring a revolution which would sweep away the Established Church, the House of Lords and even the Crown, saw to their surprise, not the frowning and blatant, coarsely-clad demagog they had feared, but a tall, mild looking man in faultless attire, with an orchid in his buttonhole, speaking in low, clear tones, with moderation of argument such as always appeals to a deliberative assembly. At once he became a force in the Liberal Party, and only four years later, when Gladstone formed his second administration, Mr. Chamberlain was with reluctance admitted to the Cabinet. This was the celebrated "Cabinet of Micawbers," who, resenting Disraeli's jingoism, entered office on the cry of "Peace, Retrenchment and Reform," only to find that difficulties in South Africa, Egypt and Ireland rendered the achievement of this vague program almost impossible. Even their one achievement, and it was a very great one—the Household Suffrage Act—brought them fresh trouble; it enabled the Nationalist Party to secure eighty-five of the one hundred and three Irish seats, so forcing the Home Rule question into a position in

which it could no longer be disregarded. The sequel—Mr. Gladstone's conversion to Home Rule and Mr. Chamberlain's successful opposition to it—is still fresh in the mind of the reader.

The darling thus far of the Radicals and the terror of the Tories, Mr. Chamberlain lost the love of his old friends before he had won the love of the new. Tho welcoming his assistance, the Tories were still distrustful, while the Radicals stigmatized him as a traitor, because he refused to support a policy which he had never advocated and in which he did not believe. The epithet "Judas," hurled at him by exasperated Irishmen, was eagerly caught at by the Radicals, while Mr. Labouchere deprecated the use of such language as insulting to the twelfth apostle.

Recognizing the difficulty of Mr. Chamberlain's position in this most awkward period of his career, Lord Salisbury appointed him Plenipotentiary of Great Britain in the Newfoundland Fisheries question. Altho the Senate rejected the treaty which the plenipotentiaries arranged, the *modus vivendi* which, it was understood, would be observed until the treaty should be ratified, still remains. By this mission Mr. Chamberlain won no fame; instead he won his third wife, Miss Endicott, daughter of Mr. Cleveland's Secretary of War. On his return he refused to exchange plain "Mr. Chamberlain" for the title "Sir Joseph."

This tribute to democracy did nothing to allay the vehemence with which he was denounced as a "traitor," "turncoat" and "renegade." Altho a kinder feeling is shown toward him to-day, there are those who cannot even now quite free themselves from the belief that Mr. Chamberlain passed at once from ardent reformer to reactionist Tory. Mr. Chamberlain, on the contrary, stated some years ago that only on one important question had he really changed sides—that, whereas he had once favored Woman's Suffrage, he was now opposed to it. His record in Parliament fairly well bears out this assertion. In the six years that followed the Home Rule split, a Liberal anti-Home Rule government being impossible, he skillfully used the Conservative majority to promote liberal measures. In fact, since Mr. Chamberlain permeated the Conservative Party

with his doctrines of social reform, the old Tory Party—the party which sought to delay progress—has completely disappeared; Conservatives to-day compete before the voters with their Liberal rivals on equal terms, and it is not easy for the observer to detect which party is the more democratic. The provision of free education, a stringent Workman's Compensation Act and far reaching changes in local government are only some of the results of this new Conservatism which Mr. Chamberlain has helped to inspire. There really seems to be no truth in the charge that he apostasized. Indeed, as late as 1895 he offended some of the old-fashioned Conservatives by voting for the second reading of Mr. Asquith's bill to disestablish the Episcopal Church in Wales.

At last, however, it is possible for his opponents justly to accuse Mr. Chamberlain of changing his views. In a biography of the great imperialist, published seven years ago, the author, Mr. S. H. Geyes, says:

"In Free Trade, the most essential part of the Cobdenite faith, Mr. Chamberlain is a devout believer. Nothing short of absolute and urgent necessity would induce him even to consider protection, no matter how seductive were the *alias* is assumed."

Clearly, then, the invective of his opponents has been *ex post facto* justified: Mr. Chamberlain is a "renegade."

But when it is recalled that the same term may with equal fairness be applied to Fox, Pitt, Burke, Peel, Disraeli and Gladstone, it is clear that we must search elsewhere for the causes of the extraordinary bitterness with which Mr. Chamberlain has been assailed. The animosity of the Irish Nationalists is easily explained: they hate the man who, after opposing coercion and after proclaiming himself to have been "a Home Ruler before Gladstone," did more than any other man to defeat the Home Rule bills. (It must be remembered that until 1886 the expression "Home Rule" was vaguely used to denote any extension of self-government to Ireland, such, for instance, as the County Councils, which have since been set up; it was in this sense that Mr. Chamberlain used the expression, and not in the restricted sense of the estab-

lishment of a separate legislature for Ireland, which is now implied by the phrase.) Such Radicals, again, as care more for Liberal ministries than for Liberal measures cannot forgive Mr. Chamberlain for supporting the Conservative Party, even tho he influenced it to pass Liberal measures, and tho the only alternative before him was to submit to an administration favoring the Home Rule policy, to which he was strenuously opposed. But Mr. Chamberlain's opponents have another feeling toward him which, because it is a feeling, is hard to describe. They feel that the great statesman does not always play the game quite fairly. True, his hard hitting comes straight from the shoulder, but it does not always give an impression of good humor or of absence of malice. Mr. Chamberlain is not always content to crush the argument of his adversary; he subjects it to a mortifying examination, turns it inside out, casts it contemptuously from him and jumps exultant on its prostrate corpse. Such tactics are said to have occasionally caused waverers to vote against him out of respect to their party, which was being so mercilessly chastised. The manner, too, in which three years ago he stole a march on the Liberals by forcing a "khaki election" at a time when a wave of jingoism was sweeping over the country and when the Liberals were more than ordinarily divided, is quite in keeping with the rest of his career. Nor is Mr. Chamberlain adequately endowed with that sanctified quality which is called good taste. Thus, after the death of John Bright in 1889, he followed Gladstone's eloquent eulogy of the dead statesman by a eulogium of his own in which he referred to Mr. Bright's fondness for dogs and cats. More repellent to sensitive ears was his brutal comparison in 1893 of Mr. Gladstone's aged condition to the horrible end of King Herod,—an attack which wrought on the feelings of excited members of Parliament to such an extent that they so far forgot themselves and the dignity of their calling as to indulge in a free fight on the very floor of the House. And so it has come to pass that the blind, unreasoning, unreasonable abuse, which twenty years ago was relentlessly hurled against Mr. Gladstone, is to-day directed

against Mr. Chamberlain. Moreover, with poetic justice he has likewise inherited that almost touching devotion of the masses which Mr. Gladstone so long enjoyed.

And yet, except in the power to call forth the unbounded enthusiasm of his supporters and the unlimited detestation of his opponents, there is little in common between William Ewart Gladstone and Joseph Chamberlain. The one, a finished scholar, a devout High Churchman, a courteous gentleman, tho not too chivalrous for the rough and tumble of political life, served a long apprenticeship to politics, holding many subordinate offices before attaining the leadership of his party and the office of Prime Minister. The other, a business man with no university training, a Unitarian, a fighter ready to take every chance, is one of the very few statesmen who have stepped direct from the position of a private member to a seat in the Cabinet, and who, while monopolizing men's attention, has failed to become in name what he is in reality, the Prime Minister of England. It was Mr. Chamberlain more than any other man who made effective the Home Rule split in the Liberal Party, so assuring a long period of Conservative predominance. It is Mr. Chamberlain who by raising the difficult question of preferential tariffs causes a split in the Conservative Party, so giving the Liberals the best chance of victory that they have had for more than a decade.

As Mr. Gladstone's declining years were clouded by his failure to establish an Irish Legislature, on which he had set his heart, so Chamberlain, when wanting only three years to complete his three score years and ten, has undertaken a task which is certainly beyond the power of any other man and which very possibly may prove the grave of his splendid reputation.

The greatness of his task, indeed, is only matched by Gladstone's magnificent attempt to carry Home Rule. Chamberlain to-day, as Gladstone before him, relying on his influence over the masses, is risking the uncertain dangers of a split in his party in an endeavor to carry out that which he believes to be the inevitable outcome of changed conditions, and to reverse a policy so old that it is almost

regarded as part of the very fabric of the state. Gladstone failed. Will Chamberlain succeed? From one point of view failure seems to stare him in the face; from another ultimate success seems equally certain.

At present, indeed, his prospects of success look far from bright. The strong free trade principles of Unionist leaders like the Duke of Devonshire, Sir Michael Hicks Beach, Mr. Ritchie and Lord Goschen, not to mention rising men like Lord Hugh Cecil and Mr. Winston Churchill, cause the split in the Unionist Party to assume formidable dimensions. Scarcely a single member of the Cabinet has declared unequivocally in his favor. Mr. Balfour's recent pamphlet did not contain a sentence in support of preferential tariffs. In the rural districts the absence of peasant proprietorship will tell heavily against him. The farmers, of course, would like a tariff on grain, but the agricultural laborers, who buy their flour and sometimes even their bread, have a remarkable prejudice against it. The older ones still tell tales of their far off boyhood when landlords were drawing big rents and farmers were living in comfort, while the laborer, unschooled, ill-clothed and half-starved, toiled, despite protection, for a miserable eight shillings a week. Radical orators, tho never dreaming of a revival of protection, have ceaselessly used the image of the cheap, big loaf of the Liberals and the dear, small loaf of the Tories of protectionist times. The poverty and ignorance of the farm laborer is a blot on English civilization; his wages are still miserably inadequate, and he seems to be fully persuaded of the hopelessness of an increase of them under protection sufficient to counterbalance the increased cost of the loaf. Of course, the farm laborers greatly outnumber the farmers, and it is almost certain that their ballots will be cast against Mr. Chamberlain's scheme.

Industrial England is more evenly divided. Lancashire, whose cotton manufacturers dread anything that may lead to an increase in the cost of raw materials from America, is generally hostile. In Yorkshire opinions are not yet crystallized, but the *Yorkshire Post*, the chief Conservative journal in the North of England, follows the *London Standard*

in its opposition to the scheme, while the *Yorkshire Herald* sits patiently on the fence. In Scotland, where Mr. Chamberlain is to open his campaign next month, the *Glasgow Herald*, one of the largest commercial papers in Great Britain, is resolutely hostile; so is the *Spectator*, by far the most influential of the English weeklies. The Liberal press is, of course, without exception opposed to the scheme.

Nor is this surprising. It was not the teachings of Adam Smith or Ricardo or Mill that caused England to adopt a free trade policy; nor was it the admirable organization of the Anti-Corn Law League, nor the skillful leadership of Cobden, nor the oratory of Bright. Free trade in England was the result of economic forces which still continue to work: as soon as the country ceased to be a primarily agricultural state, and became an industrial community studded with large towns, her very life depended on cheap food and cheap raw materials, and protection was forced to give way. It was as tho Massachusetts to-day was protected against the grain and raw materials supplied by the West and South—a totally intolerable situation.

Free trading, then, as regards these commodities, England is bound to remain until her colonies can plentifully supply them and can offer big markets to the manufacturers of the mother country.

Hopeless, however, as Mr. Chamberlain's chances just now seem to be, certain phenomena that tell in his favor must not be neglected. Some manufacturers, feeling keenly the strain of American competition, are ready to welcome any change, and are prepared to contribute heavily to a protectionist campaign. A very popular feeling that some economic sacrifice is worth the opportunity of cementing closer relations with the colonies will inspire thousands to follow the great imperialist statesman, if only they can be persuaded that Mr. Chamberlain's scheme will produce so happy a consummation. Unfortunately it is by no means certain that this would be the case. Lord Rosebery has observed that if English workmen find the cost of living increased they will become tired of the

colonies which have caused this change. Moreover, each renewal of the tariff would be the occasion of inter-imperial wrangling, such as would be anything but conducive to imperial unity. The German Zollverein, it is argued, led directly to the German Empire, but in that case friction was impossible, since there was entire freedom of trade between each member of the union. Such a policy in the British Empire to-day is manifestly impossible. Canada's infant industries demand protection against English manufacturers, as well as from those of a foreign power.

Nevertheless, it is wholly unwarrantable to assume that the elections next year will result in the return to power of a Liberal administration. Mr. Chamberlain is the shrewdest of electioneers. It was he who introduced the American caucus system into English politics. He used it in 1880, not only to secure Liberal victories at the polls, but also to throw himself into the Cabinet—an unheard of feat which actually succeeded. Moreover, the Unionist Party has a majority of about one hundred and thirty in the House of Commons, so that the Liberals must win sixty-five seats before they reach the line of scratch. The smallest safe working majority is stated to be about seventy, so that thirty-five more seats must be won—one hundred in all. But this majority of seventy would be made up not only of Liberals, but also of Irish Nationalists, at least eighty strong, whose views on the Education question are so diametrically opposed to those of the Liberals that such a government could not last a month. In fact, several Liberal leaders have declared that it would be unwise for them to take office unless they had a clear majority over Conservatives and Nationalists combined. Hence at least forty more seats, one hundred and forty in all, must be won if the Liberals are to have a satisfactory working majority. It is enough to say nothing like such a huge turnover of votes has ever been known. Accordingly, even if Mr. Balfour's adroit modification of Mr. Chamberlain's elaborate scheme proves unpopular, the probabilities do not point beyond a reduction of the present

big Unionist majority. If this reduction is sufficient to bring about a position approaching equality as between Liberals and Conservatives, the Nationalists will hold the key to the position and will be able to exact further concessions. But Mr. Balfour's policy is certain to win the support of manufacturers who have long resented the disadvantage in which England is placed by the fact that foreign statesmen have been able to raise barriers against imports from Great Britain, secure in the knowledge that British free-trade principles would prevent retaliation. The immediate effect, they will tell you, of the McKinley tariff was to throw hundreds of Sheffield cutlery workers out of employment. Would the McKinley tariff have been so severe had British retaliation been feared? During the past few weeks Liberal orators have dwelt incessantly on the dangers of any taxation of food-stuffs.

Mr. Balfour has suddenly taken the wind from their sails by his refusal to support preferential tariffs which would have made necessary the taxation of grain. Should there be an early break in the present boom of prosperity which the Liberals freely attribute to free-trade, Mr. Balfour's victory would seem to be assured.

Mr. Chamberlain may be disappointed, but he is not the man to be daunted by failure or depressed by defeat. Outside the Cabinet he will be unmuzzled, and therefore be able to fight harder than ever. Of course, he will support Mr. Balfour's policy, for it is a part of his own. No doubt he will seek to extend it. Nor is he likely to cease to strive for the noble ideal of more closely united empire, and with time and changing economic conditions on his side, it is not easy to set limits on the ultimate success of his plans.

CAMBRIDGE, MASS.

Jonathan Edwards

BY WILLIAM HAYES WARD, D.D., LL.D.

[The bicentenary of the birth of the greatest of American theologians is celebrated this week at Andover, New Haven and Princeton Seminaries, and elsewhere.—EDITOR.]

THEOLOGY has, from the beginning of its history, been a favorite study in this country. Its faith has been fed on questions, and its religion has not a little affinity with Rationalism, for Religion and Rationalism may both rest on reason, and Religion may be worthy of patient tolerance, but never of respect unless it does rest on reason.

So there has been a succession of theologians such as no other country can show. Of these the one confessedly the greatest, whose name is still a household word, even where his doctrine is forgotten, the one who would be mentioned first for any Hall of Fame, is Jonathan Edwards. Those who have come after, the Younger Edwards, Dr. Hopkins, Bellamy, Emmons, Dwight, Channing, Stuart, Taylor, Finney, Park, Hodge,

down to Professor Briggs and all the Higher Critics of to-day, are all followers of the methods of, and are in the true line of succession to, Jonathan Edwards.

I presume most people nowadays think of Jonathan Edwards principally as a sulfurous preacher of the doctrine of eternal torment. So he was. He believed in Hell, and he preached it, sometimes, when he thought it needed, with no softening of its horrors. With the same stern courage with which the eagle gazes upward at the sun, he gazed, and bade his hearers gaze, downward into the fires of Hell. Believing in it, with all its horrors, as everybody else did then, and pretty much does now, he lifted up his voice to people, bidding them flee from wrath to come. This is about all that

JONATHAN EDWARDS

SARAH PIERPONT EDWARDS

very many people now know about Jonathan Edwards. They remember, for have they not been told it many times, that he preached a sermon on "Sinners in the Hands of an Angry God," and another on "The Torments of the Wicked in Hell no Occasion of Grief to the Saints in Heaven." So he did, and the editor of his works has picked out these and five or six other sermons on Hell and put them in the forefront of his works. The punishment of the wicked was far from being the chief subject of his study and preaching, but it had its just share. He was too good a logician and too faithful a preacher to dodge it when he believed it, for he had the courage to face what he believed.

I quote from one of these sermons, which were heard with a terror which did good to many that heard them. The proposition of that on "Sinners in the Hands of an Angry God" was, that "There is nothing that keeps wicked men at any one moment out of Hell but the mere pleasure of God."

"Justice calls for their punishment. . . . The sword of Justice is every mo-

ment brandished over their heads, and it is nothing but the hand of arbitrary mercy, and God's mere will, that holds it back. . . . God is a great deal more angry with numbers that are now on earth; yea, doubtless with many that are now in this congregation, that, it may be, are at ease and quiet, than he is with many of those that are now in the flames of Hell. . . . The wrath of God burns against them; their damnation does not slumber; the pit is prepared; the fire is made ready; the furnace is now hot, ready to receive them; the flames do now rage and slew; the glittering sword is whet, and held over them; and the pit hath opened her mouth under them."

This does not prove that he believed in physical fire and brimstone, for he did not, but he believed in mental sufferings, the result of sin, in remorse that was worse than fire, for he proceeds immediately to develop what Hell is:

"There are in the souls of wicked men those Hellish principles reigning, that would *presently* kindle and flame out into Hell fire, if it were not for God's restraints. There is laid in the very nature of carnal men a foundation for the torments of Hell. There are those corrupt principles, in reigning power in them, and in full possession of them, that are the beginnings of Hell fire."

It is not in his printed works, but I have heard it said that in his sermons to the Stockbridge Indians he told these stoics, who would not shrink from holding a forge-heated gun barrel in their hands, that in Hell they would have molten lead poured down their throats. Whether that is true I don't know, but in his sermons to his own people in Northampton he did not hesitate to use the most terrible figures of fire to enforce the pangs of perdition. Let me quote once more a passage often repeated from this same sermon, where he makes the application of his doctrine directly to his hearers:

"The God that holds you over the pit of Hell, much as we hold a spider or some loathsome insect over the fire, abhors you, and is dreadfully provoked. His wrath toward you burns like fire. He looks upon you as worthy of nothing else but to be cast into the fire. He is of purer eyes than to bear to have you in his sight. You are ten thousand times so abominable in his eyes as the most hateful and venomous serpent is in ours. . . . There is no other reason to be given why you have not dropped into Hell since you arose in the morning, but that God's hand has held you up. There is no other reason to be given why you have not gone to Hell since you sat here in the House of God, provoking his pure eyes by your sinful, wicked manner of attending his solemn worship—yea, there is nothing else that is to be given as a reason why you do not this very moment drop into Hell."

Jonathan Edwards's reputation as a preacher of Hell fire is quite justified. No such preaching could be addressed to a congregation to-day even by those who believe, or think they believe, in such a Hell. But Jonathan Edwards was too logical, and too true a man to fail to preach what he believed. The change in our preaching comes from a different view of the retributions of a future world, if we really believe in such a future world. We think of grief or pang in another world as the natural fruit of conduct here, perpetuated there, and not as positive inflictions of an angry God.

Jonathan Edwards was the only son among eleven children of the Rev. Timothy Edwards and Esther Stoddard, who was a daughter of the celebrated Rev. Solomon Stoddard, of Northampton, Mass. He was born October 5th, 1703, at Windsor, Conn., entered Yale College

at twelve years of age, graduated at sixteen, and was specially devoted to studies of science and philosophy. He then remained in New Haven two years longer studying theology, and before he was nineteen he was invited to preach for an English Presbyterian congregation in New York, where he served with great acceptance for about eight months. He then returned to his father's house, where he spent some months in study. In his twentieth year several congregations sought his service, besides the New York people, who begged him to return; but just before he had reached the age of twenty he accepted the invitation to act as tutor in Yale College, where he remained till he was twenty-three, when he accepted a call to succeed his grandfather, Rev. Solomon Stoddard, as pastor of the church at Northampton, Mass. There he remained for over twenty-three years, till he was forty-seven years old, when, in 1750, he was dismissed, as the result of a difference with his people, growing out of his criticisms of the loose habits of the young people. The next year he was installed as missionary to the Stockbridge Indians, where he labored six years, meanwhile devoting much time to study and writing. In 1757 he was elected President of Princeton College, succeeding his son-in-law, President Aaron Burr. But three months later he died, the result of inoculation for smallpox. He married Sarah Pierpont, daughter of one of the principal founders and professors of Yale College, a woman of the rarest quality, and so, in his own family and his wife's, was connected with the best families of Massachusetts and Connecticut. His descendants include more men of distinction in the ministry, in education, in law and on the bench than are recorded of any other man in American history. Of these, in the next generation, was his son, Dr. Jonathan Edwards, and, in the succeeding one, his grandson, Aaron Burr, Vice-President, duelist and conspirator. Among those of the last generations may be mentioned Professor Park, of Andover, and President Woolsey and President Dwight, of Yale, not forgetting the elder President Dwight. Thus three Presidents of Yale are his descendants.

Jonathan Edwards was devoted to his

pen. He was always writing on some subject. One of his Resolutions—and he wrote out some 70 when nineteen or twenty years old, was,

“*II. Resolved*, When I think of any theorem in divinity to be solved, immediately to do what I can toward solving it, if circumstances do not hinder.”

His habit was to write out the result of his study, and accordingly he left behind him, besides sermons, over 1,400 miscellaneous papers, all numbered and classified, most of them still unpublished.

Most of his Resolutions were, of course, religious, and none the worse for that. The first one was very comprehensive:

“*Resolved*, That I will do whatsoever I think to be most to God’s glory and my own good, profit and pleasure, ON THE WHOLE; without any consideration of the time, whether now or never so many myriads of ages hence; to do whatever I think to be my *duty*, and most for the good and advantage of mankind in general.”

I give one or two others:

“*Resolved*, Never to do anything which if I should see in another I should regard a just occasion to despise him for, or to think any way the more meanly of him.”

“*46. Resolved*, Never to allow the least measure of any fretting or uneasiness at my father or mother. Resolved to suffer no effects of it, so much as in the least alteration of speech, or motion of my eye; and to be especially careful of it with respect to any of my family.”

“*43. Resolved*, Never to act as if I were any way my own, but entirely and altogether God’s.”

A young man not yet twenty could hardly be in better business than making such serious resolutions. For a while he kept a diary, but much of it was in shorthand, and he wrote under an entry of that sort.

“Remember to act according to Prov. 12: 23: ‘A prudent man concealeth knowledge.’”

It will be seen already that from his boyhood Jonathan Edwards was a student. I have mentioned that his favorite college studies were natural science and philosophy, a very happy combination. Perhaps the earliest of his writings that has come down to us was a careful study, made by the boy in the woods, of

the habits of a kind of spider that flies a long distance through the air floated by a thread of his own web. The observations are valuable to-day, and are wonderful in one of his years and time, when such things were not studied. He had the making in him of a great naturalist, if he had not become our greatest theologian.

He loved nature. He loved to wander in the woods, to commune with nature and with God. It has sometimes been said of Calvin that living as he did under the Alps, he gives no evidence that their grandeur ever appealed to him. That was not like Jonathan Edwards. And yet nature to him was chiefly valuable because it opened the door to God.

In a separate paper, written twenty years after, Jonathan Edwards preserves an account of his religious experience. A sweeter story of religious experience was never written. In his boyhood the doctrine of the divine sovereignty had greatly troubled him, and especially the thought that God could leave any souls to the eternal torments of Hell; but at last there came to his soul a trust in the righteousness as well as the love of God, and now he was at peace. He says:

“The first instance that I remember of that sort of inward, sweet delight in God and divine things that I have lived much in since, was on reading those words, I Tim.: 1-17: ‘Now unto the King eternal, immortal, invisible, the only wise God, be honor and glory forever. Amen.’ As I read the words there came into my soul, and was, as it were, diffused through it, a sense of the glory of the Divine Being; a new sense, quite different from anything I ever experienced before. Never any words of Scripture seemed to me as those words did. I thought with myself, how excellent a Being that was, and how happy I should be if I might enjoy that God, and be rapt up to him in heaven, and be, as it were, swallowed up in him forever. I kept saying and, as it were, singing over those words of Scripture to myself.

“From about that time I began to have a new kind of apprehensions and ideas of Christ, and the work of redemption, and the glorious way of salvation by him. An inward sweet sense of these things, at times, came into my heart; and my soul was led away into pleasant views and contemplations of them. And my mind was greatly engaged to spend my time in reading and meditating of Christ, on the beauty and excellence of his

person, and the lovely way of salvation by free grace in him. I found no books so delightful to use as those that treated of these subjects. Those words, Cant. 2:1, used to be abundantly with me: 'I am the rose of Sharon and the lily of the valleys.' These words seemed sweetly to one to represent the loveliness and beauty of Jesus Christ. . . . This I know not how to express otherwise than by a calm, sweet abstraction of soul from all the concerns of this world; and sometimes a kind of vision and imagination, of being alone in the mountains, or some solitary wilderness, far from all mankind, sweetly conversing with Christ, and rapt and swallowed up in God. The sense I had of divine things would often of a sudden kindle up, as it were, a sweet burning in my heart, an order of soul that I knew not how to express. . . .

"Looking upon the sky and clouds, there came into my mind so sweet a sense of the glorious *majesty* and *grace* of God that I know not how to express. I seemed to see them better in a sweet conjunction—majesty and meekness joined together; it was a sweet and gentle and holy majesty; and also a majestic meekness, an awful sweetness, a high, and good, and holy gentleness."

Let me continue to quote. It is an unconscious poet that speaks:

"After this my sense of divine things gradually increased, and became more and more lively, and had more of that inward sweetness. The appearance of everything was altered: there seemed to be, as it were, a calm, sweet cast, or appearance of divine glory, in almost everything. God's excellency, his wisdom, his purity and love, seemed to appear in everything; in the sun and moon and stars; in the clouds and blue sky; in the grass, flowers, trees; in the water and all nature; which used greatly to fix my mind. I often used to sit and view the moon for continuance; and in the day spent much time in viewing the clouds and sky, to behold the sweet glory of God in these things; in the meantime singing forth, with a low voice, my contemplations of the Creator and Redeemer. . . . Holiness appeared to me to be of a sweet, pleasant, charming, serene, calm nature, which brought an inexpressible purity, brightness, peacefulness and ravishment to the soul. In other words, it made the soul like a field or garden of God, with all manner of pleasant flowers, all pleasant, delightful and undisturbed; enjoying a sweet calm, and the gentle, vivifying beams of the sun. The soul of a true Christian appeared like such a little white flower as we see in the spring of the year, low and humble on the ground, opening its bosom to receive the pleasant beams of the sun's glory; rejoicing, as it were, in a calm rapture, diffusing around a sweet

fragrance, standing peacefully and lovingly in the midst of other flowers round about; all in like manner opening their bosoms to drink in the light of the sun. . . . My heart panted after this, to lie low before God, as in the dust; that I might be nothing; that God might be all; that I might be as a little child."

I have selected these too few words from one of the most charmingly simple, idyllically and poetically beautiful stories ever written of the ecstatic experience of a young soul that has sought and found the peaceful triumph of a will consecrated to the divine holiness and abiding in the love of Christ, partly as a pleasant relief from the fearful energy of his warnings to flee from the divine wrath; but more that we may catch a view of the breadth of the nature of a man who was in his spiritual essence at once a strict logician, a scientific observer, a poet of peculiar sensitiveness to the beauty and grandeur of nature, and above all possessed of a soul in which a pure conscience put duty and holiness regnant supreme. Space will not allow me to repeat his exquisite and oft quoted description of the young lady he afterward wedded.

It remains to speak of Jonathan Edwards's theological and philosophical writings. Yet these do not easily admit of superficial treatment, filling, as they do, large octavo volumes. In accordance with his early resolution, he was always trying to straighten out every theological tangle, and that made him a progressive reformer, for his day. We have gone far beyond him; but we may properly call him the leader in the line where his son, Dr. Hopkins, Dr. Emons, Dr. Channing and others have followed. Of the ten "improvements in theology" which the Younger Edwards mentions as made by his father, I will give but one. It had been the common Calvinistic view that Christ's righteousness was directly imparted, transferred, to the believer, so as to become his righteousness. Edwards showed that this could not be; that it was absurd to transfer righteousness from one being to another, and that all that was possible was that the *beneficial consequences* of Christ's righteousness might be bestowed on believers in him. Just so the guilt of Adam's sin could not be transferred to

his posterity; only some of its evil consequences would fall on them.

I cannot discuss Jonathan Edwards's famous essay on "The Freedom of the Will." Suffice it to say, that altho he did not fully solve the difficulties in the problem, he produced the most masterly essay on the subject ever written, and if he left some distinctions confused, he yet made others clear, and by his distinction between natural and moral inability he made room for a real freedom while retaining the control of motive and law against contingency, in a way that pleases our scientific friends who will allow no exceptions to the reign of eternal law.

But one more discussion of his must be mentioned, because it is on so vital, so basal a subject, and because he has given to the question involved so fundamental an answer. It appears in the very first one of his Resolutions as a subject to which he had given youthful thought; it is treated in his essay on "The Religious Affections," and is specifically discussed in his treatise on "The Nature of True Virtue." I would be willing to rest his fame on this last essay. I wish that our young men and women would seriously study such a problem as this: What is true virtue? In what, essentially, does it consist? What makes one action virtuous and another vicious? It is the question, What is the law of Life? One who finds the answer to this question, and then makes the answer the rule of his own life, has begun his own moral and religious reformation. To answer that question in life is the task of every religion, is the labor of every ethical philosopher, whether Judaism, Buddhism, Christianity or Socialism attempts the task. A true, or substantially true, answer, accepted as the rule of life, gives us what we call regeneration, conversion, a new birth, or whatever other term of philosophy we may hide it under, for it is common to the experience of all, and the best thing in all. One who has not got it has failed of the worthiest thing in life, and loses, I will not say the ecstasies which are possible to a rare soul, such as was that of Jonathan Edwards, but the milder satisfactions and strenuous joys that put rainbows into the soul of one whose chief purpose and highest joy are found in duty performed.

It is characteristic of Jonathan Edwards that the words *beauty* and *loveliness* are favorites with him. It has been already observed in the extracts narrating his religious experience. So the words give the key to his discussion of true virtue. It is not utility; it is beauty. "Holiness," he says, "is the beauty and sweetness of the divine nature." Again, "The Spirit of God dwells in the Hearts of his saints, . . . making the soul a partaker of God's beauty." Again, "A love to divine things, for the beauty and sweetness of their moral excellency, is the first beginning and spring of all holy affections." Such quotations, taken from his treatise on "The Religious Affections," could be multiplied indefinitely. He begins his study of the nature of true virtue with a discussion of what is beautiful, and declares that to ask what is the nature of true virtue is the same as to ask "What that is which renders any habit, disposition or exercise of the heart truly *beautiful*." Jonathan Edwards's answer to the question, What is true virtue? is that it "most essentially consists in benevolence to Being in General." Its essence is benevolence—that is, love; and its object is, Being in General; not a particular being, like one's self, or one's family, or one's country; but Being in General. He gives his answer again more accurately, "True virtue is that consent, propensity and union of heart to Being in general that is immediately exercised in a general good will," or, as we may put it more shortly, true virtue consists in love to Being in General. His essay is devoted to a development and analysis of this proposition, and to the distinctions that separate true virtue from simulated virtue.

That term, Being in General, is a very broad one. It includes all known beings, ourselves, our friends, neighbors, country, Samaritans and barbarians, angels, God. The proposition requires love to all these beings; the love of good will, benevolence (not complacency), the desire to do them good, a kindly propensity toward them. Still further, it holds the balance of their values. It does not allow a larger value to one's self than to one's neighbor. So it will not allow injury to a neighbor, for the sake of benefit to one's self. It recognizes the infinite

value of God, as the chief of all beings, as possessing more *being* than all his creatures; and so the duty of supreme love to him because of the superior and supreme amount of his being. It thus includes religion as a section under true virtue, for God is the chief part of Being in General. Here appears the identity of the philosophy of Jonathan Edwards with the teaching of Jesus Christ. His great rule was, "Thou shalt love the Lord thy God with all thy heart and thy neighbor as thyself." Jonathan Edwards translates that into philosophical language, and calls it love to Being in General, to God as the bulk of Being, to men as equal fractions of Being. It tears up selfishness by the roots. It supplies a life text and a life test to carry with one all his days in the five words "Love for Being in General."

I have desired to present the view of a serious, solemn, beautiful and majestic soul, of one whose gaze upon the clouds and blue sky pierced through the firmament into the central court of Heaven; of one whose eye, not blinking before the splendor of God's throne, or before the flames of Hell, could bend down to separate the needles' points of metaphysical distinctions; but rejoiced most in the study of moral and spiritual loveliness, and in justifying the ways of God to men. This stern, tender, fearless preacher of duty and loveliness and Christianity, this missionary to the savages, this first of American naturalists, this poetic soul, this lover of beauty, this unwearied explorer of philosophy and theology, was

the broadest, grandest man that the American pulpit has produced. I make no discount for him. I offer no apology that his ten improvements in theology were not a hundred. I see in him not a conservative but a radical. I remember one of his early resolutions which I failed to quote, written just before his twentieth birthday:

"I observe that old men seldom have any advantage of new discoveries, because these are apart from a way of thinking they have been so long used to. Resolved, if I ever live to years, that I will be impartial to hear the reasons of all pretended discoveries, and receive them, if rational, how longsoever I have been used to another way of thinking."

So he devoted himself to fresh answers to great questions, such as:

Is the Human Will Free?

Why did God Create the World?

In What Does Religion Consist?

What is Redemption?

What is the Nature of True Virtue?

I think no less of him, but the more, that he told his hearers that Hell was a fearful fate, to be avoided, and depicted it in all its horrors. I have no doubt that he did a good thing, at a good time, in a good way, which is not for our time or our way. But what I value him most for is his masterly hold on ethics, his commanding sense of the nature and obligation of True Virtue, and I would have others repeat words which I learned from his pen in my boyhood, and then repeated, and have repeated to myself over and over again since, "*Love for Being in General.*"

NEW YORK CITY.

The Optimist

BY KATHARINE LEE BATES

THE world's wild strife and change
He sees, against a far horizon-line,
As shadows, marshaled by a music strange
To goal divine.

He laughs while love and death
Are breaking mighty hearts; while Mammon
jeers,
He laughs a quiet laugh that echoeth
The crystal spheres.

If men of bitter lip
Deride him, still the dancing children share
His secret, and the golden willow-tip
In April air—

God's secret that shall thrill
The dead to life, when thro earth's troubled
dreams
Of sorrow, pain, defeat and myriad ill,
The glory gleams.

WELLESLEY, MASS.

Love-Making in Colombia

BY CLIFFORD SMYTH,

FORMERLY IN THE UNITED STATES CONSULAR SERVICE AT COLOMBIA

“DON PEDRO, you look very uncomfortable out there; won't you come in?”

“No, Señor; I'm all right.”

“But you might just as well come in. You would find it so much more convenient on this balcony.”

“No, Señor; it is impossible!”

Every evening for a month it had been the same way: Don Pedro had taken his stand in the middle of the narrow little street and, with head tilted at an acute angle, had looked unutterable things at the back hair of a coy señorita seated in the balcony above him. Occasionally a cavalcade of heavily-loaded, braying burros would come clattering down upon him, and then he would quietly relinquish his post until the disturbance had passed,

when he would return to his old position and resume the look and attitude of woe to which he had schooled himself, keeping up this painful vigil, unbroken by a word from the fair object of his regard, for the exact space of two hours. At the expiration of that time Don Pedro would saunter off with a look of calm satisfaction on his face and spend the rest of his evening at his club, or among such haunts of fashion and pleasure as his fancy might lead him—for, when he was not in the agonizing throes of courtship, Don Pedro was one of the young bloods of the picturesque old Colombian capital and had the *entrée* to its most exclusive social circles. Nevertheless, like all his compatriots, Don Pedro was subject to the elaborate and pitiless set of rules govern-

Every Sunday Afternoon the Señoritas Attend the Bull Fight

ing the conduct of a lover in Colombia, and, having once assumed that *rôle*, could enjoy no privileges therein that other followers of Eros did not share.

In gay Provence, in the days of lute and tourney, the art of love-making was reduced in practice to an exact science; and Colombia, by inheritance from the mother country, has adopted some of the regulations governing good King Rene's court in this matter that must be a sore trial to those amorous youths who lack the skill and audacity of the old-time troubadours. As Don Pedro seemed an adept in this lore, and the trials he was undergoing merely typical of those indiscriminately dealt out by the little god to all his Colombian votaries, regardless of age, race, or previous condition of servitude, I asked him one day to explain the affair to me.

"Ah, Señor," he said, "to make the love in my country is not so easy. I know how they do this in the United States and even in Europe. It is some pleasure there. But here it is different; oh, yes! very different. To have the love for a señorita is to have the plague. But what can we do? If the love comes, there is no way out of it, caramba! It is to suf-

fer until the church and the padre put an end to the trouble.

"Why don't I speak to the señorita whom I worship? That is impossible, just yet. There is much to do before there is the speaking. You will see.

"Six months ago it was permitted for me to enter my señorita's house and talk with her and her family—and so it had been for all the years of my life before. Her family is friend to my family; oh! very much friend! But, six months ago, for me all that is changed. I can speak to her no more and visit her house no more. This is because I find I have the feeling of the love for her; and when I discover I have that feeling, by the custom of my country I have to leave the house and stop speaking to her.

"Why did I not stay? Ah, Señor, it will not be the thing of honor for a lover to visit his señorita as he does before he is a lover. Yes, her father like me very much, and she like me, and will permit me to marry her when the time is ready. But—it is the custom of my country—there is much to do before can come the padre and the church.

"At first, when I discover that feeling of the love, and can talk to my señorita

Waiting Patiently for His Senorita. A Typical Street Scene in Colombia

no more, I write letters—one letter every day. Every lover must do that—at first. These letters I do not give to the Post Office. That will be too much like the business of the merchant, and the señorita and her family will be angry. So, sometimes I give the letter to the cook, sometimes I throw it in through her window, sometimes I steal it in by a boy or a friend of the family. For two weeks all these letters came back, caramba! After that the señorita keep them—and so I know she is pleased.

“After the trial of the letters it is the custom of my country to go in the coach. Every evening, when the señorita and her family are on the balcony, I drive for one hour, backward and forward, on the street in front of them. Every time I pass the house I take off the hat and make the bow. But for two weeks the

señorita pretend not to see when I do this. Then comes the evening that I know will come—and when I take off the hat she smile, and again when I take off the hat she smile. So, once more I know my señorita is pleased—and for me it is time to leave the coach and make the next trial.

“Ah, Señor, this next one is a trouble! It is the serenade. For me, music is nothing. I cannot sing, I cannot play—and I like not to hear other people sing and play. But what can I do? After the letters and the coach there must be the serenade. It is the custom of my country with those who have that plague, that feeling of the love. So I make the serenade.

“There is many kind of serenade. If the lover has no money, not even one peso to himself, of course he must make

At Night the Balcony Will be Filled With Sighing Señoritas

his own serenade. At the two o'clock in the morning he must go and sing for one half an hour under the balcony of his señorita. Of course, if he cannot sing, and his señorita understand what is the music, it will not be very good for that lover. But, caramba, there cannot be the making of the love without the trial of the serenade!

"If the lover have some little money he can make noise with the guitar or the violin under the balcony, or he can pay to some one to sing for him. In this city there is a man who get much money making the serenade. Every night, at the two o'clock, some lover have him to sing for one half an hour to his señorita. He is a big, strong man, that fellow, and can make much noise with his mouth. You can hear him for many streets. A captain of the sea tells to me that it is the voice like the—what you call?—the

fog horn. It is sure that when he is paid to sing under the balcony the señorita must wake up. And every time he makes the serenade the lover gives to him one peso.

"But if there is much money the lover will not take the guitar or the violin, or even Don Gambo, the Fog Horn. He will make to his señorita for the trial of the serenade a whole band of the music—twelve men and a captain, with much violins and trumpets and drums. This is the best. Under the balcony, always at the two o'clock in the morning, this makes the noise sufficient to wake the señorita. Of course, if she likes not the music, it is a pity. But there can be no making of the love without the serenade—and the serenade of the band costs much, five pesos every night to the captain and two pesos to every man of him. You see, it is better than this Don Gambo,

the Fog Horn, and it make very much more noise.

"It is so that I make the serenade to my señorita. For two weeks, every night, at the two o'clock, I take the captain and his twelve men, and for one half an hour they make a fine noise, a beautiful noise, under her balcony. It costs very much money, that noise, but at the end of the two weeks, when the men play on their trumpets and drums and violins, the señorita lights a candle in her room—and then I know she is pleased, and the trouble of the serenade is finished.

"After that comes the trial of the balcony. Ah, Señor! such a fighting it is with the burros and their bundles and the canaille drivers! Every evening, for two hours, I must stand here looking up at my señorita's balcony, and if she is pleased she will look down at me and smile. That is a beautiful smile, Señor! Of course, the father and the mother are looking—so it is all perfectly right. But sometimes I wish that the father and the mother are not there, and that all the burros and their drivers are dead.

"After this trial of the balcony it will be permitted for me to follow my señorita when she goes every Sunday afternoon to see the bullfight. It will not be possible to speak to her even then. But I will stand outside of her box when the

bulls and the toreadors are fighting, and when she comes out I can make the bow and receive once more the smile and walk behind her in the street.

"Then comes the trouble, even worse than the serenade—the trouble of the father. After the bull fighting is finish, I must go to this old man and tell to him that I have this feeling of the love for his daughter. Of course, he know it very well—but that is the custom of my country. He will be very angry, and perhaps he will promise to beat me and not let the señorita go any more out on the balcony or to the bullfight, where I can see her. But, after he is finish with his anger, he will permit to me to come once more to the house, where I will sit with the family looking at my señorita and sometimes talking to her. And so it will be, with the father and the mother always watching, until the padre puts an end to the trouble and we go to the church and be married.

"It is the custom in my country to have all these troubles—always the same—when any one has that plague, that feeling of the love. First, there is the trial of the letters; then, the trial of the coach; then, the serenade; then, the balcony; then, the bullfight; then, the father; then, the family, when, for the first time, can speak the lover to his

'The Burros are the Bane of the Languishing Romeos

A Colombian Family Party on the Balcony

señorita—and then, the church, where all is finish and he is once more the free man! It is not so easy, you see, Señor, to make the love in my country—there are so many troubles!

“Will I give sometimes the kiss to my señorita? No, Señor, that is impossible until after the church. For every lover

there can be only those seven troubles that I tell to you. What will happen if there is the kiss before comes the padre? Ah! the señorita will be very angry, and the father—caramba! the father will make once more the revolution to be in my country!”

ATLANTA, GA.

The Condemnation of Ensign Wortman

BY PARK BENJAMIN

THE United States battle ship “Massachusetts,” besides the principal turrets, in which are her great 13-inch guns, has four smaller turrets, each of about 20 feet internal diameter. In each of these smaller turrets are two guns of eight inches caliber. They are immense weapons, being about 28 feet long, throwing shell weighing 250

pounds and burning powder charges of 87 pounds.

* On January 16, 1903, the ship was engaged in target practice off Culebra, West Indies. In one of the above mentioned eight-inch turrets was a gun's crew of nine men. The guns could be fired either by electricity or by percussion. In the latter case, the lock in the

movable breech block, which closes the rear end of the barrel, is cocked and then fired by pulling a string (lanyard) attached to the trigger. A primer is struck and discharged, the flame projected therefrom igniting the powder in the gun. When the gun is made ready for firing by percussion, however, its electrical circuit is broken, so that it cannot be fired by electricity. To restore this capacity, it is necessary to uncock the lock.

During the drill it appears that one of the guns' crews cocked the lock of a loaded gun, thus making it impossible to fire the piece by electricity, as had been especially ordered. The officer in charge of the turret, Ensign Wortman, then outside of it, seeing this, ordered the swinging breech block of the gun to be opened so that the mechanism of the firing bolt could be got at in order to effect the necessary uncocking. While the block was being swung open, door fashion, the primer in it suddenly exploded, its jet of flame met the exposed charge in the gun and ignited it. The burning gas blew out rearwardly, instantly filling the turret, and rising as a great smoke column. Of the nine gunners, two died that afternoon and the rest a few days later. Ensign Wortman was hurled across the deck almost insensible.

There are always two results when such things happen in the Navy. First, a sure exhibition of courage and heroism, which usually does not get into the newspapers. Witness here the unhesitating rush of Lieutenant W. C. Cole and Boatswain's Mate Sonneman into the roaring furnace of the turret to drag out the burned men and drag in the hose, and the cool bravery of Lieutenant Hughes and Gunner Kuhlwein, who, seeing the burning fragments forced down the ammunition tube, thereby exposing the open magazine under the turret to fearful peril, rushed below, and stamped out the grains of powder burning on the berth deck. Second, the holding of somebody to account. It is to the way in which the latter has been done and to the course of the Navy Department in the premises I now ask thoughtful public attention.

The young officer who ordered the opening of the gun breech, being in immediate command of the ill-fated crew, was at once and properly ordered before a Court of Inquiry. It is the function of that inquest merely to ascertain facts, and to that end it gathers all the evidence of witnesses on the spot, and if it finds probable culpability, it so reports. Otherwise, it recommends that no further proceedings be had. In the first case, the accused is sent to trial before a court-martial under regular charges; in the second, the affair usually terminates.

The Court of Inquiry on Ensign Wortman, presided over by one of the most distinguished ordnance officers in the Navy (Captain George A. Converse), advised no further proceedings.

The Secretary of the Navy, nevertheless, set aside the report and ordered the trial of Ensign Wortman on a charge of "culpable inefficiency in the performance of duty," resting the indictment upon a theory of how the accident might have been caused—namely, that if, before the gun was opened, the firing string was fastened at one end to the trigger and, at the other, to some fixed point in the turret, then the swinging of the breech piece might have tautened the string enough to cause the trigger to be sprung. On this hypothesis, the alleged "culpable inefficiency" of Ensign Wortman solely consisted in not specifically telling somebody to unhook the string before ordering the breech to be opened.

The court-martial, presided over by Rear-Admiral William C. Wise—now commanding the training squadron—and having as members seven other line officers of high rank and great experience, promptly rejected this theory, which was concocted (as usual) in the Navy Department, and as elaborate investigation made it plain that no living soul knows, or ever can know, what caused the disaster, the acquittal of Ensign Wortman followed.

So far as anything was demonstrated, it was the actuality of the very peril which every naval officer has long dreaded—namely, that attending the use of two different firing systems in the same gun. The percussion system is excessively dangerous, because there is no way of testing the primer in ad-

vance without destroying it, and because a slight tug in anywise communicated to the trigger fires the gun whether the breech be open or closed. The electric system, on the other hand, is almost ideally reliable, for it can be tested without undergoing injury, and cannot fire the gun unless the breech is both closed and locked. The percussion system is retained merely as a reserve to be used in case the electric primer should miss fire, an event which never happens, except as a consequence of extreme carelessness in preparing the electric connections, which are even simpler than those of an ordinary electric bell. It is kept merely because of a fossilized distrust for electricity of which the Navy is having much difficulty in ridding itself. The Drill Regulations compel constant readiness of the dangerous percussion device, and hence the leading out of the lock string ready for immediate use in case of necessity. The conditions for just such an accident as has happened being thus officially prescribed, Mr. Wortman, as many another officer before him had done, obeyed them; but, unlike the others, not without disaster.

The exonerating verdict of the court martial, the solemn deliverance of a trial court of competent and conscientious men of the highest expert authority in the land, Mr. William H. Moody now not merely contemptuously repudiates, but, upon his own reasoning, declares Ensign Wortman to be guilty of the precise charge of which the court has found him innocent.

This is not the setting aside of a verdict as against the weight of evidence and ordering a new trial, for no new trial can be had, and Ensign Wortman returns to duty in conformity with the acquittal. The Secretary is a layman in the premises, but if he had the competence, the condition would be similar to that of a judge who, after receiving a verdict of "not guilty" and on releasing the defendant, should, of his own motion, brand him with "guilt" and spread the libel on the records of his court. The written record of every naval officer kept in the Navy Department is his official life history, and such a stigma as this must return to his injury on

every occasion when preferment is in question.

In plain terms, therefore, a civilian of less than two years' connection with the Navy, and that merely political, without any prior knowledge of the service, its customs, discipline and duties, places his opinion against that of two courts of naval officers, masters of their profession and eager to discover the cause and prevention of a disaster which may bode grave future menace; and on the basis of that utterly unskilled opinion he asks the country to join with him, not merely in smirching the good name of a young officer of admirable record and known ability, but in imposing on this man the shameful stain of guilty incompetence.

The Secretary's argument shows its weakness by its length—over four thousand words, which prevents republication here. It is largely special pleading, but, having the negative merit of destroying its own structure as fast as reared, it need not be reviewed in detail, since after the obvious cancellation it all ciphers down to the already noted charge of not telling somebody to release the trigger string. There is no specific order to this effect required by any drill regulation, nor is the giving of an order to open the breech in violation of any regulation. Even supposing the string to have been fastened, the court held Ensign Wortman guiltless at most of anything beyond a grave error of judgment in deciding a doubtful case concerning which experts reasonably may differ, and as the Secretary's review of the case shows, did differ. But the singular omission in Mr. Moody's reasoning is his total ignoring of the perceptive powers and intelligence of the nine gunners in that turret. Here were not automata or Prussian grenadiers, but active, intelligent young Americans, not only familiar with the gun, but drilled to a high state of perfection in every manipulation of it. It is in evidence that with their officer they made this very string and its handling a subject of "careful study."

Now if, according to Mr. Moody, the opening of that breech with the string fastened involved such obvious and imminent danger that the officer outside the turret must be held guilty of "culpable inefficiency" in not first causing it to be

released, how about the nine men in the turret under whose very eyes and almost in contact with whose persons that string is said to have extended? Did they refrain from unhooking that cord with the full knowledge that in so doing they were deliberately courting a horrible and needless death? What prevented them? There was no specific order "unhook the lanyard" for them to wait for. There was nothing in the order "Open the breech" to prevent any human being not a driveling idiot from taking what the Secretary calls "the slight and easily taken precaution" of freeing the cord. If it is necessary to theorize at all, is it not more reasonable to infer that those skilled gunners did unhook the cord, and did not convert themselves into latter-day Casabiancas through awaiting a fatherly hint from their commander not to get blown up. But this is inconsistent with the "theory," and to support the latter Mr. Moody prefers to impute guilt to an excellent officer, to insult the intelligence of the court, and to ask their countrymen to believe that nine capable American seamen, who now cannot speak for themselves, ought to be regarded as little better than suicidal fools.

And what becomes of the benefit of the doubt?—for surely it would be difficult to find a case which more urgently deprecates the assignment of personal culpability. The Secretary does not accord it. He *knows*, sitting there in Washington, that the accused was guilty of negligently doing to death the comrades whom he was bound to protect.

It has been suggested, perhaps by way of palliation, that the real responsibility for all this lies with the Judge Advocate-General of the Navy, who is the Secretary's adviser in military law; a contention which reduces the Secretary merely to a megaphone for his subordinate. Even if this be so, the situation is little altered. Captain Lemly has seen no active service since 1890, when he was a lieutenant. He is no more fit to pass on technical matters of battle ship routine than Mr. Moody himself. This simply because he has never served on any modern vessel, let alone a battle ship, and every naval student knows that only actual service in a battle ship turret can give the neces-

sary knowledge of battle ship turrets and the conditions prevailing in them. The case is the same as if Messrs. Moody and Lemly should undertake to condemn Dr. Bull or Dr. McBurney for the death of a patient under the knife. Professionally they don't know any more about battle ship gun practice than they do about abdominal surgery.

That the Navy is indignant, tho, of course, silent, and that it sympathizes keenly with Ensign Wortman there are increasing signs. That it must suffer from demoralization due to this ill-advised performance by its titular head is indisputable. Naval officers have human lives, including their own, in their hands all the time, and they are always more solicitous for their men than for themselves. They have deliberately given their own lives for those under them, over and over again. No one can feel the responsibility more than they. That responsibility must not only be borne, but borne without timidity or uncertainty. Whatever tends to make them timid or uncertain in equal degree directly impairs their efficiency. If even exoneration from their own brothers-in-arms—their peers in knowledge and attainments—cannot protect them from obloquy and reiterated charges of guilt, what can? And what sort of *morale* can be maintained in any service where arbitrary power may thus be abused? It is useless to build more battle ships, if the men on whom we depend in time of peril to handle them are to be treated in such a way as this.

On all the facts there appears no other possible conclusion than that Secretary Moody has acted ignorantly, cruelly and unjustly, and that he has administered a most severe and needless blow to the discipline of the Navy and the credit of its tribunals.

The possibility of any civilian office holder doing this again should be ended. Either through the proposed General Staff as one of its functions, or in some other efficient way, the review of naval court-martial decisions which involve purely professional issues should be restricted to naval officers of high rank and experience, and their recommendation should be binding.

NEW YORK CITY.

A Significant Experiment with the Jews in Agriculture

BY JOSEPH W. PINCUS

[Professor Pincus is superintendent of agriculture and assistant principal of the de Hirsch Agricultural and Industrial School at Woodbine, N. J. He has been associated with this interesting community for several years, and the progress made by its members, in agriculture especially, has been in a measure due to his efforts. Through his position in the colony Professor Pincus has been able to observe not only its material progress, but its mental and moral advancement. Consequently his conclusions are of unusual interest at this time in the discussion of the future of the European Jew.—EDITOR.]

TO realize the progress Woodbine has attained during its comparatively short existence, and the results which have accrued from fulfilling the plans of its promoters, one must consider the class of people who were conducted here to work out their own destiny, and their surroundings. Altho articles have appeared from time to time in the American press, and students of the social problem have visited us to see for themselves what we were endeavoring to accomplish, the purpose of the

founders of Woodbine may not even at this late date be generally understood. The Baron de Hirsch Fund, an organization composed of prominent persons of the Jewish faith in New York and Philadelphia, called to life by the forced immigration to this country of the East European Jew—the Russian, Galician and Roumanian—founded Woodbine with a threefold purpose in view: First, to relieve the man—the co-religionist suffering from the most barbarous persecutions; second, to prevent the increase

Agricultural School, Main Building

Pupils of Agricultural School Out on Inspection

of diversity of population in the large cities, if not to drain the so-called Ghettos of New York and Philadelphia; and, third, to instill in the immigrant the true American spirit by providing him, and particularly his children, with the best American schools and good, healthy housing facilities, by giving to the hungry the possibility of earning a decent living, to the homeless a home.

It will be seen that one purpose of creating the settlement alone was of vital interest to this country—to distribute the foreign-born population more equally, and thus assist in what might be termed their Americanization; but one of the most serious questions was how to furnish the Jew with a means of livelihood—to render him self-supporting. We believe an impartial investigation of the community to-day will reveal the fact that this question has been answered, and in a satisfactory manner.

When the dozen or so families forming the nucleus of the colony came to the site of their future home they found a place which was anything but attractive. The tract of 5,300 acres, purchased through the fund, was practically waste land, largely covered with forests of but little value—scrub oak, stunted pine, here

and there a few trees of commercial value, but most of the timber suitable merely for fencing and fuel. A few employees of the railroad company, whose tracks passed through the site, resided on it in three or four shacks. Not an acre of the land had been tilled, and apparently the sandy soil contained little or no

elements of fertility. The pioneer settlers in the main were entirely ignorant of agricultural pursuits, as has been the case with many refugees from Russia and other portions of Eastern Europe who have since followed them. At the outset it was necessary for the committee appointed by the trustees of the de Hirsch Fund to instruct their charges even in the simplest methods of preparing the ground for the seed and in gathering the scanty harvest, but it was imperative in order to provide them with the means of subsistence. Naturally, progress was slow. The early years of Woodbine were years of hardship and privation, but endured with little complaint, for the people realized that only by patience and perseverance could they make of this wilderness a place suitable for habitation for themselves and their children. By degrees the land was cleared, and patch after patch pierced by the plow point. The cereals and vegetables best suited to this barren soil were planted. After a while the embryo farmers began setting out tree and vine. Here and there would be found a Jewish dairyman selling his produce not only to his own people, but in the neighboring towns. The colony land near the rail-

road was set apart for the town site, and this became one of the markets for the farmers, as stores were opened, and even industries established.

Such, briefly, is the way in which Woodbine developed, until to-day it has become the principal center of trade, manufacturing, agriculture, and even education, in the part of southern New Jersey represented by Cape May County. Perhaps the best proof of this fact is that the 2,000 people of the colony pay nearly \$8,000 in taxes on the property—actually more than the total value of the tract when first purchased. Each family earns \$675 yearly, averaging the total amount by the total number of households in the colony—fully \$150 more than the average for the United States. Four hundred persons find employment in the factories for making clothing, machinery, building material and knit goods, while the necessary vocations of the carpenter, the shoemaker, blacksmith, painter, plumber, etc., as well as the distinctively orthodox pursuits of the melamdim,

schochet and mohel, are all filled by members of the community, with the view of making Woodbine depend on its own resources and labor. The success of the Jew as a machinist we believe has been amply demonstrated by the really remarkable development of this branch of Woodbine's industries. Six years ago they were represented by one shop, in which the owner had two helpers. To-day this shop has grown into a plant employing 25 hands and paying annually in wages from \$9,000 to \$10,000. It is one of several industries devoted to the making of hardware and machinery, all of which are prosperous.

It may be needless to say that the commercial ability, such a marked characteristic of the Hebrew, is shown in the stores. The town has no less than twenty establishments whose owners sell their wares not only in the community, but have a market throughout southern New Jersey, farmers and towns-folk from all parts of the country coming to Woodbine to patronize them. Two or three

Bird's Eye View of Farm Buildings, Agricultural School.

Group of Agricultural School Graduates

are modeled after the department stores in the large cities, and their ambitious owners have dignified them with this title. They carry stocks of goods valued as high as \$10,000 in some instances.

As already stated, Woodbine has become the principal agricultural center of southern New Jersey, as is verified by the quality of its exhibits at the county fairs and the ready sale of its products at the nearby sea-shore resorts and in

about ten acres, five acres in fruit and five in truck and field crops. He keeps two good cows, one work horse and 150 head of poultry. He has realized in cash as follows: Strawberries, \$54; peaches, \$88; grapes, \$20; wine, \$80; small truck, \$44; round potatoes, \$29; butter, \$112.50, and poultry, \$50; total, \$477.50. He has still enough vegetables for family use, and corn and cornstalks for his live stock for winter use. The outlay for producing the crops consisted in purchasing of the seed, some fertilizers and a portion of the feed for

Philadelphia. Six years ago our fruit and vegetables attracted considerable attention at the fair, altho produced from ground but newly cultivated. In 1899, however, our exhibitors secured 23 first and second premiums for displays of potatoes, beets, pumpkins, watermelons, etc., in addition to six special premiums awarded by individuals. This is noted on the records of the County Fair Association. Selecting a few results of the year's work on individual farms, the statistics may also prove interesting in this connection:

————— has under fairly good cultivation

live stock, being altogether about \$250. The farm was worked by the farmer and his children.

————— sells from 50 to 60 quarts of milk daily from a herd of ten cows; about three-quarters of the feed is raised on his farm. He also produced about 300 gallons of wine.

————— made 500 gallons of wine, sold a quantity of poultry, and raised almost all of the roughage-food (corn) necessary for his live stock.

————— has realized net, over all expenses and what he needs for his family, \$143; for fruit and truck respectively \$57 and \$86.

In noting these results it must be re-

Greenhouses of Agricultural School

membered that they have been accomplished in a place which fifteen years ago was practically a barren waste, and in some instances by people who knew as little about tilling the soil as children in their mothers' arms. What they might have done in a spot more favored by Nature can only be conjectured. It must be admitted that the educational system established in the early years of the colony has had not a little to do with this feature of its development, as well as the general uplifting of its residents, for we believe that the school is the best factor in Americanizing the foreigner. It helps not only to assimilate the young, but through the young the old as well. We have at present four public day schools, containing ten rooms, partly graded from kindergarten to high school, with a school population of about 400; there is a night school, attended by 50 to 60 boys and girls of school age who are obliged to work in the factories. The de Hirsch Agricultural and Industrial School, however, is largely responsible for the advancement of the rural section of the community. It is intended in part to give its students a practical education in every branch of modern farm life, and its curriculum embraces all of the

branches necessary to this end. After a boy—or girl, even—has taken the full course, he or she is qualified to take up vocations such as work in field, garden and orchard, dairying, poultry raising, etc., with a knowledge not only of the best, but the most economical methods. Actual experience is given on a farm of 300 acres, which is provided with a herd of graded cattle, a dairy building, barns, incubators, hothouses, etc. The practical results are shown by the success in raising live stock and in making dairy products, for example. The cattle at the school produce 6,000 pounds of milk annually on an average—twice as much as the State average—altho it is necessary to employ the silo system entirely on account of the absence of natural pasture. The average membership at the school is over a hundred, and of these from ten to twelve are girls who are ambitious to fit themselves to become mistresses of farm homes. The majority of the boys are from the cities, coming to the school ignorant of even the rudiments of agriculture, and it is out of such "raw material" that practical and progressive farmers are being made.

Since the first class graduated from the de Hirsch Agricultural School, its mem-

bers have not only interested themselves in developing the farm lands, but have gone elsewhere to take positions as experts. They are to be found throughout New England as well as the Middle States, and some have sought their fortunes in the West. It may not be inappropriate to say that one of these graduates—the son of a European refugee who found a shelter at Woodbine—is a member of the faculty of Rutgers College.

It is well known that the tendency cityward is occupying the minds of the students of practical sociology. Among other causes of this movement is the dullness of social life in the country. You cannot expect that the young people of the villages and small towns should be satisfied with work alone; they need sensible recreation, mental food. To retain the young people in Woodbine we are endeavoring to develop social organizations. Once a week there are public lectures (accompanied by stereopticon views) on different topics given by the faculty of the agricultural school; socials are given occasionally; amateurs give theatricals; sometimes professionals are invited. Besides literary clubs, we have a girls' physical culture club, and a volunteer fire company. There are several beneficial orders represented in Woodbine—the Ancient Order of United Workmen and B'rith Abraham, also the Ahawath Israel. There are also the Woodbine Brotherhood, Women's Aid Society and a free loan association to

help the sick and members temporarily in need on account of sickness, etc. And our people have learned to govern themselves. Woodbine is now an incorporated community with its own officers. During the earlier years of its existence it was, so to speak, a dependency. Its people were governed by laws enacted by the township of which it formed a part, and that were practically administered by outsiders. During the present year, however, the community secured separate political independence by an act of the State Legislature which enables it to frame its own local laws and elect its own officials. It is believed to be the only settlement of the kind in the world governed by the Hebrew race.

In conclusion I would say that while Woodbine is not isolated from the rest of the world, it nevertheless represents a unique community of great interest to the social worker. It is not populated by "individuals connected with inherited or acquired habits of co-operation, or by political traditions, or by interrelated and interdependent crafts." Tho the majority of the people are Jews and have in common their religion and certain racial traits, they nevertheless represent the different cultures and customs acquired from the people among whom they were raised, and only by suggestion, by careful guidance and temporary assistance we have tried to supply the essentials of a healthful, expanding, self-supporting and self-perpetuating communal life.

WOODBINE, N. J.

Money in College Athletics

BY CLARENCE DEMING

[Mr. Deming was captain of the Yale baseball nine for two seasons during the early seventies, and his interest in college athletics has never flagged since then. His long residence at the seat of the greatest athletic university in the United States lends special significance to his remarks at this the opening of the college year.—EDITOR.]

THE gray haired college athlete, who, a third of a century ago, bore his part on the ball field or in the boat found some elements in the sport which he misses sadly in the highly developed intercollegiate athletics of to-day. They may be summarized as (1) a large element of pure recreation reaching out from the trained teams and crews to the

undergraduate constituency in general; (2) an absence of the professional spirit, and (3) almost complete freedom from modern problems in athletic finance.

The recreative spirit expressed itself in class and "scrub" nines, interclass competitions hardly less emulative than the rivalries between colleges, boating parties and small boating clubs. The

original boat club at Yale some sixty years ago, indeed, owned an eight-oared craft so staunch and sea worthy that her crew did not hesitate to cross Long Island Sound—and she symbolized for many years the recreative boating spirit of the college. On the ball field there were no admission fees, no grand stands, no varied and costly athletic plants. Undergraduates went to their own pockets for the support of nine or crew, and expenses were cut down under the stress of this plan of voluntary taxation; and such terms as intercollege codes to check masked professionalism and special scholarship rules for athletics were undreamed of in the academic vocabulary. A certain simplicity, high amateur quality, and what may be termed “naturalness,” pervaded the whole atmosphere of college sports.

Since those days moderate colleges have grown into great universities with large professional schools annexed; the undergraduate body has waxed fourfold in numbers, and athletics have expanded, not merely in kinds, but both absolutely and relatively in ratio to the other activities and functions of the universities.

The athletic branch of university life, from being a mere side matter, has become institutional. It takes its place along with the deeper problems of the *curricula*, whether in scholarship or physical expansion. It must have its codes, its partial supervision by the faculty, its large capital vested in athletic fields and buildings, and, during the last decade, with the swift growth of football to a kind of popular frenzy, it has reached a fiscal magnitude with grave questions and abuses of its own which each year must press more and more on the attention of academic authorities.

Let us suppose, for the sake of illustration, that a successful manufacturer dies at just the period of a great enlargement of his business and of its profits. He leaves as heirs three sons, very young men, luxuriously brought up, ease-loving but not immoral, somewhat loosely joined with their father in his business and with generous views of its stability and of its money returns. Such a situation, with qualifications to be pointed out hereafter, suggests the existing relation of undergraduate management to

athletic finances. With from \$30,000 to \$50,000 coming in from a season of football alone, with total athletic receipts perhaps double those figures, and with ramified branches of athletics to be supported, the financial problem has become too large for the undergraduate mind—and time. The distribution of tickets alone for a modern “big” football game involves a mechanism the size and intricacy of which would require too many words for description. Then there is the final adjustment of profits to the various athletic interests; the question of the subsidy to nonprofitable branches, such as boating and track athletics, and an infinite number of items in each branch to be audited and reduced to balance book-keeping. The proper accounts in athletics of a large American university today match those of a good sized college or a great factory, and are crowded, practically, into five months of the academic year; and untrained undergraduates, not averaging more than twenty-one years old, do the spending.

The natural results of wastage and extravagance follow logically. The money, that comes easy, easy goes. We find, for example, in one university athletic expenses growing during five years from \$39,000 to \$67,000, in round numbers. Traveling expenses during that brief period more than double and the same is true of such items as hotel bills and sporting supplies. When we find such an entry as \$2,008 for sporting goods in one baseball season, and more than double those figures for football goods, one marvels at ingenuities of extravagance in athletic expenses. Cost of coaches shows the same scale of increase. It is a recent fact that at an Eastern university a crack football coach obtained \$5,000 for his few weeks’ training; and even when the coaches charge nothing but expenses they come in numbers which—especially at training tables and hotels—add materially to the bills. It is on those training tables that athletic extravagance spells its greatest overgrowth. The football men often have two of them—for the first and second teams—and they would hardly scruple at three if a new squad and table contained the germ of a new guard or fullback. Some \$20 per man per week—and more rather than

less—appears to be the prevailing cost of the training table for board alone; and it is of record that considerable positive dishonesty is not unknown on the part of athletes in reducing their repayments based on their regular rates of board before going to the tables—indeed, in not a few cases, making no repayments at all. To the category of the training tables may be added such luxuries as parlor cars, the best of hotel rooms and those features of modern athletic training which blend so fantastically the Spartan with the Sybarite.

Something might be said on the subject of moral effects upon the individual athlete of the financial dishonesties of the training table as well as the results of luxury on the poor student who happens to enter the athletic squad. But the immediate subject is fiscal rather than ethical, and in that fiscal aspect it is to be noted how strongly the evil tends to self-perpetuation. If athletic squads were wiped out each year by graduation and were created *de novo*, reform would find more solid standing ground. But averaged, at least two-thirds of an athletic team remain to form the nucleus of the next year's squad. These continue or positively enlarge the tradition of athletic bounty and expense. They insist on the regulation fare and luxuries, the undergraduate manager does not want to be thought "mean," and, against the combination of the two, graduate supervision and graduate criticism have thus far beat in vain.

But, in broader outlines, the evil of undergraduate excess in athletic finance grows into another bad sequel—the development of a mercenary spirit distinctly opposed to academic simplicity and democracy. It is not pleasant to find the familiar principle of "charging up to the consumer" prevailing in the cost of college sports, but it is there, visible, even vivid. It is disclosed in such matters as the refusal to put on season tickets the "big" games of the year; in loading a reserved seat at a great football match with a price prohibitory to every poor student in a university; and—at a university which could be named, the prob-

ably not an isolated one in the scheme—in the plan of pressing the undergraduates for yearly subscriptions in the face of an immense revenue from gate money, large net profits and an expense account which shows chronic waste. In college athletic finance, as in the world at large, a great income seems to make the meat it feeds on, craving more where it has much, and subverting the Democratic theory of college sports.

In what almost every old graduate will concede is a morbid excess of athletics in undergraduate life the fiscal growth of athletics is near the center of the problem. Income and outgo have already reached amounts in gross and a complexity in detail too great for undergraduate control, even if supplemented by graduate advice. They should exact close supervision, in generality and in particulars, a systematic policy, good bookkeeping and the treatment of gate money receipts as a tax to be kept as low as possible, consistent with fair expenses of the teams and crews and due provision for athletic plants. That the realization of these objects means, as its ultimate, faculty control of athletic finances can hardly be doubted. It is already forecast in the closer attention to athletics and the rules of restraint which athletic questions are forcing on the college authorities—qualified here and there by "graduate control" as a kind of intermediary. That the athletic branch will ever become a source of revenue for the general purposes of a college or university is undesirable, and the more enlightened view assimilates it, as an institution, to the present college gymnasiums—only with the gate money as fees reduced, as stated, to the plane of rational self-support. That some such change, with faculty administration as a prime factor, to be hastened or delayed, according as athletic extravagance waxes or wanes, may be set down as a certitude of the future. The financial branch of athletics, with its imperative propositions, may, indeed, contain the cure of what the doctors would call the athletic hypertrophy of the American college.

NEW HAVEN, CONN.

A Year of Direct Legislation

BY ELTWEED POMEROY, M.A.

PRESIDENT OF THE NATIONAL DIRECT LEGISLATION LEAGUE

THREE States have direct legislation, or the initiative and referendum, imbedded in their constitutions—South Dakota, Utah and Oregon. Three State legislatures passed direct legislative amendments last winter—Massachusetts, Nevada and Missouri. In the first and second of these States the legislature must pass them a second time before they go to a referendum of the people for adoption. The people of Missouri vote at their next State election—November, 1904—on this constitutional amendment. Other facts might be cited, such as that it has recently gone into the charters of such cities as San Francisco, Los Angeles; Portland, Ore.; Seattle, Wash., and for franchises into the charters of Nashville, Minneapolis, etc., but these are enough to show the progress of this reform.

The practical man at once asks how is it working. In June, 1902, the people of Oregon adopted their amendment, and last winter the legislature passed a law to carry it into effect in detail, altho it actually went into operation on the declaration of the vote in 1902.

Hon. W. S. U'Reu, formerly State Senator and leader of the direct legislation forces, writes:

"The first effect of the referendum in Oregon is the comparative absence of charges of corruption and partisanship against the legislature. The newspapers have generally spoken well of the last assembly or said nothing, while for the previous ten years, at least, the rule has been that bitter things were printed about the want of honor and intelligence among the legislators. Altogether the last session of the last assembly was the best for many years, and we credit a good deal of this to the direct legislation amendment."

The number of signatures required to refer a law to the people is 4,386. Four referendum petitions were circulated to get the four laws passed by the last Legislature voted on by the people. None of these petitions secured the required number of signatures. Two of these concerned the appropriation of money for unusual projects, of whose wisdom there might naturally be a division of opinion. The Portland Chamber of Commerce

charged that the railway companies were circulating the petitions about one of these, the \$65,000 State portage railway, but it secured the lesser number of signatures. The third petition was circulated by some mining corporations, and it was to secure the reference of the mining corporation tax bill. They secured less signatures than on either of the other two. The fourth petition was only circulated for three weeks and had 1,800 signatures, and it is almost certain that it would have obtained the required number if begun earlier. It was to refer to the people the law repealing the exemption from taxation of \$300 worth of household furniture.

Inside of the legislature it has prevented even the introduction of corrupt measures, whether those measures granted special privileges to corporations or attacked corporations with the idea of their being withdrawn for a money consideration. It has also simplified and made fewer the laws. The legislature of South Dakota passed 101 or 102 laws at its last session. Within one week Governor Odell vetoed 118 out of the five or six hundred laws passed by the New York legislature, and Governor Pennypacker vetoed 84 of those passed by one session of the Pennsylvania legislature.

The *Portland Oregonian*, which was originally opposed to direct legislation, said editorially recently:

"The result may be accepted everywhere as it is in Oregon, as a fresh testimonial to the wisdom and safety of popular government.

"The referendum stands accordingly as a safeguard in the people's hands against pernicious acts of an unworthy legislature and a conniving governor. Any hope of using it as an instrument of improper purposes must be infinitesimal, after the late severe test, in which powerful interests conspicuously failed in their attempt to invoke the plebiscite by widely circulated and strenuously urged petitions.

"The amendment is the stronger for its trial; and while it is likely to remain a dead letter except in its operation as a potential check on legislative misconduct, it may yet have a day of abundant triumph in actual employment to defeat a pernicious law."

EAST ORANGE, N. J.

Literature

The Castle of Twilight

THE difference between braggarts in arms, buffoonery and cheap sensationalism, written out with bloody enthusiasm by many novelists, and a sincere interpretation of medieval life is apparent to every discriminating reader of historical romances. The latter, indeed, is a more difficult performance than some who undertake it imagine, since not only a knowledge of history is required, but the power to conceive and represent intimate social and domestic details which belong to the individual, and which are not, as a rule, set down in national history. They must, therefore, be inferred, faithfully reckoned from the mastodon bones of time that lie buried in traditions, old manuscripts and a more or less obsolete literature that is not historical, but of the hour, fleeting pastorals and chansonettes of a far off day. Now, it is as student and interpreter of the manners

and customs of the Middle Ages that Miss Potter has delighted the readers of her books. Many will recall "The House of De Mailly," that appeared three years ago, and which is still in point of interest and dramatic power the best of her four novels. But the fourth* deserves especial attention, since it is the first effort made in historical fiction to interpret the heart of the medieval woman. Generally the heroine of such a novel is the pretty feminine bauble, to be fought for and won at the point of the sword, or she is a mysterious adventuress, unsexed by ambitions and filled with dagger plots, or she is a pretty, skittish wench with a vixen's tongue. But of the sad, patient, good women, who were the mothers of knights and priests in that day, we know little, except of their pose upon spectacular occasions. The

* THE CASTLE OF TWILIGHT. By Marguerite Horton Potter. Chicago: A. C. McClurg & Co. \$1.50.

Illustration from "The Castle of Twilight"

heart life of these silent, brave ladies, mured up in grim castles, while their lords were away at court, or in the lists or upon the eternal battle field, is unwritten history. And at this late day it is impossible to say how near Miss Potter's interpretation comes to the truth, but in this Castle of Twilight on the coast of Brittany, during the fourteenth century, her three heroines illustrate, each in a different way, the pathos, loneliness and monotony of their condition; and the whole tragedy of neglected womanhood, as suggested by the daily scenes in the weaving room of the old castle, is in strange contrast to the more masculine ideas set forth in other historical novels where all men are represented in the service of their ladies, as they seek honor from field to field in the warfare of the times. Here young brides come, one after another as the generations pass, only to find, when the honeymoon was over, that they were doomed to spend the remainder of their days bearing children, weaving tapestry and managing their absent lords' castle household.

Lenore, the fairy bride of Gerault, is a more or less fanciful creation, but Eleanor, the chatelaine of Crépuscule, well represents the character of the noble lady of feudalism, a woman of pride, of sorrows and of silence, who spent many hours daily kneeling at her *priedieu*, yet secretly rebellious against the Church. And here it is possible that the young author has transcribed the spirit of the age when she represents the very intelligent bitterness of Eleanor's protest against the convents which absorbed the daughters of these forsaken mothers as the wars claimed their sons. If any such revolt was possible for a grand dame of the fourteenth century, very probably it was less articulate than Miss Potter represents. But the development of Lours, the young nun, is a feat unsurpassed in historical fiction. All of life had been a wild enchantment, first as a child in the twilight castle, then as a maiden, haunting the crags like a white sea gull. Suddenly the inevitable passion of youth, having no other expression, assumes the spiritual aspect of religion. Her prison life in the convent begins at fifteen. But later a flash of Cupid's

wings in the face of the demure, untamed little saint changes the spell of her enchantment from prayers to plans of romantic love. And the convincing logic with which Miss Potter follows the pathetic young criminal from one stage to another is not simply theoretical; it is historically correct, so that the reader readily comprehends why many of these hereditary brides of Heaven lapsed in virtue and suffered the long penance of a lifetime.

From the author's own account she received inspiration to write this tale from hearing a certain musical composition, and she carries the minor key of the strain through the entire conception. There is a brooding melancholy, infinitely sad, that shadows forth in gray monastic piles and dim cathedral spires, a gloom never quite dispelled by the chilly sunlight upon the rocky shore, nor by the occasional fête days, nor even the meadow dances behind the cliffs. And finally the reader closes the book with a vision of three hooded women standing forlornly upon a high terrace above the sea whom the very ages seem to have forgotten. Indeed, Charlotte Weber's illustrations go far toward interpreting the history and mood in which the novel is written.

Napoleon at St. Helena

GOURGAUD, who from son of a musician in the King's orchestra, rose to prominent command in Napoleon's army, was one of the small party which attended the fallen Emperor at St. Helena. His journal, containing the substance of many conversations with Napoleon, was first published in 1898, and gives, according to Lord Rosebery's estimate, "the one capital and superior record of life at St. Helena." Mrs. Latimer's excellent translation,* considerably abridged and at times, it must be confessed, somewhat annoyingly expurgated, is a valuable addition to our English library on Napoleon, and of itself makes good reading.

One is more than ever impressed, on

* TALKS OF NAPOLEON AT ST. HELENA WITH GENERAL BARON GOURGAUD. *Translated, and with Notes, by Elizabeth Wormeley Latimer.* Chicago: A. C. McClurg & Co.

going over these pages, by the extraordinary versatility and alertness of the prisoner's mind, by his candor in acknowledging his past errors of judgment, by his penetration into character. Indeed, history presents no parallel to the intimate talk, ranging over innumerable subjects, of a man of Napoleon's practical powers. The vision of a great Eastern empire seems to have never left him. "With the French in reserve, and the Arabs as auxiliaries, I should have been master of the Orient. I should have taken possession of India," he says on one occasion, and the thought is repeated many times. He was curious to discover a resemblance between himself and Mohammed. Equally with the yearning for these grandiose visions his mind dwelt on the little mistakes of his reign. "I regret now," he says, "that I did not walk about Paris incognito. I might possibly have been recognized, but I could have put on a wig." As for his estimate of his contemporaries, we must content ourselves with a single quotation:

"Talleyrand got money out of everything, and he really has great talent for stock-jobbing. I am certain that he sold documents to the English, not important ones, but secondary letters which he sent to Pitt. It had been intimated to him that for each of these he would be paid one thousand louis. The Prince of Benevento (Talleyrand) is not a man of transcendent merit. He hates work, but he knows how to hold his tongue. He rarely gives advice, but can make others talk. If you overwhelm a man with your own views, or your counsel, you must have a certain regard for him; now Talleyrand never cared for anything but his own personal interests. The thing that might be of the greatest service to the state he put aside, if it would not contribute to his advantage. One might say of him that he was utterly without moral consciousness. I never knew any one so entirely indifferent to right and wrong. He is able to let none of his thoughts appear in his face; and he knows when to hold his tongue. The Prince of Benevento has another advantage; he can sit up and keep awake till three o'clock in the morning, which is a great advantage to a man who has much to do with public affairs. . . . What makes me think that there can be no God who metes out punishment is that good people are so often unhappy and rascals prosperous. You will see that Talleyrand will die in his bed."

Tacitus

THE capacity of Gaston Boissier as a critic of Latin literature and an exponent of Roman life has long been demonstrated. Men who now consider themselves old had not yet been born when his scholarly papers began to illuminate the pages of the *Revue des Deux Mondes*, and a goodly number of volumes of these papers have gone through edition after edition in book form. It is hardly likely that we shall see anything more from his hand during his lifetime, and so the volume* before us will arouse a peculiar interest in all who have learned to admire his bright and scholarly productions. His consideration of Tacitus falls under four heads, the first taking up the question how Tacitus became a writer of history, the second studying his conception of history, the third dealing with his judgment upon the Cæsars, and the fourth with his own political opinions. We shall not attempt any exposition of these chapters. In general, the author takes moderate, common-sense views of the problems before him. Tacitus is neither the ideal expositor of a nation's life, too impartial ever to do injustice and too conscientious ever to make mistakes of fact through insufficient investigation, nor, on the other hand, is he a dishonest partisan, garbling his authorities in order to support preconceived opinions. That he came to his task filled with opinions very firmly held is evident on the surface to any modern reader even fairly equipped for passing judgment on such matters, but it was his honest endeavor to tell the truth, for all that. As to his own political opinions, Boissier combats the theory that he was an irreconcilable opponent of the Empire, desirous of the restoration of the Republic. Rather, he regarded the change as inevitable, at the time when it came, but looked back with favor on many virtues of the old *régime*, and felt an intense moral resentment against the evils which had developed under imperial rule.

Appended to the chapters on Tacitus and forming fully one-third of the volume are three essays of an earlier date, not written with the present subject in

* TACITE. Par Gaston Boissier. Paris: Hachette et Cie 1903.

view, but nevertheless serving well to throw light upon it. The first deals with the Schools of Declamation at Rome, not so fully as Cucheval, in the first volume of his *History of Roman Eloquence*, but perhaps more attractively in point of style. This chapter is particularly appropriate, since it appears quite likely that the striking style of Tacitus, wonderfully effective for oral presentation, owed not a little of its piquancy to the habit of authors' readings prevalent at the time. The second subsidiary chapter deals with the means of circulating the news in ancient Roman times, and the third has for its subject the poet Martial. The French classicists are exceedingly effective in just such a presentation of Greek and Roman subjects as is needed in this country to-day, if classical studies are to fulfill their proper function in American education. They do not waste their efforts upon minute points of philological research of no importance except to the specialist, but they get at those features of their text which sustain a substantial relation to the life of to-day, and present their results in so bright and lucid a style that the reader follows with the minimum of effort. Classical teachers in America who are wondering how to revive and maintain an adequate interest in Greek and Latin as a factor in the education of the young would perhaps do well to give somewhat less attention to the grammatical researches of the Germans, and see whether the literary critics of France, such as M. Boissier, have not something of immediate value to offer.

Young People's History of Holland. By William Elliot Griffis. Boston: Houghton, Mifflin & Co., \$1.50.

A greatly condensed history, written in a colloquial way, and for that reason presumably adapted to young people. The effort has seldom succeeded, as witness Dickens's lamentable failure in his "Child's History of England." The refusal of the present generation to accept the "child's histories" of Jacob Abbott at the value placed on them by their progenitors is also in point. Dr. Griffis has accomplished his task as well as it probably can be done on the old lines, and has supplied an abundance of pleasantly told stories which his young readers can be

relied upon to pick out while carefully skipping all the interspersed didactic portions. But the boy or girl who is genuinely interested in the marvelous history of Holland will not stop short of Motley, and once under the thrall of those pages will have little taste left for anything else. Perhaps that is exactly where Dr. Griffis hopes to lead. If so, his success would, we think, have been better assured if he had chosen the alternative of filling gaps in the narrative, in preference to the overcrowding of facts which the demands of brevity often force upon him.

The Substitute. By W. N. Harben. New York: Harper & Bros., \$1.50

Where interest depends almost entirely upon the delineation of a series of characters, as it does when the author chooses primitive types, the short story is the preferable literary form. As a rule, the consciousness of such people and the conditions that bring them forth are too simple to warrant a more considerable treatment. Thus Mr. Harben's new novel, *The Substitute*, is as much a failure in one sense as it is a success in another. As an interpreter of Blue Ridge Mountain folk in the South he has never been surpassed by any other dialect writer of that section. He has caught into inimitable phrases the drollery of their humor, he writes out with passion their spiritual bondage to old religious creeds and dogmas, and he has discovered the key to their pathetic philosophy of life. He shows us in them the old worldly wise motives made primitive, almost to the point of becoming mere instincts. But the volume is not so much a consecutive romance as it is a series of character sketches, fitted into one community setting, which brings the story to a different, individual climax in almost every chapter. And when we consider the erratic, naturally perverse men and women who move, each at his own gait, through the scenes, it is evident that the author would have had difficulty in massing them into a one-hero tale. Another thing, Mr. Harben is essentially an interpreter of mountain types. He cannot accomplish in literary expression the essential temperamental difference between the aristocrat and the "cracker." Altho his story whirls fiercely around the one aristocratic family in the village, it is

apparent that the only distinction between them and their less affected neighbors is a matter of manner, not of instincts—of pose rather than personality. This is not so much a deliberate blasphemy on Mr. Harben's part as it is a lack of power to conceive the difference between a thoroughbred and a scrub.

Our Feathered Game. A Handbook of the North American Game Birds. By Dwight W. Huntington. New York: Charles Scribner's Sons, \$2.00 net.

Nowadays we bag more birds from the authors and publishers than we do on the stubble fields and marshes. It is almost too provoking for a sportsman to read Mr. Huntington's book on game birds, for countless new varieties as well as the old favorites whirl up in easy range from every page. Every bird that is shot at for sport in the United States has its chapter or paragraph, depending upon its importance; and its habits and characteristics are set forth with fullness and authority,

and as there is about as much incident as description, the book is very readable. There are introductory chapters on Guns, Dogs and Game Preserves, and an appendix containing technical notes on each bird, followed by photographic plates of most of the birds described, small but very suggestive. We know of no cover that contains as great a variety of game birds as this book, and the percentage of hits made by the author is far above the average. It deserves a place near every gun rack.

Exits and Entrances. By C. W. Stoddard. Boston: Lothrop Publishing Co., \$1.25.

Mr. Stoddard has the advantage of having beaten a great deal about the world and met a goodly number of persons who loom large in our modern field of vision. And from his reminiscences of these celebrities his volume of essays catches a reflected glory over and above its own peculiar brightness, particularly as so many of his subjects are now dead, and one is inclined with amiable sentimentalism to welcome any scrap of gossip which serves to renew the sense of

Wild Turkey. (From "Our Feathered Game")

personal presence and benumb the ache of irreparable loss. In this respect the opening paper on Stevenson will appeal very strongly to his admirers for its bits of characteristic parody and its glimpses of the boyish enthusiasm so dear to readers of the Letters. It is amusing, too, to read Mr. Stoddard's account of his introduction to George Eliot, in which the awful solemnity of anticipation is so ludicrously resolved by the simplicity of a very homely reality. While "A Humorist Abroad" presents Mark Twain in

dressing gown and slippers in the easy, familiar attitudes inexpressibly dear to the public heart. In short, Mr. Stoddard, tho never indiscreet, knows all the literary gossip with the fullness and accuracy of a "review editor," and to any one who likes clever chit-chat of that kind his book is capable of affording considerable entertainment.

The Red Triangle. By Arthur Morrison.
Boston: L. C. Page & Co., \$1.50

A modification of the Sherlock Holmes romance. There is the private detective of genius, rejoicing in the euphonious name of Martin Hewitt, together with a subservient fag, in the shape of a newspaper man, and the public and official policeman, to give the proper chiaroscuro—all banded against the tremendous genius of crime, who unites to the usual qualifications of successful villainy the uncanny gift of hypnotism. The book gains nothing by a comparison with the best of Dr. Doyle's, tho such a comparison it actually forces upon the reader. But the episodes, which are all tangled into a common mesh, are sufficiently exciting to while away a slack afternoon—some are even rather ingenious.

Essays on Great Writers. By Henry Dwight Sedgwick, Jr. Boston: Houghton, Mifflin & Co., \$1.50 net.

A volume of literary essays such as these, dealing freshly and vitally with Montaigne and Macaulay and Thackeray and other great writers, is doubly welcome in the midst of so many books that have nothing to do with literature. So often in the humdrum of life and in the press of much ephemeral reading, we forget the great joy we have had from the true books, and need a clever coaxing voice like this to recall us to our own intellectual happiness. Mr. Sedgwick, whose name is well known in *The Atlantic Monthly*, writes in the tradition of Lowell, spreading forth the delights of reading with pointed cleverness and avoiding for the most part the more problematic sides of a question. He is never dull, always sprightly, and, barring perhaps a one-sided estimate of Thackeray, eminently sound. A few lines on Montaigne will give some notion of his manner:

"Montaigne is not for the young man. Youth has convictions; its feelings purport absolute verity; it possesses reality: why go a-fishing for dreams? But when the blood runs cooler, when we are glad to be safe on earth, when of a winter's evening we listen to the pleasant shoot of the bolt that shall keep us to ourselves, and draw up to the fire, then Montaigne is supreme. He is so agreeable, so charming, so skillful in taking up one subject, then another, so well practiced in conversation, so perfect a host. We are translated into his library. He wanders about the room, taking from his shelves one book after another, opening them at random, reading a scrap, and then talking about it. On he goes, talking wisely, wittily, kindly, while the flickering firelight plays over his sensitive, intelligent face, and the Gascon moon shines in patches on the floor, till the world we are used to dissolves under his talk, and its constituent parts waver and flicker with the firelight."

Vacation Days in Greece. By Rufus B. Richardson. New York: Charles Scribner's Sons, \$2.00.

Of books of travel in the better known parts of Greece we have a sufficiency, but comparatively little has been printed about the bypaths and more inaccessible regions. Of these, in large part, Professor Richardson writes, and readers who have followed his articles in *THE INDEPENDENT* know that he writes with a picturesque pen. His book is called *Vacation Days*, but they are the days of one who has lived for eleven years in Greece, whose position at the head of the American School of Classical Studies at Athens has made him familiar with the historic scenes of the land, and whose temperament has led him to explore the romantic scenes by land and water, such as Tempe, Arcadia, Thermopylæ, Acheleos, Euripos—their very names are the substance of poetry. If one were obliged to select the most interesting chapter of the volume, he would probably choose that on Thessaly, with its homely excursion into Tempe ("On that evening we caught for the first time the notes of the Greek frogs, *Brek-ke-ke-kek-koak-koak*, reproducing Aristophanes with the exception of a few sibilants") and its view of the lofty Meteora cloisters. The book closes with "A Tour in Sicily" and "Dalmatia," as being outlying regions of ancient Greece. The volume contains a number of full-page illustrations.

The House on the Sands. By Charles Marriott. New York: John Lane, \$1.50.

A story of English life at the close of the Boer War, written by a young man who is supposed to be a disciple of George Meredith. The scenes shift from London to Godfrey Julien's country place and from there to "The House on the Sands," where lives his gentleman tenant, Lanyon. About this strange household the story really centers. Lanyon is one of those earlier idealists in socialism who broke away from the movement when an attempt was made to reduce the idea to a practical form of living. And his companion in seclusion is Audrey Thurston, a woman ten years younger. They agreed to live together as brother and sister. But when this folly had lasted long enough to spoil the woman's reputation and to develop Lanyon's ideality into a dangerous form of insanity, another man appeared upon the scene. Now, while it is evident that Audrey might remain a sister to Lanyon, she loves Julien and would marry him. Mr. Marriott does not neglect the dramatic possibilities of such a situation, but he is especially fortunate in interpreting the more delicate psychic features. As is the case with most English novels, much space is given to politics. It is impossible to say why it is that not only are nearly all the heroes in English fiction nowadays Prime Ministers, but the author usually writes out the whole political scheme by which he came into power. However, it is a fact which accounts for the potbellied form of these English romances. In each you may count on two hundred pages being devoted to what the author knows or predicts of the national policy.

'Twixt God and Mammon. By W. E. Tirebuck. New York: Appleton & Co., \$1.50.

According to Mr. Hall Caine, who introduces this volume, "it was reported that Count Tolstoy considered certain passages" in one of this same author's previous books ("Miss Grace of All Souls") "the best examples of modern English fiction." And Mr. Caine himself remarks of the author that "his hope was to write his name among the names of the English novelists, and if I am any judge of the art, he has certainly done

so." Posterity, however, we are very much afraid, will hardly sustain the judgment of these eminent authorities, if all Mr. Tirebuck's novels are like the present example. It has, indeed, a kind of largeness, a solidity of conception. It is a serious piece of work and deals with one of the great issues of life, a clergyman's hesitation between the worldly and the spiritual way, with a woman as a tutelary genius on either path. And it affects us, furthermore, with that particular sense of strangeness which is the sign of an original vision of life with which the reader is as yet unfamiliar. But both plan and insight are partly frustrated by the execution. As Mr. Caine says, again justly, the writer "lacked invention, he was deficient in power of construction, and he had no real gift of selection." But in spite of these very serious drawbacks, which pretty nearly cut the ground from under his feet one would suppose, in spite, too, of the crude sensationalism of the *dénoûment*, the novel, posthumous as it comes to us and without the author's revision, does produce an effect considerably more impressive than nine out of ten of the general cry of current writings.

The Millionaire's Son. By Anna Robeson Brown. Boston: Dana Estes & Co., \$1.50.

This is the story of a young man's effort to choose between the conventional career of a millionaire's son and the higher life of thought and social service. And it is exceedingly well written, altho the author develops the situation upon an intellectual plane which the average reader will find a little difficult.

The Golden Kingdom. By Andrew Balfour. Boston: L. C. Page Co., \$1.50.

The fact that a story of adventure is improbable renders it the more fascinating to the reader, whose lazy imagination craves the wings of another man's fancy to bear it out into the regions of incredibility. And *The Golden Kingdom* is a stirring tale of adventure which purports to be founded upon a manuscript of the seventeenth century. It sweeps us over high seas in a slave ship, plunges us into the untrodden fastnesses of Southern Africa, and involves us in many critical situations, all through the author's power

to realize in pictorial phrases a condition of things almost inconceivable to the average mind. What he has written is not only entertaining, but the novelty of it is refreshing.

Marjorie. By Justin Huntly McCarthy. New York: R. H. Russell, \$1.50.

The charm of some stories lies in the way they are told. And it is not the material in this book that will recommend it, for it is made up of the same young-man fancies, the same sea adventures that are familiar to every reader of pirate tales; but it is the naïve simplicity of the author's literary style which catches and holds the fancy. The whole conception is written out so plainly, with so much sincerity and precision, that we are reminded of Frank R. Stockton's veracious use of the incredible. Every lover of desperate straits in fiction, where love and pirates and mutineers and gallant men take active parts, will be delighted with *Marjorie* and her Friends.

Birds in Their Relations to Man. A Manual of Economic Ornithology for the United States and Canada. By Clarence M. Weed and Ned Dearborn. Philadelphia: J. B. Lippincott Co., \$2.50 net.

A scientific treatise, very agreeably written, and readable for pleasure as well as for profit. It is the first comprehensive work which renders popularly available not merely results of the many scattered investigations into the food habits of birds, but also those which have been conducted under the Division of Biological Survey of the Department of Agriculture. To these have been added much data from the individual studies of the authors, both lifelong students of ornithology. The book shows how important is the part played by birds in crop production, and the character and quantity of their food. It also indicates the species which are useful and the best methods of conserving them, discusses game laws, and gives an excellent bibliography of the whole subject. An invaluable work for farmers and bird lovers generally, especially as it furnishes in full the strictly practical and economic reasons against the wholesale destruction of bird life for dress adornment.

A Master Hand. The Story of a Crime. By Richard Dallas. New York: G. P. Putnam's Sons, \$1.00 net.

A detective story calculated to hold the reader's attention to the end. Five friends in New York meet together one evening in the apartment of one of the number to play cards. After the party breaks up the host is found murdered in the room, and the writer of the story, who calls himself an assistant in the district attorney's office, undertakes to work the case up. The plot is quite simple but well managed, and the characterization rather better than in the average detective story.

The Love of Monsieur. By George Gibbs. New York: Harper & Bros., \$1.50.

To one unacquainted with the stirring adventure novels of Mr. Stanley Weyman and the picturesque and engaging little romance, "*Monsieur Beaucaire*," this hark-back to both would probably prove entirely satisfactory. Comparisons are odious, but occasionally it is impossible to avoid them, and in the present instance the parallelism is too obvious to be ignored. However, *The Love of Monsieur* is a bright, wholesome tale of adventure in which love finds the way through parlous happenings and dire distresses, and in these vacation-days when both body and mind are apt to be on the wing, a diverting book will not be subjected to too critical a reading nor too exacting an examination.

Literary Notes

BENZIGER BROTHERS publish "The Great Encyclical Letters of Pope Leo XIII" in authorized translations. (Price \$2.00 net.)

....Little, Brown & Co. announce new "handy volume sets of the standard novelists," including Dumas, Jane Austen, Victor Hugo and Bulwer.

....The Baker & Taylor Company has issued a new edition of "Mr. Chupes and Miss Jenny," Effie Bignell's popular story of two robins. (Price, \$1.00 net.)

....The Macmillan Company publish "The Saint of the Dragon's Dale," by William Stearns Davis, in their Series of Little Novels by Favorite Authors. (Price 50 cents.)

...."The Motor Book," by R. J. Mecredy, gives full descriptions, with illustrations, of all

sorts of motor carriages and explains their management. (John Lane, \$1.00 net.)

....We would call attention once more to the excellent fullness and arrangement of the Dictionary and Concordance bound up with the Teachers' Edition of the American Standard Revised Bible, published by Thomas Nelson & Sons.

....A very tastefully made little book called "Bachelor Bigotries" is published by Paul Elder & Co., of San Francisco. It contains 365 quotations, for the days of the year, all paraphrasing the Old Proverb, "Honest men marry young; wise men never." (Price \$1.00 net.)

....Little, Brown & Co. publish an optimistic and on the whole commendable history of "American Literature in Its Colonial and National Periods," by Lorenzo Sears, Professor of American Literature in Brown University. The volume is adapted both for class-room use and for general reading. (Price, \$1.50 net.)

...."The History of Johnny Quae Genus" has been brought out in the same style as "Dr. Syntax in Search of the Picturesque." We should like very much to see the other two tours of the amiable doctor presented with reprints of Rowlandson's illustrations. (D. Appleton & Co., \$1.50.)

....Volume VII of "Historic Highways of America" contains a monograph on "Portage Paths," by Archer Butler Hulbert. As Mr. Hulbert says in his Preface: "The little portage pathways which connected the heads of our rivers and lakes or offered the *voyageur* a thoroughfare around the cataracts and rapids of our rivers were . . . the 'Keys of the Continent' a century or so ago. The forts, chapels, trading stations, treaty houses, council fires, boundary stones, camp grounds, and villages located at these strategic points all prove this."

....M. Walter Dunne announces the first complete edition in English of Guy de Maupassant's Works, to be published in seventeen handsome volumes. The translation promises to be well done, and the illustrations, including seventy or more photogravures, are the work of distinguished French and American draftsmen. It is the intention of the publisher to make this the definitive edition of Maupassant in English. De Maupassant had all of Balzac's insight into the human heart, with more than Balzac's imagination. He possessed moreover what Balzac never possessed—the ability to say what he had to say in few words. As M. Jusserand, the French Ambassador has said, what Flaubert, Zola and others before and after De Maupassant take a page to say, is said by De Maupassant in "ten masterly lines."

Pebbles

Boracic acid in the soup,
Wood alcohol in wine,
Cutsups dyed a lurid hue
By using aniline;

The milk—the kind the old cow gives
'Way down at Cloverside—
It's one-third milk and water, and—
And then—formaldehyde.

The syrup's bleached by using tin,
And honey's just glucose,
And what the fancy butter is
The goodness gracious knows!

Meantime all the germs and things
Are buzzing fit to kill;
If the food you eat don't git you,
The goldarned microbes will.
—*New Orleans Times-Democrat.*

FOOTBALL DAYS.

The football days have come again, the gladdest of the year;
One side of Willie's nose is gone, and Tom has lost an ear;
Heaped on the field, the players jab, and punch and claw and tear,
They knock the breath from those beneath and gouge without a care;
They break each other's arms and legs, and pull joints out of place,
And here and there is one who gets his teeth kicked from his face.

The freshman and the sophomore, besmeared with grime and mud,
Go gallantly to get the ball and quit all bathed in blood;
The senior knocks the junior down and kicks him in the chest,
The high-school boy is carried home and gently laid at rest,
While here and there a crowded stand collapses 'neath its weight,
And forty people get more than they paid for at the gate.

O brave, O happy, careless days! How deep the mother's joy
What time she thinks of all the things they're doing to her boy!
How proud she is to know that he is on the team; how sweet
His face appears to her since it is only bloody meat!
With honest pride she lays away his amputated ear
And puts his eye in alcohol to be a souvenir.
—*Chicago Tribune*

Editorials

The Isthmian Canal

COLOMBIA has rejected the canal treaty signed by her representative at Washington, and her Congress is languidly considering a bill authorizing President Marroquin to negotiate a new treaty upon conditions which the United States will never accept. This is the situation at Bogota, as disclosed by the latest dispatches from that remote capital. At the time when these words are written the news from Bogota shows that at 5 p.m. on the 22d, the last day for a ratification of the Hay-Herran treaty, no action upon the pending bill had been taken. The treaty was dead. If no request for an extension of time was made in the remaining hours of that day, what ought President Roosevelt to do? He is not required by the Spooner Act to turn immediately from Panama to Nicaragua and to make a treaty for a canal on the Nicaragua route. This will not be the alternative until he shall have failed to obtain from Colombia the needed rights and territorial control within "a reasonable time" and upon "reasonable terms." He is empowered to decide that more time should be used in striving to reach a satisfactory agreement with Colombia. We hope that he will so decide, and that he will spare no effort to convince the Colombian Government that its own interests as well as those of the entire civilized world require it to accept the liberal terms of the treaty negotiated and ratified at Washington.

We fear, however, that this cannot be accomplished unless some plan shall be devised for intimate and friendly conferences of the two contracting Powers. So far as we can learn, the causes of the rejection of the treaty at Bogota were as follows: the opposition of a political party or faction to the President now in office, who accepted the agreement; the resentment of certain sensitive and impulsive Spanish-American legislators, because it seemed to them that our State Department's friendly warning against any substantial amendment of the treaty was an attempt to restrain their liberty of action;

a conviction that our Government would consent to pay \$10,000,000 more, and that \$10,000,000 could be extorted from the French company; a failure of the Colombian politicians to agree among themselves as to a division of the spoils; Colombian ignorance of our ways and purposes, and the lack of means of easy and frequent communication between the two capitals. We have seen no indication that legislators at Bogota were corrupted by persons or corporations desiring to prevent the construction of a canal. There is no more evidence of such interference than there is in support of Mr. Henry Watterson's remarkable assertion that our Senate was induced to prefer the Panama route by a bribe of half the sum to be paid to the French company—" \$20,000,000 for the thieves in France and \$20,000,000 for the thieves in America,"—or of a suggestion that any Washington legislator's labors in behalf of the Nicaragua route have been stimulated by a desire to share in the sum that might be realized hereafter upon the claims of the Maritime Canal Company. What has taken place at Bogota can be fully explained, we think, by a knowledge of the character and ways of the Spanish-American politician, and by the condition of a country that has been racked for four years by bloody revolution, and whose currency is worth less than one cent on the dollar.

The Isthmian canal ought to be made on the Panama route. We desire to construct it there and are ready to begin the work. It is especially for the interest of Colombia that the canal should be in that place. We shall not take possession of the Isthmus by force, nor shall we pretend that the old treaty of 1846 authorizes us to make there a waterway for ships. We shall not incite the people of Panama to revolt. If, however, those people should establish and maintain their independence without any assistance from us, and should offer to us the privileges which Colombia has withheld, we might be able to accept them honorably. The merits of the Panama route, when it is compared with the route in Nicaragua,

are so manifest, in our opinion, that all honorable methods should be used in an attempt to take advantage of them.

What is needed now is an opportunity for friendly consultation and argument. In this matter, Colombia and the United States have seemed to be separated by almost as much space as yawns between two planets. There has been no contact except by means of the two Ministers, and these have not been very efficient agents of communication. When there was danger in Havana of a serious misunderstanding of the aims and purposes of the United States, we suggested that the entire Cuban Congress, or a Commission representing it, be brought to Washington for a friendly conference. A Commission was sent from Havana, and much good was accomplished by its visit. Our Government ought to know the views and the sentiment of Colombia with respect to this canal question; the leaders of Colombian opinion should have a better knowledge of our views and purposes than they now possess. This mutual enlightenment, so much to be desired at this time, when perhaps the lack of it is the only thing that prevents an agreement as to the canal, might be gained by a conference or by the efforts of a joint Commission, sitting in some neutral city, or for a time at one capital and then at the other. The President and Congress would find it profitable to consider such a plan for promoting international friendship, dispelling harmful illusions and prejudices, and smoothing the way for that great undertaking, the benefits of which Colombia is now inclined to reject. The canal is to be an agency for the promotion of the peace and well-being of mankind; the construction of it should be the result of peaceful and honorable agreement, and not of intrigue, revolution or war.

Trade Union Bigotry

HUMAN nature is harder to change than social forms are. A born bigot does not become a liberal because he forswears the creed of his fathers, and sets up as an apostle of the latest philosophical quackery. The man or woman who grovels in superstition does not become a fearless rationalist by swapping "isms." The

heresy-hunter does not become less strenuous when he exchanges Presbyterianism or Old-Two-Seed-in-the-Spirit Baptismalism for Trade Unionism.

No one can watch the recent developments of trade unionism, with all its unquestioned value and importance, and not be impressed by the rapidity with which it is tending to become a dogmatic religion, surcharged with bigotry, fanaticism and superstition. The unions have erected Sunday into a Sabbath of the faithful. The union itself has become a Church, to which on every seventh day the faithful repair. The unbeliever is no longer merely a "scab," he is a sinner, living under wrath. The individual member who goes out from among the industrially redeemed is a lost being, who cannot be permitted to live inconspicuously among his fellows, but must be followed with anathemas, and all the pains and penalties of the excommunicated. The danger to trade unionism from this tendency is serious and deplorable.

If any reader of these words thinks that we exaggerate, we need only refer him to the resolutions adopted the other day by the Central Labor Union of the District of Columbia in condemnation of President Roosevelt, on account of his action in standing by W. A. Miller, of the Government Printing Office bindery. These resolutions inform the world that Mr. Miller was tried and "found guilty of flagrant non-unionism." This sin, of course, comprehends every other, just as to the mind of good Dr. Patton the Rev. David Swing's twenty-eight heresies corrupted his spiritual nature at the source. So we are not surprised to learn further from these resolutions that Mr. Miller has "outrageously violated" every moral law, and even, "in two instances," the criminal law. If this latter charge is true we hope that President Roosevelt will inform himself of the facts, and not lend the support of the national Government to a man who has merited any serious punishment at the hands of the courts. The tone of the resolutions, however, leads us to suspect that Mr. Miller's "moral turpitude" and criminality were not different in degree from the flagrant sin of the Connecticut swain who embraced his sweetheart before sundown on Sunday afternoon. A criminal, let us

never forget, is a man who violates a law to which the State attaches a sanction of punishment, and, inasmuch as no commonwealth is as yet enlightened enough to sweep from its statute books all laws forbidding things in themselves essentially innocent, there is probably no man living who would dare to kiss the holy book and swear that he has not been a criminal, at least twice.

If these declarations against heresy do not establish our point, there are others in the resolutions that do. With that serious self-satisfaction which is an unfailing mark of religious bodies conscious that they are the only real favorites of Almighty God, these Washington brethren put on record their awareness of the awful fact that "the trade union movement" has its enemies, "who scoff"! Every religion that the world has known has had to endure the contumely of those "who scoff" and "refuse to be brought to see the many benefits" that accrue to all who accept the saving creed. It was inevitable that the trade union movement in its progress toward perfect dogmatic expression should learn the necessity of dealing not only with the callous unbeliever but also with the malicious scoffer, and it was natural that the Central Labor Union at Washington should see the importance of bringing conviction to the heart of the Chief Magistrate by reminding him that if he gave countenance to an excommunicated member, he might unwittingly be lending aid and comfort to those abhorrent ones, past feeling, "who scoff."

It is characteristic of religious bigotry, theological or industrial, to think of itself not only as supremely enlightened, but also as the only true guardian of liberty. To the dogmatic mind true liberty consists in accepting the one infallible creed, and no one should expect to enjoy the blessings of freedom until he bends his unregenerate will to the authority of an institution that bears the Ark of the Covenant. These Washington resolutions, in perfect keeping with this phase of the religious spirit, declare:

"The principle of trade unionism is intended to raise the standard of living among the working classes, to instil into their hearts the blessing of free government, to educate them so that they might uphold the law and its representatives, to make them good citizens in

time of peace and zealous patriots in time of war."

If all this is humorous, it is also serious. The trade unions embrace possibly two and a half million members. If they are all to become dogmatic religionists the days of persecution "for the faith" are not over. It looks as if a great deal of educating and broadening of the human spirit would have yet to be done before all the American people shall be brought to a full realization of what is meant by instilling into the heart a vital sense of the blessings of free government.

The Promise to "Obey"

Not long ago we gave a line or two to the mention of a young woman who refused to be married by her rector because he would not omit the word "obey" from the service, and we remarked briefly that the promise to obey was now left out of all sensible services. This has brought us a number of letters, mostly from Episcopal rectors, who tell us that their young women seldom object to the word, that they always use it, and that brides ought to promise to obey their husbands.

Why should they make the promise? These rectors tell us that there must be a head to every family and that head must be the man. Why should there be but one head? We do not see the necessity. If a government is an absolute monarchy it must have only one head. That is what the word monarchy means. But a republic has more than one head, or ruling power. Our Government has three heads that unite to make laws, the Senate, the House of Representatives, and the President, who may sign or veto a law. If a country can have three law-making powers, why may not a family have two? Why cannot the two confer and agree, on equal terms, in the family, as well as the three can confer and agree in the nation?

But these rectors all agree in telling us further that the promise should be required, made and kept because the Bible commanded wives to obey their husbands. That may be true, but what of it? We remember, for we have often read and heard it quoted, that Saint Paul said to the Colossian and Ephesian women,

"Wives, submit yourselves to your husbands, as it is fit in the Lord." We remember that he said to Timothy, "Let the woman learn in silence, with all subjection," and that he told the Corinthians that "the head of the woman is the man." But again we say, What of it? Doubtless what he said was proper enough for the Corinthian, Colossian and Ephesian women of his time but they were a very different lot of women from what we have now. Paul told slaves to obey their masters; we give no such commands, as we have no such customs of servitude and subjection, whether of slaves or wives. Why, Paul told women they should not wear short hair, that they should not take off their veils at church, nor speak in meeting, nor do any of those mannish things, for it was not the "custom." He says of such things: "We have no such custom, neither the Churches of God." But we do have such customs, and so have the Churches of God, because they have learned something, and are much better Churches than those that had been gathered out of a pagan and licentious civilization.

Yet we must not put too strong a meaning on Paul's use of the word "submit." Here is what he tells the Ephesians in its connection:

"21. Submitting yourselves one to another, in the fear of God.

"22. Wives, submit yourselves unto your husbands, as unto the Lord."

So everybody is to "submit," all Christians to one another, including husbands and wives; and the wives are especially exhorted to do the same kind of submitting to their husbands that their husbands are required in the previous verse to do to them and to all other saints. That kind of submission is not stiff obedience.

But our correspondents point us to the reasons Paul gives for the command that wives shall submit themselves to their husbands. It is because "Adam was first formed and then Eve," and Eve was first "in the transgression." That reason was good enough for Paul and Timothy and his Ephesians, but it is not good enough for us. Allowing that Adam was formed first, does that make him the better product? We read somewhere that Auld Nature first tried her 'prentice han' on man, and then she made the lasses.

But the rectors tell us that "Adam was not deceived, but the woman being deceived was in the transgression." Doubtless Paul believed that story of the fall of man to be good literal history, and so he used the argument, which, even so, is not conclusive, seeing that Adam's or Eve's credulity or sin does not control ours. But we do not now generally take that story of the creation and fall of man as literal history; we take it for a useful, religious, poetic legend, a sort of parable which we do not interpret on all fours. We cannot use it as closely and minutely as Paul could in his day. The argument is not good for us.

But, our correspondents continue, "Did not Paul tell the Corinthians that the husband is the head of the wife, even as Christ is the head of the Church?" Certainly he did, and it was a very good doctrine to teach them. But in these days we have two heads to the family, and the parallel does not hold so well as it did in the days when women were slaves for their husbands to beat, divorce or kill at their will.

But some of these rectors tell us that "obey" in the service does not exactly mean obey. But common folks think it does, and if it does not it should be changed. But it will not soon be changed in that service because those that make the service, or who have the authority to change it, are all men, and most of them believe that women really ought to obey their husbands. To be sure they do not, and these men are well aware of that; but they think they ought to, and that the promise is some little help in maintaining the good old patriarchal order. Doubtless in old times, and still, the word had and has its plain meaning. In the earliest English service the promise the wife made was to be "buxom (old English bûg-som, bowsome, submissive) at bed and board" to her husband, and this was meant to include all her relations to him at home. But those days have passed, and all sensible formulas of marriage recognize the changed conditions under our more Christian civilization and have given up the promise to obey.

Possibly some of these rectors will be shocked at our plain speaking, and will think that we are rejecting the Bible. Not at all; we only reject their way of

holding to the letter instead of taking to its spirit. Such literalism makes infidels. Tell a sensible person that he has got to believe what he cannot believe, and he will angrily reject the authority you present him. Paul was one of the greatest, wisest teachers the world has ever seen, none greater among men. But he had the merit of fitting his times, with the limitation that he could not always fit all times. His principles hold for us, but not all his applications. He depended necessarily on his "customs," as do we. We do not dishonor him, but honor him when we modify his teachings for our times. We want what he would teach if he were living now. We honor both Paul and the Bible best by frankly and plainly telling the truth as our day must see it.

Demoralizing the Navy

It may perhaps be considered that the unusual action of Secretary Moody, which Mr. Park Benjamin arraigns in his article on "The Condemnation of Ensign Wortman," is an isolated error, and not symptomatic of that kind of demoralization which usually attends the arbitrary exercise of power in impugning the integrity or authority of a duly constituted and competent tribunal. Since Mr. Benjamin's paper was written, however, another instance has occurred which not only rudely disturbs the complacency of the foregoing conclusion, but leaves one rather more solicitous concerning the extent of the impairment of *morale* in the Navy than doubtful as to its existence.

A young assistant paymaster named Nicholson, who entered the service but two years ago and who is now making his first cruise in the Asiatic Squadron, was ordered by Rear-Admiral Robley D. Evans, his Commander-in-Chief, before a court-martial on charges of "drunkenness," "scandalous conduct" and "falsehood." It was specified that at a ball on shore he became intoxicated and, without provocation, assaulted a civilian guest, and that he afterward falsified in denying that there had been any prior altercation. The court found him guilty of intoxication and of an assault which was not unprovoked, but not guilty of false-

hood, which, being translated, means simply that the young man, being quarrelsome in his cups, kicked a German Vice Consul who had aggravated him. The penalty imposed on the young paymaster was reduction of five numbers in lineal rank—roughly equivalent in this case to a year's stoppage in promotion to the next higher grade, and corresponding loss of difference in pay—not a severe sentence. Courts-martial sentences sometimes go but a pretty sharp invitation to mend one's ways to a thoughtless youngster just at the very threshold of his career. The President of the court was Captain Uriah Sebree, who this month completes his fortieth year of service. Of the six remaining members Commander Marshall has to his credit thirty-six years, Lieutenant-Commanders Dodd and Kinkaid respectively to theirs thirty and twenty-six years, Lieutenant Williams eight years, Paymaster Biscoe eight years, and Assistant Paymaster Venable four years. All of the line officers are Naval Academy graduates and, together with the staff officers sitting with them, are of unexceptionable reputation.

The proceedings in regular course having come before the Commander-in-Chief for review, were returned for reconsideration because of "inadequacy" of the penalty inflicted. The court, having reconvened, reconsidered and reaffirmed its findings and sentence. The three younger members united also in a recommendation to clemency. The whole matter is now sent by Admiral Evans to the Navy Department, together with his dissenting "views" embodied in an official and public memorandum.

Concerning this court of experienced officers Admiral Evans thus informs their countrymen:

"The trial is sufficient to make their brother officers blush with shame to realize that there exists among the commissioned officers of the Navy at least four [the smallest number required by law to have arrived at the finding and sentence] who have so little interest in maintaining the honor, dignity and discipline of the service and so small an idea of the binding quality of the oath they took as members of the court. It is astounding that the court . . . could have thought for an instant that they were guided by their consciences or their oath."

The evidence, continues Admiral Evans, was enough thoroughly to convince "any fair-minded man" and "establish that the assault was unprovoked, intentional and persistent;" also that the accused "had committed a falsehood was established beyond a scintilla of doubt."

"The convening authority [Rear Admiral Evans] cannot therefore but express his thorough lack of confidence in the integrity of each officer whose prejudices so blunted his conscience as to allow himself to be in one way more guilty than Mr. Nicholson was in the other, for be it understood the court was under oath. The sentence for this offense so clearly proved would have been by a right-minded court dismissal from the service. It is the opinion of the convening authority that the disgraceful conduct of Paymaster Nicholson was less reprehensible than that of those members of the court who succeeded in arriving at the sentence awarded and bringing the honor of a court-martial into disrepute."

Regarding the three junior members, nearer in years to the accused and therefore perhaps more leniently inclined, and who begged for clemency, Rear-Admiral Evans says that they have

proved their unfitness to hereafter act as members of a court, and not again will they be placed in a position of passing judgment upon other persons or guarding and maintaining the honor and dignity of the naval service."

It not being in the power of any officer in the Navy to disqualify his professional brethren, the last quotation is as lacking in sense as it is in dignity. For anybody to assert that seven naval officers of well-known and excellent repute, four of whom have served their country for more than a quarter of a century, are capable of deliberately disgracing their calling and violating their oaths, is a reflection not on them but on the individual who assails them. And when the principal object of attack is Captain Uriel Sebree, the executive officer of the "Thetis" on the Greely Relief Expedition, and of the "Baltimore" during the Chilean trouble, the Governor of Samoa, for which post he was especially chosen for his sound judgment and known executive abilities, the present Commander of the great battle ship "Wisconsin," a man of fine attainments and of a character which has rendered him universally beloved in the

Navy, it is not difficult to see why the veteran editor of the *Army and Navy Journal* satirically remarks that a preferable alternative to such exhibitions might be the re-establishment of the cat-o-nine tails, to be wielded by the "convening authority" when court-martial members intractably reject his "views." What, indeed, is to become of the sanctity of courts-martial, of the respect due to their fundamental administration of naval discipline, if to the contempt which Secretary Moody has lately shown for one is to be added the open insult which Rear-Admiral Evans permits himself to heap upon another?

This country has never taken seriously the eccentric personality who under the sobriquet of "Fighting Bob" has added to the gayety of nations by his preposterous yarns of personal prowess, and it has condoned in him much intemperate speech which, if indulged in by others, would have encountered swift official rebuke. Here, however, is not "Fighting Bob," nor is there any proper place here for the leniency accorded the private individual.

Rear-Admiral Evans occupies the highest naval position afloat. He is the Commander-in-Chief of our largest and most important fleet, of all the ships which guard the Philippines, of our sea forces in an arena where war may come at any time, war in which we may be involved, and which it lies largely in his power to precipitate. It was quite within his right to express his opinion as to the adequacy of the penalty inflicted by the court-martial in the usual terms of official courtesy. The demoralizing effect upon the service of his unrestrained and undignified abuse is too obvious for discussion. Beyond this, and even more serious, the disquieting question is raised whether we have made the best choice of commanders for the difficult and delicate post which Admiral Evans occupies, and whether our naval interests in the far East would not be better served by a transfer of their control to more conservative, sane and prudent hands.

That is a question for the Secretary of the Navy to answer. He will now deal with Admiral Evans's "Memorandum" under the searchlight of the Wortman episode.

Everybody's Business

NEVER did the old saying that what is everybody's business is nobody's business have a plainer illustration than in the present condition of Macedonia. It is the business of Turkey, of Russia, of Austria, of Germany, of France, of Italy and of Great Britain to see to it that Macedonia is well governed. Any one of them, barring Turkey, and perhaps Italy, if left to itself, could and probably would insist upon the restoration of order and the creation of good government; together, with their mutual jealousies, they can do nothing. No two of them together, not even Russia and Austria, can agree to do this.

How different was the case when a similar but less acute and shocking condition existed in Cuba. Then there was one neighboring predominant Power, the United States, and no other could have, or did have, a word to say by way of interference. Accordingly, when conditions became intolerable, the United States took hold of the matter with decision and declared that the anarchy must stop. We sent our army and fleet to Cuba, and when Spain thought to resist us, we crushed her power as if it had been an egg shell. We redeemed Cuba, and restored the island to its own people, bidding them try the experiment of independence and self-government.

Possibly, if there were in Europe a masterful statesman who had a sense of righteousness and the gift of initiative, something might now be done for Macedonia; what he might dare others might allow. Nearly three hundred years ago—but that was before the days of Balfour—there was a Lord Protector of England who was not afraid of France or Spain, and who was willing to put his foot down heavy and declare that there should be no more "slaughtered saints" in the Italian Alps. To-day Balfour, head of the British Government, weakly declares that he can do nothing for Macedonia; that if the Turks are bad, the Christians are just as bad, and that they can keep up their slaughtering of each other as long as they please, for all he will do about it. It is as cold-blooded as Bismarck's declaration that he would not risk the life of one Pomeranian hussar

to save the people that were being massacred outside of Germany. It is as bad as all Europe was in the days of the horrible Armenian massacres. Oh, for a day of Cromwell! There was a Brutus once that would have dared the eternal Devil sooner than allow these atrocities to continue.

We hear of international law, of international justice; is there no place for international mercy? Have the assembled nations—or, in default of that, has no single nation the duty to step in and say, Thou shalt not, when tens of thousands of our fellow men are being ruthlessly murdered? Do bystanders have no sort of obligation? We thought we had an obligation when Cuba was being crushed. Are there no other nations not utterly selfish? Does no one dare to speak to Turkey with fleet and army? It would seem not. Where is the chivalry that carried Byron and Dr. Howe to Missolonghi? The present prevailing international chivalry seems to allow Turks and Christians to murder each other till both are exhausted, if not exterminated, and then let Russia and Austria step in and divide control of the devastated provinces under nominal Turkish suzerainty.

Brains and Battle Ships

IN his late Presidential Address before the British Association, Sir Norman Lockyer advocated the grant by the Government of \$120,000,000 for university extension and education in Great Britain. That is just the amount spent last year on the Navy. He would borrow this sum and put it once for all in buildings and endowments, where it would be permanently profitable. It would be a single appropriation, for the production of brains, and would not have to be repeated. Battle ships wear out in a few years and go to the scrap heap; buildings and endowments maintain an endless profit.

It would be interesting to inquire why in this country private beneficence so richly endows institutions of learning, while in England not \$20,000,000 has come from this source in sixty years. In this country as much as that has been given in a single year. The main rea-

son probably is one that might not be suspected. It is one that prevails over the whole of Europe. The union of Church and State puts people in the habit of depending on the Government for the support of religious and educational interests, and the self-sacrificing enthusiasm for a noble cause is not encouraged as it is in a country where the people are taught to give liberally to support objects not provided for by the state. In Germany and France the universities are supported wholly by the Government, as are our State universities in the West. Under these circumstances no one will care to make them any gifts beyond bird skins for a cabinet. Germany has given out of the public exchequer nearly \$5,000,000 for buildings alone in the new Strasburg University, more than private generosity has supplied for buildings in Manchester, Liverpool, Birmingham, Bristol, Newcastle and Sheffield combined. Thus the English older and younger universities, shut out from state aid, are starving from lack of private gifts. It is an American citizen who has made a notable gift for the endowment of the Scottish universities.

But let us make the comparison which Sir Norman Lockyer suggests between the expenditure of \$120,000,000 once for the production of trained brains, and that of the same amount every year for the building of battle ships. Which is the most profitable investment of a nation's surplus wealth?

The prosperity of Great Britain depends on its productive power in the fields of manufacture and commerce. By common consent she is fast losing, where she has not already lost, her pre-eminence, and losing it to Germany and the United States. Only one explanation of this fact is given and accepted: it is that these two nations lead the world in the training which their universities and technical schools supply. Think of the multitude of such institutions in this country to which flock many thousands of youth eager to acquire the completest training which the best technical experts can supply. Millions of money are freely supplied to equip these institutions with the best laboratories and shops for all sorts of engineering skill that will be called for in the arts, and these young graduates

are eagerly sought to control our sources of production. All labor comes to be skilled labor, directed by more skilled intelligence. It is just so in Germany; perhaps even more is this true there, where the Government spares no money to provide the equipment of its institutions, which attract youth from all over the world to what is the world's center educationally. But this is not true of Great Britain. She is not cultivating brains; and brains are the sole source of wealth and prosperity. We do not wonder that the cry for the privilege of brain culture has there become almost a despairing cry for life.

And what is a battle ship, which costs as much to build as it does to endow a university? It is a temporary fragile thing, made to smash and be smashed, soon out of style, like a woman's bonnet, and equally thrown aside when after a few years worn out. It is the expression of the destructive, the cursed side of national character and life, that which makes for loss and ruin, or at best for defense against wanton attack. It may be necessary to build vessels of war, we do not deny it, but Sir Norman Lockyer is right in saying that brains are a better defense than battle ships, and better worth building.

Unconscious Plagiarism

A CASE of "unconscious plagiarism" in the Brooklyn pulpit calls fresh attention to this vice of memory. Fortunately we have not in this country come to the pass of the English pulpit, and it is hardly a recognized trade with us to supply written or lithographed sermons to lazy parsons. In the Brooklyn case considerable passages from one of Dr. Hillis's sermons were reproduced six months later in a sermon on the same subject by one of his neighbors, and given to be printed in the same journal in which Dr. Hillis's sermon had appeared. This fact is enough to make it practically certain that the preacher who used the matter last did not remember where, whence or how the language came into his mind. But in the case of any minister who has such an extraordinary memory for language and thoughts, and such an unfortunate forgettery as to

where he found them, or whether they were his own or somebody's else, this experience ought to teach him not to be a student of other men's sermons. A habit of unconscious pilfering is very unfortunate, and may involve the "appearance of evil," and should be strictly guarded against.

Such a minister had better read books rather than sermons. Yet even then he may be in danger of appropriating the language as well as the succession of thought. We can see no wrong in gathering ideas wherever one can, but they should not be so conveyed as to carry with them the signet of the first author's language and style. Ideas become common property, for which, when first fresh, suitable acknowledgment should be given. But the day has passed when a writer could, as in the days of manuscript books, and when the law and right of literary property were not fully recognized, incorporate long passages from earlier authors into his work without credit.

Yet even now men may differ as to what makes plagiarism. One of the ablest missionary scholars that this country has ever sent abroad was Dr. Van Dyck, of Beirût, the translator of the Arabic Bible. He was once charged with plagiarism in the pulpit, and the report of it came to this country, and occasioned great surprise among those who knew his ability, and that he had no occasion to steal other people's matter. He was said to have preached as a sermon of his own a chapter of "Natural Law in the Spiritual World," which was then appearing serially. It turned out, on inquiry, that he had made use of the facts and arguments in that chapter, but it was not a written but an extempore sermon, and it was preached to the students in the Syrian Protestant College, not in English but in Arabic. This quite materially reduced the turpitude, if there were any, of the offense.

This we may say, that a man ought not to allow himself to be betrayed twice into the blunder of supposing another man's writing to be his own. This kind of unconscious plagiarism is one into which those are apt to fall who have so fatally cultivated the gift of memory that once reading their own or any other

man's composition will fix it in the memory. Really such people ought to be careful what they read, and ought to try to perfect their memory so far that it will retain the source as well as the substance of what they read.

✱

Suicidal Folly in Support of Crime

In the history of organized labor there can be found no example of greater folly than has been seen in the action of the building trade unions of New York during the last six months. From the beginning of their contest with the employers they have been clearly and persistently in the wrong. Permitting themselves to be led by corrupt walking delegates, whose chosen industry was the blackmailing of contractors, they lost more than \$20,000,000 in wages and tied up \$100,000,000 worth of building projects before the conviction of Samuel J. Parks. It should be borne in mind that neither the rate of wages nor the hours of labor were involved in this controversy, and that they have recently been fighting, under the leadership of their walking delegates, against the adoption of a fair arbitration agreement proposed by men who bind themselves to employ only members of the unions. When, owing to the returning sanity of the workmen and to the conviction of their rascally leader, the end of the wretched contest seemed at hand, a national convention took place in Kansas City, where this leader—a convicted blackmailer, temporarily out of prison, and soon to be tried on four additional indictments—won a notable victory over the honest men of his organization and was raised to the rank of a hero. Now he returns to New York, breathing threatenings and slaughter, and promising to cause strikes on all the building projects where work has been resumed—even upon the new bridge across the East River. The result is, the contractors and architects say, that not less than \$50,000,000 which was to be invested in buildings has been withheld. Contracts have been canceled, rents are rising, the savings of the workmen in the banks are almost exhausted, and a "blue winter" for the building industry is at hand; for it is predicted by the builders that, whatever Parks and his foolish dupes may do, not more than one-

half of the skilled workmen will find employment in the coming cold season. At the beginning of the present season there had never been a brighter prospect of abundant work at high wages in this industry. The effect of this suicidal and criminal folly is not confined to New York. Building has been checked elsewhere, altho not to the same extent, and the direct and sentimental influence of what has taken place is seen in the beginnings of depression in the great iron and steel industry. If this depression shall become more clearly marked, other industries and business generally will be affected injuriously in sympathy with it. Never have workingmen in America sought more diligently and with greater lack of common sense to kill the goose that was laying golden eggs for them.

The Play of "Ulysses" Of Stephen Phillips's drama of "Ulysses" as a piece of literature we have already given an opinion. It contains exquisite passages of poetry, chiefly descriptive, but is somewhat lacking in construction and in that controlling force which restrains the exuberance of fancy to the expression of a central idea or plot. Naturally one might expect these deficiencies to become more prominent when the action is presented before him on the stage. And yet that is not quite the case. The prolog on Olympus, to be sure, is altogether tawdry and absurd, and, were it not for the later appearances of Athena, could be cut out entirely, with mercy to hearers and actors alike. It is in the parting scene between Ulysses and Calypso on the Island of Ogygia, with which the real play opens, that we begin to feel the enhancing power of the acting in the emotional effect of the lines. Only once or twice—notably in that passage lovely in itself, "This odorous amorous isle of violets"—does the intrusion of irrelevant description jar on the nerves. Mr. Phillips has here been quite successful in throwing around a very simple situation the glamour of poetry and in creating withal a strong emotional illusion. Here and elsewhere Mr. Tyrone Power, who plays the title rôle, spoke the blank verse with considerable feeling for its rhythm—an extremely rare accomplishment on the stage to-day—and very seldom fell

into declamation. The descent into Hades especially required all the restraint of his art to save it from grotesque failure, and, if truth must be told, an onlooker blessed with a keen sense of humor would be somewhat puzzled at times during these ghostly apparitions to know on which side of the line which is supposed to divide the sublime from the ridiculous the phantoms marched. And this uncertainty is increased by the irrelevance of the scene from a dramatic point of view. Yet, on the whole, the final impression is serious, not unmixed with grandeur and awe, and the extravagance of the conception thus justifies itself. The scene of the suitors in Ithaca was such as one expects in a comic opera and was quite out of harmony with the general tenor of the play. Only the meeting of Ulysses and Eumæus, with its genuine humor and pathos, redeemed the buffoonery of these scenes. It required some courage to place such a play as this on the stage, and the crowds who enjoy the Rogers Brothers will certainly have little respect for Mr. Phillips's poetry. To those who are sufficiently educated to look for something more than mere relaxation in the theater, we recommend "Ulysses" heartily as a production of no little artistic and emotional interest.

Presbyterian Union

This week a very important meeting on Church Union is being held in St. Louis. The principal conferees will be a committee of the Northern Presbyterian Church and of the Cumberland Presbyterian Church, with a view to the union of the two denominations. This has been much talked of since the amendment of the Westminster Confession by the former Church and the adoption of its new creed. We do not believe that it was prominently in the mind of the Presbyterian Church, when the new creed was adopted, that it would lead to the return of the Cumberland Presbyterians, but a good deed shines further in this naughty world than those who do it suspect. Immediately the Cumberland Presbyterians discovered that there was no longer any reason for their separation from the parent body, and they made modest overtures for union. The Presbyterians were not slow to respond, and

there is every reason to hope that this union will now be accomplished. It will have one effect that is worth considering. It is known that the Cumberland Presbyterians are strong in the South, where the Southern Presbyterians have been able to hold the ground almost to the exclusion of their Northern brethren. If now, as is probable, the Cumberland Presbyterians shall join with the Northern Presbyterians, the united body will be side by side with the Southern Church, and the result ought to be a movement to unite the two Churches that were separated by the Civil War. But that is another and more difficult problem.

Out of Door Schools

THE INDEPENDENT for many years past has advocated not only the teaching of agriculture to farmers' children, but teaching it in a natural way—that is, out of doors. We believe that children can never become properly conversant with nature through books. A part of each day should be devoted to the application of truths acquired. This method of study would require an entire readjustment of our school building system. Every school should be planted in a garden or orchard, where the children may apply whatever they learn, and do it daily. This idea of a garden school is gaining ground, we are glad to say, with rapidity. In Canada will be opened at once, in each of the Provinces, what is called a MacDonald Consolidated Rural School. In these schools the child is to be set at studying nature itself—the successive phases of the growth of plants. He is to learn how varieties of soil affect growth. In other words, he is to combine study with work; hand culture and brain culture will go on together. Botany will be applied botany, and entomology will be applied entomology. Boys will be taught drawing, carving, turning, as well as field work. Girls will have the same instruction, with the addition of housekeeping. The school, instead of being dis severed from the farm and the home, will become an integral part of it. The lessons of geography will begin at home and so with geology, for there is geography and geology enough on any farm to make a very large initial chapter for any child. It is not proposed, however, to overlook literature and confine the child to strictly

physical science studies. The aim and end is to make of every farm boy and girl an intelligent investigator, and to make country life intensely interesting, and farm work inspiring. This reform in education we believe to constitute the next great step of progress.

Objecting as we do to the contemptible cowardice of college hazing, we do not object to certain above-board and legitimate exhibitions of class prowess. In many colleges in the first weeks of the college year, a day is set apart for a bout between the freshman and sophomore classes. The upper classmen oversee the contest and protect each side from unfair play. It may be a cane or a hat that is the prize of the rough and tumble fight between the two classes, but it is all fair, with no bad spirit, and it gives scope for courage and skill. It is no better and no worse than football, and is an admirable substitute for the meaner impositions and reprisals that go with hazing.

It is the President who must decide whether fourth class postmasters, like Miss Todd, in Delaware, come under the civil service regulations. They ought to at any rate. Miss Todd was removed just because she was unacceptable to Addick's Senatorial Man Friday. There would have been some color for the claim that this Senator had the right to control a new appointment, but he had no right—nor had the Postmaster-General—to create a vacancy, for the charge of pernicious political activity is an evident afterthought.

Two or three articles have lately appeared in the papers describing in flattering terms the Georgia State Industrial College for negroes, but we observe that they do not mention how much the State of Georgia appropriates for its support from its own treasury and how much comes from the Congressional appropriation for agricultural colleges.

We were in error in attributing to *The Presbyterian* approval of President Hyde's composite college creed as sufficient to admit one who holds it to the Presbyterian Church. It was another Presbyterian paper of unimpeachable orthodoxy.

Insurance

Insurance in Mexico

RECENT advices from the City of Mexico indicate that there is a promising insurance field in that city with many opportunities for development. Any one who has recently been in Mexico and has studied the question at all will have been impressed by the opportunities that are now available there for general insurance companies doing a conservative business.

At the present time there are three leading American life insurance companies engaged in business in the Republic. These companies are the Equitable, the New York Life and the Mutual. The Mexican insurance laws are very liberal, and the companies named have flourished under them for a number of years.

The pioneer insurance company in the Republic of Mexico was the Equitable, which began business in that country as early as 1873. Gen. Porfirio Diaz, the President of Mexico, was for some time the presiding officer of the local board of the Equitable. He was also a large policyholder, thus demonstrating his full appreciation of this particular company, and indicating his approval of the management of American insurance companies in general.

The business of the New York Life and the Mutual in Mexico is very satisfactory to both companies. The National, at present the only existing Mexican company, is mainly controlled by American capitalists. It has had a business career of only about two years, but is in a flourishing condition. The Sun Life of Canada, as well as the Canada Life, has arranged to do business in Mexico within the last few months.

The Mexican laws affecting foreign life insurance companies are decidedly liberal, the only requirement being a tax of 3 per cent. on gross premiums and a ten-cent stamp tax on all policies.

The Federal Government, however, requires a deposit of \$10,000 for every \$1,000,000 of insurance in force. This guarantee may be made either by a deposit of Government bonds or by the

purchase of real estate equivalent in value. The semi-tropical rate for the table lands in the vicinity of the capital and the surrounding country and the tropical rate for the lowlands and the country along the coast have been fixed by the different companies doing business there. This has been found expedient on account of the wide climatic range prevailing in Mexico.

The fire insurance companies operating in Mexico are comprised in the following list—viz., the London and Lancashire, Home, Phoenix, London, Transatlantic, Royal Exchange, Hamburg-Bremen, Norwich Union, North British and Mercantile, Royal, Aachen and Munich, Sun, Palatine, Manchester, Law Union and Crown, and British America.

There is also in Mexico a rapid growth in accident, health and plate glass insurance. Most of the accident policies thus far issued have been written on railroad employees, altho considerable business has likewise come from outside the railroad class—from miners, traveling men, and the general business public. The British and Foreign Marine Insurance Company and the Mannheim are the only recognized companies that are writing marine insurance, altho there are several individuals who handle this class of risks. These men do not represent any particular companies, and are known simply as corresponding agents. The Mexican field, it would appear, therefore, is well worthy the attention of insurance underwriters.

IN the article on Insurance and Co-insurance in our issue of September 3d the example cited should have read: "If a merchant having a stock of \$100,000, for example, insured it for \$50,000, with the full coinsurance clause, in case of the partial loss of \$10,000, he would receive \$5,000 from the company, instead of the full loss, he himself being the co-insurer for one-half his loss."

Financial

Stocks and the Industries

ON the Stock Exchange last week there was further and continuous decline, the ruling influence being the downward movement of Steel shares. The common stock of the Steel Corporation fell on Friday, and again on Saturday, to \$16, and the preferred on both days was at times only a fraction above \$60. It will be recalled that the annual dividend on the common has thus far been 4 per cent., and that the 27,000 employees who took nearly 49,000 shares of the preferred under the provisions of the profit-sharing scheme, paid \$82½ for the holdings. The decline to \$60¼ cannot be regarded by them with complacency. No official announcement as to further payment of the dividend on the common shares has been made. It is now apparent, however, that the iron and steel industry is beginning to suffer a check, due to lessening demand for consumption. For this reason there will be some restriction of the enormous output which has been the subject of much comment for a year past.

This reduction of demand for consumption is due to several causes. A prolonged and continuous decline of securities has embarrassed many consumers and induced others to proceed with much caution. We are of the opinion that at the outset and for some time thereafter this decline was not wholly a natural reaction, but was forced. When once the ball was rolling downward, however, many natural influences tended to keep it going and even to increase its speed. Eventually there was some impairment of general confidence, altho there have been no depressing conditions in the general situation. Crops are large, railroad earnings are satisfactory, transportation facilities are still heavily taxed, and the volume of general trade continues to be good. After giving due weight to the manipulation of share values by powerful capitalists, the vulnerable condition of many new enterprises, the embarrassment of syndicates, and other incidental and secondary influences, we must regard the unwise and reckless conduct of organized labor, especially in the building trades, as a very prominent and effective cause of

what seems to be the decline of prosperity.

While the demands and the conduct of organized labor have exercised a restraining and discouraging influence upon capital in some other branches of industry, the effect of them upon building in the cities has simply been paralyzing. This has directly imposed a check upon the iron and steel trade, always regarded as a barometer, and now exerting more influence upon the general situation than ever before because of the prominence of its securities on the Stock Exchange and before the public. If a general impairment of confidence and a restriction of manufacturing industry shall now follow our prosperity, organized labor will suffer severely by reason of conditions due largely to its own blindness and folly.

IN an address last week Treasurer Roberts pointed to the great and unprecedented gold holdings of the Treasury—\$653,000,000, nearly four times the amount held by either the Bank of England or the Imperial Bank of Germany.

....On Wednesday of last week Secretary Shaw gave notice that owing to the scarcity of 2 per cent. bonds for use as security for circulation or deposits, he would resume refunding to the extent of \$20,000,000 and would also redeem the 5 per cents of 1904, paying interest to maturity.

....Dividends and coupons announced:

Am. Telephone & Tel. Co., \$1.50 per share, payable October 15th.

Atch., Top. & S. F. R'way (Gen. Mort. 4's), Coupons No. 16, payable October 1st.

Atch., Top. & S. F. R'way (S. F. & S. J. Valley), Coupons No. 14, payable October 1st.

Nat'l Park Bank, quarterly, 4 per cent., payable October 1st.

N. Y. Cent. & H. R. R R., 1¼ per cent., payable October 15th.

Westinghouse Elect. & Mfg Co., Preferred, 2½ per cent., payable October 10th.

Southern Pacific Co., various Coupons, payable October 1st.

Minneapolis & St. Louis R.R. Co., Pacific Extension Coupons, payable October 1st

Amer. Chicle Co., Common, 1 per cent., payable October 20th.

NEW YORK, THURSDAY OCTOBER 8, 1903

No. 2862

Survey of the World

National Topics

It is now expected that Congress will assemble in special session on November 9th, and that the treaty of reciprocity with Cuba will be the only subject to which its attention will be directed by the President in his message. Altho preparation for currency legislation has been made, it appears now to be admitted that this question will not be considered at the special session. Mr. Cannon will be elected Speaker, and will appoint Representative James A. Hemenway, of Indiana, chairman of the Ways and Means Committee. Action with respect to the treaty of reciprocity will be taken by means of a brief joint resolution originating in the House. This may be the subject of a tariff debate.—There are persistent rumors to the effect that Senator Fairbanks, of Indiana, has been urged by persons representing the Administration to accept a nomination for the Vice-Presidency. Representative Hemenway says that the Senator is not a candidate for the place and does not want it, but might think it necessary to take the nomination if the convention should offer it to him.—William Youngblood, a leading Republican in Alabama, representing the so-called Lily White faction, permits the press to publish his prediction that Mr. Roosevelt, if nominated, will be defeated.—Representative Richardson, of Alabama, opposes the nomination of Mr. Cleveland, he says, for “a dozen good reasons,” but would cheerfully support him if it could be demonstrated that he is the only man to defeat Mr. Roosevelt. Such a nomination does not seem to him, however, to be

within the range of possibilities. “Without taking into account Mr. Cleveland’s record toward his own party while in power, the third term idea would exclude him.” Concerning the negro question he says:

“It seems to me that the agitation for a repeal of the Fourteenth and Fifteenth Amendments is very unwise. Practically the Amendments are dead matters; hence their repeal, which will never be accomplished, is unnecessary. More than this, a request for their repeal would provoke a war time issue. We may as well discuss the issue of African slavery.”

—The division of the Republicans of Delaware may, it is said, give the State’s electoral vote to the Democrats next year. There are signs that the leaders of the Addicks faction have not recently commended themselves to the favor of the President. As to the selection of a District-Attorney in the place of Mr. Byrne, who recently resigned, the two Senators sharply disagree, each having a candidate. At a conference with the President last week they were told that if they should not agree he would make the appointment without regard to their wishes. A day or two later, Mr. Addicks himself called at the White House, and current reports say that he was not received with expressions of affectionate regard.—The assignment of Major-General Corbin, Adjutant-General of the Army, to the command of the Department of the East, with headquarters at New York, has excited much comment. General Young, Chief of Staff, says that it “is in accordance with General Corbin’s wishes, is intended as a recognition of the eminent services rendered by him in the impor-

tant office of Adjutant-General during the war with Spain and the subsequent operations in China and the Philippine Islands, and is made with a view to obtaining the benefit of his great administrative and executive ability in the command of the largest and most important military department in the United States." General Chaffee is called from New York to Washington in order that he may become familiar with the duties of Chief of Staff, in which office he will succeed General Young in January next. The new General Staff law took from the the office of Adjutant-General much of the great power which General Corbin had exercised, but he earnestly promoted this legislation. He says that he feels deeply gratified and highly complimented, and that there is nothing behind the change but the kindest feelings and the most cordial relations.—The Boston Patriotic Association has sent to the President resolutions expressing disapproval and alarm because, by the agency of Secretary Hay, he addressed to Cardinal Rampolla a letter of condolence on the death of the late Pope, and on account of a rumor that the Vatican will be invited to send a representative to the St. Louis Exposition.

Conventions and Platforms

The parties in Massachusetts held their conventions last week. By the Republicans Governor Bates and the officers associated with him were renominated, and a very brief platform was adopted, of which the following paragraph is the only important part:

"We reaffirm our belief in the policy of protection to American industries. While admitting that tariff schedules should be revised from time to time to meet changing industrial conditions, or to secure the benefits which may be obtained from reciprocity, we declare that the present tariff law should not be revised or changed until the need of such action and the benefits to be obtained from it are clearly shown. Whenever industrial conditions shall require a readjustment of the tariff, the work will be undertaken by the Republican party, the friend and defender of protection, without unnecessary disturbance to business or commerce, and with fairness and justice to all American interests."

The plea for a revision designed to restrain combinations was opposed by the permanent chairman, who said that "the greatest industrial nation in the world" would "never be called upon to surrender to its competitors the policy which has made it great and powerful, as the only remedy for the control of corporations existing under State law and operating in violation of Federal statutes."—The Democrats renominated Col. William A. Gaston. Their platform is a very long one, but no place was found in it for Mr. Bryan or the free coinage of silver. At the beginning it says:

"First of all we place the question whether those laws shall continue which put the livelihood of eighty millions of people in the power of the few, which enable the same hands that control the railroads to control the mines, that control the banks to control the Treasury, that own the people's necessities to own the people's government. The Trusts, monopolies made by law, entrenched behind a prohibitive tariff, and buttressed by subsidies and special rates, plunder our people with one hand while with the other they reach for conquest, and sell their product cheap abroad that they may sell it dear at home. We condemn the hypocrisy of that party which, admitting the evil, makes the remedy dependent upon a Constitutional amendment which it never intends to pass. We despise that hypocrisy which outdoes Populism in placing the Treasury money at the service of favored banks, and breaks laws to favor Wall Street speculators. We favor the immediate regulation of Trusts under the interstate commerce and taxation powers of Congress, and the admission free of duty of articles controlled by the Trusts, raw materials of manufacture, and the necessities of life."

The passages relating to labor call for a national code which shall limit the hours of interstate railroad and telegraph employees; for legislation throughout the country for equalizing the hours of labor, forbidding the employment of children in factories, and in other ways "bringing other States up to the Massachusetts standard;" and for tribunals of voluntary arbitration, with power to enforce their decrees. Reciprocity with Canada is demanded. "We should condemn lynchings in the South or North," says the platform, "as we condemn massacres in Russia or murders in the Philippines. Hence we favor an early declaration of our purpose in the Philippines and oppose the repeal of the Fourteenth and

Fifteenth Amendments." The chairman excited great and prolonged applause by a brief complimentary reference to General Miles, who, he said, had been "disciplined, snubbed, belittled and insulted by a crowd of fustian soldiers and sycophants surrounding the technical head of the army, who was a chance participant in one small fight."—The Socialists again nominated for Governor ex-Mayor Chase, of Haverhill. Their nominee for Lieutenant-Governor bears the name of John Quincy Adams. Among the "immediate demands" of the platform are State insurance for workers, trial by jury in cases of injunctions issued against workingmen, the abolition of child labor, the abolition of capital punishment, public ownership of public utilities, the initiative and referendum, and proportional representation. — In Rhode Island the Democrats have renominated Governor Garvin, on a platform devoted entirely to local questions. Their candidate for Attorney-General (a Democrat, of course) is a brother of United States Senator Aldrich.—In Colorado's Republican convention ex-Senator Wolcott won a decided victory in a factional contest involving the seating of delegates, his opponent being David H. Moffat. Mr. Wolcott will probably lead next year's delegation in the national convention and be a candidate for the Senate. The platform is emphatically for Mr. Roosevelt.

Colombia and the Canal

The committee appointed in the Colombian Senate to consider the bill authorizing President Marroquin to negotiate a new canal treaty upon certain specified conditions has decided to make an adverse report, while at the same time it approves the rejection of the original treaty. A debate upon this report and the bill will soon take place, and at the conclusion of it Congress will adjourn, probably before the end of October.* Action upon the treaty in Colombia appears practically to have been deferred until next year. President Marroquin's successor is to be General Reyes. It is believed that he regards with some favor the treaty which was rejected. The terms of the Senators who were not-

ably hostile to the Hay-Herran treaty will expire in July next. Some predict that after the Senatorial elections there will be in the Senate a considerable majority for the original agreement, altho a few unimportant modifications may be required. This prediction, of course, is based upon the assumption that our President and Congress will cheerfully wait a year or more for favorable action at Bogota.—The New Jersey corporation which is interested in the Darien-Mandingo route still hopes to obtain Government aid for its project, which involves the construction of a sea level canal 30 miles long, including 5 miles of tunnel (300 feet high) through the solid rock.

Mr. Roosevelt and the Labor Unions

Altho the terms of the President's original decision in the Miller case were generally regarded as sufficiently explicit, a sub-committee of the Executive Council of the Federation of Labor sought a conference with him last week, possibly hoping that it would be modified. A hearing was granted. The members of the sub-committee were Messrs. Samuel Gompers (President of the Federation), James Duncan, John Mitchell, James O'Connell and Frank Morrison. The Eight-Hour bill and the Anti-Injunction bill were among the subjects considered. Concerning the discharge and reinstatement of Miller the President said to the sub-committee:

"As regards the Miller case, I have little to add to what I have already said. In dealing with it I ask you to remember that I am dealing purely with the relation of the Government to its employees. I must govern my action by the laws of the land, which I am sworn to administer, and which differentiate any case to which the Government of the United States is a party from all other cases whatsoever. These laws are enacted for the benefit of the whole people, and cannot and must not be construed as permitting discrimination against some of the people. I am President of all the people of the United States, without regard to creed, color, birthplace, occupation, or social condition. My aim is to do equal and exact justice as among them all. In the employment and dismissal of men in the Government service I can no more recognize the fact that a man does or does not belong to a union as being for or against him than I can recognize the fact that

he is a Protestant or Catholic, a Jew or a Gentile, as being for or against him.

"In the communications sent me by various labor organizations protesting against the retention of Miller in the Government Printing Office, the grounds alleged are twofold: 1. That he is a non-union man; 2, that he is not personally fit. The question of his personal fitness is one to be settled in the routine of administrative detail, and cannot be allowed to conflict with or to complicate the larger question of Governmental discrimination for or against him or any other man because he is or is not a member of a union. This is the only question now before me for decision, and as to this, my decision is final."

After the hearing, the labor leaders declined to comment upon the President's decision. Two days later, the Executive Council issued a long address, demanding the enforcement of the eight-hour law "on all work performed by or on behalf of the Government," by contract or sub-contract, opposing the use of injunctions in labor disputes, and arguing against "the open shop," which, it was said, "makes agreement with the employers impracticable if not impossible." As to the hearing at the White House, it was stated in this address that the President had said that he was in favor of the Eight-Hour bill and would give to the Injunction bill his earnest attention. The most important part of the address, however, was the following assertion as to what the President had said concerning "the open shop" and the Miller case:

"President Roosevelt set forth that in his decision he had nothing in mind but a strict compliance with Federal, including civil service, law, and that he recognized a difference between employment by the Government, circumscribed by those laws, and any other form of employment; and that his decision in the Miller case should not be understood to have any other effect or influence than affecting direct employment by the Government in accordance therewith. He furthermore made plain that in any form of employment except that so circumscribed he believed the full employment of union men was preferable to either non-union or 'open' shops."

No official denial of the accuracy of this report of Mr. Roosevelt's remarks has been made, but it is asserted in dispatches from Washington that the report was not authorized and does not fairly represent his position.

Labor Controversies

The mineral output of Colorado for the present year has been reduced by about \$3,000,000, owing to strikes and lockouts at Cripple Creek and elsewhere. A Constitutional Amendment authorizing the enactment of an eight-hour law for mines, mills and smelters was adopted, but the desired law was not passed. After an eight-hour day had been granted generally at the mines, the Western Federation of Miners set out to compel a similar concession at the mills and smelting works. The first strikes were ordered in June. Eight weeks ago, 4,000 miners at Cripple Creek were ordered by the Federation to strike (altho they had no grievance as to hours or wages) in support of a demand for eight hours at the mills and smelters. They obeyed reluctantly. Whereupon the mine owners gave notice that they would give no further employment to members of the Federation. For four weeks 1,000 militia have been on duty there, and sensational collisions between the civil and the military authority have taken place. Hundreds of strikers have found work in other States.—At the closing session of the ironworkers' convention, in Kansas City, Samuel J. Parks was unable to prevent the re-election of President Buchanan, who had suspended Parks's local union in New York. The vote was 43 to 40 in Buchanan's favor. But a resolution supporting Parks's union in its contest with employers was passed, and the arbitration agreement of last April with the Association of Steel Erectors was repudiated. Parks still promises to order a strike on the new East River Bridge, and Buchanan says that there shall be no such strike. The convention unanimously adopted a resolution declaring that President Roosevelt's action in the Miller case was unfriendly and unjust to trade unions.—A general restriction of output at the iron furnaces has been accompanied in two or three places by a reduction of wages.—Owing to the presence of the United States Marine Band at the Centennial celebration in Chicago, all the other bands, including those of the militia regiments, refused to take part in the grand parade. The

Marine Band had been engaged for the banquet in the evening.

**The Hague
Tribunal**

Altho, according to the protocols signed last winter between Minister Bowen and the representatives of the Allies at Washington, the Hague Court should have assembled on the 1st of September to decide upon the Venezuelan dispute, it was not until last week that the court opened. It seems that the arbitrators originally appointed by the Czar of Russia were not allowed by their governments to serve, tho it was thought in some quarters that the delay was owing to the obstructive tactics of the Allies. By the appointment of M. Muravieff, the Russian Minister of Justice, however, as the President of the Tribunal, and Professor F. de Martens, of the University of St. Petersburg, and Professor Lammason, of Austria, the court was finally completed. At the opening President Muravieff pointed out the significance of the arbitration proceedings, in which for the first time the bulk of the nations of Europe participated, and the calamities of war were averted, thus scoring a victory for peace over the arguments of force. A slight hitch occurred over the question of the language in which the proceedings should be conducted. Great Britain and Germany claimed that the memoranda of the claims should be in English, tho the pleadings might be in other languages with the permission of the court. After some discussion by the lawyers, the court decided that the minutes of the decisions should be presented in English and might be accompanied by a translation in the language of the country submitting them, but that the discussions should be in English or French. The court has further decided that the briefs and other documents should be delivered before October 18th, and the replies should be handed in by November 2d, but that thereafter the consent of the court must be obtained before the presentation of further documents. Wayne MacVeagh then opened his case in behalf of Venezuela, and at the present writing he was still speaking. The gist of the brief presented by Wayne MacVeagh, Herbert W. Bowen and William L. Penfield in behalf of Venezuela may

be epitomized in six contentions. Preferential treatment for the Allies is objected to, 1st, because Great Britain, Germany and Italy already exacted a preferential treatment of \$380,000 from Venezuela. 2d, Because Great Britain, Germany and Italy distinctly agreed, in the course of the negotiations at Washington, to the proposal of Venezuela that all the claims should be treated upon the basis of exact equality. 3d, Because all the nations are equal in the forum of International Law, and should be accorded equal treatment, unless some valid reason could be adduced for denying them such equality. 4th, Because the only precedent applicable to the present controversy is that presented by the case of China after the siege of Peking, where all the Powers having claims upon China were allowed exact equality of treatment, even Belgium and Spain, who had no naval or military forces in China or Chinese waters. 5th, Because the three allied Powers should not have had recourse to war except in the last extremity. 6th, Because the allies should have asked Venezuela to agree to arbitration, especially after they had all signed the declarations of the Great Peace Conference, to the effect that an honest endeavor should always be made to employ the methods of arbitration in all disputes before recourse should be taken to arms. We do not know yet what the counter arguments of the Allies will be. Venezuela, however, has already been paying every month 30 per cent. of the customs receipts into the bank at Caracas, while the separate Commissions which have been sitting in Venezuela are dealing in claims amounting to upward of \$41,000,000. In this connection it is interesting to note that the Peace Conference held at Rouen on the 23d of September passed resolutions regretting the actions of Germany, Italy and Great Britain against Venezuela and praising the intervention of the United States and congratulating President Roosevelt and Mr. Bowen on their efforts to bring the dispute before the Hague Tribunal.

**British
Politics**

The fiscal question is so absorbing public attention in England that in his important speech at Sheffield, October 1st, President Balfour made no allusion

to the formation of the new Cabinet, but confined himself entirely to the tariff reform. There were 5,000 persons present in the hall to hear him, and the Premier on his appearance was greeted enthusiastically. He said that the last sixty years had completely refuted the prophecies of the great tariff reformers who introduced free trade. During all this time England, without making a sign, had watched the wall of hostile tariffs growing up and dividing nation from nation. The colonies themselves were building up a system of protection which would make it as hard for England to export to them as to America or the other protective countries. He said that he could offer no cure for the deplorable situation, but only a palliative. Cobden hoped and believed in free trade throughout the world. What England to-day had to deal with was a world where international commercial relations are regulated entirely by treaty. It was necessary that Great Britain should have the means of forcing advantageous agreements with other countries, and this could only be done by means of a tariff. On the same day Mr. Chamberlain contributed to *The Daily Telegraph* a letter intended to serve as a preface to his forthcoming book on the fiscal problem. In this letter he declares that "it is not well with British trade." Exports are stationary in amount and declining in character. England is receiving from her competitors a larger proportion of manufactured goods and sending to them a larger proportion of raw materials than formerly. One by one the markets, once profitable and expanding, are closed by hostile tariffs. He gives in detail the arguments raised against his scheme with what seems to him a sufficient refutation of them. First, against the objection to placing a tax on foods, he maintains that a large part of the revenue is already raised on food and drink, the bulk of which is consumed by the working classes. Second, it is not true that the whole amount of the new duty will be paid by the consumer. Third, there is no foundation for supposing that any tax so heavy as 5 or even 10 shillings a quarter will need to be imposed. Fourth, the question of old-age pensions has nothing whatever to do with the tariff re-

form and is to be discussed independently.—The vacant places in the Cabinet are not yet filled, and the enemies of the Administration hold this up as a reproach, declaring that it exposes the Conservative party's present lack of strong men. Lord Milner has declined the position left vacant by the resignation of Mr. Chamberlain, his reasons being, apparently, both that he wishes to hold himself aloof from party politics and that he does not feel willing to give up the African government while affairs are so unsettled and anxious in those colonies.—In the afternoon of September 30th, Sir Michael H. Herbert, the British Ambassador to Washington, died at Davos-Platz, Switzerland. His death came as a general surprise, altho those intimately acquainted with him knew his long fight against consumption and his precarious condition. Nothing as yet has been said about his successor.

Manchuria and Korea

October 8th is the date upon which Russia has promised to evacuate Mukden and New-Chwang, in Manchuria, and on her action in keeping or breaking that promise may depend the whole future of the Far East. Prince Ching, President of the Chinese Foreign Office, informs the Ministers in Peking that he is still resisting the claims of Russia upon China and asserts to M. Lessar, the Russian Ambassador, that Russia should first evacuate Manchuria according to her agreement, and after that discuss with China the desired concessions. In the meanwhile Japan has made a move which may have serious consequences. She has sent troops estimated at between 8,000 and 10,000 into Korea, and from the activity prevailing at Karatsu and Kokura it looks as if more troops were to be sent over. Baron Hayashi, the Japanese Minister at London, says that the movement of the troops has no significance, and is only the routine relief of the Japanese forces guarding the telegraph line from Fusan to Seoul and Chemulpho. The general belief, however, is that Japan is preparing to hold Korea until Russia gives up Manchuria. Russia now has 50,000 men of all arms in Manchuria, including eighteen batteries of artillery. On the lines of communication between

Port Arthur and Amur Province she has 110,000 men and at Port Arthur and Talien-Wan 90,000 more.—It is expected that China will sign the commercial treaty with the United States on October 8th, the day when Russia is to evacuate Manchuria. The Chinese have modified the clause referring to the abolition of the likin tax in such a way that China is permitted to establish an unlimited number of branch offices of the native customs department in the neighborhood of the open ports. This will probably do much to preclude the free circulation of commodities.

The Balkans

According to a promulgation of the Macedonian Revolutionary Committee at Sofia, the whole Christian population of the town of Mehomia (Razlog) was massacred on September 28th, with the exception of ten men who contrived to escape. As these refugees bring the news, the Turkish troops in the Pirin Mountains, on hearing that an uprising was declared in the Razlog district, hastened to Mehomia and surrounded the town. After some fighting in the streets the Turks got control and proceeded to kill every one they could find. Batchevo also, with a population of 650 Christian Bulgarians and 570 Pomaks, has been destroyed, and Belitentza, with 2,700 Bulgarians and 550 Pomaks, has been burned. To add to the other distresses, a famine is imminent in Macedonia, due to the general devastation of the crops. The meeting of the Czar and Emperor Francis Joseph at Mürzsteg has had some results. Identical telegrams have been sent to the Ambassadors of the two countries at Constantinople, commanding them to place the following declaration before the Ottoman Government:

"You were recently instructed to declare that Austria-Hungary and Russia adhere to the task of pacification which they have undertaken and are resolved to persevere with the program drawn up at the beginning of the year, notwithstanding the difficulties hitherto opposed to its execution. For, indeed, while on the one hand the revolutionary committees have provoked disturbances and deterred the Christian population of the three valiyyets from co-operating in the execution of the reforms, on the other hand, the representatives of the Sublime Porte intrusted with their applica-

tion have been generally wanting in the necessary zeal and have not been imbued with the idea which inspired these measures.

"Both Powers are united in the determination to show that it is their firm resolve to insist on the execution in their entirety of those reforms which were accepted by the Porte, and which are calculated to guaranty general security. In this connection you will receive detailed instructions without delay.

"While the Powers recognize to the full the Porte's right and duty to suppress the disorders fostered by the insurrectionary agitation of the Macedonian committees, they at the same time deplore the fact that this suppression was accompanied by excesses and cruelties from which the peaceful inhabitants suffered. It therefore appears to them to be their urgent duty to come to the assistance of the victims of these regrettable occurrences, and the above mentioned instructions will acquaint you with the details of the humanitarian action which they deem necessary with the object of supporting the inhabitants who have been deprived of all means of existence, facilitating their repatriation, and restoring the villages, churches and schools destroyed by fire."

The text of the proposed reforms was made public on February 24th, and has already been summarized in THE INDEPENDENT. An Inspector-General is to be appointed for the three Valiyyets, and is to hold office for three years unless Russia and Austria concur with the Porte to dismiss him. The Valis of the three Valiyyets will be bound to follow his orders. Rural guards are to be chosen from the population of the towns, and are to be Christians where the majority of the people are of that faith. The administration of finances is to be so ordered as to apply the revenues first to local needs. Turkey accepted the entire scheme the next day, but has hitherto done nothing to make her acceptance good. Whether the present urgent message of Russia and Austria will have any effect remains to be seen. Meanwhile M. Miletich, a representative of the Macedonian revolutionists, now in St. Petersburg, declares that the Bulgarian armaments are completed, and horses and rifles, with 10,000,000 cartridges, have arrived. Bulgaria has, he says, 200,000 Männlicher and 50,000 Berdan rifles. Ninety-six thousand men have been mobilized, 60,000 of them in Southern Bulgaria, and 100,000 more can be put in the field in twenty-four hours.

The Progress of India

Every year a "Statement exhibiting the Moral and Material Progress and Condition of India" must be presented to Parliament, and every tenth year this statement is extended so as to include a general survey of the progress of the country during the decade. The Blue-book now issued contains in its 355 pages a vast amount of information about the British provinces and native States, and is on the whole distinctly encouraging. Especially is this true when it is remembered that the decade closing March, 1902, was one of the most disastrous in the annals of India. Two famines of unexampled severity and terrible visitations of plague, fever and cholera left their mark on the land, and these account for the comparatively small increase in the population. In 1896-7 the extent of the famine-stricken area was 300,000 square miles, with a population of 63,000,000; in 1899-1900 it was 400,000 square miles, with a population of 60,000,000. The number of persons on relief reached nearly 4,000,000 in June, 1896, and over 6,000,000 in the height of the second famine. The advent of the bubonic plague in 1896 increased the sufferings of Bombay, and the spread of this epidemic added a factor of great anxiety to the many problems of the Government. The second chapter of the Blue-book deals with the various frontier States. By the Durand Agreement of 1893 the Indo-Afghan boundary was settled, while by the Pamir Agreement of 1895 the limits of Russian territory were carefully demarcated to the north of Afghanistan and India. Under the former agreement the Ameer's subsidy was increased from £80,000 to £120,000. In Baluchistan the unruly tribes were brought into subjection, and a trade route was opened from Quetta *via* Nushki into Persian Seistan. Several military expeditions were necessary to quell the outbreaks of turbulent tribes on the Northwest frontier, and no fewer than 43,700 men were engaged in the Tirah campaign of 1897, the most extensive military operation of the decade. Indian medical officers have labored especially to combat the ravages of malarial fever to which about one-half the mortality of India is due. At

first very radical means were adopted to check the plague and cholera, and these drastic measures caused some disturbances among the population. Later, disinfection, inoculation, isolation of the sick, and evacuation of infected sites were conducted with less difficulty. The health statistics of the army show a marked improvement, altho the death rate is still high. At the beginning of the decade the Government was involved in serious financial difficulties due to the fall in the sterling value of silver. After 20 years of currency troubles, it was resolved to fix the sterling exchange at 15 rupees to the pound, thus practically instituting a gold standard. This policy has met with conspicuous success, for during the last five years the rupee has remained practically stable at 1s. 4d. The Government can now estimate its liabilities with some certainty and commerce is freed from a pernicious source of speculation. In the Chenab Colony 1,433,700 acres have been redeemed by means of irrigation, and colonists who have gone thither from more densely peopled districts raise crops to the annual value of about £3,370,000. The ancient indigenous textile industries have shown no advance, but the spinning and weaving of cotton, jute and wool in factories have rapidly advanced, while the mineral resources of the country are being more extensively exploited by the extraction of coal, petroleum, mica, manganese ore and rubies. There has been a considerable forward movement in the exportation of oilseeds, raw cotton and cotton yarn, raw jute and jute goods, tea, rice, hides and skins, but a decline is shown in silks, wheat, indigo and coffee. The number of postal communications has increased 42 per cent., and the number of telegrams 70 per cent. In ten years the railroad mileage has grown from 17,894 to 25,260, and the railroads, instead of being a drain on the Government, are now a source of income. Partly owing to the prevalence of famine and plague, the progress in education has been slow. In 1901-2 there were only 4,500,000 pupils in all the schools of India. The elementary schools are in a backward condition, but secondary education has advanced.

Detached Thoughts on Religion

BY COUNT LEO TOLSTOY

[The paragraphs which follow are culled from the original Russian unpublished text of a large work on "Religion and Theology," which will appear in a few months simultaneously in the English, French and Russian languages. As in all Tolstoy's writings on religion, he has in view the doctrines of the Greek Church.—EDITOR.]

I WAS led by an irresistible force to the study of the doctrines of the Orthodox Church of Russia. In my union with the Orthodox Church I found a safeguard from despair. I was firmly convinced that its doctrine contained the only truth, but certain manifestations of this doctrine, which were not in harmony with the fundamental conception I entertained with regard to God and his laws, compelled me to examine closely the doctrine itself.

I did not yet suppose that the doctrine was a false doctrine. I was afraid of such a supposition, for one bare falsehood in the doctrine would entirely subvert it; and, in that case, I should lose my mainstay, the very support which I had found in the Church, as the receptacle of truth, and the source of that knowledge of the meaning of life which I was trying to discover in faith. And so I set about studying the books that expounded the Orthodox doctrine. In all these works, in spite of a few differences of detail and of inference, the doctrine is the same, there is the same connection between its several parts, and it rests on the same basis.

After reading and studying these books, this is the feeling I experienced at the conclusion of my studies. If I had not been predisposed by my life to believe in the necessity of faith; if I had not seen that this faith is the basis of the life of all men; if this feeling, shaken and exasperated by life itself, had not been strengthened in me anew, and if the basis of faith were credence solely, if I had not had within me that same faith of which theology speaks, then, after having read these books, not only would I have become a pagan, but I would have become the bitterest enemy of all religion, because I found in these doctrines not only the insanity, but the conscious

falsehood of the men who deliberately selected this faith as an instrument for the attainment of their personal aims.

For me the reading of these books was a painful labor, not at all so much so on account of the effort I had to make in order to comprehend the correlation of the expressions, as because of the internal struggles I had to contend with in order to restrain the indignation that was ever surging within me while I was reading.

I have read the works of Voltaire and of Hume concerning religion, but never, when reading them, did I experience such an inflexible conviction of utter absence of faith in an author as I experienced in reading these theological works.

When we read, in Voltaire or in Hume, quotations from the apostles or from the Fathers of the Church, we see that these quotations are the expressions of men who believe, we are listening to the voice of the heart, in spite of the rudeness, the uncouthness, or even the inaccuracy of the expressions; but when we read a catechism, we see clearly that its author is not in the slightest degree moved by the quotations he produces. He does not even make an effort to understand them. All that he thinks necessary is to catch and hang on to some word or other spoken at random, some thought of an apostle, some phrase of Moses or of a Father of the Church. All he needs is to get together a collection by which it will apparently be proved that everything contained in the Sacred Books has been written for the sole purpose of justifying the symbol of faith.

And then I understood at last that all this doctrine, which had once seemed to me to be the expression of the faith of the people, was not only a lie, but a time-honored deception, organized by men

who did not believe, for a definite and miserable purpose.

For me and for all believers God is before everything, the beginning of every beginning, the cause of every cause. He is an existence outside time and space; he is the extreme limit of reason. No matter in what fashion I apprehend this conception, it is not as something that is *one*, and I cannot apply to this conception the idea of number, which is dependent upon time and space; therefore, I cannot say that there are seventeen gods, or that there is one god, at least with any certainty. God is the Beginning of everything. God is God.

Every one who has read the Old Testament is fully aware that the conception of God in the Old Testament is not the conception of a universal God, but the conception of a special God, the exclusive God of the Hebrews. It would be superfluous to quote the passages of the Bible which show clearly that the Hebrews made their God a special God among other gods. The Pentateuch is full of these passages; the Book of Joshua 24: 2; Genesis 31: 19-30; the Psalms 85: 8; even the first commandment of Moses.

Take a hundred of the common people, and you will find that not more than three can name the persons of the Trinity, and not more than thirty can tell you what the Trinity is; they will not be able, however, to name all the persons, and will name instead St. Nicholas and the Blessed Virgin. The others will know nothing about the Trinity. I have never met with the idea of the Trinity among the common people. Christ is called the God-Man, the first, as it were, among the saints; the Holy Ghost is altogether unknown, and God remains God, incomprehensible, omnipotent, the Beginning of everything, but nobody ever thinks of the Holy Ghost, nobody ever invokes him. Nor have I come across in the better educated circles any belief in the Holy Ghost. I have come across several persons who were ardent believers, especially in Christ, but I never heard them mention the Holy Ghost, except in the-

ological discussions. As for myself, during the time I was an Orthodox believer I never even thought of the Holy Ghost.

I have found faith in the Trinity and its definition only in the schools. These facts prove conclusively that the dogma of the Trinity is of no use, and that nobody believes in it—yet the Church teaches it!

According to the doctrine of the Church, the struggle which man feels within himself between good and evil, and the inclination to evil, which the Church affirms as a certainty, is explained by the fall of Adam, and, it must be added, by the fall of the devil, for Satan was the instigator of the crime, and, altho created to be good, he was to fall still lower.

But in order that the fall of Adam should account for our inclination to evil, it is necessary to account for first the fall of Adam itself and of the devil who seduced him. If there were in the story of the fall of Adam and of the devil an explanation of this fundamental contradiction between the consciousness of good and the inclination to evil, as the Church says, then to allege that this contradiction is our heritage from Adam would be, in my view, an explanation. But I am told that Adam had just the same liberty I feel within myself, that, having this liberty, he sinned, and that I have this liberty. Then what does the story of Adam explain to me? In this struggle we all feel and, from our own internal experience, recognize the phenomenon which took effect in the case of the devil and afterward in the case of Adam. Exactly the same thing happens with ourselves every day, every moment, that happened to the soul of Satan and to the soul of Adam. If those who describe to us the liberty of the devil and of Adam would explain at least how it came about that creatures naturally good, created for happiness and glory, succumbed, how it was that, altho created good, they became bad, then I should understand that my propensity to evil is the result of their peculiar relation in opposition to good and evil. But what they tell me is that the very same thing took place in them that takes place

in me, with this only difference that what took place in them was of a more insensate character than what takes place in me; I have a multitude of temptations which they had not, and I have not the special help of God which they had; so that their history, so far from explaining the affair, makes it darker than ever. If it is necessary to discuss this question of liberty and to explain it, would it not be better to discuss and explain it in oneself and not in such fantastic creatures as Lucifer and Adam, creatures I cannot even picture to myself?

Religion is not belief established once for all, a belief in supernatural phenomena, which, it is asserted, made their appearance formerly, nor is it a belief in the necessity of certain prayers, of certain rites. Nor is it either, as scholars think, the residuum of primeval superstitions and primeval ignorance, which there is no longer any need of adapting to the life of to-day. Religion is the relation of man to eternal life, to God, a relation in harmony with reason and contemporary science, and which alone impels humanity on its onward course toward the good assigned it.

The chief basis of the life of man—the internal struggle between good and evil, the consciousness of his liberty and of his dependence on God—has been banished from man's conscience and transferred to the region of fable. We are told that, some 7,000 years ago, God created Adam, free; that is to say, he created man, and this man sinned because of his liberty, and God punished him for it and also punished his descendants. The punishment consisted in placing the person punished in the same situation as to the choice between good and evil, the very situation in which man was placed before his punishment. So that all this doctrine explains nothing as to the essential question, as to the liberty of man; it simply calumniates God, and ascribes to his justice and goodness the incompatible injustice of punishing the descendants of Adam for a

crime of which they are not guilty. If the doctrine of the fall explained anything, then we might understand that the motive was rational which urged the transfer of the question from the internal consciousness to the domain of fable. But there is no explanation at all relative to the liberty of man, therefore, we are bound to have another pretext for this invention. We find this pretext in the doctrine of the Redemption.

The Church affirms that Christ has repurchased men from evil and from death. If he has repurchased them from evil and from death, then comes the question: What is the origin of evil and of death? And so the dogma of the fall was invented. Christ, who is God, has saved men from evil and from death. But men are the creatures of this same God of goodness. Then, how was it that evil and death were able to spread in every direction among men? This question is answered by the myth of the fall. Adam, abusing his liberty, did evil, he sinned, all his descendants sinned and lost immortality, the knowledge of God and a happy life without toil. Christ came, and he has restored to humanity all it had lost. Humanity has been ransomed from sickness and labor, from evil and death. Thanks to the Redemption, humanity has already got rid of sin, suffering, toil and death, provided only that it believes in the Redemption. And this is what the Church teaches, this constitutes the pretext for the creation of the doctrine of the Redemption and the sin based upon it. When the dogma of the Redemption is discussed, a person instinctively puts these questions to himself: Has God repurchased me or not, and how has he repurchased me? Is there a Trinity and what are its qualities? Does God think of the world and of me, or does he not? What is my relation to the whole subject? It is clear to me that I do not comprehend the aim, way, thought and essence of God. If he is Trinity, if he thinks, if he has redeemed us, then so much the better for me. Redemption is his business. And I, too, have mine. There is one thing I ought to know, one thing about which I should make no mistake. I ought not to imagine that he is thinking about me when what I need to do is to think about

myself; I should not believe that he has ransomed me when what I need is to ransom myself. Even if I saw that what the theologians say is reasonable, plain and convincing, I should not keep quiet. God does his work, which, evidently, I shall never be able to comprehend, and I must do mine.

The rational man cannot live without religion, because it is religion that gives him the necessary guidance for that which it is his duty to do, and it is religion that points out to him the order in which he should do it. The rational man cannot live without religion, precisely because reason is the property of his nature.

Religion continues to be what it always was, the *primum mobile*, the heart, the vital organism of human society, and without it, as without the heart, there can be no rational life. There have been and there are many different religions, because the expression of man's relation to the infinite, to God, or to the gods, varies according to the time and degree of development of different peoples, but never, since men have become rational, has any society of men been able to live without religion, and, consequently, did

not live, and does not live now, without it.

Every religion recognizes that man is equal in his lowliness before the infinite, and, therefore, every religion embraces always the conception of the equality of all men before that which it regards as God, whether it be the thunder, the wind, a tree, an animal, a hero, a deceased emperor, or even a living emperor—as was the case in Rome. So that the equality of men is a general fundamental quality of all religions.

Faith is the same thing as religion, with this difference: that under the word *religion* we range the phenomena observed externally, and that by *faith* we note the same phenomena when experienced by man within himself.

Religions are different in their external forms, but they have all the same chief foundations. And these chief foundations of all religions form the true religion, which, in our time only, is accessible to all men, and its acceptance can save men from their misery.

YASNYA POLIANA, RUSSIA

King Albicore

BY T. JENKINS HAINS

AUTHOR OF "THE WIND JAMMERS," "THE CRUISE OF THE PETREL," ETC.

HE came from a race of giants. His ancestors had held sway over the great breadth of the Pacific for many centuries, and were the lords of the South Sea. When he first saw the light it was where the towering peaks of Juan Fernandez rose above the eastern sea, rising like the back of a huge marine monster from the deep ocean and topped by a heavy pall of vapor, which rose massively for miles into the blue

above and spread out like an enormous umbrella. Between the darkening under surface of the higher layers of white reaching down to the green hills beneath, rectangular sections of steel blue showed the semi-tropic rainfall. They were sharply outlined against the clear sky beyond, for off the land the sky was devoid of a single trade cloud.

All around was peaceful calm. The great Pacific, father of waters, was rest-

ing. Only the high-rolling swell from far away to the westward came majestically onward toward the shore, rising higher and higher as it met deep down the resistance of the ontlying reefs, until it threw its crest far into the air, and with a thunderous roar of welcome rushed white and churning against the iron-hard cliffs, who received it silently and hurled it backward as if coldly repellant of its embrace.

The sun had shone strongly for days upon the smooth, heaving swell, and out upon the sunken ledges, where the Albicore lingered just below the surface of the sea, the rays filtered down to the solid rock. Here, sheltered by the reef beyond, the breakers did not disturb the ocean denizens. The deep-toned thunder of the fall on the outer barrier filled the air, but beneath the surface of the clear water all was quiet in the sunshine. The king was a young one of a large family. Scores of his brothers and sisters lay close to the bottom, peering in and out among the forest of kelp and enjoying the rays of the warm sun, for the Albicore is essentially a surface fish. The heat and light were very pleasant to them, and they were growing strong and healthy under its influence.

The older fish had come inshore some weeks before our hero was born, but food was plentiful about the island and they still lingered. They had spawned and had seen their young brought forth. Now their duty was done, and they swarmed about the ledges or plunged playfully about the slues in the reef, chasing the smaller fish to shelter in pure wantonness. They were possessed of the fighting spirit and feared very little indeed, and they lingered on when it was time for them to take to the great stretch of ocean to the westward and make room for others of the deep ocean tribes. Now the young were about in great numbers, and they seemed almost to crowd the waters in the sheltered coves. It was high time to go to sea again, and on the morrow the leaders of the school would start for the open ocean to the west, where the sun sank out of sight. Those who could follow might be safe, for the older fish were very strong and their numbers would prevent any of the hanger-on crowd of sullen sharks from

coming too near the flanks of the moving throng.

A leader passed while our young one was watching the light. He was a great fish, six feet in length, his sides shimmering like silver. His long, sinuous body apparently made no motion, save that it went ahead slowly and steadily, and his eyes sparkled like glistening crystals. His thin, tapering head seemed to barely disturb the medium about him as he went through it, and the only vibration of the light rays near him was caused by the huge mouth, which, altho shut, showed heavy projecting lips and a half-concealed row of pointed teeth that rippled the water slightly as it slipped past. He was a long, powerful fellow, capable of great speed, and a stroke from those jaws of his meant death to anything in the sea of his size except the tough shark. Even the tough hide of the scavenger would not protect from a frightful cut when the long, muscular body was launched at him with the speed of an arrow. A dark shadow which had come near the edge of the broken water gradually drew away with the Albicore's approach and the young one experienced a feeling of relief instinctively which he could not understand. He was a very sensitive young one and all nerves, and the uneasiness which possessed him when the large relative drew away caused him to make an effort to follow. But the great Albicore took no notice of him, nor waited, and suddenly made a dart ahead. He disappeared leaving a vision of a silvery flash.

Other large fellows came and went while the younger ones strayed about the shoal water and chased the herring spawn or whale food, eating much and gaining strength hourly.

High above the bare rocks a shaggy goat nibbled the grass of the hillside, and to the southward a chunky, dirty bark lay with her courses hauled up and her mainyards aback, while a dense smoke arose from her trying-out furnace. Alongside of her the carcass of a freshly killed whale rolled just awash in the swell, attracting countless thousands of whale birds and loafing sharks.

Our young one was getting very nervous as the sun sank behind the sea in the far west, dying the waves a deep

crimson. He was remarkably sensitive for an ocean denizen. Instinctive longings seemed to tell him that he would fare better away from that reef after the last full grown Albicore had gone. They had been going to sea all day by twos and threes, but had paid not the slightest attention to him or any of his younger mates. The longing for the open ocean came upon him, and with it a nameless dread of something he could not understand. He had no mother to guide him, no father to protect him. They had gone to sea with the rest and left him to shift for himself. But there was something in the deepening roar of the surf and the moaning of the sea among the sunken ledges that spoke of an all pervading Power that would guide him onward to whatever life held in store. And yet with it all was that nameless fear and dread which made him alert to every vibration of the water. Darkness came suddenly, and some of his smaller companions began to seek the shelter of the shallower water within the coves and between the rocks. Their shimmering bodies grew less and less distinct, until only the phosphorescent flare of the disturbed water, when they moved, gave notice of their presence. The semi-tropical night fell upon the peaceful ocean and the great Albicore had begun to make their way seaward, leaving the lesser denizens of the rocks of Juan Fernandez behind.

All that night the great fish moved westward. In the morning, just before the sun rose, the last of the laggards had started off into deep water, leaving the high cliffs like a wall in the eastward, while the somber bank of vapor rose again from the land and cast a gloom over the outlying reef.

While the young fish were waiting for the growing light to guide them in the wake of their forbears there was a sudden commotion on the edge of the surf. Numerous plunges and splashes told of a horde of rapidly moving bodies advancing through the shoal water of the reef. The feeling of terror that had come over our young one the day before now seemed to pervade the entire crowd that scurried here and there in the gloom. Everywhere there seemed to be a state of wild alarm. Bunches of the smaller fish tried to find shelter in deep dark holes, where the

kelp weed formed mats and snaky tangles. Then, just as the first rays of the morning sun glistened upon the crest of a great roller, there was a sudden rush through the water all about, and dark forms came plunging onward with incredible speed.

Our young one caught a glimpse of a great fish high in the air, heading for him, and the next instant there were several huge gaping mouths between pairs of shining eyes rushing upon him from all sides. He saw his young comrades seized and swallowed by the dozens, their frantic efforts to escape availing them not the least. Then, with a wild terror which spurred him to frantic action, he rushed seaward. A giant mouth made a snap at him as he went past a dark monster. A huge form rose in the air and dropped upon him with jaws gaping. He made a mad dodge and just missed the rows of teeth, while the stroke of the falling body almost stunned him. Then he recovered and tore for the outer breakers, his one idea being to get as far away from that awful reef as he could. The Bonito had struck inshore, and lucky would be the small fish who could escape their rush.

Away into the deepening blue of the ocean he sped headlong with all his energy. He looked neither to the right nor the left, but held his way straight ahead, with the terror of those fierce monsters vibrating through his whole being. On and on, without a thought of rest or slacking his speed until the bright sunshine showed him a desolate waste of fathomless blue void around and beneath him, and a bluer void above with the little lumpy trade clouds swinging past overhead. He was heading almost due west, and as the day wore on and his terror gave place to fatigue, he slacked his speed enough to take a careful look about him. There was not a living thing in sight, and he arose to the surface and stopped.

Hunger soon came upon him and stirred him to further action, and he began searching the sea for food. Soon one of his former companions came up almost as exhausted as himself with the run for life, and together they swam slowly along just beneath the surface in the roll of the swell.

As the day passed more of his youth-

ful relatives hove in sight, until by night six followers held their way in his wake. These were all who had gotten to sea. Few, indeed, had escaped. The day had marked the death of countless numbers of young fish, for the Bonito spared nothing that came in their path.

The seven Albicore cruised in company, capturing what small surface fish accident cast in their way, but all the time they held a general course to the westward and northward, to where the coral reefs rose from the bed of the equatorial ocean. Day after day they swam steadily on, our young one leading. Their silvery bodies grew apace and their backs took on a shifting blue color, so that looking downward from above it would have been hard to tell them from the surrounding blue depths, except in a strong light. Sometimes the ugly and noisy bos'n birds would swoop down as tho to strike them, but by sinking a few feet lower beneath the surface they were easily avoided. At night the seven swam beneath a tropic moon, and as they went their courage grew rapidly with their size. Once they unfortunately approached an unknown peak lying below the surface of the great ocean, and here they were chased by a huge dolphin who haunted the vicinity. He managed to destroy three of their number before they could get away. A week or two later the remaining four fell in with a roaming pair of Bonito. Two more went the way of the weak.

The remaining pair of Albicore now cruised onward together, our hero leading as before, until they came to Tahiti in the South Sea. Long accustomed to danger now, they approached the shore warily, their tapering bodies scarcely disturbing the sea. The Albicore had grown very fast and had developed rapidly during these weeks of travel into powerful fish. The teeth of the male leader began to show sharply beyond his lips. He was growing more and more muscular, and the long swim was hardening him. He was sturdy and shrewd, and the wild instinctive fear that had governed his younger actions now gave place to a feeling of confidence. His female companion had also developed into a strong fish, and as they swam slowly in through the outer breakers of the barrier reef they

presented a picture of two long, sinuous bodies armed with teeth and jaws which were not to be despised. Smaller fish approached to welcome them, but they received them coldly and headed straight into the sheltered coves of coral, where they would rest from their long run. Here they stopped at last and set about making a new home.

During the months that followed the Albicore grew several feet longer. Our leader was now nearly six feet in length, with his long jaws armed with razor-like teeth, his tapering flanks with silvery scales covering muscles of great hardness and power. And with that power came a consciousness of his worth. His wild life and flight had made him careful of the denizens of the coral banks, and he grew cold and thoughtful as he became older, until, as he reached his final development physically, he was a dignified and quiet fellow. The smaller, sociable fish of the reef did not understand him. Theirs was a life of ease and comparative safety, and their thoughts seldom went beyond the boundaries of the outer barrier. They fussed among themselves, and voted the great stranger and his companion surly company. The inquisitive little sunfish would sometimes take a peep in at the cove, where the Albicore usually lay in the sunshine on bright afternoons, but there was something in the great fish's manner that the little reefer could not understand, and he set him down for a villain, keeping at a distance and looking askance always at those ragged teeth that peeped out from the long, sharp jaws. Even the mullet were warned and gave the Albicore a wide berth, while all the time he lay there with his thoughts far away where the peaks of Juan Fernandez rose from the sea. The sociable fish went in great schools together, led by one or two who seemed to assert the right to lead, and when they had nothing better to do they investigated the Albicore, always finding him unworthy of themselves and their gatherings. He was, indeed, a stranger in a strange place. Finally he was left alone with his female companion.

The little, sociable fish were not heeded at all by the Albicore. He went to the reef daily and caught what small game he wished, and his dignified movements

2304 THE INDEPENDENT

were even watched by the great ground shark who lay daily under the shelter of the outer barrier, waiting to snap up any unwary traveler who would be unfortunate enough to get caught in the rolling surf and lose control of himself. Once only did the fellow come in contact with the stranger, and that was when he had been rolled shoreward in the roaring surge. The lurking monster thought it a good chance to take an advantage and make a strike through the broken water. He received a savage cut over the eye that left him somewhat bewildered and much more respectful of the powerful stranger's rights in the vicinity.

As the season changed and the trade wind shifted to the eastward, bringing with it little watery clouds, the two Albicore became more and more restless. Our hero's sensitive nature became more and more imbued with the feeling that he must return to the place of his birth and take his place among those of his kind. He would be needed. The Bonito would come again and there might be no Albicore leader to protect those who had escaped their last assault, and who would return to the beautiful peaks that rose from the sea of his birth. There was a feeling within him that he must be there for a purpose. He was for something more than a mere cruising pirate of the reefs of the South Pacific. The petty life of little, sociable fish was not for such as he. There was something for him to do before he died, and this feeling came stronger and stronger upon him, until one rainy morning he started out accompanied by his faithful mate.

He was now at the fulness of his powers, a full grown Albicore of the southern ocean. All the inheritance of the race of giants from whom he had sprung was in his strong frame and lightning-like actions. He could dart so swiftly the eye could hardly follow his form, and by a slight swerve upward he could spring high into the air above, leaving the sea ten feet or more below him, and then with head pointed gracefully downward, he would plunge into the blue depths, slipping his long, sinuous body so easily into the unresisting medium that there would be hardly a splash to mark his entrance. There was strength and grace in all his movements, and he was as bold as he was beautiful.

The speed of the fastest ship was slow as compared with his tremendous pace, so, altho he took his time and spent several days hunting upon the surface of the sea, it was but a short run for him to Mas-a-fuera. It was a very different passage from the one made when but a little fellow—the voyage out.

The high, grim cliffs of the Fernandez group, especially Mas-a-fuera, rise a sheer thousand feet on the north side of the island, and the wind is usually southerly. This makes a ponderous lee, the only sea being the heave of the offshore swell. Many denizens of the deep ocean come in here to rest and search for food, and even the great cachalot, or sperm whale, often takes a quiet cruise through the clear depths to enjoy the stillness and incidentally look up a stray octopus or cuttle fish who might be ensconced within some ocean cavern in the cliffs.

It was toward this sheltered lee shore our Albicore held his way. Above the heights ashore the huge pall of vapor rose as in his younger days, standing out clearly against the void of blue and as sharply outlined as a heavy cumulus cloud. There was no mistaking the place. He felt like a sailor who had made a long voyage and had sighted the home port at last.

As he proceeded shoreward, followed by his mate, he noticed many silvery flashes in the water between him and the land. Drawing nearer he perceived that these were caused by countless Albicore. Soon he was amid a throng of his fellows numbering thousands, all making their way toward the sheltered sea in the lee of the island. With the spirit and instinct born in him and developed by his strenuous life, he at once took the lead of this vast school and led them slowly into the submerged rocks, which would shelter them during their stay. Great numbers of females heavy with spawn straggled from the flanks of the column, but he swam around them and gathered them in, forcing them all into an almost solid phalanx of moving fish. The memory of the Bonito was still fresh within him, and he would take no chances with these helpless kindred. They seemed to recognize his leadership without question and followed quietly wherever he led the way. Now and then some frisky younger member of the horde would take a sud-

den start to sheer away, but with a rush our leader was upon him and he was forced back again. As they drew near the island a school of porpoises made a dash among them. These fellows drove the more timid in frantic throngs until our leader came plunging to the rescue, followed by a few of the largest and boldest of the school. In a few minutes the warm-blooded animals had received some severe strokes from the razor-like teeth and they went plunging seaward. Then the mass of Albicore went in and took possession of the rocks, the smaller denizens fleeing before them.

Here at last our hero was in the waters he loved. Game was plentiful, and the school of the Albicore led by him along the sunken rocks found it easy to keep supplied. His great size, greater than even the largest of that vast host, made his leadership unquestioned. Everything stood clear of his rush except the sullen sharks, who also took care not to precipitate trouble by hanging too closely about the rear of his foraging parties as they went their way along the shore.

During the whole season the Albicore hung about the reefs of Mas-a-fuera and Juan Fernandez Island, the young had come forth and the sheltered places inside the outer breakers were teeming with them. Our leader had driven to sea all other fish who were at all antagonistic to them, and peaceful tranquility reigned. Once or twice a growing fellow, who had reached six feet or more in length, wanted to try conclusions with the leader, but he soon had enough after encountering his sharp teeth and took his place among the followers. It was not the leader's policy to follow up these attacks upon his position. He bore no thought of revenge after them, but met each renewal with a cool steadiness which soon won him the respect of all. He was their king—king by election, and he led them steadily until the season waned and the time for the Bonito to strike inshore came at hand.

As the time drew near, the feeling of unrest began to show itself among the school. Stragglers began to leave the reef and seek the open ocean, with the instinctive longing for that safety which exists there. Our king watched them go by pairs and sometimes dozens, but

he made no attempt to stop them. There would be enough to look out for without them and they could well be spared.

Finally the time came for the general movement. He had marshaled the great host of Albicore from the adjacent reefs, and together in one vast throng they would leave for open ocean, going to the northward to avoid the enemy, who would attack from the south and west. The Bonito were not as large or as heavy as themselves individually, but they were the strongest creatures of their size in the ocean, and their countless numbers made them absolutely fearless. They would attack anything that stood in their path and their great vitality and quickness made them the most dreaded of all the foraging bands of sea wolves who roamed the south sea.

The solid phalanx of Albicore started off shore at sunrise, the king in the van and the younger and more helpless bringing up in the rear of the column. All had been amply warned of the movement, but as before many of the young had been overlooked and they loitered among the sheltered places in the rocks.

The head of the moving mass was a full mile from shore before the end of the crowd had begun to leave, and as the sun shone upon the calm ocean its rays struck glancing along the flanks of thousands of moving bodies, making the water seem like shimmering silver as the light flashed from the bright scales. There was no wind at all, but from far away to the westward our leader thought he noticed a peculiar disturbance of the sea surface. He took a leap into the air to get a better view and was followed by many of his companions, who usually imitated his example in all his movements. As he rose in the sunshine his glistening armor reflected the light and made him visible for miles. His followers who leaped after him also made a striking spectacle, but the leader took no notice of them. What he had seen upon the western sky-line was enough. As far as the eye could reach the ocean had spurted white at his plunge, for the Bonito had seen him, and with a front of several miles in extent they were plunging toward the band of Albicore, tearing the calm surface to foam with their rush. It was as tho some mighty ex-

plosion had taken place and spurted the sea upward in little jets along the front of a sunken reef, for the Bonito acted almost in unison in spite of their vast numbers, and they were now in full charge.

Where two bodies of almost equal weight come in violent contact with each other, the one having the swiftest movement will naturally drive back the more stationary. The king Albicore understood this principle instinctively and sprang instantly forward. His followers joined him and away they rushed straight for the line of breaking water, which drew nearer and nearer as the moments flew by. The rear of the column, finding the head leaving at speed, closed up the gap and came onward until soon the entire mass of Albicore were driving headlong to the westward as fast as they could go.

It was a grand sight to watch those charging columns. There were a million Bonito charging a hundred thousand Albicore. Nowhere on land could such vast hosts of large, living creatures march. The sea was ruffled and foamed for miles with the disturbance of the flitting bodies, and from above the bos'n birds could watch the long line of pointed heads making the ocean darken as with a huge shadow as the hordes rushed onward.

A mile, then a half—a quarter, and still the ruffling lines of ocean surface seemed to draw nearer with undiminished speed. There was a seeming instant of quiet. A space of apparently unruffled water. And then they met.

Like an eruption from some subterranean crater the sea sprang upward. The long lines of pointed heads struck together. Bodies flung high in the air. Tails, heads, quivering sides, streaming from ugly gashes, leaped into the sunlight, and then upon the quiet of the morning there broke a deep, dull, moaning roar of immense volume.

Full into the center of the great army the King Albicore tore his way. Bonito snapped and flashed upon all sides, their vigorous bodies fairly quivering with the rapidity of their movements, but with his jaws cutting like a pair of flying shears, he held his way while his sturdy followers entered behind him and forced the

gap. Into this, like a wedge, pressed the body of the column, cutting and fighting with incredible fury. Comrades fell out by the hundred, chopped and torn by the Bonito who surged in upon the flanks, but the great mass of Albicore tore its way through, killing everything in its path.

Away they went straight ahead. The Bonito fell away sullenly from the solid ranks, and in half an hour the last Albicore had gone through the gap in close column, leaving the sea and its scavengers to wipe out the marks of their passage. There was no changing front to that horde. The movement was straight ahead, and it was certain death to be left behind.

The Bonito held their way toward the reef, and in a short time the Albicore were started or rather continued on their way to the coral banks of the South Pacific.

But our King Albicore, what of him?

With flanks cut and ripped almost to ribbons, he held along at the head of the column. No sheering this way or that. The feeling had come upon him that he had done his duty. He had fulfilled his mission. He, the king, had led his comrades to victory, and he must pay the great debt which falls to all sons of nature. Silently and steadily he went along, his instinct telling him his time had come. But with it there were no regrets.

He had done all he could for his kind, and like a king he would die. The bright sunshine would fade and the blue water would disappear forever. They would forget him, and another leader would take his place. But he knew he had done his duty and knew he had done it well, and the great throng would live to be thankful for his prowess.

The sunlight seemed to be fading and darkness appeared to be coming upon the ocean, yet he knew it was not quite midday. He turned to take one look at the mighty host he had brought to sea, and saw they were still following him faithfully.

Then the light went out, and he turned upon his side and sank downward through the blue depths, while the Albicore held their way to the coral reefs of the south sea.

Lord Salisbury—And After

BY JUSTIN McCARTHY

THE death of Lord Salisbury has had a distinct effect on the conditions of English political life. It is true that for a considerable time before his death Lord Salisbury had ceased to be Prime Minister and had apparently withdrawn from all share whatever in public affairs. Yet there was always the impression existing in political circles that he was still an influence not unfelt, altho unseen, and that the Conservative party could at any serious crisis have the benefit of his far-seeing intelligence and

his moderating counsel. But with his death there came over all observers the conviction that the Tory administration was destined to become a mere struggle for supremacy between one set of Ministers and another. Every day that has gone by since the mortal remains of Lord Salisbury were consigned to the grave near his ancestral home, the Conservative administration has been falling more and more manifestly into pieces.

There are now two antagonistic factions in the Ministry, the one reluctantly

led by Arthur Balfour, and the other eagerly put into motion by Joseph Chamberlain. Now the words I have purposely used in characterizing the conditions of the leadership on either side will help to explain some of the main difficulties in the way of a possible reconciliation. Arthur Balfour, I take it for granted, feels no joy in this strife and would gladly allow things to go on quietly and to keep up the seeming of a thoroughly united administration if it were in his power to keep up such a theatric performance. Balfour is, above all things, a man of culture and of thought, a somewhat skeptical philosopher, a lover of literature and art, and has no natural taste whatever for the rougher work and the rude struggles of parliamentary life. I do not believe that he has any strong political ambition, and, indeed, I have long been under the conviction that if it were left to his own choice he would much rather not be a Prime Minister. But his family connections and his position in Parliament compelled him to assume that trying and perilous place, and I take it for granted that when he consented to become Lord Salisbury's successor as leader of an administration his best hope was that he might be allowed to get through the work as quietly as possible for a certain time and then leave it to be carried on by some one with a greater natural inclination for parliamentary leadership. But, then, on the other hand, there is Joseph Chamberlain, a man swelled with an intense ambition to win the highest place in whatever party it suits him to support and who takes a positive delight in the game of political warfare. One or other of the two must give in, and it may be taken for granted that Chamberlain will not give in so long as he sees any reasonable chance of his winning the game. His resignation is not defeat.

Some inquirer might possibly ask why under such conditions Mr. Balfour does not follow his own natural inclinations and relieve himself of all trouble by resigning his position at the head of the Government. The reason, however, is not far to seek. Arthur Balfour is weighted by the responsibilities which his family traditions impose upon him and he has, further, the knowledge that some of the most eminent and influential

members of the administration, and even of the Cabinet, are utterly opposed to Chamberlain's new policy and will not, if they can, allow their present leader to adopt any course which might seem to give the victory to Chamberlain and his followers. Chamberlain has at all events the courage of his professed convictions and he has proclaimed certain financial principles which the most distinguished men in the Government regard as utter and intolerable heresy. I have before this called the attention of my American readers to the fact that three living Conservative statesmen who have in their turn held the office of Chancellor of the Exchequer—Lord Goschen, Sir Michael Hicks-Beach, and Mr. Ritchie, the last of whom has just resigned,—have lately again and again disclaimed and denounced Mr. Chamberlain's new policy. These men, of course, would bring a powerful pressure to bear on Mr. Balfour in order to keep him at the head of the Government, as a virtual if not nominal opponent of Chamberlain, and it is only mere justice to Balfour to say that his spirit and his temper are far too chivalrous to allow him to take any action which might seem like escaping from personal trouble and leaving his colleagues and his cause to their fate.

Such seems to me the explanation of the manner in which the struggle has been prolonged up to the present, but so far as outer observers can judge there must be a crisis near at hand. All the evidence which we can gather from actual political events in the country of late would seem to show that Chamberlain is not likely to find that amount of popular support which we may presume he must have counted on as certain to be his when he made up his mind to go in for this momentous struggle. In the more recent elections the Liberal candidates have been successful, and chiefly because of their emphatic opposition to Chamberlain's proposals. In one or two instances seats which had been won again and again by Tory candidates were captured by Liberals because, to all appearance, of their proclaimed hostility to Joseph and his recent proclamations. I am not now entering into any discussion as to the merits or demerits of Chamberlain's policy, altho I hold very clear and decided opinions on the subject. I am

only concerned to tell my American readers how the English public in general are taking him and his policy and what likelihood there seems to be of his gaining a victory. The whole struggle is one of deep and thrilling interest for one who, like myself, is a mere looker-on, and I do not remember for many years any crisis so peculiar and so unexpected in English political affairs. Joseph Chamberlain, it must be admitted by his most uncompromising enemies, is a hard man to beat, and we may take it for

of peaceable, reputable and well-to-do citizens. Just now, however, public attention is diverted from this new form of domestic strife by the terrible stories which every day's journals bring us of the struggle between the Macedonian insurgents and that Ottoman Power which has kept them so long in thralldom. England is unquestionably responsible to a great degree for the unhappy condition of those Christian populations in Eastern Europe, and a strong feeling is growing up here among men who have no sym-

Hatfield Chapel, Where Lord Salisbury is Buried

granted that he will fight out this fight to the best of his power. We may look, therefore, for lively times in the coming months.

Meanwhile there are difficulties pressing on the Government which have nothing to do with the Free Trade controversy and the split in the Cabinet. The dissenting denominations are carrying on with ever-increasing determination their struggle of passive resistance against the recent Education Act, and if there were no other political storm raging just now the attention of the whole public would be absorbed in the daily accounts of this strange conflict between the Administration and a vast proportion

pathy whatever with unnecessary war that the British Government ought to intervene in some form between the Sultan and his unhappy Christian subjects. Any English Government, however constructed, must have a difficult and trying task to undertake for some time to come.

I do not know whether much has been heard in the United States of a movement now going on in this country with the object of obtaining funds and public approval for the erection of a monument to George Washington in some conspicuous part of London. The strong conviction among those who favor this movement is that the time has come when England ought to offer such a

tribute to the memory of Washington and thus signify to the American people the common desire of Englishmen to be ranked as their friends and kinsmen. I believe the idea, at least in this definite and practical form, originated with Mr. David Christie Murray, the well-known novelist, war correspondent, lecturer and traveler, who has crammed as much work into his life, not yet a very long one, as any man I know. Mr. Murray has been everywhere through the United States and has great sympathy with the institutions and the feelings of the American people and a strong faith in America's destiny to be a commanding force in the world's true civilization. He has long cherished the idea that there could be no better method of symbolizing the growing friendship between the English people and the American people than by the raising of a statue in London to him who was once England's successful enemy, but who has ever been regarded in England as one of the world's noblest heroes. Mr. Murray has been working at his project for some time, and I hope and believe that he now begins to see his way toward its successful accomplishment. I think I may say of him that he is well qualified to carry to success any undertaking which commands his full sympathy and his close attention. I have heard something to the effect that certain objections were raised to the whole proposal by some influential Americans, who were under the impression that the idea was to be undertood as coming originally from America and who naturally felt unwilling to give any countenance to a scheme which would put America in the light of a petitioner for a grace to be conceded by England. No such thought ever existed in the minds of Christie Murray and the friends who are working with him for the fulfilment of his purpose. The whole meaning and spirit of the proposal was and is that England should spontaneously perform this act of graceful and honorable homage to the great soldier and statesman, patriot and lover of his kind whom England's own poet, Lord Byron, described as:

"—one the first, the last, the best,
The Cincinnatus of the West."

I have just received an advance copy

of a book which is likely to be read with deep interest by my countrymen in America as well as at home and in England. It is an important historical novel called "The Island of Sorrow," by George Gilbert, who is already known as the author of more than one brilliant and successful historical romance. "The Island of Sorrow" is, I need hardly say, my native country, Ireland, and the hero of the book is Robert Emmet, the anniversary of whose death is commemorated with honorable national celebration this year in the land for which he sacrificed his young life. The title of the novel is taken from that melancholy and thrilling song of Thomas Moore which tells of Sara Curran, Emmet's first and only love, to whom he wrote a most touching letter of farewell just before his execution—the song ending with the words "from her own loved island of sorrow." American readers will remember that one of Washington Irving's most exquisite short essays enshrines Emmet's love and his fate. No hero of romance ever had a braver heart and a more generous and devoted spirit than Robert Emmet, who was only in his twenty-fifth year when he was executed as the leader of the rebellion in 1803. Emmet's rebellion was a failure—his attempt was made too soon after the suppression of the greater national uprising in 1798—but even the most devoted loyalists and the most bitter opponents of the Irish national movement could not fail to admire the noble character of the young man who had staked all his promise of a brilliant career on this effort to recover for his country that right to self-government which was taken from her by force and fraud when the Act of Union was passed. Emmet's love, Sara Curran, was, I need hardly say, the daughter of the great Irish advocate and orator, John Philpot Curran. Robert Emmet's brother, Thomas Addis Emmet, escaped from captivity in 1802 and made his way first to Holland, then to France and afterward to New York, where he rose to great distinction in the legal profession and was regarded with universal respect and admiration. I can remember well how often during my visits to the United States I used to stop and gaze upon the monument to Thomas

Addis Emmet, which stood, and I suppose still stands, outside a church in the lower part of Broadway, and the feelings with which I contemplated the difference of fate which had brought one of two brothers engaged in the same cause to public honor and renown on American soil and the other to a scaffold in his native land. I have not yet had time to read the volume, of which I have only just received the advance copy, but I think it well to write these few lines in

order that my own countrymen in the United States and American sympathizers with Ireland's national cause may know that it is announced as one of the many tributes which this year is offering to the memory of Robert Emmet. Most sincerely do I hope that "The Island of Sorrow" may prove itself worthy of the subject which it commemorates. The book, I should say, is to be published in London by Mr. John Long.

LONDON, ENGLAND.

The Scylla and Charybdis of Trade Unionism

By HERBERT N. CASSON

AUTHOR OF "ORGANIZED SELF HELP," "COMMON SENSE IN THE LABOR PROBLEM," ETC.

THE American labor movement has as yet no dramatist nor historian.

It has not even a novelist nor a short story writer. It has some 650 trade journals, edited in every case by a wage worker who has come to his task directly from the factory or workshop, and the contents of these journals can scarcely be called literary in any strict meaning of the word.

Those, therefore, whose imaginations need the stimulation of a story or a play to enable them to understand the events of their own time cannot appreciate the importance of the great Labor Drama which is now being played in the United States by over two millions of wage-workers. The present situation, in fact, is very similar to that of 1851, before "Uncle Tom's Cabin" opened people's eyes to see the auction block and taught their ears to hear the sound of the lash.

Yet what are a few of the facts with regard to this greatest of all proletarian organizations — the American Trade Union? It includes at the present time more than twenty times the number of those who, under the banner of Spartacus, kept the Roman Empire for two years on the verge of ruin, and which was the largest labor army ever known in ancient times. There are as many voters

in the labor movement as there are in the States of New York, Maine and Delaware, and thirty times more people than there were in General Sherman's army that made the famous march "from Atlanta to the sea."

The gain in trade union membership during the past two years has been seven hundred and fifty thousand, which includes, of course, a number of wage-workers who had formerly been unionists but who had fallen out of the ranks. More than twelve hundred organizers, most of them working without pay, are adding thousands to the membership every week; and new trades, ranging from the "excavators," or subway diggers, to the school teachers, are applying for charters.

A fairly large proportion of these labor organizations are in reality mutual benefit associations. Their bank accounts would astonish those who know nothing about the recent developments of unionism. For example, the Bricklayers' and Masons' International Union, which is not federated with the other unions, has an \$80,000 surplus. The Garment Workers' Union spends \$60,000 every year in the advertisement of its label, and the Cigarmakers' Union spends an even larger amount annually for the same pur-

pose. The Coal Miners' Union, in spite of the heavy expenses of the late strike, came out of the struggle with over a million dollars in its treasury.

These large, wealthy and powerful bodies of workmen are self-governing. A majority vote decides all important questions. Every class of workers depends entirely upon its own members for its guidance, differing in this respect from a corporation, which employs highly skilled specialists to manage its business and promote its interests. When the molders organize, for instance, they elect one of their number as president, a second as secretary, a third as treasurer, a fourth as editor, etc. Elections are held annually, and any change in the opinions of the rank and file is apt to make itself evident in the selection of officers.

Every labor leader, therefore, is placed in a most peculiar and trying position. He has not only to exercise his best judgment on behalf of his union, but he has also to persuade the union that his action was for its best interests. The rank and file in almost every trade can see no further than the next pay envelope; yet the leader must be a man of unusual foresight and ability to secure better industrial conditions for his fellow workmen.

The president of a union is not only its business agent. He is its principal orator as well. There is seldom a week in which he is not obliged to address mass meetings of local unions, and at the close of his speech any member may request him to explain or defend his general policy. It is very apparent that the "leader" is consequently very much at the mercy of those whom he is supposed to lead. He is not like the general of an army, having absolute control of his men, but rather like the guide of a party of tourists—half master, half servant. If the president of a railroad had to explain all his official acts to fifty thousand shareholders, and were obliged to meet these shareholders in fifty or a hundred mass meetings every year, his position would be regarded as an intolerable one for a business man to occupy. Yet such is the predicament of every labor leader in the country.

The prevalent opinion that labor lead-

ers order strikes is erroneous. There are occasions when this is true, just as there are occasions when a policeman uses his club to wound a peaceable citizen; but a general rule cannot be framed from a small proportion of instances. It is the frequent boast of a well-known retired labor leader that in his long career he had never ordered a strike. The recent coal strike, as may be remembered, was demanded by the rank and file of the miners, and in spite of the strenuous opposition of John Mitchell.

When business is good and all the members of the union are at work, the desire of the workers to declare a strike is the strongest. They feel that the time when their employer needs them the most is the best time to demand higher wages. In this they are merely using good business judgment and following the example of the financier, who charges a higher rate of interest because money is tight and his customers are obliged to borrow or face bankruptcy.

It is at such times the difficult task of the labor leader to persuade his fellow workmen to be patient and to wait until all peaceful methods have been tried. His advice generally is: "Keep cool. Go on working. It is better to get 10 per cent. increase by arbitration than to get 12 per cent. increase by a strike. Give me a month to see what I can do, and if I fail you can all come out and tie up the business."

But a crowd loves extreme measures, whether that crowd be composed of bankers or of day laborers. Seldom, if ever, will a mass meeting vote for moderation. The most strenuous speaker carries the day, except with experienced unionists, who know how little common sense oratory usually contains. "We have the power and now is our opportunity," is the argument that generally stirs up the most enthusiasm.

The labor leader knows, perhaps, that in the present case the employers' profits are not as large as they appear to be. He knows that a strike abruptly ordered may permanently alienate the employers and the men. He knows that the grievances of the men are not of such a nature as to win the sympathy of the general public, and that a strike will make him and his union very unpopular.

But his objections are all overwhelmed by the stubborn wilfulness of the crowd, and having opposed the wish of the majority as long as he can, the leader yields and the strike is ordered. It may be mentioned that during the progress of the strike the strikers have nothing to do, while the unfortunate leader is working from fourteen to eighteen hours a day and at the same time receiving all the blame from the employers and from the press.

On the other hand, when business is bad, and a large proportion of the union members are out of work, the task of the leader is quite different, though equally arduous. This is the time when the revolutionary Socialist appears, with his endeavors to disintegrate the union and swing all its members into a fanatical and turbulent political movement. The weak points of unionism are pointed out—its inability to provide work for its members, its failure to maintain wages at their former level, its helplessness in the face of a united millionairism and a capitalistic government.

As against the slow and unsure methods of unionism, the "presto, change" plan of labor politics is advocated with a fierce emphasis that wins converts easily among the unemployed and disheartened workers. "Ten dollars a day under Socialism" is promised by these fluent agitators, who are as passionately convinced of the speedy realization of their dreams as though they were the followers of the Mad Mullah. Their propaganda has double force if an election is at hand, and many unionists transfer their allegiance from the union to the "class-conscious Socialist party," which offers the joys of a labor Millennium to all its devotees. Scores of unions have been broken up by such defections, while all are weakened and discouraged to a large extent.

Such are the two constant dangers of unionism—the Scylla and Charybdis of the labor movement. Prosperity devel-

ops the autocratic unionist—the one who is apt to disregard the public welfare and refuse to arbitrate; while adversity develops the revolutionist, who throws aside his union and aims to bring about a state of ideal industrial justice by a great political *coup d'état*.

Both of these types—the autocrat and the revolutionist—are anti-social and injurious to the progress of unionism. Both alike alienate public sympathy from the working classes, and endanger the gains that have already been made. Both are strongly antagonized by every veteran labor leader, who knows what harm has been done to unionism in the past by bad judgment and fanaticism.

But the general public knows little or nothing of the internal struggles of unionism, and of the patient and truly heroic efforts of those labor leaders who are educating their fellow workers and teaching them good citizenship and the responsibilities of power. "The capitalist attacks us in front and the revolutionist attacks us in the rear," said one of these men to me recently. "Yet people wonder," he continued, "if our meetings are not as orderly and harmonious as a five o'clock tea."

In short, the men who have been elected leaders by the organized wage-workers have a task which needs the combined abilities of a statesman, a diplomat and a financier. The men whose welfare they protect are liable to be stampeded at any time by the arguments of demagogues or fanatics. It is not only to the interests of the unions, but also a matter of vital importance to the whole nation, that these labor leaders should be encouraged and assisted in their work. If they fail, it is quite certain that they will be succeeded by a set of political demagogues, violent and irresponsible, who will endeavor to make use of the passions of the mob to overthrow indiscriminately the industrial and financial institutions of the country.

PINE HILL, N. Y.

Conditions in Porto Rico

BY WILLIAM H. HUNT

GOVERNOR OF PORTO RICO

THE history of the third year of civil government in Porto Rico but strengthens the belief that the United States can successfully institute and carry on American government

The results which stand for the real welfare of a community—equal political rights, free education, just criminal laws, equal taxation and material growth—are satisfactory—indeed, gratifying—in Porto

WILLIAM HENRY HUNT

among and with a people willing to receive its blessings, even tho such a people are of radically different tradition, language and civilization. This is an important evidence of national force, for I doubt very much whether five years ago many Americans would have believed that the government by the United States of a then Spanish possession would have been so far accomplished that within two years after acquisition liberal self-government would be substituted for benign military control.

Rico. Of course, there has only been a start, and contrast at this time must be made, not with old States of the Union, but with conditions which existed under the Spanish dominion, and which were found when the island became ours. It is at this point that those few err who declare that the experiment among a Latin people will fail and "benevolent assimilation" is impossible.

It is safe to say that a judgment based upon a drive across the beautiful island of Porto Rico and upon a few moments'

conversation with each of a dozen people, or upon a casual glance at the natives as they pass along the road, is not of sufficient value to justify a general deduction against the hoped for outcome of a great national responsibility. And whether such brief observations are favorable or unfavorable, they must be of comparatively slight worth. It is the opinion of those who have lived among the people, who have seen them day after day, who have watched them in trying situations, who have studied their natures at home, heard their sentiments when in their families, had mercantile, social and political relations with them, and who know them by intimate contact, that becomes the safe base upon which thoughtful conclusions can rest.

Applying the proper standard, the opinion is substantially unanimous on the optimistic side. Four sessions of the House of Delegates (which is composed of thirty-five members elected by the people) have passed within three years. Moderation, intelligence and common sense have prevailed in each. Laws which are universally considered prudent and wise have been enacted, and there has been no scene of insult, corruption or deadlock. General elections have been held, and notwithstanding the impressionableness of the people and their natural love of politics, they have restrained themselves within bounds not less creditable than prevail at like contests in many States.

The courts are generally respected and crime goes unpunished much less than formerly.

The people are keen for education, and every school is overcrowded. All school children study English, and it is not uncommon to hear it in even the remotest parts of the island. Young men are

studying, too, in the United States, fitting themselves for higher usefulness when they return.

Modern sanitation is in vogue, and with its extension have come decreased death rates, cleaner cities and improved hospitals.

Merchants are gradually adopting the more rapid methods of American business men, and an English speaking clerk is to be found in the principal stores of the larger cities.

Many more Porto Ricans go to New York and New Orleans than used to. Some go for pleasure, others for business, others for climates. They return with happy accounts of all they have seen and are ardent for the island to be in the closest relationship with the mainland.

The regiment of native troops is a soldierly, precise and loyal body of men.

Law and order exist. Exceptional instances have occurred, and will. Socialism may crop out to a limited extent. But a better sentiment for peace and quiet is strong. In the natural order of things a few will regard their present liberty as license, but such obstacles are an inevitable part of the whole task. There is no doubt of successfully working through them.

Co-operation between a large majority of the natives and the governing authorities has marked the course of events. The full ambitions of the people will be realized in this way, and there will be no serious interruption to their continued progress. The destiny of Porto Rico is Territorial Government.

The Porto Rican people are peculiarly warm-hearted, generous and kind. Added to these inborn qualities are intelligence and aspiration. Patience and fair-dealing during these early times will therefore insure enduring good results.

SAN JUAN, PORTO RICO.

The Marvel

BY BERTHA E. BUSH

"LAZARUS, come forth," the Master cried;
The whole world marveled that the dead man came.
I marvel rather that *my* dead comes not,
Tho day and night, weeping, I call his name.

GARNER, IOWA.

Passion-Plays at Brixlegg and Erl

BY E. I. PRIME-STEVENSON

A YEAR or so ago one of the Austrian humorous journals contained a squib, in which a traveler was presented as asking of the railway-guard on a Sunday train, "Do we stop long at X——?" the official answering, "Only just long enough to get a glass of beer, and to see a Passion-play, sir." The witticism often does not seem overdone, so many Biblical dramas having recently sprung up into their village-existence all over the Catholic part of the two Austrias and within the Tirolese, Bohemian and sister states. A certain proportion are genuine relics of medieval piety, rooted in ancient local customs; sometimes having lapsed for many generations, and now being revived again with fresh energy and a deal more of advertising and sophistication in general. A considerable group, however, have neither antiquity nor religious impulses as their origin. These Passion theaters represent merely the effect of a sort of contagion of Passion-play acting, communicated by one little community to another; or else exist in the direct aim to make money for the community's private uses through such performances; and, last but not least, the process and establishment of a local Passion-play has been found by the zealous and astute Catholic hierarchy in Bavaria and Austria a valuable spiritual and financial agency.

The present writer has seen, owing to the chances and lines of constant and wide travel, a large number of these different religious dramas—Bavarian, Tyrolese, Bohemian, French, and so on—in all their primitiveness of performance and reality of emotions, or their elaboration into mere rural theater-pieces, acted carefully and with not the least inward solemnity of feeling. I cannot reach any other conclusion than that, with all gain-said, they are a desirable and helpful moral and religious agency; with the possible exception of the most famous one of all—the venerable Oberammergau performance. That distinguished Passion-play, in plain fact, to-day is one of the

least meritorious; it has not enough of the spiritual atmosphere or artistic leverage that redeems its mechanical and often offensive theatricism. Perhaps the best one is the simple, crude Eibesthal Passion-play, given in a hamlet near Mistelbach, in Lower Austria. But the Brixlegg one is also distinctly of note, and worth a visit on the part of travelers over the Arlberg Railway during one or another summer of the play's recurrence.

Brixlegg itself is an attractive, tidy valley-village, charmingly situated about an hour west of Innsbruck. The Passion-play there is given at irregular intervals, not on set recurrences, and, of course, only in summer-weather. It is a modern matter, having been taken up by the community rather less than forty years ago. Of the actor-group that figured in the earliest performances, especially those of 1868, and important at that time, only one member is to-day of significance, a certain Peter Winkler, the *Apostle Peter* of the drama. He is, withal, one of the most dignified and expressive figures in it, tho now a man of rather too advanced years to typify the sturdy and impulsive Fisherman. The *Christus* at Brixlegg is Josef Einberger. In his solemn impersonation this Tyrolese peasant has won a wide repute and commendation. As compared with Anton Lang, the personator of the Savior at Oberammergau, Einberger is distinctly the superior. He has a fine presence, a natural dignity of manner and a resonant voice that makes him what the Christ should be in every scene of the Passion-drama—the dominant and central figure. He avoids poses and stage-mannerisms, too, such as mar the presentation of the Redeemer by the Bavarian peasant-actor named. On the other hand, the *Christus* of Einberger is now somewhat too mature a physical type, and, like each and every Passion-play impersonation of Christ, it fails to convey the least idea of the magnetic, virile, potent temperament, the charm, which must have characterized the personality of Christ—un-

JOSEF EINBERGER AS CHRIST

"ECCE HOMO" JOSEF EINBERGER AS CHRIST

JOSEF EINBERGER AS CHRIST
IN GETHSEMANE

CHRIST BIDS MARY FAREWELL
JOSEF EINBERGER & MARIA HAUSBERGER

doubtedly one of the most immediate aspects of his relations with all manner of men and women. Peasant-actors invariably are blind to this aspect. There is a great deal that is acceptably suggestive in Einberger, but his voice is the voice of a pulpit-orator, and the accent is, from scene to scene, that of a preacher, rather than of one who, spontaneously and warmly, talks to men as a man. In certain tableaux of the Passion Einberger is exceedingly impressive, especially in

is statuesque and refined—the village-actress being a woman of a beauty that anywhere, except in Tyrol, is notable. But she brings less pathos and force to her dramatic situation than any *Mary* that I have seen. It is a curious trait, too, of this Brixlegg play that the rôles which are most dramatic—and which consequently we would expect to find the best played by the ever-emotional Tyrol peasant—are here only conventionally and tamely taken in hand, such as the

Brixlegg from the Southeast

the "Farewell to Mary" and the "Ecce Homo."

Others in the cast—a remarkably long one, inasmuch as this Brixlegg play contains not less than one hundred and thirty-five speaking rôles—whose impersonations merit praise, either as to art or nature, are Karl Einberger, as *Joseph of Arimathea*, and Franz Schösser, as *Simon, the Leper*, both sustained with much force and simplicity, and both of the Two Thieves have a good deal of dramatic individuality. I have already spoken of the *Peter*, so long played by Winkler—a serious and sometimes touching study. The feminine impersonations at Brixlegg are less distinct—a common failing in all these Passion-dramas. In this case the *Mary* of Maria Hausberger

Judas, the Pilate and the High-Priest. One element of this Brixlegg performance surpasses the same thing in Oberammergau, in Horitz, in Eibesthal and in any other Passion-play theater that I know of—the tableaux. These are strikingly well-grouped. The actors hold to their poses with surprising rigidity and grace. Unfortunately all these Passion-dramas are performed under daylight conditions, and without attempt at artificial adjustment of lights. The consequences are a complete loss of values and perspectives, and the casting of all sorts of shadows in all sorts of disturbing relations and angles—which would not be the case were the plays performed at night with a stage properly, even if simply, lighted. In this respect Oberammer-

gau is also a conspicuous disappointment.

The theater at Brixlegg is a rough but spacious one, built partly of stone, partly of wood. The scenery is well painted—for decorations of such type—and the proscenium, so much in use in all these Passion-plays, is an effective Oriental one. The piece follows the usual model of Passion-plays, being in three divisions. The initial one offers the entrance of Christ into Jerusalem, with the populace casting their garments and palm-branches before him. From this point onward, to the Crucifixion and Resurrection, the action of the Gospel narrative is followed carefully. It is interspersed, as at Oberammergau, scene by scene, with a descriptive or pious commentary declaimed by the Chorus—an excellent orator at Brixlegg, tho one with a strong dialect; also by choral music from some eighteen singers, by short orchestral interludes, and, along with the declamatory episodes, by the usual appropriate tableaux from the Old Testament. The Brixlegg musical score, by the by, is a better one than most, while, of course, it is more sentimental than robust in its ideas. It is, too, better sung than played, the small orchestra leaving much to be desired even from a Tyrol village-band.

The piece itself is devout and well-constructed if its models be remembered. In carefulness of adherence to the sacred story, not to mention drawing on episodes that pious tradition has added, these Passion-dramas are almost invariably like in every detail. The trilogy at Eibesthal makes the widest and happiest departures of any that I have seen. But just therein comes a detrimental. For the

deference to convention and to religious tradition drags the action and text out to a length at once unnecessary and wearisome. The Brixlegg play demands a full day; and a full day in a Tyrol mid-summer, in a wooden-roofed auditorium, with every current of air carefully barred out, is no small trial to one's temperature and lungs. But the tragedy was followed with evidently the deepest attention, and often with emotion, tho the manifestations of the one and the other were not so much from the younger men and women as from their seniors. The audiences this summer have been crowded, and of all creeds and classes.

The Passion-play at Erl, a village tucked away near Oberaudorf, and some kilometers from Kufstein, a bustling station on the Arlberg, is a peculiarly genuine, primitive and interesting type. Here everything is really unsophisticated, as far as action and stage-effect are concerned. All the actors and actresses are of the village. Many of them are poor people, too—possessed of far more religious feeling than education. The play is a simple and home-

made product. The theater, the scenery, the music, all are local; and the occasional grotesquerie and crudenesses are easily pardoned

because the *naïveté* appeals to one. This play, too, is performed semi-occasionally, and is also of recent establishment. It is at present in abeyance because of circumstances that may make one smile in noticing that village human-nature is sometimes much more positive than village-piety. With the first performances of the Passion-play at Erl the receipts proved gratifyingly large. The money

Johannes
(Max Gritsch)

was for the benefit of the community, of course—that had been before the representations were decided on. But it had not been previously settled just how the fund was to be employed. A “sharp contention” grew up. Erl was racked and rent with its factions! One party claimed that a new church-clock was a necessity of the first sort. Another group spoke for a fire-engine. Another obstinate circle of debaters claimed that to invest the money for the good of the village-poor was the only, suitable disposition of it. Meantime, the actors themselves begged for—a new theater! and for costumes and ‘properties’ of more seemly kind than the rude ones hitherto in use. The battle grew more and more embittered. It has not yet been decided! Till it is settled Erl will give no more Passion-plays, as in its case they seem productive of much more than devotion and brotherly love and a full town-exchequer.

Passion-plays as a religious institution have been queried and criticized and analyzed, especially by Protestant observ-

ers, until almost a polemic literature on them exists. But much of this querying is wide of the elemental interrogations to decide whether they are edifying or unedifying, an aid to reverence or the contrary, among those special Catholic publics where they exist—or in an even wide appeal. Their justification in their *prope milieux* hangs on a few plain, simple elements only. Are they acted with reverence and avoidance of unnecessary theatricism? Is their intention, whether given here or there, merely one of money-making, or does a genuine religious sentiment enter into their performance? Are their audiences distinctively local, Catholic spectators?—a class truly impressed by what is offered? Do they avoid unhelpful religious fiction and tradition in treating the Gospel tragedy? In so far as one or another of the dramas answers satisfactorily this sort of special catechism it may properly be set down as worthy of life and favor, so long as spiritual life is taught by eye as well as by the ear to the simple souls of the world.

BUDAPEST, HUNGARY.

Ballooning as a Profession

BY AUGUSTE E. GAUDRON

[M. Gaudron is a London aeronaut who, by order of the British Government, is now engaged in building an aeroplane balloon of 120 horse-power, to cost \$25,000. It is designed for use in war, and, if successful, is to be capable of carrying five persons and remaining in the air within a radius of one mile from the starting point for twenty-four hours without descending. M. Gaudron has been a balloonist from childhood, and has made more than 1,200 ascents. He had charge, in St. Louis, of the balloons that were sent up during the fireworks exhibition in connection with the World's Fair dedication ceremonies.—EDITOR.]

WITH the aid of the aeroplane in the last five years balloons have grown smaller and smaller. The aeroplane is a smooth board, so to speak, which, according to theory, will sail straight through the air. When the plane is tipped to one side the balloon ascends; when it is tipped in the opposite direction, there is a descent. The swiftness of motion supports the aeroplane in part. To be kept in the air entirely by the swiftness of motion, dispensing altogether with the balloon, is the ideal of the aeroplane balloonist. Like many

ideals, this one of ballooning without a balloon is far away, but when it comes it will make air navigation both safer and more practicable.

The question of danger, however, even in a non-dirigible balloon, is a negligible factor, provided there be proper preparation. In my career as an aeronaut I have never been seriously injured. The incident which threatened most disastrous consequences arose from a misunderstanding in sending up the balloon. It was an ascent from Trieste, Austria, a city in which the language spoken is the

Italian. As I am not at all conversant with the Italian tongue, I was obliged to have my orders translated. I was already seated in the seat of the balloon, but I had not the parachute in my hand when I gave the direction to my assistants, "Let the balloon up a little." The translator did not catch my meaning and gave the command, "Let go." I began to go up at a tremendously rapid rate, and within a few seconds I was over the Adriatic Sea. There was no ballast or valve to control the balloon, and I appeared to be without resources. Having no parachute, I must remain with the balloon, which would not discharge its gas and descend for two hours. It would then be dark and I should be 70 miles out at sea. I had no hope of any boat following me at the terrific rate at which the balloon was being driven along. A sheer catastrophe seemed impending. Yet as I reflected that something must be done to try to save myself, I remembered that the balloon was kept in position by my weight, and that if I could in any way tilt the unwieldy structure so that the large opening at the bottom would be at the side or at the top, the gas would escape much more rapidly and descent be more speedy. I resolved to take hold of the lines underneath and climb up the netting on the outside of the balloon. My first attempt turned the neck to a point about midway from top to bottom, but this appeared to have little effect. Again I climbed, with extreme caution, for the balloon might at any time shift position; but, to my joy, the balloon turned until the opening was about three-quarters of the distance toward the top. In an infinitely short time I began to go down with great rapidity. The balloon had been at a height of about 6,000 feet. Down, down I came, the balloon making for me a sort of parachute, and in what must have been about three minutes I struck the water with a tremendous splash, and I knew I was safe. I was about three miles out at sea, but I saw behind me a

steamer coming in my direction. The life-belt which I wore kept me up for ten minutes or more, until I was picked up by this vessel, which turned out to be a revenue cutter that was purposely ready for me, without my knowledge.

A trip with Dr. F. A. Barton across the English channel, starting from Beckenham and landing at Calais, was entirely without accident. More peril threatened once over the mouth of the Thames. We had started from London, but had lost our bearings because clouds beneath us hid the landscape, and on descending through the clouds we suddenly found some very vigorous manipulation necessary to bring us to earth in the sand at low-tide rather than in the water.

When I was a boy of sixteen I once struck the earth in an open prairie, where there was neither bush nor tree nor any building for an anchor. A fierce gale was blowing and I was dragged over the ground for three miles until I was completely exhausted. After that for a time I almost consented to follow my relatives' advice and give up ballooning, but the balloonist cannot do that. After he has once mounted the air, the desire comes upon him again and he cannot resist it.

If the flying machine is ever to be freely used for commerce and travel, it must be made independent of the balloon, because the balloon is too fragile for common use. Theories have been advanced about strengthening it by putting ribs in it, but Count Zeppelin's expensive attempt showed the difficulties in this respect. The inventions of Santos-Dumont have greatly improved motors and balloon motive power, but still the balloon remains.

If more men of leisure had the pluckiness, the ingenuity and the enthusiasm of the young Brazilian, and were willing not only to hazard their lives in balloon ascents, but to gain the skill which comes only from beginning the study in their youth, as he did, the flying vehicle might soon become as common a sight as the more prosaic automobile.

ST. LOUIS, MO.

The Church in the Philippines

BY THE MOST REV. J. J. HARTY

ARCHBISHOP OF MANILA

[Archbishop Harty was appointed to the See of Manila in June of this year, and on August 15th was consecrated in Rome by Pope Pius X, receiving the pallium two days later at the hands of the Pope. He was born in St. Louis, within a stone's throw of St. Leo's, of which he is still pastor, a large and flourishing parish which he founded fourteen years ago: and he will follow the wish of the parishioners in remaining with them for a month or more, up till the time he leaves for Manila. Five months ago he celebrated at St. Leo's the silver jubilee of his ordination to the priesthood, when he was presented with a purse of \$3,000 and many other costly gifts. He is a very liberal-minded, even-tempered man, who made it a point to know every man, Catholic or Protestant, in his parish of four or five thousand souls. His remarks on the Philippines were given in an interview, which he approved after it was written.—EDITOR.]

ONE of the first acts of the new hierarchy in the Philippines will be to submit to Rome the names of men to be made bishops of two new dioceses, unless Rome in the meantime should fill these offices from her own motion. The creation of the additional dioceses, which as yet are unnamed, will give in the Philippines a college of bishops consisting of the archbishop and five bishops. Under Spanish rule there were but four, an archbishop and three bishops, each of whom was generally a member of a religious order.

The two new dioceses have been carved from the diocese of Nueva Segovia, to which in return some other territory has been added. On the parish books of the Philippines there are the names of 8,000,000 Catholics, and the diocese of Cebu, with its 1,800,000 souls, is probably the largest in the archipelago. Bishop Hendricks, of Rochester, N. Y., renowned for his patience, has been well appointed to this populous see. "Father" Hendricks—for he was a parish priest until his appointment to Cebu was made—was the typical pastor of his people. Every one in trouble in Rochester went to Father Hendricks. You would find, some mornings, seventy persons waiting for him in the parlors of his residence, to each of whose causes he was able to listen quickly and sympathetically, giving each visitor just the advice which was best.

The other two bishops, Bishop Rooker, in the diocese of Jaro, and Bishop Dougherty, in the diocese of Nueva Segovia, are already on the ground. I shall go in November, and I believe Bishop Hendricks is to go with me or at about the same time.

Bishop Dougherty, who is a man of superior attainments, a master of languages and a profound student of theology, will at once re-establish the diocesan seminary for educating young men to the priesthood, which was closed three years ago in Nueva Segovia. For this purpose he took with him from Philadelphia a community of six American priests, who were professors in theological seminaries. Bishop Dougherty himself was professor of dogmatic theology in St. Charles Seminary, Overbrook, Philadelphia. He has also in Nueva Segovia three theological students from this country.

Bishop Rooker, already in Jaro, was raised to the episcopate in order to be sent to the new possessions, like each of the other members of the Philippine hierarchy as it now stands. Like the others, also, he was consecrated at Rome. Bishop Rooker was formerly a member of the Apostolic Delegation at Washington, D. C., under Cardinal Martinelli. He is enthusiastic in his new mission.

Bishop Allocer, who resigned at Cebu and who now administers the diocese of Manila, is the only bishop left in the Philippines of those who were there when the United States took possession, three years ago. The others have been recalled. Bishop Allocer is a very learned man, and a member of the Capuchin order.

From the religious orders I expect great assistance in carrying on my work. They will be on precisely the same footing as the religious in this country. The religious in America should have very high praise, because in this country they stand before the people as a very superior body of men. They occupy in this coun-

try the positions of professors, give missions, retreats and lectures, and I shall be very glad to have them help me thus over there. In my limited station as pastor at St. Leo's I have always brought in the religious to help me in giving lectures, missions and retreats, and in the broader sphere that I have now I hope to use them in the same capacity.

The Congregation of Missions, or Lazarist Fathers, are in charge of a theological seminary at Cebu, and a seminary at Manila was under their care until the American occupation, when it was turned over to the Jesuits. This is rather unusual, and it was only because of necessity that the Jesuit Father-General in Rome permitted it. The Jesuits have also their university in Manila, with 1,200 students. It is here that they prepare young men for the Jesuit priesthood. In the Manila diocesan seminary (now under the care of the Jesuits, as I have said); merely the training for diocesan priests is given—that is, for those that are to be appointed to serve in parishes,—the “secular” priests as they are commonly called in distinction from the members of religious orders. The Lazarist Fathers are the well-known educators of the diocesan priests, both in this country and in Europe. In America they divide almost evenly with the Sulpicians the care of the seminaries, except about half a dozen institutions which are managed locally by the diocesan priests; and in France the seminaries under Lazarist control number 20, while there are 17 with the Sulpicians in charge.

The other seminary, in the diocese of Nueva Segovia, is to be in charge of the diocesan priests—that is to say, of Bishop Dougherty and his priests. A fourth seminary will very likely soon be added by the re-establishment of the seminary at Jaro, under Bishop Rooker.

Starting with these facilities, we hope to be able to encourage and foster vocations to the priesthood, until the native Filipino clergy form a powerful body, because the Council of Trent declares that the Church is never stable in any country until the native element predominates in the priesthood. This is as it should be. In Italy we have an Italian priesthood, in Ireland an Irish priesthood, in England an English priesthood.

The native priest understands the temper, the genius of the people. He has the same psychological bent as they, and knows in what moral characteristics they are lacking, in what they are strong.

In the evidence brought before the Philippine Commission it was shown that the priests of Spanish birth filled almost all the important ecclesiastical offices, not allowing the Filipinos, when they did become priests, to be other than assistants, except in some rare cases where for personal reasons the archbishop desired to pass over the members of religious orders and to appoint native priests in their places. It was shown that Spain assumed first place in the beginning, at the time of the conquest, and very little opportunity or encouragement was afterward given to the natives who became priests.

With such a state of affairs it is not surprising that few vocations manifested themselves. Even in this country, where ecclesiastical advancement is upon an entirely democratic basis, the number of young men entering the priesthood is sometimes less than it ought to be. The priest's life is at best a career of self-denial. The financial outlook of a bare \$400 a year is apt to discourage the young man, who may make more than this in almost any commercial pursuit. The spiritual side of his nature must be strongly developed before he is willing to give up social ties and worldly prospects, as he must do if he becomes a priest. It is only by faithful culture that vocations can be induced. This culture it shall be our aim to give.

Every parish in the Philippines, with very few exceptions, has had its grammar school under the Spanish *régime*, according to the report brought to me. We shall advance the standard as much as possible in each school. The people of the Philippines are a Catholic people, and as such there will be no infringement of rights when we teach catechism before school hours or after school hours.

Too much, perhaps, has been said of the ignorance of the Filipinos. Just as in our own country there are illiterates, so in the Philippines there are people who have not had the advantages of education, but in no greater per cent.

than in a number of States which I might mention in our own country. From 250 to 300 Filipinos came to America from the Philippines two years ago and entered different universities all over the country. In many instances they have carried off the highest per cent. in their studies. In Santa Clara last June, at the Jesuit University, a Philippine student won the gold medal, the highest prize in English.

The distrust of American methods which was felt by priests, and people in the Philippines three years ago has entirely disappeared. The Filipinos now welcome American teachers, and are trying to adapt themselves to our forms of government. The people of the Philippines are natural imitators, and as a witness before the Commission said, "They will readily follow American customs if the proper people go in for them." They are handicapped somewhat by their feuds and family jealousies, but there is reason to hope that they are advancing toward self-government.

I shall take no priests from America with me, unless some should offer themselves as volunteers, which I hardly expect in the short time before my departure. When a priest says to me that he would like to go to the Philippines, I do not regard that as a declaration that he will go. He must seriously consider the matter, and go through the necessary form of securing a release from his own archbishop in this country before he can be at all a candidate. As I cannot thoroughly understand Philippine conditions until I reach Manila, I would not ask any of the American clergy to go with me. I might not have any appointment for them over there, and my diocese might not be able to support them. After I arrive in Manila and study the situation, if I need assistants I shall invite volunteers. But it is my plan to go first myself. This principle applies to most of my work in the Archipelago. I cannot outline any policy with definiteness until I learn from the Filipinos themselves, in their own language, just what they desire.

ST. LOUIS, MO.

"Things-in-Law"

BY MARION HARLAND

PEOPLE who read the newspapers thirty-five years ago will recall the controversy over the authorship of the pathetic ballad, "Rock Me to Sleep, Mother," written by Mrs. Elizabeth Akers Allen ("Florence Percy").

Altho Mrs. Allen had proved her ability to write this and far better poetry, her claim to the authorship of the popular song was sharply questioned by half a dozen competitors for the honor of having produced it.

The squabble ended in the laugh raised by Mark Twain's entrance upon the scene with an address to the loudest and most persistent of the claimants. It began after this manner:

"Cease then, O B——, your silly complaint! You know you're pretending to be what you ain't!"

I adopt the homely phrase as the key to the manifold difficulties attending do-

mestic relations created by legal enactment and not by nature.

The most difficult and painful of these complexities arises, of course, from the introduction of the daughter-in-law to the son's mother. A vast majority of women live amicably, if not lovingly, with the husbands of their daughters. This is the simple truth in the face of the stock jeers touching "my wife's mother," and the readiness with which a plea of "too much mother-in-law" is accepted in extenuation of all manner of marital escapades. There are several reasons why a woman prefers to keep on friendly terms with her son-in-law. If she be sensible and clear-eyed, she is not slow in appreciating the comfortable truth that her child loves her no less for loving her husband more. The two matrons have more in common, and are drawn more closely together in sympathy and in ex-

perience, than before the girl's marriage. If the mother have not gained a son—which rarely happens, let me say—she has not lost a daughter.

Again—and a yet more powerful reason—the mother, knowing for herself that the worst fate which could befall the young wife would be alienation from the man to whom she is bound "for better, for worse, until death do you part,"—would, if she have a spark of natural affection for her offspring, prefer to banish herself from her child's home and heart to knowing that she "lives unhappily" with her husband.

David Copperfield's landlady covered the ground better than he or she knew in her answer to his query, "How do you know that I am in love?" "I am a mother myself, Mr. Copperfield!" One who is a wife herself cannot ignore the supreme strength, the unsurpassable sacredness implied in the word.

Admitting these facts—as all must who have studied life with unbiased judgment—one may well be puzzled by the far different attitude maintained by the good woman and devoted mother toward the bride for whom the son bespeaks a daughter's place in her heart. He makes the demand confidently and happily—poor boy! "Mother" and he have been chums always, so much to one another that she cannot fail to be the tenderest of parents to the woman he loves. The dear girl has only to creep into the cozy corner awaiting her under the wing that has sheltered him and his sisters from birth.

To her own heart, sore and often hot, the wife and mother—who has never been a bridegroom!—says: "This girl" (if the heart be very hot she says "This creature") "has come between him and me! She has robbed me of the first place in his love."

With this conviction stinging like a serpent in her consciousness and biting like an adder into her soul, she feigns to receive the robber "as a daughter," and tries to adapt speech and behavior to the new relation—the pretense that runs counter to reason and inclination. As might have been predicted, the effort is, in ninety-eight cases out of every hundred, a ghastly failure.

Both women "know they're pretending to be what they ain't!"

The saucy slang rings itself in our ears like the knell of a bell-buoy warning sailors off the reefs.

A like result attends the well-meant, well-bred endeavor of sisters-in-law to fit the newcomer into the niche convention and (so-called) Christian amity assign to her. The hole may be padded with kindly intent and gentlest courtesies. The square peg can neither be slid nor driven into it.

"What"—asks the Prince of Satirists, in "Vanity Fair"—"does a fashionable woman mean when she says, 'Of course I love Jane as a sister'?"—"Jane" being unfashionable and poor.

When Things-in-law force sisterhood upon each other the sham is grotesque as well as pitiable.

The whole situation is violent because unnatural. Let the daughter choose a husband after her own heart, and the bridegroom rejoice over the bride—his predestined complemental self, from the beginning of the ages. All these marvelous correspondences of taste and feeling, and the exultant satisfaction in their respective mates, do not alter the basal fact that the ties and obligations of blood are born, not made.

The love which informs the mother's being, the spontaneous upgushing of yearning tenderness that is almost agony in its intensity, at the thought of sons and daughters born of her body and her spirit, no more resembles in quality the sentiment she cultivates laboriously for her children-in-law than the wistaria, pinned stiffly across my summer bonnet, is like the mauve clusters palpitating with fragrance and the ecstasy of bloom that, while I write, dally with the south wind before my window.

Then why attempt the obviously impossible? Let us reason together above dutiful attempt and ghastly failure, as we would try to adjust other mortal mistakes. Why should not the mother, putting away from her for the time the thought that she no longer stands first with her boy, accept his wife as an acquaintance she means to convert into a friend? Let her regard the acquaintance as an associate who must be worth cultivating since her son vouches for her. It is highly expedient for his sake, for the good of society and to insure harmony in the domestic circle, that they

should get on comfortably together. She is resolute to see whatever is pleasant and comely in the newcomer, and to cast the mantle of charity over all that is objectionable. The thought of setting her side by side in her heart with her children does not obtrude itself. The effort to do this would provoke comparisons that would unsettle the predetermined friendship. Because the friendship is a foregone conclusion she refrains from adverse criticisms, and keeps a bright lookout for whatever may promote kindly feeling between her daughters and "John's wife." John's wife, henceforward, is her neighbor whom the Eleventh Commandment teaches her to love as herself. She reads nowhere in her Bible that she is to love an alien as her own flesh-and-blood.

Received within the bounds of cordial friendliness upon these grounds, the Thing-in-law of either gender is not handicapped by conventional obligations to feel filially, when, as a matter of fact, a gentle glow of amiable good-will is all that should be expected. If, as the acquaintanceship progresses, warmer personal regard is developed, so much the better and happier for all concerned.

Herein is practical good sense and benevolence unfeigned. The newcomer, if tried by the standard of feeling applied

to sons and daughters, will inevitably be found wanting. The slip of a strange vine, she is set among olive plants that have all been reared according to one rule in soil expressly adapted to their characteristics and idiosyncrasies.

"Strike your roots deep and conform your growth to these," says the tiller of the domestic plantation. "You are now one of them."

The Oriental mother-in-law is wiser in her generation—a generation that has held its own from the days of Rebekah and Naomi until now, in those changeless lands. She transplants the alien vine when a tiny, undeveloped shoot from the parent stock, marking it for her own, and bringing it up to suit the place it is to fill.

"My people shall be thy people," as spoken by her, is in the imperative mood. There is no pretense of being what she is not. If the absorption of the daughter-in-law's individuality into that of the husband's mother and that of her household seems to us like violence done to natural laws, it is, as least, frank brutality—plain, if not fair dealing.

In countries where higher Christian civilization bears rule, the conventional dealing with a relation at once delicate and complex are neither plain nor fair.

POMPTON, N. J.

Her Assurance (After Shipwreck)

BY SARAH PIATT

"Five hundred souls went down," she said.
(Death-white and cold the sea-birds fly.)

"Yet, friends of these, be comforted."

(Long will the winds and water cry.)

"Five hundred souls went down, but I
Know of a truth that none are dead.

"These through sure pathways safely found
The Blessed Islands man should seek:

New light, sweet light, on pleasant ground,

And laugh on lip and flush on cheek,

And tender voices that could speak

Their language with diviner sound.

"What time for tears have you and I?

Tho dim the sea, the compass knows—

Hid in the mist—the Land is nigh.

Oh, scarred with rocks and stung with snows,

Sword-sharp may be the blast which blows

The secret of the spices by!"

NORTH BEND, OHIO.

Literature

Definitions of Christianity

THE most significant book in recent theology is Adolf Harnack's "What is Christianity?" This statement is justified, not by Harnack's sharp, enlightening characterizations of the leading features of the Christian faith and the principal tendencies in the dogmas of the historic churches, but by the purpose of the book, the questions it seeks to answer—"What has Christianity been? What has it now become?" The religion of Jesus does not exist free in nature: its separation is the work of the theological laboratory. To the laboratory process, therefore, Harnack submits the various mixtures that have borne the name of Christianity, that he may prove what is the really vital and essential in the beliefs and institutions that trace their way back to a stirring among the common folk of Galilee 2,000 years ago. It is not the ability of the investigator that gives the book its importance—tho, indeed, Harnack is the genius of modern theologians—but his question, his problem. The chief interest is no longer in questions of criticism, the dates and literary character of books and documents. These are still considered and much remains to be settled, but the center of interest has passed to questions of the essential character of Christianity itself. Perhaps theological science is not ready for the undertaking; certainly much work remains on the character of the sources; but the question has come, and it came in a book of such brilliant learning, such fairness and clearness of judgment, such eloquent and religious spirit that it compels comparison with Schleiermacher's *Reden ueber die Religion* of 100 years before, and gives hope of like favorable issue in clearness of the air and concentration upon the vital and essential.

The interest aroused by Harnack, or

perhaps rather the interest which Harnack proved to exist, has led Prof. William Adams Brown to prepare a history of the definitions of Christianity.* He explains that his book is not "another attempt to define Christianity, but rather to analyze the problem involved in such a definition, and to give an account of the more important attempts which have been made to solve it." These attempts were made chiefly in three periods, the Ancient Church, the Reformation, and the nineteenth century. In the Ancient Church there were three distinct answers, as represented by Paul, the Epistle to the Hebrews, and the Letter of Barnabas. The Reformation brought a new impulse to define Christianity, but failed to draw the proper distinction between the Old Testament and the New, and so to appreciate Christianity as an historical religion. With the rise of the Kantian Philosophy and the awakening of the historical spirit came new interest in the question and new principles by which to solve it. In his famous definition of religion as an extension of morals, Kant laid the basis of a definition of Christianity which could do justice to its moral force. With Schleiermacher came appreciation of the basis of religion in the human personality, and the necessity of considering Christianity as an historic religion with Christ as its central figure. Ritschl compelled the recognition of the social aspect of Christianity, and started the question as to what Jesus meant by the Kingdom of God; he gave justice to Paul's teachings and made redemption its fundamental fact, and victory over the world and over sin its purpose in the world; he drew the line between the Old and the New Testaments as it had never been drawn before, and insisted that Christianity was not every good thing that had ever been in the world, but the truth and the life that had their rise in Jesus of Nazareth and have developed from his teachings. Professor Brown closes with a brief *résumé* of Harnack and an appreciation of the results attained.

* THE ESSENCE OF CHRISTIANITY. By William Adams Brown, Ph.D., D.D. New York: Charles Scribner's Sons. \$1.50 net.

† THE CHRISTIAN POINT OF VIEW: Three Addresses by George William Knox, Arthur Cushman McGiffert and Francis Brown. New York: Charles Scribner's Sons. 60 cents.

No one can follow the study here briefly outlined without sincere respect for the patience and fidelity, the fair spirit and careful scholarship which it manifests. No one can follow it without added clearness of thought in the supreme problems which it considers. It is through such careful historical studies as this that we shall learn that religion is not for every good purpose in the world—for example, that it has nothing to do with curing sick people—and that Christianity is not a compendium of all the wisdom men shall ever possess, but a certain thing that came into the world at a definite time and is fitted to do a certain very necessary work, provided one does not try to make it work in spheres where it does not belong.

In the same spirit as Professor Brown's historical study is a small volume containing three addresses by his colleagues at Union Seminary, New York. That of Dr. Knox is on the "Problem for the Church," which he contends is nothing less than the problem of the knowledge of God, and he looks for its solution in a better appreciation of Jesus. The address of Dr. McGiffert is an earnest appeal for thorough and immediate "Reconstruction in Theology" on the basis of the historic Christ, making the controlling principle of Christ's life the controlling principle of the reconstructed Theology. Dr. Francis Brown, while recognizing the limitations of the Old Testament for Christian use, presents a strong case for its permanent religious

value. The "Christian Point of View" as illustrated in these addresses is that of "the progressive realization, in thought as in life, of the supremacy of Christ," which is that view of Christianity to which Prof. William Adams Brown declares the history of its definitions leads.

Charles and Mary Lamb

THIS will undoubtedly be the authoritative edition of Lamb* for many years to

come; indeed it is scarcely probable that any future editor will be found ready to bestow so much labor on the editing of works which might seem in themselves so far removed from the need of diligent scholarship. In the first place Mr. Lucas has discovered a good deal of verse and prose which Lamb contributed to various periodicals and which, for one reason and another, was never re-

Gin Lane. After the Picture by Hogarth (Reduced). From the Works of Charles and Mary Lamb

published. Some of this material had already been brought into earlier editions of Lamb, but no small portion of it is now for the first time reprinted.

It is in the notes, however, that the great strength of this edition lies. Really it almost disheartens one to reflect on the amount of labor which Mr. Lucas must have undertaken to trace the innumerable quotations and allusions sprinkled through Lamb's pages—a task made vastly more difficult by Lamb's inveterate

* THE WORKS OF CHARLES AND MARY LAMB. Edited by E. V. Lucas. In Seven Volumes. Vol. I, *Miscellaneous Prose*; and Vol. V, *Poems and Plays*. New York: G. P. Putnam's Sons. \$2.25 net each.

habit of quoting incorrectly. One is surprised to observe how few of these sources have escaped the editor's vigilant eye and memory. Nor is the hunting down of citations the only labor that has gone to the making of these notes. In one way or another a considerable part of the literary history of the period is brought to bear on the elucidation of Lamb's various productions. There will certainly be a question in the minds of some whether or not such a mass of erudition added to so slight a writer as Lamb is not pedantic or impertinent. To those who go to our Saint Charles, as Thackeray called him, for the entertainment of an hour this elaborate annotation, and the size of the volumes due to the notes and to the inclusion of so much indifferent matter, will probably act as a repellant; they will find what they want in the handy, and not incomplete, volumes now being edited by Mr. William Macdonald. But for libraries and for a scholarly reading of an author who, after all, was a scholar in his own way, there must be a recourse

to Mr. Lucas's more elaborate work.

It could not but happen that a number of errors should creep into so many references as these notes contain. We have ourselves, in a cursory reading, observed one or two which had not been pointed out in the longer English reviews of the volumes. So, for example, in an explanatory note on the quotation of Virgil's "*Lacrimae rerum*," Mr. Lucas writes: "Tennyson, of course, inclined to the wider rendering when he wrote, in his 'Ode on Virgil,' of 'the sense of tears in mortal things.'" It is a little

hard to take away Matthew Arnold's exquisite line on his dog Geist and ascribe it to Tennyson. The illustrations are not for ornament but for elucidation, and as such are placed at the end of the volume among the notes.

Bliss Carman's Pipes of Pan*

MR. CARMAN certainly has the lyric vein. There can be no doubt of that by this time. His verses sing. Nor is there any question of the singular fineness and hauntingness of his sentiment. To attempt anything on these subjects at this date would be to bring coals to Newcastle. But there is one essential peculiarity of his verse, which we have never seen touched on and which is, like feminine coquetry, at once a charm and a weakness. His melody and sentiment are accompanied by a disintegration — we know not what else to call it — of thought. For instance, in the piece entitled "April Weather," which is for the rest delightfully written, there are ten pe-

riods—or eleven full stops, if we count a final exclamation—with not a single principal verb, not a single predication among them. Perhaps nothing could better illustrate how little contemplative Mr. Carman's poetry is—a sort of elementary surrender to the first sensation of things. For inasmuch as thought consists in judgment, that is, in the recognition of identity and distinction, its expression in language must strictly conform to the

Garrick's Monument in Westminster Abbey (Reduced). From the Works of Charles and Mary Lamb

* PIPES OF PAN. No. II. From the Green Book of the Bards. By Bliss Carman. Boston: L. C. Page & Co. \$1.00.

model of the sentence, which prescribes the only way of completely affirming such identity and distinction; while unchastened feeling, on the contrary, just because it is obscure, confused, and troubled, tends as strongly to express itself chaotically and piecemeal.

The same disposition of spirit is even more evident in the titular piece of the volume, "The Green Book of the Bards," as compared with the formal evidence just adduced. Of course "The Green Book of the Bards" is, nature—that is, the peculiar sensory and emotional "complex" to which the poet's consciousness gives a sort of coherence and projection—neither "the thing as in itself it really is" nor a thinking clear through it to perfection; and the names of the "bards" supposed to have derived their inspiration thence are strung together through a series of stanzas with an inconsequence worthy of Emerson at his loosest:

"Here were derived the gospels
Of Emerson and John;
'Twas with this revelation
The face of Moses shone.

Here Blake and Job and Omar
The author's meaning traced;
Here Virgil got his sweetness,
And Arnold his unhaste.

Here Horace learned to question,
And Browning to reply —"

Now this quality of which we have been speaking gives the volume—and, indeed, all of Mr. Carman's work with which we are acquainted—a kind of kaleidoscopic splendor; it is full of broken bits of brilliant colors, illusory gleams and reflections like the surface of a street at night after a rain. Vague aspirations and evanescent desires which become definite enough every here and there, not to satisfy and inform, but to tease and tantalize. And it is the momentary arrest from time to time of some such transitory glory which gives the book its eminently characteristic air of alluring and elusive significance, an air communicable only by quotation:

"Be thou my exaltation
Or fortitude of mien,
Lord of the world's elation
Thou breath of things unseen!"

or, even better:

"And whoso shall wear that habit
And favour of the earth,
He shall be lord of his spirit,
The creatures shall know his worth."

Characteristic of these two extracts, which must suffice for exemplification, are the sense of giddy exultation and the sense of incomprehensibility which are characteristic in various degrees of the book.

The Alaska Frontier

THE author of this brochure* has done commendable service in placing before the American public a clear view of the important interests at stake in the Alaskan boundary question. When we use the words "at stake" we do not mean, however, that the loss of American territory is really threatened by a decision of the tribunal now in session in London. Properly speaking, that is not an arbitration tribunal possessing the power to cede American territory, for the Government at Washington has emphatically declined to agree to any tribunal in which one of the members, not being selected from this continent, shall have a casting vote. It has agreed to a commission composed of three American and three British members, and it is universally believed in this country that the former are not judges to review a case about which they are uncertain, but representatives of established American rights which they are in London to see confirmed. If at least one British member of the Commission is not won over to the American side, it is not likely that the United States will ever again consent to reconsider the language of the treaty made between Great Britain and Russia in 1825.

Assuming that Mr. Balch has stated the British contentions fully and accurately, his refutation of them is, we think, complete, and his argument for the United States is so unanswerable that the reader will agree that there is nothing to arbitrate; that the American title to Alaskan territory, as represented on most of the maps published since 1825, can no

* THE ALASKA FRONTIER. By Thomas Willing Balch. Philadelphia: Allen, Lane & Scott. \$2.00.

more be called in question than the title to Massachusetts or Virginia. The American contention is, briefly, that the treaty of 1825 gives this country, which acquired Alaska by purchase from Russia in 1867, an unbroken coast line above 54 degrees, 40 minutes. The British contention is that a correct interpretation of the treaty would place the line so that Canada would have several outlets to tidewater. We cannot go into details for lack of space; suffice it to say that a large number of maps, American, British, French, German and Russian, place the boundary line exactly where the United States has always declared it to be. Several Canadian maps of recent date agree, and a striking confirmation is given by a British admiralty chart corrected to 1901, which exhibits the line drawn in the same way. Moreover, the American claim is supported by seventy years of undisturbed possession. Mr. Balch has, we think, made good the contention that a history of the treaty negotiations, together with the maps he has so convincingly grouped together, exclude honest doubt as to the validity of the American title.

A New Edition of the Babylonian Talmud. Translated into English by Michael L. Rodkinson. Vol. IX (XVII), Section Jurisprudence (Damages), Tracts Maccoth, Thebuth and Eduyoth. Vol. X (XVIII) Tracts Abuda, Zara and Harioth

The History of the Talmud. Vol. I and II (XIX, XX). By Michael Rodkinson. New York: The New Talmud Publishing Co.

Dr. Rodkinson has brought out in the eighteen volumes published more than half of his projected translation of the Babylonian Talmud. The two volumes XVII and XVIII, bound in one, conclude the Section "Jurisprudence." These volumes are not among the most interesting to the Gentile reader, except the pages given to the chapters which tell what dealings may be had with idolaters. These are full of stories and curious information, not a little of which would be of interest to the student of the history of medicine. The two volumes, bound as one, of the History of the Talmud give a very interesting account of the various persecutions to which the Talmud has been subjected. There is no braver story in the annals of good schol-

arship than that of the defense of the Talmud by the famous Christian scholar, Reuchlin, at the risk of his own life and reputation. We observe that Dr. Rodkinson does not enter into the discussions as to whether Jesus is recognized in the Talmud, except that he suggests that Ben Patturo, mentioned only once, should be read Joseph Pantira, and is the same as Jesus Ben-Joseph Pantira, or Jesus Pantira, who is supposed to be the Christian Jesus. The statement about him in the Talmud is interesting, and would belong to the uncanonical sayings of our Lord:

"If two were on the road [in the desert], and one of them has a pitcher of water which is sufficient for one only until he may reach an inhabited place, but if both should use it both would die before reaching a village, Ben Patturo lectured that in such a case it is better that both should drink and die than that one should witness the death of his comrade."

Dr. Rodkinson remarks that this judgment seems rather Essene than Talmudical. We again commend this very important series of volumes to students and libraries, and express the wish that Dr. Rodkinson, who bears the burden of this work, might find the assistance of Hebrews of wealth, inasmuch as the sale of such a work is likely to be slow.

Walks in New England. By C. G. Whiting. New York: John Lane, \$1.50 net.

Mr. Whiting has gathered a volume of reflections and impressions, adorned with a number of excellent photographic reproductions of nature in and about the Berkshires. The style and tone of these pieces, unaffectedly simple and pleasant, seems at first thought a second or third attenuation of Emerson and Thoreau after John Burroughs. But Mr. Whiting is more than a mere disciple of those he would probably be the first to acknowledge as his teachers; he is something of a critic of them, too. He has the shrewdness, for instance, to declare that "the Nature school of the age that began with Wordsworth and continued through Bryant and Thoreau and is so well known in Burroughs and many another . . . has opened the wonder of the manifestation of life in tree and flower and the

glory of the scenic beauty of earth to all, without giving them the radical secret of respect." Whatever may be thought of the justice of this reproof—and opinion will probably split—there can be no doubt that Mr. Whiting himself is in possession of this "radical secret of respect." Without a leaning toward the Newman kind of mysticism or any other form of confusion between the two orders, he admires God as immanent in Nature and reverences Nature as the vestment of divinity in a dualism wherein the physical and the spiritual have each its fair share.

The Life Work of George Frederick Watts, R.A. By Hugh MacMillan. [The Temple Biographies.] New York: E. P. Dutton & Co., \$1.50 net.

It was a happy thought to include the life of the greatest living English artist in the Temple Biographies. A man who has exercised so profound an influence on his time as Watts is well worth a place in this series. It is therefore a serious disappointment that the responsibility of presenting his life and work to the public should have been committed to a man so utterly unfit for the task. We could forgive Dr. MacMillan for a lack of technical knowledge necessary to criticise the painter's work, if he had given us a simple, straightforward account of the man. But any satisfaction we might take in the facts which the writer has accumulated is annulled by his lack of system and by the gross contradiction of his own statements. Even this might be condoned, if it were not for the irritating sentimentality of the author's style. Perhaps there has been more twaddle written about art than on any other subject, but it would be difficult to find another book on a kindred subject so cursed by maudlin moralizing as is this one.

The Captain's Wife. By W. Clark Russell. Boston: L. C. Page & Co., \$1.50.

A treasure-laden vessel having been sunk in a harbor in a far distant island, the underwriters dispatch a ship, whereof the hero is captain, to regain the gold. With him go his bride, a philosophic diver and the villain. Adventures begin at once and continue until the wreck is reached, where the dramatic interest rap-

idly culminates and poetic justice ultimately prevails. Mr. Clark Russell neither advances nor retrogrades in his art. His stories are always built on precisely the same lines, and have the positive merit of going straight ahead without yarns within yarns, extracts from correspondence and other deviations. He can put together better descriptions of gales, piracies and shipwrecks than probably any other writer before the public, and yet can manage to keep the sort of genius which informs Stevenson's "Treasure Island" well below the horizon. *The Captain's Wife* is as good as anything he has produced, and in point of precision of touch and of a journalistic way of making his points vivid and telling, it is better than some of his earlier work.

The Redfields Succession. By Henry Burnham Boone and Kenneth Brown. New York: Harper & Bros., \$1.50.

The fact that this novel comes from the authors of "Eastover Courthouse" is enough to recommend it to all who read that delightful romance. The scenes are laid in the same neighborhood, and it is another pastoral of high life in Virginia, where farming, fox hunting, feasting, dancing and courting are the chief occupations. In some stories it is what happens which most interests us, in others it is the attraction of some personality portrayed; but in this one the charm lies in the way it is told. There are none of Miss Johnston's rainbow glories, but it is the real earth we tread, fragrant from beneath the plow or packed into a race course.

The MS. in a Red Box. New York: John Lane, \$1.50.

Now that the much exploited mystery of authorship has been explained, we may judge this novel on its own merits. It is, in fact, a very good story, told with the usual affectations of modesty by the hero himself. The scenes are laid in the "Isle of Oxholme," and the plot turns upon the English King's permission to Cornelius Vermuijden, a Dutchman, to drain the marsh lands of the island and otherwise change its topography, against the protest of the inhabitants. The only

remarkable feature of the tale is the amount of bad weather the author manages to get in. There never has been so much rain and mud depicted in fiction before. Everybody is wet, or about to get wet, and the fighting, of which there is much, is done between showers.

Literary Notes

THE September number of *The Studio* contains the first of an important series of articles on Whistler, also papers on Zuloaga, Watts, and Drawings by Old Masters. (John Lane, publisher.)

....The Life of Gainsborough, in the Dent-Dutton series, is not an inspiration to a personal philosophy of art, such as was "The French Impressionists," by Maclair, for example; but it does present, in a clear, interesting style, all that the ordinary reader cares to know about that great English master. (Price 75 cents net.)

....W. M. Thackeray's acquaintance with the Baxter family of New York was one of the most interesting of the great novelist's friendships. His letters to the Baxters are to see the light in the pages of *The Century* during the coming year. They cover both visits of Thackeray to America, and they reflect his opinions upon all sorts and kinds of American topics, with all the author's frankness, vivacity and charm.

....A new serial begins in this month's *Critic*, entitled "The Jessica Letters." It is anonymous, but the publishers say it is written by two authors—a real New York editor and a real Southern girl, who reviews some of his books. Of course it is going to turn into a love story before the end, but the first installment is flavored with the gossip of contemporaneous literature and Printing House Square.

....E. P. Dutton & Co. have ready a new edition of "The Autobiography of Leigh Hunt" with an introduction by Thornton Hunt, and newly edited with notes, etc., by Roger Ingpen. It is of this book that Carlyle said: "I call this an excellent good book, by far the best of the autobiographic kind I remember to have read in the English language; and, indeed, except it be Boswell's of Johnson, I do not know where we have such a picture drawn of a human life as in these three volumes."

...."The Annual Register" for 1902 maintains the high level of that publication. The first part of the volume is devoted to a *résumé* of the political history of England during the year 1902. The events of parliamentary life

are noted, and the principal speeches summarized. Foreign and colonial history is also dealt with. In the second part a chronological summary is given of the principal events of the year, both foreign and domestic; this is followed by a retrospect of literature, science and art, and an obituary of eminent persons. A full index, which is an important feature of the book, adds very materially to its value as a work of reference. (Longmans, Green & Co., \$6 net.)

Pebbles

CRITICISM FROM A SAFE DISTANCE.—At this distance we feel safe in proclaiming our opinion that the Sultan of Turkey is a grouchy old fez-bedecked Turkish assassin.—*Buffalo Times*.

...."Dasher and his brother fell out the other day, and now they don't speak." "You don't say?" "Yes, they fell out of their automobile while going at the rate of eighty miles an hour."—*Philadelphia Press*.

....*New Yorker*: "Why are you looking so curiously at this map?" *Stranger*: "Because I can't find my way without looking at it." *New Yorker*: "Not find your way? I have lived in this city for forty years and have never had use for a map."—*Judge*.

....One of the most delicious mixed metaphors we have come across recently is that from a temperance paper in Chicago which announces that "the fall campaign is already being launched in a blaze of enthusiasm."—*The Wine and Spirits Gazette*.

...."There's a strange man at the door, sir," announced the new servant from Boston. "What does he want?" asked the master of the house impatiently. "Begging your pardon, sir," replied the servant, a shade of disapproval manifest in his voice, "he wants a bath, but what he is asking for is something to eat."—*Syracuse Herald*.

....Thomas Dixon, Jr., is the author of "The Only Woman," a book from which the following quotation is taken: "Across the huge oak mantel he had carved the sentence: 'I am an old man now; I've had lots of trouble, and most of it never happened.'"—*Saturday Evening Herald*.

...."I was passing through a class room in one of the big down town schools the other day," said Superintendent Maxwell during a lull in a board meeting, "when I heard a remarkable definition of 'average.' In answer to the teacher's request to define the word a little black-haired beauty cried out: 'The thing that hens lay eggs on.' When the teacher told her she was wrong she produced a book in which she pointed out the phrase 'a hen lays on an average five eggs a week.'"—*New York Times*.

Editorials

A Revolution in England

WHEN a new great issue appears in politics it drives a plowshare through the old parties. So it was when anti-slavery first split and then destroyed the Whig party, and drew off from the Democratic party an ex-President and a host of young men to join the new Free Soil party. So it was when, after the Civil War, the revived issue of protection drove back a multitude of Republicans to the Democrats. So was it when our insular acquisitions repelled the loose members of one party and attracted those of the other. So is it to-day in Great Britain, where the sudden revival of an old issue, supposed long dead, is realigning the old parties, so that we know not which to call Liberal and which Conservative, or to which the term *Unionist* properly belongs.

The disturbing force is Joseph Chamberlain. It is he that has seemed to discover the fatal cause of England's checked prosperity. It is the maintenance of free trade, when all the rest of the world has gone over to protection. Since Peel and Cobden free trade had become so much of a political religion that no man dared above a whisper to mutter dissent. But Chamberlain has flouted it aloud, and lo, in an instant, half the nation turns infidel, and Premier Balfour follows first after the Arch Heretic.

Balfour's course has been a very curious one, and it is not strange that those who do not go over to protection complain of his deceptive reticence. He had become a quiet convert to Chamberlain's doctrine. He knew that Chamberlain intended to resign from the Cabinet so that he might have a freer hand to preach his crusade. Balfour wished to reconstruct his Cabinet on the Chamberlain line, with Chamberlain temporarily out of it, and so he concealed his knowledge of Chamberlain's resignation from the unyielding opponents of protection, thus encouraged them to resign because they would not serve with Chamberlain, but he gave the information to another titled

member of his Cabinet, whom he wished to retain. So he will have a Chamberlain Cabinet, with Chamberlain out of it, but a constant adviser and a vigorous and persistent supporter in the field. The Cabinet is reconstructed and is a unit, if the party is not.

The international condition has utterly changed since Cobden's time. Under free trade England wonderfully prospered during a good part of this half century. She extended her trade everywhere. She has become the mightiest manufacturing and commercial Power in the world. But during this time the United States has created and developed a great protective system, and has prospered greatly under it. The other nations of the world have followed our example. Each protects its own products and shuts out, as far as may be, those of other countries. Thus every one is building a wall against England, and England begins to suffer. England has for these last five years been asking what is the reason of her decline in trade. The visiting manufacturers have carried back word that it was lack of enterprise, the maintenance of old methods and old machinery and the fear of the scrap-heap. The scientists have said it was the lack of technical schools, of chemists and engineers. Now Chamberlain tells England that it is the wall built against her by other nations, and that she must build wall against wall if she would hold her own against Germany and the United States, and the politicians believe him.

Chamberlain's argument, and Balfour's, is simple enough. Germany puts on a high tariff which shuts out British manufactures. She thus keeps her home market for her own products. Then her manufacturers combine, form "trusts," make a handsome profit on the goods sold to their own people, and then send to England their superfluous output, and sell it at cost price or less, lower than British factories can make it, and break down the British market. England cannot retaliate so long as she has no tariff. Give her a tariff, and she can bargain with Germany. She can say, If you shut

out our goods, we will shut out yours. Reduce your tariff and we will reduce ours. Even the colonies are shutting out, by their tariffs, British manufactures and protecting their own. What trade will England have left when the nations and the colonies have built up in this way their own manufactures? Let England, says Chamberlain, give her colonies better terms than she does the rival nations. The United States prospers under absolute free trade between the States of half a continent. Why can there not be free trade and prosperity between Great Britain and all the greater Britain, and protection against the rest of the world?

So we have nearly come to the end, for the present, of the doctrine of free trade. As monometallism has gradually conquered the world, so does protection conquer it. Russia's tariff averages 130 per cent. against Great Britain; that of the United States, 72 per cent.; that of Austria, 32 per cent.; of France, 30 per cent.; of Italy, 27 per cent.; of Germany, 25 per cent.; of Canada, 10 per cent.; of Belgium, 13 per cent.; of Australia, 7 per cent. And against all this exclusion Great Britain is powerless to make any effective remonstrance. British exports show no increase; they are 20 per cent. less than thirty years ago, while German exports have increased more than 100 per cent., and American more than 200 per cent. Both Germany and the United States now make more iron and steel than does Great Britain.

At the psychological moment Chamberlain has raised the banner of protection, and Balfour and his Cabinet all are marching under it. It represents the temporary failure of the doctrine of free trade, which is the doctrine of international unselfishness, the doctrine we hold to within our own States, the doctrine that will prevail in the final "federation of the world." But this general international protection must be subject to general disintegration. When all equally protect it is the same as if none protected. The condition becomes like that when so many nations put a bounty on sugar that the bounty did no good and had to be lifted. Protecting States will have to bargain with each other to equalize their disadvantages. We call it reciprocity, but it is a partial return to universal free trade, which is the ultimate goal, even

as protection is a temporary provision—or should be—to create industries. In the Republican party itself the sentiment is growing, and must grow, that we must have relief from excessive protection, and that reciprocity is the first way to it.

The Would-Be Aristocrats

A FINE old aristocrat who has never been anything else, and whose forbears have not been anything else for a millennium or so, has some of the attractive qualities of an ancient vintage or of exceptionally ripe old cheese. Brand new aristocrats are not pleasing. They still smell of machine oil and paint. Would-be aristocrats who have a measure of blue blood in their veins, but who are doomed to live in a democratic society, are in no wise attractive, but they **are** unobjectionable when they don't talk **too** much. When they talk they get foolish.

We don't know whether Mrs. Stuyvesant Fish really said to a St. Louis reporter the other day the silly things that the newspapers attributed to her, and, so far as the public is concerned, it doesn't matter. We have all of us heard the would-be aristocrat say such things in private, and the remarks attributed to Mrs. Fish will therefore serve well enough as a pronouncement of the would-be aristocratic views of American society.

We need not linger on the indelicate remark that "Mrs. Roosevelt dresses on three hundred dollars a year, and she looks it." We should be sorry to believe that many American citizens are capable of making such comments upon the wife of the President. But let that pass. Neither will we in this particular discussion dwell on the question of the **social** equality of the negro and the white man. If Mrs. Stuyvesant Fish, or any other lady of Newport, R. I., objects to being the President, or the wife of a President, because she would not like to have to eat with negroes, we are sure the American people will respect her desire for private life. And, finally, we see no reason for enlarging on the assurance that "Harry Lehr never gave any monkey dinner" at Mrs. Fish's home in Newport. We're glad to know that he didn't, and are willing to let the affair go at that.

The opinion upon which we have a word or two to say relates to an alleged necessity, or inevitableness, of class distinctions. It is true that "Europe is older" and perhaps "more worldly wise than America," and that Europeans have not eliminated class distinctions; but it has hitherto been the boast of loyal Americans that they were working out a national life on this continent which was an advance beyond European systems in this particular respect. We have abolished class distinctions in so far as they were established in the body of law brought by the colonists from Europe. At the polls and before the law we have made men equal. To a great extent we have hitherto succeeded in maintaining in most parts of our country an approximate equality in social intercourse. Whether by inevitable necessity, or not, that equality is rapidly disappearing, in consequence of our later industrial revolution, with the astounding disparity of economic condition that it has created. Any aristocracy of blood that existed here has long since been leveled, and if the would-be aristocrats are to have satisfaction of their dreams they will have to find it in the crass inequality of a brutally materialistic money-power. We suspect that a true blue blood, to the manner of an old aristocracy born, would about as soon eat with a polite negro as with some of the more recent arrivals on upper Fifth Avenue or the Ocean Drive.

But to return to the fundamental question. Will there "of necessity be two classes—the aristocracy and the common people?" Is it a mistake, and even dangerous to "be too democratic"? And must we admit that "people are not equal anyway"?

There was once a wise and worldly-wise gentleman named Aristotle, who defended the thesis that aristocracy is the best form of society, and that all civilization rests on slavery. Aristotle associated with very well-born people in his day, and was the companion and tutor of a youth who in later years became known as Alexander the Great. It may be presumed that Aristotle did not speak or write without reflection, and we think it might interest ladies like Mrs. Stuyvesant Fish to know just what he meant by aristocracy and by slavery. Boiled down to brief and simple expression his philos-

ophy was that any slavery which is created by the brutal power of the strong to subjugate the weak is an abhorrent thing, but that some men and women are slaves by nature. They would rather be lackeys to the great than to lead self-respecting, independent lives in obscurity or poverty. In like manner the aristocracy that is born of mere wealth or power is a spurious article, which levels the pride of nations by reducing them to vulgar vice and imbecility. The only true aristocracy is that of those great souls who are aristocrats by nature: the men and women of noble ideals, of civic courage, of fortitude in days of trouble, the men and women of thought, of moral power, of beauty of spirit. Happy indeed, in Aristotle's view, is the state in which these aristocrats by nature hold sway, and in which the groveling ones who are slaves by nature are relegated to their proper place.

We suspect that Aristotle and Mrs. Stuyvesant Fish are both right, "People are not equal anyway." Law and institutions cannot make aristocrats by nature out of men who spend their days in bribing legislatures, and, in their lust of wealth, squeezing the uttermost service out of human flesh and blood; or out of women whose thoughts habitually rise to the level of such questions as the annual expenditure for the clothes of the President's wife. Nor can the fairest traditions of a self-respecting republic prevent the semi-public sale on the matrimonial auction block of assorted lots of slaves by nature in a society where it becomes necessary for a distinguished leader of an exclusive set to deny in the public prints the giving of "a monkey dinner" at her house.

New York's Municipal Campaign

At the very beginning of this year's campaign for decent government in the city of New York, unforeseen complications challenge the courage and political wisdom of the reform party. By the logic of the situation the renomination of Mayor Low and his associates on the old ticket was required. They have given the city an honest, clean and progressive government. District-Attorney Jerome's demand that the Mayor should be laid

aside because his letter of acceptance was salted with no humorous passages, and also for the reason that his "personality" was "unlovable" (from Mr. Jerome's point of view), was permitted to have no weight in the Fusion councils. The Mayor was again placed at the head of the ticket, and with him were renominated Comptroller Grout and Mr. Fornes (President of the Board of Aldermen), both of whom, as it afterward became known, were already in treaty for nominations on the ticket of the enemy. To some unsophisticated souls it seemed at first that the offer made by the Tammany leader to these gentlemen was a most commendable recognition of their virtue. But this explanation is no longer accepted by even the veriest tyro in New York politics. The seduction of Grout and Fornes was a device of Tammany designed to promote the election of the tiger's candidate for Mayor.

Satisfactory as he may be to the rank and file of Tammany, there is nothing about this young man, Congressman George B. McClellan, that can commend him to Reform Democrats. His nomination was undoubtedly "suggested" by Croker, from that peaceful dairy farm in distant Berks, where he plays the rôle of an English squire. To Croker Mr. McClellan owes his seat in the House. At this Boss's bidding he shifted easily from gold to silver. In the last campaign he publicly defended all the Crokerism and foul Deveryism of Van Wyck's administration. That carnival of indecency and corruption was, he asserted, "a splendid government," and in no part of it was there anything for which he should "apologize." To gain independent Democratic votes for McClellan, and incidentally to punish the complaining and aged Boss of Brooklyn, the Tammany leader tempted Grout and Fornes. They fell. To accept Tammany nominations under the restrictions clearly indicated in their letters of defense to the leader of the reform party, was nothing short of treachery. They are now on the Tammany ticket with McClellan, and they are to be removed this week from the ticket of the Fusionists, where their names would never have been placed if it had been known that they were engaged in negotiations with Murphy. Mr.

Grout insists that it is not necessary now for him and his Fusion associates to denounce Tammany and all its works. To stand for the record of the Low administration is sufficient, he says. But that record implies or is a denunciation of Tammany, an organization which he has called "a mere business investment," and concerning the "stench" of which he has made public complaint. Moreover, the Tammany platform denounces his own administration for the last two years, as well as that of his associates in office. To all this he is conveniently blind, being at the same time so utterly devoid of a sense of humor that he intends to ask the courts for a mandamus that shall compel the Fusionists to keep his name on a ticket where it is not wanted.

This litigation, if he shall engage in it, will be one branch of the legal complication with which the Fusion party may be required to contend; for while the Citizens' Union cannot be restrained from amending its nominations, the lawful right of its ally, the Republican party, to take the same course is not universally admitted. We believe that the Republicans may successfully defy any attempt to prevent a removal of Grout and Fornes from their ticket, because their original nominating convention was not adjourned *sine die*. It may be expected, however, that Tammany and these two candidates will make a determined effort to cause confusion and disturbance by use of the courts. Such an effort ought to leave Grout and Fornes with only a handful of votes and open the door for their permanent retirement from politics. Another complication, which the Fusionists regard with complacency, is the Democratic revolt in Brooklyn, where the old machine leader, Hugh McLaughlin, resents the nomination of McClellan and any action designed to make it successful at the polls. In past years his anger has repeatedly been appeased, but this time he fights to save the life of his local organization, menaced by invasion from the Tammany of Manhattan Borough. No one has believed that Mr. McLaughlin's expressed disapproval of McClellan as a possible protector of "graft" is an act of expiation.

There ought, of course, to be no room

for the slightest doubt as to the issue of a municipal contest like this, between good and evil, light and darkness. But the history of New York shows, if our memory serves us, that a reform victory has not immediately been repeated. Having been profoundly moved by revelations of corruption and vileness, the people have displaced Tammany for a term, and then have permitted a restoration of its abominable rule. These lapses have been due sometimes to the errors or tactless conduct of a reform administration, but more frequently to a revival of partisanship, skillfully incited and stimulated by the piratical organization that has most to gain from a strictly partisan division of the vote. The danger this year lies in a possible revival of partisan animosity rather than in the curious complications to which we have referred or in any shortcomings of the reform Government.

The record of that Government is one of honesty, cleanness and efficiency. Mr. Low and his associates have undoubtedly conducted a non-partisan administration. There was partial failure for a time in the Police Department, but not for lack of honesty and decency at the head. Mr. Partridge, with an admirable record of achievement in the past, was not sufficiently active and severe. We believe that his successor is an ideal officer for the place. In other respects the Government's record is excellent. The people, and especially the poor, have been served by intelligent, upright and expert administrators. Behind all this decency and civilization lies the unspeakable infamy of Tammany rule. We do not believe that the city is to be given over again to those who stand ready to loot it. Surely, the cry of "Democrat" and "Republican" cannot obscure the supreme issue in the mind of any thoughtful voter. But the battle cannot be won without sturdy fighting. Tammany has the persistence and craft that are born of dire hunger. Its leaders know that altho they may satisfy their poor retainers during one term of exclusion, two successive defeats would almost surely wreck that alliance of charity and politics in the districts which has been a strong foundation of their power at the polls.

A Representative Cardinalate

Since his return from Rome, where for the first time in history the American Hemisphere was represented in the election of a Pope, Cardinal Gibbons has more than once intimated his expectation that the number of American Cardinals will be increased. In his first sermon last Sunday, he said:

"I would not at all be surprised if in the next Conclave the Catholic Church of the United States will be represented by several members of the Sacred College, so that the number of Cardinals from our country may be commensurate with the population, the grandeur and commanding influence of the nation, and may be in keeping also with the numerical strength of our hierarchy and laity and the splendor and progress of our religious and charitable institutions."

That would seem to imply that he expects, and probably with good reason, that as many as two new Cardinals will be appointed. We conjecture, altho with all hesitating ignorance, that they will be found in New Orleans and St. Paul.

But the personal question is of no consequence. What is of consequence is the policy involved, which would be a most desirable revolution in the composition of the College of Cardinals; and this would be almost tantamount to a revolution in the Catholic Church.

If two new Cardinals were appointed from the United States it would mean the reduction by two of the number of Italian Cardinals. Not only are the large majority of the Cardinals Italians, but a majority of them are from Rome and Southern Italy. The College of Cardinals is not representative of the Church; it is self-evident that it ought to be. The Cardinals rule the Church. Theirs are the Congregations, under an Italian Pope, who decide everything. They do not supply the money which supports them and their work; that is given by the Church at large.

Now if the United States is to have an increased number of Cardinals, France and Austria and Mexico and Brazil and Chile and Argentina and the Philippines ought to supply representatives for their millions of Catholics. This is the future that must be before the Catholic Church—that its governing body of Cardinals shall

represent, in some fair way, its adherents the world over. The majority will no longer be Italian. That will make the Church much more truly Catholic than it is to-day.

But that will involve an immense revolution. It will put the Church under the influence of the best sentiment of the Catholic world. It will be no longer provincial in its government or decisions. The most enlightened portions of the Church will have their fair voice and influence. The Conclave will be much less under the influence of local and conservative traditions. We do not anticipate so much reforms, or changes, in doctrine, at least none confessed, as in practice; and practice is ever more important than doctrine. Old prevalent superstitions will cease to be cultivated, and will pass into desuetude. The fiction of temporal authority, which provoked the Reformation in England, will be silently dropped. The way will be opened for a modification, by degrees, of the interpretation of those dogmas, like infallibility, which offend the other branches of Christendom; and the process of coming together, which is already begun, will be facilitated. Indeed, we look upon the hopeful promise of more American Cardinals as the promise of a reformation of the first magnitude in the government of the largest branch of the Christian Church.

About Tolstoy

It would be an essay in psychology to study out a reasonable conjecture what would have been Tolstoy's attitude toward religion if instead of growing up in the midst of the formalism and icons of the Russian Greek Church he had been surrounded from his youth by the warmth and freedom of the Christian faith to which we are accustomed. Losing no atom of fealty to the Heavenly Father, or of love for the brotherhood of man, he now finds himself at war with the only form of Christian faith of which he has any knowledge. We should like to show him what the liberty of religious thought is in this country and what are its fruits, and we do not believe that he would repeat here his bitter words there. Tolstoy's discussion of the Trinity, and of Christ's repurchase, or ransom, or

redemption—for it is all one to him—of the fall and of free will, has a far-away sound to us here, but it is all fresh and present to him as a student of the teachings and worship of the Orthodox Greek Church.

These questions of high theology it is not important for us to discuss with him here. We turn from the amateur theologian to the man, and we are glad to give some facts of personal interest about the Russian philosopher, moralist and novelist which have come to our knowledge through a late conversation with one of Count Tolstoy's sons, as well as with several other persons on an intimate footing with him.

Count Tolstoy's health is at the present moment excellent. He made a journey on horseback, quite recently, of fifteen miles, and he walks three or four miles every day without fatigue. But in order to keep his health in this good condition, Count Tolstoy has modified his habits somewhat; he has become less rigorous toward himself, takes rest as soon as he feels at all tired, and permits himself to drink a little wine.

Count Tolstoy occasionally relaxes from his intellectual labors by engaging in a game of cards with his bosom friends; his favorite game is "vint," a game now very popular in Russia; it is a kind of whist, but somewhat more complicated; for that matter, Count Tolstoy is a rather poor player.

Count Tolstoy keeps briskly at work as his health allows him to do so, and, according to his custom, he is handling several subjects at the same time. He has just finished a postscript to his pamphlet, "To Workmen." He is constantly retouching his novel, "Kadji-Murad;" it was at first a short story; now, after a series of transformations, it is growing into a great romance. We have been informed that Tolstoy read passages from this work lately to some of his friends. When he came to the pages in which Kadji-Murad describes his childhood, those who heard him were so moved that they could not restrain their tears.

Together with "Kadji-Murad," Count Tolstoy is now writing his autobiography. This he had long refused to do, alleging in an interview which has been made public that he was not able to understand how a man could write his au-

tobiography. The reason he gave was that it was difficult for the autobiographer to be sincere; for, in spite of ourselves, we are prone to exaggerate our good qualities and our bad ones; sometimes even we attribute imaginary qualities to ourselves. Nay, he refused to furnish any biographical details to a young Russian writer, named Molotsov, still advancing the same reason. But he has been prevailed upon to recede from this determination by one of his devoted friends, Paul Birukov, who is himself writing the biography of the great author. When Birukov had finished the first part of the book he sent it to Tolstoy, who ran over it, and made a correction here and there. But, strongly influenced by what he read, Tolstoy set to work, and has written altogether close on five hundred pages. He has described at length his parents, the environment of his infancy, etc. Those who have seen the manuscript declare that it will be one of the masterpieces of the great author.

But, besides these different works, Tolstoy is now and then giving his attention to his romance, "Father Serge," which, as well as his drama, "The Corpse," is not yet finished.

As may be seen, the activity of the great writer is indefatigable, especially if we add to it his correspondence, which is considerable. This exhibits an extraordinary variety, and is of a singularly curious character. He receives letters from every point on the globe, and from persons of the most diametrically opposite social conditions, and it is impossible for him to answer them all.

The massacre at Kisheneff made a keen and painful impression upon him. He was very near falling ill when he read of the horrors committed by these bandits drunk with carnage. The rumor spread in Russia and in foreign countries that he had sent fifteen thousand rubles to the victims. But this rumor was unfounded. Tolstoy did not send this money, for the simple reason that he hadn't it; nevertheless, he has done a good deal, for he has promised an article for a collection which is now being prepared, and which will be sold for the benefit of Kishineff's victims. The mere fact that it contains an article by Tolstoy will increase the sale of this collection by some dozens of thousands of copies.

We have heard some interesting particulars in connection with Tolstoy's correspondence with the Czar. The letters which Tolstoy addresses to the Czar do not pass through the post office, they are placed directly in the Emperor's hands by certain friends of the Count, who are close to the throne, and especially by the general aide-de-camp, Obsonfief.

Furthermore, it is as well to note this circumstance: The Czar has never replied to Tolstoy's letters, and so vanishes the legend, according to which the Czar has tried to see him.

In the Apple Orchard

RUSKIN says that he is not sure but the loveliest thing which graces the world of to-day is a blossoming apple tree. Civilization has inherited from wild life nothing finer than the apple blossom; it has improved wild nature in nothing else more grandly than in creating our desert fruit from the thorn apple of the thicket. If there were no apples for table or for market the apple would still be counted the most glorious of ornamental trees. It has a homely spread to it, not reaching up and aloft as if it scorned or were thoughtless of humanity, but leaning over and hanging down its arms full of blossoms and fruit, where maid and child and mother can gather as they will. All those who have been born in the country will surely link their memories with happy thoughts of apple blossoms, and apple trees—how they climbed their sloping trunks in childhood, to sit near the robins, in the perches of the limbs. We could make even more extensive use of the apple tree than we are yet doing. It should be planted up and down our highways; for it is as grand for shade as it is for fruit. John Burroughs speaks of it as being a peculiarly "comfortable tree" in winter—it never has a far away look about it.

Our English fathers linked the apple with almost all of their festivals. We must believe that these apples were not like our Northern Spies, for in 1430 a historian tells us that they had a tree that bore fruit "as big as a man's thumb." In Devonshire, every Christmas night, the farm folk gathered to bless the apple tree; to drink a toast, and throw a part of it at the roots of the trees. singing:—

"Health to thee! good apple tree!
Will to bear pocketfuls, hatfuls,
Peckfuls, bushelbagfuls."

Similar customs seem to prevail all over Europe. In Bohemia, before sunrise on Good Friday, the peasants sing: "I pray, O green tree! that God may make thee good." An English writer says that at the Michaelmas the maidens of West England go up and down the hedges gathering crab apples, which they carry home, and with them write the initials of the names of preferred suitors. The initials which are found, on examination, to be most perfect on Michaelmas Day, are considered to stand for the strongest attachment and the best choice of husbands.

It is difficult to place the apple tree in American history. It is probable that the Indians had done considerable in the way of selecting better stock before white people reached the country. They certainly appreciated the improved varieties that came from Europe. General Sullivan found the Iroquois cultivating orchards through the center of New York State, some of which contained fourteen hundred trees. These were curiously grouped like forest trees, instead of standing in rows. It is hard to believe that exigencies of war compelled the entire destruction of these orchards; yet, with the exception of those owned by the Oneidas they were all cut down. The oldest orchard planted by New Englanders, west of New England, still has a few trees standing on the hillsides overlooking the Oriskany Valley in Central New York. These trees are now one hundred and twelve years old.

The value of the apple can hardly be overestimated. The enormous growth of the apple market in Europe and Asia is making this crop one of the three most important in America. Exports to the German and English market have increased twenty to thirty per cent. each year for some time past, while the China market, a more recent opening, promises to take in everything that can be grown on the Pacific slope, and a large surplus from the Mississippi Valley. An American apple sells in the Berlin market for more than an American orange. It has become absolutely necessary that the old slipshod ways of orchard culture should

be given up for the most scientific care of trees and fruits. Besides this the home consumption is enormously on the increase. Fruit is wisely entering into our diet much more largely to displace meats. One medical writer says:

"The more mellow apples one eats the better, provided they be taken at meal time. It is best of all to eat fruit before meals, and freely as you like."

This will prevent loading the system with a heavy weight of less digestible foods. Senator Vest says that if a man wishes to live long, and be able to keep up his work, he must eat not less than one apple with every noon lunch; we are not sure but he said half a dozen. The no-breakfast fad tells us that we must not only go without the morning meal, but that we must live much more largely upon fruit. Some of its disciples insist that the apple may be taken in the place of the ordinary breakfast. John Wesley once referred to apple dumplings as an illustration of the alarming advance of luxuries in England. Charles Lamb quotes a friend who says that "a man cannot have a pure mind who refuses apple dumpling," and Dr. Johnson speaks of a clergyman of his acquaintance who brought his family up almost altogether on this Anglo-Saxon combination. We have recollections of dumplings which might accord with the opinion of Lamb; and then we have recollections of other dumplings which might have been the origin of Calvinism. It must be borne in mind that the ideal apple is one that is fit to be eaten raw; yet the glorious old Spitzenburg is only fit for the cook—in whose hands it becomes the very perfection of pie apples. The nineteenth century went out with a marvelous evolution of new sorts of fruits of all kinds; but there was nothing in the list to exceed the delicious juices of the Northern Spy, the Macintosh Red, the Shannon, or the Stuart's Golden.

There is nothing in the world to exceed the beauty of the apple blossom; while the air is laden with an exquisite perfume that has charmed a hundred generations—has added to the poesy, the love and the comfort of Greek, of Roman and of Briton. But if there be anything more beautiful than the apple in blossom it is the same tree loaded down with

crimson and golden fruit. Then it is that the apple touches human nature, and wakens in the housekeeper the highest conceptions of the science and the fine art of dietetics. Let us work for the day when the dream of every American shall be that he may sit down under his own apple tree, as the Israelite longed for a Canaan where he could enjoy the shade of his own vine and fig tree. Country life is fortunately winning its way into the affections of all classes. The longing for fresh air and sweet odors and fresh fruit and a simpler life all go together. It is the apple tree that beckons the herded masses, packed in stifling and treeless homes, to assert their individuality in a larger life in harmony with nature.

War Cloud in the Far East

It is a threatening war cloud which appears in the Far East. A very important dispatch reports that Japan has taken retaliatory steps which may involve war with Russia. Japan has been well nigh ready for war ever since it became evident that Russia has no intention of keeping her promise to evacuate Manchuria. After the war with China Japan proposed to hold the Liao-tung Peninsula, in Southern Manchuria, just behind Korea. Then a concert of European Powers forbade her to take a foot of Chinese territory, and England consented to what was the demand of Russia and her followers, Germany and France. So Manchuria was saved against the time when Russia should be ready to gobble it. The time has come now, and, of course, Japan is very angry, and justly so. The evacuation of Manchuria was to begin this week, but there is no sign of it. Instead, we hear of 250,000 Russian soldiers at the eastern end of the Trans-Siberia Railway. But this is not all of Russia's offending. She is reported to have sent a detachment of soldiers into Korea, just across the Yalû River, to "protect" some timber cutters. It is clear what that means. Russian soldiers do not withdraw their flag, unless they must, when once advanced. Russia means to have Korea, and Japan just as stoutly means to have it herself. Hence the report that Japan has sent some regiments to Korea to maintain her equal or

superior rights. And we do not believe that Japan will yield. She will fight first, and the fight will not be unequal. Her treaty with England will prevent the French fleet from joining the Russian, and in fleet and army in the East Japan will not be inferior, while in fighting morale and in equipments, as well as in nearness to their base, the Japanese will have the advantage. What might happen in a ten-years' war we would not prophesy, but in a war of ten months Japan would not be defeated.

A Very Elijah

It was Elijah I who hewed in pieces four hundred and fifty prophets of Baal and four hundred prophets of the Asherah at the brook Kidron, and who consumed with fire from heaven two captains of fifty with their fifties who had been sent to arrest him. He was a hairy, leather-girt man and a terrible. Elijah II was a prophet of "spirit and power," he of the camel's hair raiment and the locust diet, who preached judgment and the fiery baptism to a generation of vipers, and of whom King Herod was afraid. In our day we have the honor of seeing and hearing Elijah III, who left Chicago and went out into the wilderness, whither the multitudes have followed his baptism and have built him a city, even Zion City. To be sure, he wears no sackcloth and eats no locusts, nor pork nor oysters; but the power of the two Elijahs rests on their successor. It was in Zion City that his wrath fell on his son. Only a few weeks before—we read it in his sermon of September 6th—Alexander John Gladstone Dowie had graduated with honor, at the age of about 23, from the law school of Chicago University. His father, Dr. John Alexander Dowie, which is Elijah, also the Restorer, was present to see him receive, with loud applause, the degree of *Juris Doctor*, Doctor of Law (not Doctor of Laws, as the papers have it). On the succeeding Sunday Elijah III mentioned the fact from his pulpit, thanked God that he had lived to see his son "complete his university education with so much honor," and exclaimed: "May God bless Doctor Alexander John Gladstone Dowie! Pray for the young man." And the people made a loud noise. There was the proud father, the

mere man Dowie. But the scene changes; behold the young Dr. Alexander John Gladstone Dowie among the prophets of Baal and the Asherah; and in the spirit and power of the first Elijah, Elijah III takes him down, metaphorically, to the brook Kidron. We fear that great congregation had done more cheering than praying; for a month had barely passed when the young doctor of law went to a ball game in Zion City. There was a misplay; a man threw the ball to the wrong base, and a run was tallied. It was very provoking, and Alexander John Gladstone Dowie, J.D., forgot that he was a deacon in Zion, and profanely blurted out, "Oh! the ———" but our pious types cannot repeat the forbidden participial adjective which the temporarily backslidden deacon of Zion and doctor of law then and there prefixed to the word "fool." It was not unheard. The rushes listened; the breezes bore it to Elijah III. He arose in his prophetic and paternal wrath; he went to and for his son; no fear of the public gaze and no fatherly tenderness restrained him. Before the people he administered suitable chastisement, and the young man, buffeted for his fault, took it patiently, which was perfectly proper, but, as St. Peter says, brings no glory. Oh! but glory coruscated about the aureole and the long white surplice and bathed the stinging palms of the retiring majesty which rules the saints in Zion.

**Archbishop Harty
on the Philippines**

We wonder that it does not occur to the ruck of Catholic newspapers of the mediocre sort—all but a few of superior intelligence and information—which are constantly and bitterly attacking our Government for its treatment of the Philippines, but chiefly of the friars, to wait for a cue from the chief men of their Church, who know more about the matters involved, such men as Archbishop Chappelle, or Ireland, or Martinelli, and who say the least. This week we publish some admirable statements by the new Archbishop of Manila which we commend to these aforesaid journals. They will notice that he speaks highly of the orders—that is, of the teaching and preaching orders—in this country, but he says nothing in praise of the Spanish

Dominicans and Franciscans and Recolletos, against whom the Filipinos are in rebellion. It is for the Lazarists and the Jesuits that he has a good word; but for the orders that have been in control there he has only to say that the policy which has kept under and discredited the native priests it will be his effort to reverse. Following the Spanish friars, every one of the Spanish bishops has resigned, and their place is taken by Americans, and Americans will be in charge of the seminaries for the training of the native priests. We remember the fearful bitterness of Archbishop Nozaleda's tirade against the Americans just before they captured Manila; now Archbishop Harty says:

"The distrust of American methods which was felt by priests and people in the Philippines three years ago has entirely disappeared. The Filipinos now welcome American teachers, and are trying to adapt themselves to our form of government. . . . There is reason to hope that they are advancing toward self-government."

"Advancing toward self-government!" Shades of the late Anti-Imperialists, Moorfield Storey and Erving Winslow, what does the Archbishop mean?

**Senator
Smoot**

Senator Smoot will not be refused admission to the United States Senate, and the Gentiles of Utah and the women of the country who are opposing his admission might as well give up their effort. That is not the way to down Mormonism. No one can prove him to be a polygamist. "The only Mrs. Smoot" was the way he introduced his wife the other day to a railway company of Congressmen and others who passed through the town where he lives. To say that he supports a system which supports polygamy is quite too indirect an argument against his admission, even if it can be proved. Of even less value is the argument that he supports a system which puts loyalty to the Church above loyalty to the nation. We all do that, or ought to. Even in the United States army the Cross flies above the Stars and Stripes. We can see no good reason for refusing to give Mr. Smoot the seat to which he was elected. Mormonism is bad enough, but it is to be overthrown by the same forces by which

other errors are overthrown, by education and public sentiment; in the same way that the evils of the Oneida Community were ended. There are only three hundred thousand Mormons in the whole country, not more than the population of a second class city. Those forces have already compelled the abandonment of public defense and practice of polygamy, and the rest will follow, when the foreign missionaries are no longer able to attract immigrants with the promise of 160 acres of Government land.

Presbyterian Union

The committees of the Northern Presbyterian and the Cumberland Presbyterian Churches met last week in St. Louis, and they made a fair start toward union. It was a "love-feast" from beginning to end, but yet they learned that a good object cannot be achieved all at once. It was agreed that the late revision of the Presbyterian Confession and the New Creed remove all doctrinal difficulties, altho the Cumberland Presbyterians will want assurance that adhesion to their own creed will not subject them to any charge of heresy. Really the main difficulty was with the everlastingly recurring negro question. Some of the Cumberland people have not been reconstructed since the war, and it will take some time to reconcile them. But the Northern Church has a committee on the relations of the negro to the Church and its presbyteries, and it will be thought necessary to wait and see what will be done. It may be observed that the chief organ of the Cumberland Church has been nominally favorable to union, but somehow the influence of the paper has been rather against it; but that is the way officialdom is apt to work. Proposals were presented on each side, discussed and amended, and finally an adjournment was had to next January, in anticipation of some further agreement by a joint committee.

Court-martials Again

Out of the Navy Department comes a feeble effort to excuse the action of Secretary Moody in the Wortman case,

and Rear-Admiral Evans's swashbuckling assault on the Nicholson court-martial, by vaguely asserting that naval tribunals are becoming too lax in failing to convict for "errors of judgment." People who do not err in judgment possess infallibility; and, while that quality may exist in the Navy Department and the Vatican, it is not generally supposed to prevail elsewhere. Meanwhile it has been pointed out that Admiral Evans's attack is illegal, since it is a public reprimand, which is a punishment to be inflicted only by sentence of court-martial; and besides unfair, because the members of the court are sworn not to divulge the proceedings and therefore cannot appeal to them in their own defense. These proceedings, in justice, should now be published. It is also reported that the protest against Admiral Evans's action lodged by Paymaster Biscoe, one of the members of the court selected for special reproof, has received an "unfavorable indorsement" from the Chief of the Bureau of Navigation. This also should be made public, so that it can be seen who actually made the indorsement, in order to protect Rear-Admiral Taylor from the inference that he has officially passed upon the doings of Rear-Admiral Evans, who is his brother-in-law.

We congratulate the Protestant Episcopal Diocese of New York in securing such a Coadjutor and probable successor to Bishop Potter as Dr. Greer. He is, as such a bishop should be, a Broad Churchman, the ecclesiastical translation of St. Paul's requirement of a bishop, that he be "no striker," for the words have no reference to labor strikes. It is of the very essence of Broad Churchmanship that it attacks neither wing, but fraternizes with both. Dr. Greer is an admirable executive as well as an excellent preacher, and we anticipate for him a distinguished administration.

So a most brutal lynching is to go unpunished in Delaware because a grand jury cannot, or will not, find evidence for indictments. Some Southern States are doing better.

Insurance

Causes of Fires in Chicago

IN a recent issue of THE INDEPENDENT a table of the causes of fire in London was published. In connection with this table a similar one, printed in the *Argus*, having to do with the causes of fires in Chicago, may well be studied. From the table in question it appears that 2,128 fires occurred in Chicago, from January 1st to July 16th. The causes are arranged alphabetically as follows:

Careless use of matches.....	236
Careless use of sulphur.....	3
Careless with candle.....	4
Christmas tree.....	2
Cigar stub	14
Defective flues.....	118
Electric wires.....	32
Explosion of chemicals.....	7
Explosion of dust.....	4
Explosion of gas.....	48
Explosion of gasoline.....	117
Fireworks	52
Gas jets.....	35
Hot ashes	25
Hot boxes.....	9
Ignition of boiling oils.....	13
Incendiary	14
Lightning	6
Mice and matches.....	6
Oil lamps	65
Oil stoves.....	21
Overheated furnaces.....	58
Overheated stoves.....	90
Plumber's furnaces.....	7
Salamander	1
Sparks from chimneys.....	149
Sparks from grates.....	18
Sparks from locomotives.....	16
Spontaneous combustion	115
Steam pipes	26
Supposed incendiary	51
Thawing water pipes.....	43
Unknown causes.....	723
Total	2128

Fires arising from candles are much less frequent in Chicago, it would seem, than they are in London. Two fires are noted as having occurred because of Christmas trees. These apparently are a little out of season. The hazard from defective flues is more than double in Chicago what it is in London. The careless use of matches in Chicago, compared with a similar cause in London, is nearly six times as great in the American city. Fires arising from unknown causes are much more frequent in this country than in England. Many other comparisons may be made which will be

interesting not only to insurance companies but also to insurers themselves.

EMBEZZLEMENTS and defalcations for the month of August, as tabulated in the current issue of the *Monthly Bulletin* of the Fidelity & Casualty Company, show a surprising increase in the total for the preceding month. Losses from a lack of fidelity during August are more than double what they were for July. There was a general increase in defalcations during the vacation month, banks, firms and municipal departments having been co-sufferers from this evil. The August items are given in the following table:

Banks	\$107,000
Building and Loan Associations.....	10,000
Benevolent societies, etc.....	92,317
Court trusts.....	
Federal and State.....	17,317
Firms	278,679
Insurance companies.....	52
Municipal	124,383
Transportation companies.....	7,055
Miscellaneous	83,552
Total.....	\$720,355

....Many of the insurance companies who are unable to accept applications from certain men failing to pass the medical examinations have provided forms known as the Sub-Standard or Adjustable policies. The working of the scheme may be understood from the following typical case: A \$5,000 policy is issued with the agreed stipulation that \$2,700 will be paid by the insuring company in case of death during the first year of the life of the policy. When death does not occur until the second year, the annual premium is added to the \$2,700 available under the adjustable policy. For every year the insured continues to live, an additional sum represented by the annual premium is added to the amount, until at the end of about the ninth year the policy becomes worth its face. The premium paid is, of course, always at the \$5,000 rate, or, in some cases something over. This will be interesting to many persons who have considered it impossible to procure life insurance because of disabilities developed by the stringent medical examinations.

The Lake Superior Company

IN the recent history of great corporate undertakings there has been seen no more extraordinary and complete collapse than that of the Consolidated Lake Superior Company. This concern, now in the hands of a receiver, is a holding company composed of about a dozen subsidiary manufacturing, railroad, lighting and power corporations, and is known to the public chiefly on account of the prominence of its steel plant on the Canadian side of the Sault Ste. Marie. It was formed two or three years ago with an authorized capital of \$117,000,000, and the par value of its securities (\$28,000,000 preferred and \$74,000,000 common stock) at last accounts was \$102,000,000. Upon the preferred a dividend of 7 per cent. was paid until December last. But, altho the par value was \$102,000,000, the stock was selling, before the appointment of a receiver, at prices (less than \$2 for the preferred and about 25 cents for the common) that made the market value of the entire capitalization less than \$800,000! The company had borrowed \$5,050,000 and was utterly unable to pay the debt. A receiver was appointed to prevent a foreclosure sale of its assets. A plan of reorganization is now under consideration. The market value of the company's shares a year and a half ago, at current quotations, was \$50,000,000.

We shall not narrate the melancholy history of this corporate project, but merely desire to comment briefly upon the influence of its directors. In Philadelphia the losses caused by this failure have been very heavy. An elderly man, whose small competence has been swept away by this collapse, writes to a Philadelphia newspaper that he was led to regard the undertaking as in some way associated with, or having the support of, the Pennsylvania Railroad Company, because "two of the Directors were Vice-Presidents of the Pennsylvania, and all of them were either large stockholders of the Pennsylvania or so associated as commonly to be spoken of as Pennsylvania Railroad men." It was this belief in a connection between the two companies, he says, "that led us all to our ruin."

We suppose that in this instance, as in other cases, the Directors did not direct.

But men who cannot attend to the duties of an office charged with the control of a large industrial corporation, in the securities of which thousands of people have invested their money, should not consent to hold the office. There have been instances of the management of one institution so successful that the responsible officer has received a great bonus from his delighted stockholders, while thousands suffered by reason of what was regarded as the mismanagement of another corporation of which he was one of the few Directors, altho probably he did not in fact direct. Nothing but a definite fixing of responsibility by law upon Directors will prevent the holding of Directors' offices by men who do not or cannot perform the duties of those offices, altho the influence of their names and associations attracts investors to their ruin. Such responsibility does not appear to be fixed by the corporation law of Connecticut, under which this Lake Superior Company was chartered; and now the strict laws of Massachusetts have been superseded by a new statute which, as we understand the criticism of the Massachusetts press, is characterized by deplorable laxity in this respect.

THE Falls of Hobabani in Cuba are to be the source of power for use in lighting Cienfuegos and operating 43 miles of electric railway in and near that city.

....Capitalists from this country are to construct and operate an extensive trolley system in the city of Mexico. Their concessions permit the building of about 100 miles of road in the city and its suburbs.

....Sir Charles Metcalfe, the well known railroad builder in South Africa, is coming to this country to examine the electrical power works at Niagara Falls, and thus to obtain information to be used in similar works at the Victoria Falls on the Zambesi River in South Africa.

....Dividends and coupons announced:

Atch., Top. & Santa Fe R'way (Stamped Adjustment No. 7), 4 per cent., payable November 2d.

Atch., Top. & Santa Fe R'way (Stamped Adjustment No. 14), 2 per cent., payable November 2d.

No 2863

Survey of the World

Politics and
Washington Topics

Owing to the continued disagreement of the two Senators from Delaware, with respect to a candidate for the office of United States District Attorney, the President has appointed John P. Nields, whom the Federal Court had appointed to perform the duties of the place temporarily. It happens that Mr. Nields was the candidate recommended by Senator Ball and has been an opponent of Mr. Addicks, but it is said that the appointment should not be regarded as indicating the President's preference for the Anti-Addicks Republicans. The following explanation was made at the White House:

"The two United States Senators disagreed as to whom they would recommend for the vacancy. The President went over the indorsements of all the candidates who have been recommended for the place. In such a case he feels that the opinion of the judiciary and the bar should have peculiar weight. He finds that the Federal and State judges and an overwhelming majority of the members of the bar, without regard to party or faction, favor the appointment of Mr. Nields, and the President is entirely satisfied as to his personal and professional fitness."

The appointment of Mr. Nields was desired by the judiciary and the bar at the time when William M. Byrne was restored to the place which he had given up in order that he might be a candidate for Congress in the interest of Mr. Addicks.—In Rhode Island, the Republicans have nominated for Governor Col. Samuel P. Colt, upon a platform in which the party "declares against bribery and corruption," but "finds no words of criticism too severe to apply to the Chief Executive [Governor Garvin, Democrat],

who has preached and written throughout his executive career concerning the debauchment of Rhode Island voters, thereby impeaching his own party and defaming the fair name of the State, which he has taken the oath of honor to defend." Concerning Trusts the platform says:

"The party is opposed to the immense Trusts of the country, so far as they inflate values beyond their normal condition, destroy competition and build up barons of wealth on the earnings of the common people; and it commends the courage of President Roosevelt and his advisers in bringing the operations of great Trusts into publicity and their illegal proceedings to the bar of justice."

Some who criticise the platform point to the fact that Colonel Colt, the nominee for Governor, is President of the combination known as the Rubber Trust, Vice-President of the similar combination known as the Woolen Trust, and Vice-President of the extensive system of street railways of which Senator Aldrich is President, and as to which Governor Garvin asserts that it has been the beneficiary, in very liberal franchises, of those practices at the polls which he condemns and attacks.—At the recent election in the city of Waterbury, Conn., public disapproval of the attitude of the labor unions and of the conduct of the municipal authorities during the street railroad strike of last spring was expressed by a political revolution and the election, by a large majority, of the Republican candidate for Mayor, John P. Elton, secretary and treasurer of one of the largest manufacturing corporations in the place. It will be remembered that the strike was accompanied by much violence, that a policeman on guard in a car

was murdered by a party of masked men, and that the assassins were not brought to justice. Before the recent election, the labor unions obtained control of the Democratic organization and nominated James M. Lynch for Mayor. Many Democrats voted for Elton.—Before beginning a series of political speeches in Ohio and neighboring States Secretary Shaw wrote to the President for his consent and approval, speaking of the candidacy of Mr. Hanna for re-election to the Senate. Replying, Mr. Roosevelt wrote that he was glad the Secretary was going to Ohio, and also said:

“The return of Mr. Hanna to the Senate and the triumph of the principles for which he stands in the present contest are things that concern not merely Ohio but our country as a whole; and I congratulate you upon having a chance to do your share to secure not merely the triumph, but the decisive and overwhelming triumph, of Senator Hanna and the cause which he represents.”

In his speeches, Mr. Shaw has been defending the present tariff. Senator Allison is making the tariff the chief subject of his addresses in Iowa, arguing that revision of the Dingley duties should not be made until after the Presidential election; that reciprocity by means of maximum and minimum rates is worth trying; that it is impracticable, and would be unjust to independent competitors, to restrain Trust combinations by repeal or reduction of their tariff duties, and that the tariff does not promote such combinations “in any material degree.”—Prosecutor Folk, of St. Louis, was recently the guest of Mr. Roosevelt at the White House. He asks that bribery be included as an extraditable offense in all new treaties of extradition; that it be added by supplemental agreements to the existing treaties with Great Britain and France, and that Mexico be requested to surrender two fugitive corruptionists who fled to that country from Missouri. Mr. Folk desires also the surrender of other fugitives now in Canada. It is understood that the President will assist him by recommending the changes which he suggests. — Adverse criticism of the President's attitude toward the negro, published in a prominent review by Henderson M. Somerville, chairman of the Board of General Appraisers, has not

commended him to the favor of the Administration. Reports that he will be asked to resign appear to have no foundation in fact.—A crazy man, named Peter Elliott, formerly of Minneapolis, was arrested on the 5th while attempting to reach the President at the White House. He drew a revolver and was subdued by the police only after a desperate struggle, in which both Elliott and his captors were injured. Another demented man—John Decker, of Norwich, Conn.—sought an interview with the President two days later, and was arrested. Since the President's return from Oyster Bay five lunatics (these two included) have been arrested while seeking interviews with him. All have been pronounced insane and are confined in the asylum at Washington.

A Destructive Rain Storm Along the North Atlantic Coast, and especially in the City of New York and surrounding district, there was a great downpour of rain on Thursday and Friday last. In New York all records were broken by a fall of 10.4 inches between 3 a. m. on the 8th and 4 p. m. on the 9th. A sub-tropical storm generated between the West Indies and Bermuda, and moving northward, encountered another storm, or the collected material for one, that was moving from the Northwestern States to the sea. The center of the resulting disturbance appeared to be a district including the city and Northern New Jersey. The sudden rising of streams and flooding of lowlands caused great loss of property, and several persons were drowned by the destruction of bridges. In New York thousands of cellars were flooded and much injury was done in the parks and cemeteries. The Passaic River at Newark was 3 feet above its record for 40 years. Paterson and Passaic, situated on this river, suffered great loss, estimated at about \$2,000,000 for each city. In Paterson two wards were under water for three days, thousands were driven from their homes, and nine bridges were carried away. Owing to the breaking of a dam, fifty houses in a village near Passaic were wrecked. At Schenestady, the Mohawk rose 21 feet above its normal level, closing the

works of the General Electric and American Locomotive Companies, which employ 18,000 persons. Railroad service westward from New York was interrupted. The Pennsylvania Company's trains crossed the river at Trenton until they were stopped by the rising flood, which at one time stood six feet above the tracks. One bridge after another along the Delaware was pronounced unsafe, and at last the Lehigh road's bridge at Easton was the only one by which trains could pass from New York to Philadelphia. Then this was bent by the shock and pressure of the floating timbers of wrecked bridges, and for a time there could be no through traffic. Heavy freight trains were placed on several bridges to hold them down, but in one or two instances bridge and train were swept away together. There was more rain at the end of the week, but on Sunday the swollen streams began to fall.

More Postal Fraud Indictments

The investigation of the postal service frauds yielded seventeen additional indictments last week. Six of the men thus accused are now indicted for the first time. They are James N. Tyner, of Indiana, who was dismissed in April last from the office of Assistant Attorney-General for the Department; Harrison J. Barrett, his nephew, formerly his assistant, and afterward counsel appearing before him in behalf of persons accused of fraud; James T. Metcalf, who was removed some months ago from the office of Superintendent of the Money Order Division, for attempting to divert a contract for money order blanks; Norman R. Metcalf, his son, employed as a clerk by the bidding company for which the father exerted his influence; Harry C. Hallenbeck, president of the corporation in question, the Wynkoop-Hallenbeck-Crawford Company, of New York; and William D. Doremus, accused of paying bribes for the purchase of stamp-canceling machines. There were also indictments against State Senator George E. Green, of New York; George W. Beavers, and August W. Machen (all hertofore indicted), for corrupt acts in connection with the

purchase of canceling machines and badges for rural mail carriers. At Cincinnati, Daniel V. Miller (formerly one of Tyner's assistants) and Joseph Johns, a lawyer, of Rockville, Md., were indicted for extorting from John J. Ryan, the head of a "turf investment" concern, \$4,500 for a favorable decision of the Department as to his use of the mails. Such cases came before Tyner for a final opinion. It is charged that Barrett, while he was in the Department, conspired with Tyner to obtain money from the bond investment or "get-rich-quick" companies by controlling the decisions relating to their use of the mails, and that the conspiracy continued after Barrett had left the Department and was urging these companies to employ him as counsel. The five indictments against Hallenbeck and the two Metcalfs assert that they conspired to defraud the Government by various irregularities in connection with the Hallenbeck Company's contract for money order blanks, and that the son received a commission which was equivalent to a bribe. The company lost this contract some months ago, when it was awarded to Paul Herman, against the strenuous objection of the elder Metcalf. These will probably be the last of the postal indictments. The entire list calls for the trial of thirty persons.—The resignation of Henry A. Castle, Auditor of the Department, has been accepted. Mr. Castle says he desired to go in April last, but remained on account of the investigation. His approval of certain accounts was criticised in the charges of Mr. Tulloch, which were recently examined by Mr. Bonaparte and Mr. Conrad, the Government's counsel. George A. C. Christiancy, formerly one of Tyner's assistants, but not accused of dishonest acts, has been allowed to resign. It is held that he erred in permitting Mrs. Tyner to rifle the safe in her husband's office room. Several employees guilty of minor offenses have been removed, and others are to follow.

The Campaign in New York

In New York's municipal campaign the tickets have been completed and the orators are at work. The names of Mr. Grout and Mr.

Fornes (Comptroller and President of the Board of Aldermen in the present government), who accepted nominations from Tammany, have been removed from the Fusion ticket, and in their places have been nominated Frederic W. Hinrichs and Edward J. McGuire. Both are Gold Democrats, and Mr. Hinrichs was a candidate for Lieutenant-Governor on the Palmer and Buckner ticket. Messrs. Grout and Fornes have become fully affiliated with Tammany. Neither of them has yet asked the courts to compel a restoration of his name to the ticket of the Fusionists. While Mr. Grout was formally accepting the Tammany nomination he was asked by persons in the audience whether he would vote for Mr. McClellan, the Tammany nominee for Mayor, who was standing by his side. In reply he said that three weeks ago he would have voted for Mayor Low, but he had now decided to vote for McClellan, because Mayor Low had become a partisan Republican, and the Citizens' Union had passed under the control of the Republican party. It is quite plain that this question of partisanship is to be made prominent in the campaign, if possible, by Tammany. Mr. McClellan in an address accepting his nomination asserted that partisanship could not be divorced from the government of a municipality, that the present government had drifted into the control of the Republican party, and that it had become "the absolute chattel of the Republican machine." Mayor Low's letter of acceptance is a long review of the achievements of the reform administration, which are compared with the record made under his Tammany predecessor, Mayor Van Wyck.

Our Islands in the Pacific

The Collector of Customs at Manila has unearthed a conspiracy to procure the admission of Chinese coolies by means of forged or otherwise fraudulent certificates, many of which, it is said, have been issued and used. As a result of this discovery, John T. Miller, formerly an inspector of immigrants, has been arrested, and there has been issued a warrant for the arrest of Inspector W.

D. Ballantyne, who is now in China. Collector Shuster has obtained the written contract providing for a distribution of the profits of these frauds. Among the beneficiaries named in it are Carl Johnson, Acting Consul of the United States at Amoy, his secretary and his interpreter. It is stated that the Collector has evidence implicating several other Consuls.—Two officers of the constabulary stationed at Misamis (Mindanao), Capt. George Hermann and Lieut. C. F. Johnson, stole \$6,000 of public funds, last week, seized the small steamer "Victoria," and set out upon a piratical career. Being short of coal, they forcibly detained a steamer engaged in the island trade, took from her what they needed, and started for Borneo. The Governor of British Borneo, having been informed by cable of their departure from Mindanao, sent a coast guard boat in search of them. Several small American gun boats joined in the pursuit. The "Victoria" returned to Mindanao on the 10th. It appears that the crew had intentionally run her aground off the coast of Negros, and had so deceived the pirate commanders as to her condition that they went ashore and sought refuge in the mountains of that island. Hermann was formerly a non-commissioned officer of the Ninth Infantry. He enlisted at Philadelphia; and Johnson, formerly in the Eleventh Infantry, entered the service at the same place, being a resident of Moosic, Pa.—The Legislative Council of the Moro Province has passed a law prohibiting slave hunting and providing for the confiscation of any vessel engaged in the slave trade.—Julian Ramos, leader of the ladrones in Cavité Province, has surrendered. Several ladrones have recently been sentenced to life imprisonment.—On the 9th inst., 98 Filipino students, whose expenses will be paid by the Government, sailed for the States. They will pass the winter in the schools of Southern California, will then visit the St. Louis Exposition, and will afterward be placed in our colleges.—Official returns for the last fiscal year show an increase of \$8,862,000 in exports from the islands, with very little change in imports. This growth was in shipments of hemp and copra. The balance of trade is now (by \$530,000) in favor of the islands, the

value of the exports having been a little less than \$34,000,000. By the Commission the increase of nearly \$9,000,000 is regarded as most encouraging, inasmuch as it was made in a year when agricultural industry was restrained by cholera, rinderpest and famine.

✱

The Duke of Devonshire It is commonly supposed that one of Mr. Chamberlain's reasons for resigning from the Cabinet was that unless he did so the Duke of Devonshire would certainly desert the Ministry and take with him a considerable number of electors who regard him as the personification of prudence. There was no little surprise and consternation in the Liberal Unionist party, October 6th, when the Duke gave up his office of Lord President of the Council and his leadership of the party in the House of Lords. His letter to the Premier is, in part, as follows:

"MY DEAR BALFOUR:

"I have since we last met felt increasing doubt whether I had been well advised in consenting to separate myself from those of our colleagues whose resignations were tendered and accepted last month, but until some new development in the situation should have taken place I have not thought it necessary to trouble you with these doubts. The speech, however, which you delivered last night made it necessary for me to finally and definitely decide whether I am so far in agreement with yourself on the question of fiscal policy as to make it possible for me with satisfaction to myself or advantage to the community to remain a member of your Government. . . . I was prepared by our discussion for your statement that you desired to obtain the sanction of the constituencies for a reversal of the doctrine that taxation should never be imposed, except for purposes of revenue, and this is no doubt the principal and most definite statement in your speech. But you may remember that I told you I thought it would be very difficult to make this statement the foundation of a great announcement of policy, inasmuch as I was not aware of any law or constitutional principle in which this doctrine was embodied. I admit that you have succeeded in making this declaration the basis of a great political announcement, but in my opinion that announcement has been extended very far beyond the necessities of the case. . . . I had hoped to have found in your speech a definite statement of adherence to the principles of free trade as the

ordinary basis of our fiscal and commercial system and an equally definite repudiation of the principle of protection in the interest of our national industries. But in their absence I cannot help thinking that such declarations as those which I have quoted cannot fail to have the effect of materially encouraging the advocates of direct protection in the controversy which has been raised throughout the country and of discouraging those who, like me, and I hoped yourself, believe that our present system of free imports, and especially of food imports, is on the whole most advantageous to the country, although we do not contend that the principles on which it rests possess any such authority or sanctity as to forbid any departure from it—for sufficient reasons. . . .

"You have in your second speech said that this subject could no longer be left an open question among the members of the Government, and I think I have said enough to prove to you that there is no such agreement between us on the general question as to make it possible for me to be a satisfactory exponent of your views or those of the Government in the debates which much inevitably take place in the next session of Parliament.

"I cannot adequately express the deep regret which I feel in separating myself from a Government with which I believe myself to be in sympathy on all other matters of public policy, or the anxiety with which I anticipate the wide division which I fear must result from the unexpected scope and strength of your declarations of yesterday in the ranks of the Unionist party, but, holding the opinions which I have endeavored to express, no other course is open to me but to ask you to place my resignation in the hands of His Majesty.

"I am, yours sincerely,

DEVONSHIRE."

✱

Mr. Balfour's Letter

Mr. Balfour's reply to this dignified letter has undoubtedly done a great deal to weaken his position in England. It is commonly criticised as petulant and unmanly in tone and unjustified in substance.

"MY DEAR DUKE:

"I received this afternoon two telegrams forwarded in quick succession by my private secretary in London, the first from you, asking how soon your resignation might be announced, and the second giving a full summary of the reasons which moved you to resign. I am not sure which of these unexpected communications surprised me most. On the whole, perhaps, it was the second. The first, however, was sufficiently strange.

"Do you remember the circumstances? It

was on September 16th that you informed me of your resolve to remain in the Government. This decision was preceded by much confidential correspondence, much intimate conversation. There was no phase of policy which I was not prepared to discuss, and which I did not, in fact, discuss with perfect frankness. Men and measures alike were surveyed from every point of view bearing on the present course and future fortunes of the party. The decision arrived at after these preliminaries I had a right to consider final, and final I certainly considered it. . . . The principal occasion for this singular transformation was, you tell me, my Sheffield speech. This is strange, indeed. In intention, at least, there was no doctrine contained in that speech which was not contained in my note on insular free trade and in my published letter to Mr. Chamberlain.

"The first of these documents you had in your possession before the generality of the Cabinet. The second you saw the manuscript of before it appeared in the newspapers. . . .

"But, after all, what and where is this discrepancy which has forced you in so unexpected a fashion to reverse a considered policy? I do not believe that it exists, and if any other man than yourself had expended so much inquisitorial subtlety in detecting imaginary heresies, I should have surmised that he was more anxious to pick a quarrel than particular as to the sufficiency of its occasion. To you, fortunately, no such suspicion can attach. Yet am I unreasonable in thinking that your resignation gives me some just occasion of complaint, and perhaps some special occasion of regret to yourself? . . . To resign now and to resign on the speech is to take the course most calculated to make harder the hard task of the peacemaker.

"Again, do you not feel some special regret at having at this particular juncture to sever your connection with the Unionist administration? Doubtless there is no imaginable occasion on which you could have left one without inflicting on it a serious loss. At the moment of its most buoyant prosperity your absence from its councils would have been sensibly felt, but you have, in fact, left it when, in the opinion of our opponents, its fortunes are at the lowest and its perplexities at the greatest. Maybe, however, you are spared this aggravation of the inevitable pain of separation by holding, as I hold, that our opponents are in this mistaken. I firmly believe they are. I see no difficulty in carrying out the policy which for a fortnight you were willing to accept by the aid of an administration which for a fortnight you helped me to construct.

"On this point I feel no disquiet. I cannot pretend to view with light equanimity the loss of a colleague whose services to the Unionist

party no change and chance of political fortune can tempt any Unionist to forget.

"Yours sincerely,

A. J. BALFOUR."

The British Cabinet

The vacancies in the Cabinet have at length been filled up, and the Government is ready to go on with its work. The Right Hon. W. St. John Brodrick, Secretary of State for War, succeeds Lord George Hamilton as Secretary of State for India. The Right Hon. J. Austen Chamberlain, Postmaster-General, succeeds the Right Hon. C. T. Ritchie as Chancellor of the Exchequer. The Hon. Alfred Lyttelton, Recorder of Oxford, succeeds the Right Hon. Joseph Chamberlain as Secretary of State for the Colonies. H. O. Arnold-Forster, Parliamentary Secretary to the Admiralty, succeeds Mr. Brodrick as Secretary for War. The Right Hon. Andrew Graham Murray, Lord Advocate of Scotland, succeeds Lord Balfour of Burleigh as Secretary for Scotland. Lord Stanley, Financial Secretary to the War Office, succeeds Austen Chamberlain as Postmaster-General. Victor Cavendish, nephew and heir of the Duke of Devonshire, has been appointed Financial Secretary to the Treasury. Earl Percy, Under Secretary for India, eldest son of the Duke of Northumberland, has been appointed Under Secretary for Foreign Affairs. Of these new Ministers all belong to what may be called regular governmental material with the exception of Mr. Lyttelton, who now takes Mr. Chamberlain's place. Mr. Lyttelton is described as being one of eight brothers whose average height is six feet and whose mental endowments are said to be as exalted as their physical. He is a barrister of high standing and has stood for Leamington, Warwick, for eight years.—Meanwhile, Mr. Chamberlain as a free lance is waging a vigorous campaign for his protective policy. On October 6th he addressed a large audience at Glasgow and was received with great enthusiasm. Among other things he again emphasized his loyalty to Mr. Balfour and spoke bitterly of those who could not understand the meaning of disinterested friendship. He said he had recently been to Venice, where he saw the ancient Campanile ly-

ing a mass of ruins. He would not say that he anticipated such a fate for the British Empire, but he did see "signs of decay, cracks and crevices, showing that the foundations are not broad and deep enough to sustain it." Of this country he said:

"America is the strictest of the protective nations. It has a Tariff which to me is an abomination, it is so immoderate, unreasonable and unnecessary, and altho America has profited enormously, I think it has been carried to excessive lengths, and I believe that a great number of intelligent Americans would gladly negotiate with us for its reduction."

Again, at Greenock, he laid his arguments before a large assembly, warning them that within two or three years America would have dumped 10,000,000 tons of iron in England, and so thrown the British workmen out of employment.

A Treaty of Arbitration

The news has come to this country that an arbitration treaty is about to be signed between England and France, which will be the first convention of this nature between any of the great countries of the world. The *Matin* of Paris declares with emphasis that the news sent to this country is correct, and proceeds to give some details of the coming treaty. England and France, it says, will submit to arbitration the greater part of the differences arising between them, whether commercial or political. The manner in which these differences shall be submitted has been arranged by the diplomats of the two countries. Such a question as the English occupation of Egypt, however, is not subject to the new convention. The negotiations have been conducted for the most part by M. Cambon, the French Ambassador at London, and Lord Lansdowne, the British Foreign Secretary. King Edward has been kept in touch with the proceedings from the first, and has had considerable influence in the matter. It is also believed that England, France and Italy have come to an agreement over the difficulties in Morocco, and there are even rumors that some time in the future France will be permitted to join the Moorish Kingdom to her province of Algiers. The recent loan of 20,000,000 francs negotiated in Paris makes

France the largest creditor of the Sultan of Morocco. As soon as the Moorish Pretender to the throne is removed the present rebellion will come to an end, and France will then make of Morocco what may be called a protectorate.

The Balkans

At the present moment the outlook is somewhat more promising in the Balkans. M. Lockroy, ex-French Minister of Marine, had an audience recently with the Sultan, in which the unspeakable Turk professed the strongest desire for peace. He would not make war unless forced into it. Of course, excesses had been committed by his soldiers, but such things could not be avoided. When Spain conquered the Moslems she did not allow one to remain in the country. The Sublime Porte's humanity is not above suspicion, but the report also comes that the Macedonian insurgents are preparing to suspend the insurrection until next spring in order to see whether Turkey will apply the promised reforms. The Bulgarian Premier, moreover, has made proposals to the Ottoman Commission to the effect that the troops on both sides of the frontier be withdrawn a certain distance, to be agreed on by the two Governments.—From Belgrade it is learned that the Premier has succeeded in filling a vacancy in the Servian Cabinet over which there has been much heart-burning. M. Andrejevitch, who has been appointed War Minister, was not an active member of the military conspiracy which murdered the former king, but he is believed to be in sympathy with the act. King Peter continues to keep about him the officers who were associated in one way or another with that brutal assassination, and unless the Ministry can persuade him to get rid of them, his Government will be anything but stable. A military court on appeal has confirmed most of the sentences imposed September 29th on the officers guilty of the murder. Their sentences range from imprisonment of a few months to that of two years. The Premier, of the new Cabinet, General Gruitch, is a moderate Radical, as is also Andra Nikolitch, the Foreign Minister. King Peter opens Parliament on Wednesday.

Russia and Japan Last Thursday, October 8th, was the time appointed by Russia for the partial evacuation of Manchuria, but this evacuation she was careful to condition on the fulfilment by China of certain demands to which, as every one knew, China could not accede without disregarding the claims of other countries. As a matter of fact, there was not the slightest pretense of evacuating New-Chwang on the appointed day. The assistants of M. Grosse, the Civil Administrator, admitted fully that their tenure of the city was to be permanent, and, as if to affront openly the other Powers, the troops of the Russian garrison paraded the principal streets of the foreign and Chinese settlements, with banners flying and bands playing. Since then there has been news of diplomatic negotiations and the marching of armies and sailing of fleets; but mostly of an indefinite nature and uncertain authenticity. The negotiations between Russia and Japan are now being conducted at Tokyo under Baron de Rosen, the Russian Minister, and the Japanese Government, but naturally nothing is known of what is transacted. As late as Monday, October 12th, the Japanese Minister to London, Baron Hayashi, declared that nothing had occurred which made war probable. Nevertheless, Japan has embarked three divisions of troops for Korea, and her fleet, when last reported, was between Chemulpo and Fusan. The vessels are under steam and prepared for immediate movement. Russia, on the other hand, has fortified Yongam-Pho, on the Korean bank of the Yalu, and several brigades have been moved to the Korean boundary. A fleet of ninety war ships of all classes has gone from Port Arthur to Masan-Pho, where the Japanese fleet had already arrived. This last announcement, however, must be, from the known strength of the Russian squadron in Far Eastern waters, somewhat misleading. The feeling in Japan may be gathered from the fact that a petition signed by 40,000 members of the Anti-Russian Union, protesting against the action of Russia in Manchuria and Korea, has been presented to the Pre-

mier. The *Jiji* of Tokyo declares that "the patience of the people has reached the extreme limit," and the other prominent papers speak in the same tone.

✱

The German Universities

According to the new *Universitätskalender* the total number of regular or matriculated students in all the twenty-two universities of Germany during the semester just closed was 37,813, as compared with 36,652 of the preceding half year. In point of attendance three universities, that of Berlin, with 5,781; Munich, with 4,692, and Leipzig, with 3,605, easily occupy a front rank by themselves. Bonn alone, with 2,491 students, has an attendance of more than two and less than three thousand. At all the other schools, with four exceptions, the contingent is between one and two thousand. Those with less than the former figures are Greifswald, Erlangen, Jena and Rostock, the last mentioned with an enrollment of 520 being the smallest numerically. According to faculties these students are divided as follows: In the law department, 11,352; in the philological and historical, 6,983; in the medical, 6,204; in the mathematical and natural science, 5,849; in Protestant theology, 2,207; in Catholic theology, 1,580; in the pharmaceutical, 1,103; the rest being in the other departments, such as veterinary surgery, forestry, dentistry, etc. Germany is still the chief school and teacher of the world, the foreign contingent at the universities being 2,731, or 7.2 per cent. This proportion is comparatively fixed, as it was 6.8 per cent. ten years ago. Berlin, Leipzig and Heidelberg are the favorites of the foreigners, the first reporting 876 non-Germans, the second 406, and the third 197. The foreign contingent is distributed as follows: Russia leads with 860 students; then comes Austro-Hungary with 536; America, with 276; Switzerland, with 253; England, with 149; Asia, with 133—nearly all from Japan; Bulgaria, with 67; Rumania, with 63; Greece, with 56; Italy, the Netherlands and Servia, each with 45; Turkey, with 36; Sweden and Norway, with 32; Luxemburg, with 27. The total European contingent is 2,299; the non-European is 432.

The Vintage

BY ELIZABETH STUART PHELPS

Across the seas, within the lands where faith
And legend clasp their hands, there is, we
read,

A little church, beloved and visited
By pilgrims for the romance that it wears
Still sacredly, as romance may be worn
When it is wedded to a holy thing.
For, it befell, the building of the church
Chanced on a year of drought so dead and
dread,

That all the country famished for a draught
Of God's best common mercy, valued not,
Like other common mercies, till withheld.
"There was not water enough to drown a
fly."

So said the people's epigram, and, truth,
There was none for the cooling of the sick,
Or laving of the dead, or christening
The new-born infant wailing at the font;
Scant mercy for the cattle in the field—
And dole it to the dog you thought you loved!
Each drop, a precious pearl, a jewel hid,
Was cherished for parched, avid human
lips,

And dedicate to saving human life.
Thus, when the builder of the little church
Came to the setting of the sacred walls,
"To mix the mortar wherewithal," he said,
"Have I? Behold in all the land who gives?
There is not gold enough within the town
To buy a cask of water for the Lord."

Then spoke the aged priest; a quiet one,
Who listened much, but little said, more
loved

Than understood, but honored as a man
Who served his God, and did forget himself.
"God's gifts," he said, "are always manifest
As His denials. Never does he smite
But that he heals, nor e'er refuse, but grants
He still. The water famine scalds our throats.
But the red grape hangs heavy on the vine.
When knew we such a vintage? Look abroad!
The vineyards hide beneath their purple cloaks
Like wounded Kings. Their royal blood's
awaste.

The presses will refuse the yielded fruit
That cumbers, loth and splendid, all the
ground.

God hath denied us water. Give Him wine."

So, it is said that thus the church was built,
In teeth of water-famine and despair.
And strange and precious mortar mixed with
wine

The workman laid upon the rising stone.
Gone are the hands that built unto the Lord.
Gone is the silent priest who ministered.
But firm and fair the church of God remains,
That drank the glowing wine into her walls.
Unto this day, 'tis said, at vintage time
A perfume subtle as the wild grape's heart
Steals from the wine-mixed mortar through
the nave,

At vespers greets the wondering worshiper
Who has the finer senses, and the soul
To recognize the mystic things that are
Revealed not to the many, but the few.

Son of the saints! Who gently servest God,
And dost forget thyself! Let one who treads
Where stranger feet must pause, be not forbid
To-night to say:—Of mortar mixed with wine.
The walls of all thy spotless life are built:—
The wine of high and holy heritage,
The wine of fair and lowly ministry.
A manhood fine as flowers of the vine,
A priesthood loved and honored of the Church,
—These need no song from me. But, grape
by grape,

I gather memories of thy silentness,
And self-forgetting, tenderness, and truth,
And add them slowly to the blood-red press
Which, crushing out the precious wine of
souls,

So builds a man into the walls of God.
In years to come, I say, at vintage time
A perfume subtle as the wild grape's breath
Shall steal upon the loving worshiper
Who has the nobler senses, and the soul
To recognize the finer things that are
Revealed not to the many, but the few.

NEWTON CENTER, MASS.

The Wireless Daily Achieved

BY C. E. HOWELL

[Mr. Howell is the operator at the wireless receiving station at Avalon, Catalina Island, Cal., where the daily newspaper, *The Wireless*, is published. Of all connected with this latest and most significant development in journalism as well as electricity, Mr. Howell is probably best qualified to speak.—EDITOR.]

COMMERCIAL wireless telegraphy is a settled fact under certain conditions. Under the same conditions the transmission of news for publication is equally an accomplished fact.

Every morning, at a little station on the edge of the Pacific, sparks of electricity leap between the spark balls above an induction coil, and, at the same instant, make themselves heard to the receiving operator nearly thirty miles at sea, on Catalina Island. An hour later

the newsboys are crying, "Mornin' *Wireless*, all the news of the day, on'y a nickel."

The Wireless has been issued at Avalon, Catalina Island, Cal., for several months. Every issue has carried a résumé of the world's news, varying from 700 to 950 words, in addition to the news of the resort. This world budget has been transmitted by wireless telegraphy without intermission or lapse and without a single error. The wider application of the system to general news

transmission appears to be primarily a matter of apparatus and minor details. The one broad fact has been amply demonstrated; as for the rest, it is merely a work of extension, amplification and perfection.

The mainland station of the Pacific Wireless Telegraph Company is located at San Pedro, where it occupies joint quarters with the Western Union. This station was first placed at White's Point, two miles from the Western Union office, to secure the elevation thought necessary; but the service has in no way suffered by removing it to tide level, in the town. The second station is on the hillside, high above the little town of Avalon, on Catalina Island, twenty-nine miles out in the ocean. These stations were established experimentally eighteen months ago, and were thrown open for the transmission of messages in August, 1902. Originally operating under con-

Joint Western Union and Wireless Station on the Ocean Front at Avalon

cessions from a parent company, the Pacific Wireless Telegraph Company attempted to install the system owned by the parent company. But their experiments demonstrated that climatic or other conditions prevented them from working it out on a successful commercial basis; the coherer system was abandoned and a line of independent experiments was instituted. The plant, as it stands today, is the outcome of these experiments and a

C. E. Howell, Wireless Operator at Avalon, Cal.

monument to the ability of G. T. Swenson, the head electrician. In place of the coherer we use an original wave detector, an instrument $1\frac{1}{2}$ inches in diameter. It has stood every test and never has given us a particle of trouble since it was perfected. Wearing a common telephone head receiver, I get the report of the sparks from the sending station so clearly that no error has yet been made. We send 25 to 30 words per minute. Entering the

Interior of Station at Avalon, Showing Motor, Switch, Spark Balls, etc.

bay at Avalon, you will see, perched high on the hillside above the village, a little white building with a towering mast behind it. The mast is 162 feet high and its top stands 400 feet above the water. Near the top is a cross-arm from which 10 insulated wires are suspended. The outgoing messages are thrown off by the wires, and the Hertzian waves from the companion station are intercepted by them. The wires are led into the building through a switch and directly into the receiving box, where the wave detector is located. It is this receiving instrument which individualizes the system of the Pacific Wireless Telegraph Company, the other apparatus being such as is common to all wireless systems. The power is obtained from a $3\frac{1}{2}$ horse-power gasoline engine. There is a 12 ampere dynamo, a circuit breaker, an induction spark coil, wound with 125 miles of wire, and a set of Morse sending instruments. This constitutes the equipment; 90 volts are used and the spark is set at $\frac{5}{8}$ inch between the terminals. At times only 10 volts is used in sending, and the messages come through just as clearly. A new coil now being installed will have ten times the sending power of the present instrument.

For nearly seven months the system remained in daily service, transmitting an average of some fifty messages a day. Severe tests were made, among

them the sending of cipher messages and codes. In another test a newspaper paragraph was cut in two diagonally and the two sections, with their severed words, were sent as separate messages. Under all tests perfect results were secured.

A special investigation, conducted by General H. G. Otis, editor and manager of the *Los Angeles Times*, was followed by his decision to print a wireless daily on Catalina Island. A small assortment of type, a little job press and other equipment were sent over to the island, and Mr. Mathes, the *Times* correspondent on the island, was placed in charge. The news matter, being Associated Press stuff, cannot be released by the *Times* until its publication hour; we arranged to handle the news budget between 4 and 5 A.M. The date of the first issue was fixed for March 25th, a period when the wind and rain storms are quite likely to be at their worst. There was some delay in beginning the sending; but, as I afterward learned, that was owing to the poor arrangements at San Pedro. The matter was sent from Los Angeles to San Pedro by Western Union and carried by messenger two miles to our station at White's Point.

The delay in starting the messages as per schedule rasped on my nerves,

The Station at Avalon, Santa Catalina Island, California

for Senner was not at his instrument. For anything I knew, the entire plan had miscarried. It was as trying a half hour as I have ever spent, but I remained in the box and, finally, at 4:40, I got Senner's signal.

First came the items gathered by the *Times's* local reporters and correspondents, followed by the Associated Press reports, taking me from point to point in this country and then on a world-trip; the matter, being very much condensed, jumped from Chicago to Boston, from Paris to Cape Town, with startling rapidity.

Hand composition meant slow work, and numerous minor delays marked this first issue of *The Wireless*. But when it appeared on the street it went with a rush. Before 10:30 the first edition of a thousand copies was exhausted and a second was under way. This second edition quickly disappeared, some copies being sold at \$1.00. Avalon, always on the lookout for souvenirs, quickly sensed the curio features of *The Wireless*.

A little later we were put to the real test by a nine days' storm—something altogether unusual in this locality.

The fourth morning, when I answered the alarm at 4:30, I stepped into a puddle of water; the engine room floor was covered with half an inch of it, and the receiving wires had been wrenched loose and wound tight around the mast in a tangle. It looked to me like a hopeless case. But Senner's signal came in as usual, followed by 800 words of news—and I did not lose a syllable. That day the steamers dared not leave San Pedro and several sailors were lost overboard. It brought us an unusual number of commercial messages and made *The Wireless* better appre-

ciated, as no papers reached the island.

The Wireless was soon increased in size; new equipment was added, and a special building was put up. It is now regularly cried on the streets before 7 o'clock. Improvements are also being made in the system and plant of the Pacific Wireless Telegraph Company. A recently patented receiver will do away with the use of the sound proof booth; a heavier coil, now being installed, will have several times the sending power of the present one, allowing a spark up to 35 inches; storage batteries will shortly enable us to develop amperage enough in a few hours to produce the spark for a week.

J. B. Elliott, formerly an editorial paragrapher on the Los Angeles *Times*, is editor of *The Wireless*. Together we have discussed the relation of wireless telegraphy to the various phases of news work. A central wireless news bureau in a metropolis, sending out impulses to be caught up by a series of stations, in smaller towns, seems to solve the problem of a news service for small dailies. As for confusion among messages from various stations, or the intercepting of messages, I believe that no serious trouble will arise. Greater problems than these have been successfully met during the unfolding of the possibilities of other epoch making inventions.

The U. S. training ship "Alert" spent a week in various parts of the channel, equipped with Marconi apparatus, endeavoring to catch our messages. An ensign came up to the station one day and said that they had not caught a sound; but this is not strange, as our wave detector is in no way similar to Marconi's. He told me that the instruments

Mainland Wireless Station at White's Point, near San Pedro, California

aboard the "Alert" had received Marconigrams at 1,700 miles.

I do not think that weather or climatic conditions will interfere with the use of the wireless system for news transmission. In this connection I have noticed a peculiar thing which illustrates the ex-

of honor in the history of journalism; I believe that it marks the beginning of an epoch in the dissemination of news. At present the natural field of the wireless system is between important centers and isolated places where cable or pole systems are expensive to build and to main-

J. B. Elliott, Editor of The Wireless

treme sensitiveness of the waves. When we have one of our high coast fogs, the reports are unusually clear and sharp; now, if the sun breaks through the fog bank, I instantly note a change in the signal. When the sun disappears the reports come more clearly again.

To me *The Wireless* occupies a post

tain. But when I review the advent and development of the telegraph and the telephone, I cannot get away from the conviction that wireless telegraphy will soon be handling messages more quickly, more cheaply and over a greater field than either.

AVALON, CATALINA ISLAND, CAL.

The Educational Reformation of China

BY LEONG KAI CHEU

HEAD OF THE CHINESE EMPIRE REFORM ASSOCIATION

[Mr. Leong Kai Cheu is perhaps the most active evolutionist the Celestial Empire has ever produced. Though not the founder of the reform movement, which is striving against seemingly insurmountable obstacles to educate the masses through the medium of schools, literature and the press, and prepare them for constitutional liberty, Mr. Leong is devoting his life to this cause and has met with such success, both at home and abroad, that the Empress Dowager has offered a reward of 150,000 yen (\$75,000) for his head. He is but thirty years of age. When twelve years old he received his degree of Bachelor of Arts from the University of Peking, and at sixteen was awarded the post-graduate degree. Three years later he was given a chair in the institution and appointed tutor of the late Emperor's family. The following statement was obtained with some difficulty, for this disciple of Chinese liberty is most carefully guarded. The interview was conducted through his secretary, Pow Chee, who speaks English fluently, and it was signed by Mr. Leong himself.—EDITOR.]

THE only hope for China to gain constitutional liberty, cast off the yoke of tyranny which has held it in a stagnant condition for several centuries, and which is particularly felt under the present illegitimate rule of the Empress Dowager Tsi Ski, is education. It is not so much its religion that disqualifies China for rank among civilized nations as the ignorance, superstition and consequent ineffectuality of the masses.

The Chinese Empire Reform Association not only aims to effect the elimination of these handicaps through general education, but it is surely and irresistibly creating the necessary conditions to accomplish such a result. It is a movement that is growing daily in strength and vigor. The better classes of my countrymen favor it more or less openly—as openly as they dare—and the masses are eager and willing to be led toward a deliverance they have not of themselves the strength to achieve.

The association is by no means a secret organization. In many districts our work meets with no interference from the courts or provincial officials, and is promoted as freely as a similar movement in this country would be. In others it is necessary to work quietly and attract as little attention as possible; but even in such sections the movement progresses rapidly and certainly. As a body we defy the Empress Dowager. We have carried this policy so far as to send her photographs of such of our leaders

as she cannot reach directly. We have the secret approval of the majority of Mandarins or provincial governors, tho they cannot protect us openly. A Mandarin's power in the territory over which he exercises authority is far greater than that of a governor in one of your American States—in fact, it is almost absolute. He dare not openly defy the Central Government, but he may evade many of its laws in their more local application. It is this state of affairs which makes it possible to carry on our work successfully, despite the hostility of the present interloping sovereign.

The rightful ruler of China, His Majesty, the Emperor Kang Sui, has the best interests of his subjects at heart, and his reaccession to the throne is all that the most ardent patriot could desire. He has progressive and modern ideas and is generally beloved by his people. It was under His Majesty's supervision and benevolent patronage that the Reform Movement—the Educational Movement, I should say—was inaugurated and carried on with great success for three months, until the accession of the Empress Dowager and practical deposition of the Emperor brought it to a sudden close. In 1898, Kang Yu Wei, Imperial Physician, and one of China's most eminent educationalists, was appointed by His Majesty president of the then newly organized Chinese Empire Reform Association. He gathered about him a corps of assistants from among the men he deemed best qualified to carry on the

great work, and I was honored with the vice-presidency. It was the aim of the Emperor to grant his subjects constitutional liberty as soon as they had been fitted through education for this privilege. The rapidity with which the work progressed frightened the Empress Dowager, who had thus far kept in the background, into sudden activity. She brought to bear the influence she commanded among the officials of army and state and succeeded by threats, bribes and intrigue in placing herself at the head of the nation's affairs. Recognizing the menace of educational enlightenment to the despotism she craved, her first move was the suppression of the Reform Association. A number of our leading officials were beheaded and the work was temporarily stopped. Kang Yu Wei was warned by private edict from the Emperor to quit the country. He disregarded this warning, and also a second one from the same source, because of his dislike for abandoning the work in which his whole life was centered. It was not until the third warning came from his royal protector that he made hasty preparations for flight and quit Peking, only one day before the Conservative party began its crusade which resulted in the death of several of our leaders. Even then it might have been too late but for the intervention of the British Consul, who secured his safe passage to Shanghai, from where he was conveyed to Hong Kong on an English man-of-war.

My own life was saved by Marquis Ito, ex-Prime Minister to Japan, and through his authority I escaped to Japan. Since that time Mr. Kang Yu Wei and myself have been carrying on the work abroad and also in China through our trusted agents. We have succeeded in arousing the Chinese people everywhere. The movement meets with especial enthusiasm and support in this country, where the Chinese are better able, by actual demonstration, to understand and appreciate the value of education. I first landed at Vancouver, where Mr. Charles Yip Yen was appointed president of the association for the Dominion of Canada.

Our funds are drawn from voluntary contributions and from membership fees, which are nominally placed at \$1.

Tho the members of our association run into the millions, our chief revenue is obtained from generous gifts on the part of the many wealthy Chinamen who have cast their lot with us at home and abroad.

I have often been asked whether the Boxer movement is in any way, directly or indirectly, connected with our work. Most decidedly not. Originally the Boxers were bands of robbers who preyed upon travelers much as the brigands of badly governed countries. Owing to national poverty and disorganization these robber bands could not be suppressed and increased rapidly. During the late uprising the Empress Dowager, who hates all foreigners because she fears the introduction of advanced ideas, encouraged the Boxers to drive out the "Western Invaders" and recognized them, unofficially, but none the less emphatically, as a part of her soldiery, thus precipitating the conflict with the allied Powers which threatens the dismembering of the Empire.

For obvious reasons I cannot describe in detail or statistically the extent or character of our work in China, nor name the localities or men most friendly to our movement. I may say, however, that the interior provinces are the most hostile, and in these we find it necessary to work very, very quietly. We have a number of newspapers allied to our cause which are exerting great influence. We have established numerous schools where they are most needed and are circulating widely all sorts of educational literature. We shall continue this work and increase its scope as rapidly as conditions warrant, and until our ideal of religious and political liberty is realized. This will not take as long as might be imagined. The Empress Dowager is an old woman and cannot live much longer. With the resumption of sovereignty by the Emperor, we shall carry on our work under the protection of the Crown, and, once fairly started, shall be enabled to survive any political upheaval that may arise.

China is working its way, slowly but surely, toward the light of a far greater civilization than it has ever enjoyed before, and I hope to live long enough to see it recognized among the world's foremost nations.

SAN FRANCISCO, CAL.

The French Republic and the American Constitution

BY ALFRED NAQUET

[For many years the author of this article was one of the most conspicuous figures in the radical wing of the Republican party as a member of the French Chamber of Deputies and French Senate and the close friend of the leading public men who founded the Third Republic. He was one of the first to perceive the importance of revising the present Constitution of France, a question which is now more prominent than ever before in French politics.—EDITOR.]

THE present Constitution of France is the work of a monarchical and Imperialist, but hopelessly divided, majority of what was once known as the National Assembly. The model taken was that of England, because it was hoped and believed that a king would soon replace the temporary President. All this happened some thirty years ago. But the foolish desires of these old fogies were not realized and poor France has been staggering on, for more than a quarter of a century, under a Constitution that was never fitted for it.

There are Frenchmen, however, who have carefully studied the various constitutions of the world, especially those of the United States and Switzerland, and who, without proposing to copy them servilely, have striven to introduce into the French Constitution the fundamental features of these older instruments. But, unfortunately, all minds have not been agreed on just what to take from Washington or from Berne.

One of the best efforts to amend the

ALFRED NAQUET

Constitution of France was that made by M. Edouard Portalis, to-day exiled from his country, in his volume, which appeared in 1880, entitled "Two Republics," and which advocates the adoption by France of the whole American system, not excluding the federative feature.

About this same time, I myself began a vigorous campaign in favor of the "the American idea." One of my parliamentary speeches of 1882 closed with these words:

"In my opinion, if we are to have a really stable government, one of the crying needs of our country, we should resolutely turn our backs on the English system, and adopt in its stead the American system, thus clearly separating the executive and the legislative powers."

This declaration was warmly applauded by many of my colleagues.

From that moment, I began an active propaganda on these lines. In 1883 I published a pamphlet, which was rapidly sold out, in which I fully developed these ideas, and a copy of which I sent to every member of the Senate, where I then sat.

and to the leading members of the other House. This was followed by a number of speeches delivered in various parts of France. In 1886 I continued the good work in the press by publishing numerous articles on the subject in the daily and periodical organs of the Republican party. When I perceived that no real headway was being made, and believing that General Boulanger would remain true to the Republic, I went over to "Boulangism," which step I profoundly regret to-day. I had hoped to get General Boulanger to play the same part in the revision of the Constitution that Gambetta had played in forcing the hesitating to found the Republic.

Unlike M. Portalis, my aim was not simply to put France under the American Constitution. I did not favor an executive elected by the direct vote of the people, lest the enormous cost of this sort of an election should place the chief magistrate in the power of an unscrupulous plutocracy. I wished to confide this choice to a widely-recruited electoral college, which would also have the power to depose the chief magistrate. Contrary also to M. Portalis's plan, I would have placed the law-making power in a single House, elected for six years, one-third going out every year. As in America, I selected the Cabinet officers outside of the legislative body, to which they were not responsible. They were to be responsible only to the Chief Magistrate, who nominated them, but whose nomination had to be confirmed by the legislative body. As in America, too, these Cabinet Ministers would not introduce bills and would not be subjected to interpellations. As regards the Executive, I would have preferred some sort of Directory, like that known in France at the end of the eighteenth century, rather than the personal Presidency which exists at Washington. But I was not set on this. I was opposed to the introduction into France of the American Supreme Court, for reasons which will be given further on in this article. I would have conferred the veto power on the President. When the veto affected a fundamental law of the land, a referendum, as in Switzerland, would decide whether the President should be sustained or no. In other cases a majority of the House, as in Mexico, could reverse

the Presidential veto. A petition signed by half a million citizens could call for a referendum on a measure adopted by the Assembly, but not vetoed by the President. These views I preached before, during and after the advent of Boulangism.

A few months after the delivery of my speech quoted above, M. Andrieux, who had filled the responsible position of Paris Prefect of Police, and was then a prominent Republican deputy, introduced into the Chamber a bill drawn up on much the same lines as my own proposition and supported it by a strong speech. But his bill, like mine, was voted down by an enormous majority. His plan was especially opposed to an irresponsible President, such as exists in France to-day. He was also decidedly against taking Cabinet Ministers from Senate or Chamber.

Among persons outside of Parliament who have taken an interest in this important question of amending the French Constitution I may mention M. Pascal, who, tho now calling himself a Republican, reveals his old Imperialist associations in two pamphlets which he has devoted to this subject. He lays emphasis on ministerial irresponsibility, but does not provide for the guaranties for liberty contained in the American Constitution. He holds that the Second French Empire was more American than English. The truth is that, like Germany to-day, it combined the two systems in such a way as to exclude liberty.

About this same time, M. Carette, an ex-deputy and now a judge, published a solid Constitutional study and came out squarely for the American system, without, however, favoring, in the case of France, the federative form of government, which would, in fact, be meaningless in our country, where the geographical divisions are quite artificial, so that such a course would be simply a step backward.

M. Charles Boysset, formerly a deputy but now dead, has also contributed to the discussion a pamphlet in which he advocates selecting the Ministers outside of Parliament, having the President chosen directly by the people, giving the President a veto, etc.

At the present moment, M. Charles Benoist, one of the Paris deputies, stands

foremost as the advocate of American ideas in the French Constitution. He has written articles in the venerable *Revue des Deux Mondes*, of which he is one of the editors, a pamphlet and a volume, and a few months ago he put the result of all his studies into a bill which he laid before the Chamber of Deputies. It has attracted considerable attention.

M. Benoist would have the Ministers taken outside of the Chambers, but would introduce an innovation in the person of a functionary whom he styles "the Minister-Speaker," who is to have access to the Chambers, to which he would be responsible, and where he would take part in the debates. He has evidently taken this idea from the part played by M. Billault and the famous M. Rouher under the Second Empire, when they would appear before the legislative body to defend the acts of the Executive power. M. Benoist favors also a strong President. But the prominent feature of the proposed reform is the attempt to limit the powers of the legislative body. With this in view, he advocates the creation of a Supreme Court, modeled after that of the United States.

But I think this is the weakest part of M. Benoist's bill. Such a tribunal as that which exists at Washington is perfect in a country like the United States, where the form of government is acquiesced in by all and where religious questions, thanks to the prevalence of Protestantism and the separation of Church and State, are foreign to politics, and where, consequently, there is little

danger of the court deciding matters on party lines. In France, however, a Supreme Court of this kind would soon become retrograde, a tool of antiquated *régimes*, and would eventually be dominated by the Catholic Church, so that its decisions, far from being generally accepted, would cause greater confusion in the country than now exists. Suppose, for instance, the Chambers were to vote an income tax and the Supreme Court were to declare it unconstitutional—can one imagine the French people bowing quietly to the decision? Any one who thinks that such would be the case does not know France. Nor would the Chambers submit to see their work rejected. Every time the judges brushed aside a bill that had passed Parliament, the latter would reply by a revision of the Constitution, and the country would be kept in a state of continual agitation. In a word, a Supreme Court in France instead of being an element of peace would be a source of revolution. So I fear M. Benoist's bill does not exactly meet the situation.

But that the present Constitution should be revised there can be no doubt. Consequently a scheme for easily amending it should be introduced. The American procedure in this matter is too slow and too beset with obstacles for its adoption here. This has produced no evil results in the United States because Americans, like Englishmen, have a high respect for tradition and are adverse to radical changes. This is not the same in France, where, as in Switzerland, tradition exercises a secondary influence.

PARIS, FRANCE.

Natura Benigna

BY ROBERT HAVEN SCHAUFFLER

Out of the mammon-mad clangor and riot,
Out of necessity's grinding unrest,
Out of the chaos and into the quiet,
I go to thy breast.

Round me the soothing assurance of flowers
Mighty beneath me the strength of the hills
I shall be lulled by thy nurturing hours
While the night wills.

Then shall I rise with exulting Antæan;
Rise with thy might—O my mother—in me,
Stronger to strive toward the day of my pæan
Of victory.

AKEWOOD, N. J.

The Storm-Cloud in the Far East

BY CHARLES JOHNSTON, B.C.S. RET.

THE conflict between Russian and Japanese interests in the Far East is inevitable, because it springs from economic and ethnical causes. It is not a mere political struggle, which depends on the views and intentions of parties, but is the natural outcome of the growth of the two nations concerned. From the Russian point of view, the causes of the fight for Manchuria are these: Russia is not densely populated yet, but the resources of European Russia are very undeveloped, while the population is increasing faster than that of any nation in the world. It is at present one hundred and forty millions; at the present rate of increase it will be two hundred millions within twenty-seven years, four hundred millions within seventy-five years, and five hundred millions by the end of the century. As sanitation and the food of the people improve the number of children surviving will increase; hence the present rate of increase may be expected to continue for at least a hundred years. We have, therefore, within the near future, a nation of five hundred millions, overwhelmingly of white race and Slavonic blood, to be provided for; and this makes an imperative demand, with which the views of ministers or even emperors have practically nothing to do. It is childish to derive Russia's Far Eastern policy from the plans of M. Witté, or General Kuropatkin, or Admiral Alexeieff, or even of Nicholas II. They spring wholly from the life and growth of the Russian nation, which will, within a measurably short time, number five hundred millions, largely of homogeneous race.

In his recent masterly report on Siberian and Manchurian conditions, Minister Witté tells us, first, that Russian colonists are pouring into Siberia in an ever increasing stream, which already amounts to a quarter of a million emigrants yearly; and, secondly, that there is any amount of good available land in Siberia, both arable and forest, which

will provide ample room for Russia's colonists for a long time to come. This land is largely of the quality of our Northwestern wheat States, or, perhaps, even more like the great wheat field of the Canadian Northwest. Like Manitoba, Siberia owes one of its chief advantages as a wheat country to its high latitude, which is by no means, as we are accustomed to think, a disadvantage from an agricultural point of view. Thus along the fiftieth parallel of north latitude there are, on the average, two hours more sunshine daily, during the period when the wheat is ripening, as compared, for instance, with Ohio. The Siberian summer is intensely hot, comparing with the tropics. Hence it will rapidly fill up with a part of the excess population of Russia; and, as Siberia has an area of about six million square miles, of which at least two million are available for colonization, it will probably have, by the end of the century, a population of between two and three hundred millions, almost wholly of pure Russian race, since the Asiatics are a dwindling factor. The pressure of two hundred millions of Siberians, with three hundred millions of European Russians behind them, as we shall have it in less than a hundred years, is something which can no more be resisted than the progress of a glacier or the flow of the Amazon.

This vast population, with a territory equally vast, must have a free outlet to the sea, and will have it, no matter what opposition, from whomsoever coming, may attempt to check it. This is so evident that Mr. Balfour has long ago conceded the point, and, on behalf of England, has explicitly acquiesced in Russia's acquisition of Port Arthur. Once we grant Russia's right to hold Port Arthur, all the rest follows inevitably. Arrived at this point, we already begin to feel the pressure of Japan, and we may continue the story from the Japanese side.

The density of population in European Russia and Poland is only about fifty to the square mile; for the whole of the Russian Empire, it is about fifteen. Japan is at the other pole, having an average density of three hundred to the square mile, something more than Germany. With the German Empire Japan may fairly be compared, both for area and population, if we leave Bavaria out of the count, and the comparison helps us vividly to understand the storm and stress of the Japanese nation. Let us remember Germany's strenuous efforts to get a footing in South America; let us keep in mind Germany's steadfast desire to "inherit" from decrepit Turkey a field for German enterprise in Asia Minor, and we have an exact image of the forces which drive the Japanese toward the Asian mainland. The Japanese hankering for Korea dates back centuries, and it was the desire to oust China and Chinese suzerainty from Korea which inspired the Chino-Japanese war of 1894. It will be remembered that Japan landed her troops at three points on the Korean coast, and, using the Hermit Kingdom as a base, made a successful incursion into China's territory in Manchuria, and inflicted a crushing defeat on the Chinese armies in the neighborhood of the Yalu River. At the close of the war the Japanese found themselves in occupation of the "Regent's Sword" peninsula, called in Chinese Liao-Tung, at the extremity of which Port Arthur lies. Japan believed that she had at last secured a firm footing on the continent of Asia, and could proceed to absorb Korea by easy stages, thus finding an ample field for her surplus population, and a vast tract of untouched resources. For Korea has an area of over eighty thousand square miles, with a population of about twelve millions, or some hundred and fifty to the square mile, thus allow-

ing room for at least a hundred Japanese colonists to every square mile without any great crowding of the population. Manchuria, to which the "Regent's Sword" peninsula gave access, was even more tempting, as, with the immense area of over three hundred and sixty thousand square miles, it has only a population of eight millions, or less than twenty-five to the square mile. So far Japan, at the end of the war. Boundless hopes, boundless ambitions. A great surplus population, and a most promising field in which to plant it.

Russia once more comes into the story. Count Cassini was in those days her envoy at Peking. On his initiative, Russia enlisted the co-operation of France and Germany against the threatened Japanese invasion, and the three nations together, coming forward on China's behalf, forced Japan to get off the Asian mainland, taking Formosa instead. This Japan did, with the worst grace in the world, and the whole subsequent history of the Far East turns on that occurrence. To speak in the language of diplomacy,

China was boundlessly grateful to her great neighbor for driving out the Japanese, and readily acquiesced in certain proposals put forward by Count Cassini and embodied in what is called the Cassini Convention. As a result of this agreement, we find Russia holding a lease of the land about Port Arthur and Talien-wan, and building a railroad across Manchuria, on a strip of conceded territory, with certain widenings at convenient points. The Boxer rising of 1900, which threatened the entire destruction of Russia's work in Manchuria, compelled Russia to substitute armed occupation for pacific tenancy, and this armed occupation is being gradually withdrawn from the general Manchurian territory to the conceded strips, thus restoring the civil government to China, without in the least weakening Russia's hold on the railroad and Talien-wan and Port Arthur.

Again the story changes to Japan. Fiercely resenting her forced withdrawal from the "Regent's Sword" peninsula, and the destruction of her hopes of finally seizing Manchuria, Japan, immediately after the treaty, set herself to build a great fleet aimed directly at Russia's position in Port Arthur. In the five years following her forced evacuation of the Chinese peninsula, Japan built six large modern battle ships, two of twelve thousand tons and four of fifteen thousand tons displacement. Within the same period she added to her fleet six large armored cruisers, of about ten thousand tons displacement; thus building, clearly for revenge on Russia, twelve of the most powerful war ships afloat at the time. Besides her fleet, Japan has an army of about a hundred and fifty thousand, with a first reserve of time-served men of about two hundred thousand, and a second reserve of about the same number. She has also, besides her first fighting line, about a dozen less effective protected cruisers besides numerous transports.

But while Japan, in her rage and fury, was building big battle ships and cruisers, and drilling her troops, Russia was not dreaming. She pushed forward the Manchurian Railroad, paying for it from the budget surplus, and thus making a sound investment; and at the same time she steadily accumulated battle ships, cruisers and the lesser fry of gun

boats, destroyers, torpedo boats, and so forth, under the tremendously strong fortresses of Port Arthur and Talien-wan. In the spring of 1901, about the time Japan's fleet was ready, Russia had in the Far East three first-class battle ships, one being of eleven thousand and two of about thirteen thousand tons displacement, and also four powerful cruisers, one being of eleven thousand tons, one of nine and the other two of six thousand tons displacement, besides gun boats, torpedo boats and destroyers. Thus Russia had three battle ships and four cruisers against Japan's six battle ships and six cruisers; and, while the Japanese ships were in the main heavier, the Russian ships were, in proportion, more heavily armed. While Japan might have been able to win in a fight, the Russian force was sufficiently formidable to induce hesitation. And while Japan was, Hamlet-like, weighing the question of taking arms against a sea of war ships, Russia was acting with decision and force. In the spring of the present year she added two more cruisers to her Far Eastern fleet; and, at the moment of writing, three more battle ships, two of which are over thirteen thousand tons displacement, and two more cruisers, one of eight and one of seven thousand tons, are on their way to join their sister ships in Port Arthur. This gives Russia six battle ships and eight cruisers, against Japan's six battle ships and six cruisers, both having secondary fleets of lesser ships. To back her fleet up, Russia has not less than a quarter of a million troops of all arms in or near Manchuria, with a million or so more who can be brought over the Siberian Railroad within a few weeks.

As the latest move up to the present we have Japan landing ten or twelve thousand troops in Korea, "merely as an experiment in mobilization," and we may presently expect to see a Russian force wander over toward the Yalu River and the Korean frontier, "for survey purposes," and for change of air. Of course the purposes of both nations, in thus bringing two huge modern fleets and a quarter of a million troops on each side face to face, are purely platonic, and wholly in the interests of science. Neither has the remotest intention of fighting—unless the other does.

NEW YORK CITY.

The Future of the "Arts and Crafts Movement"

BY OSCAR LOVELL TRIGGS, A.M., PH.D.

INSTRUCTOR IN ENGLISH AT THE UNIVERSITY OF CHICAGO AND SECRETARY OF THE INDUSTRIAL ART LEAGUE

PERHAPS the most important discovery of the last half century in the field of culture has been that of the cultural value of labor—the discovery that true education is not merely passive, but also constructive; that true art is not merely fine, but also practical. These two phases of modern industrial development should be considered together in order that their full significance may appear; the educational phase, called Manual Training in distinction from Intellectual Training; the artistic phase, called Industrial Art in distinction from Fine Art.

For centuries education has been purely intellectual. The theory that education was a matter of mental culture and that this culture was acquired by a study of transcendental subjects was formed, of course, in the pre-industrial period of the world's history and was current only among the leisure class. It was inevitable that, with the growth of industrialism, the theory of education should change to correspond to the dominant tendency in civilization. An industrial civilization means that the central fact of that civilization is work and not leisure. The school could not continue to give an education which sprang from a basis of leisure when the social order took its rise from the ground of labor. Hence, in the order of time schools of "technology" were established, and these, when built by universities, took their place by the side of the professional schools of law and divinity. The public schools were then so modified as to admit a system of manual training, on the ground, first, that manual training is really mental training, but latterly for the reason that, whatever its by-products, so to speak, may be, it is fully justified in itself. The idea of education is broadened at length so as to include in its scope the many and varied activities of the whole personality. Industrial education signifies education with reference to action, the discipline and guidance of the creative activities.

It is at this point that education touches art; not because the industrial movements in education and art are parallel and nearly identical, but because in the search for work that is really creative the educator has found that the craftsman, the industrial type of the artist, is able to furnish exactly the materials and methods needed.

The industrial movement in art is about contemporary with the educational movement I have described, and springs from the same general source, the belief in the industrial ideal and the acceptance of the industrial order of civilization. The fine arts are arts of leisure. They have come to flower only in an aristocracy of some sort, religious, political or social. Art, however, is industrial in its origin and nature, since the art instinct, as proved by anthropologists, is essentially the "instinct for workmanship." When applied to concrete materials and turned to practical ends, art becomes craftsmanship. Work, when freed and ennobled, tends toward art. These three men, the artist, the craftsman, the workman, represent only different degrees of the creativeness that is the fundamental characteristic of art, considered as an elemental social force or impulse.

If we understand art, then, as free creation, the connection between the industrial movements in art and education becomes plain. Not all work is educative. In nearly all the States there are laws prohibiting child-labor in factories. It is yet desirable to educate these same children in a manual training school. Why is work in the one case injurious and in the other case conducive to health and growth? Whether work is educative or not depends upon whether it represents the play of the creative faculties. If I am compelled to make a chair under the will and control of another mind or according to a design furnished by another, or under a limitation imposed by machinery, my work is not then creative; it is not, therefore, educative; it cannot be artistic. Admit creative work into

the factory and the factory becomes at once a school. But now the field of work most accessible to education is that most closely connected with the field of art—a mid-region, defined by the term Industrial Art.

It will be seen from the foregoing analysis of the subject that the future of what is called the Arts and Crafts Movement will depend upon the permanency of the industrial order and the increase of industrial education. Apparently we have seen but the first stages of industrial organization—merely the results of the conflict between political and industrial ideas, the reorganization and readjustment of the social materials. The cultural aspects of industrialism will appear after civilization is established frankly on the industrial ground, when ideas and aspirations are formed with reference not to what is outside, but to what is inside the accepted order. When imagination begins to play about the incidents of labor, sincerely and not cynically, when ideals begin to gather about the studio and workshop, then will be the opportunity of the artistic crafts. Of course, so long as the labor world is disorganized and work is still regarded as something to escape from rather than resort to, there is no chance for that idealization of work which is the very meaning of the Arts and Crafts Movement. Such idealization will come only after the permanent systematizing of the labor world, after the corporations and trusts and labor unions have accomplished their social mission and given place to a higher order of things. The best estate of craftsmanship will be, therefore, at the time of the greatest maturity of industrial civilization.

There is another reason for the postponement of the triumph of the art crafts. We must wait for the perfecting not only of the industrial system, but also of the machine, which is the prime agent in the development of that system. There are those who cherish hopes of artistic product from the machine itself. Of course, it is possible to set an artist to design for the machine, and to improve the product thereby, but the artist will soon discover that the genius of the machine is mechanism, and mechanism can turn out only what is mechanical in its nature. The function of the machine is

to do mechanical work, to serve the unvariable and constant needs of the human race—such needs as are implied by the words food, clothing and shelter. All that is sordid and unseemly in work pertains to these elementary objects of life. As Professor Ely says:

"It is true, that in proportion as you make men valuable, machinery does disagreeable work. The inventive power of man now aims to increase the earnings of capital, and not chiefly to render the task of the toiler as light and as pleasant as possible."

If the machine can be so perfected as to do the drudgery of the world, the mind and hand and tool can then be reserved for the higher ends of living.

Industrial education, in its turn, is only just beginning. So certain, however, is the development of civilization in the industrial direction that the industrial schools at present established contain the promise and potency of the future. Among the very best schools in the world to-day are certain schools devoted to the industrial training of negroes and Indians. These institutions give training only in the elementary employments, but it is discovered that even trades and employments yield cultural as well as professional results. With a change for the better in the conditions of work in factory and workshop it will doubtless become possible for a boy to get an education without leaving his employment. In fact, his employment will be his education.

A school of a new type has recently been established by Mr. N. O. Nelson, at Leclaire, in connection with his factory. The school is an organic part of the village and factory, the pupils being employed and taught according to the employment. Such a situation is educationally an ideal one. A community desiring education already exists. Teachers, pupils, buildings, materials and opportunities are ready at hand. All that is necessary under such conditions is a change in the industrial motive of the employer—a little less commercialism, a little more humanism. As social ideals increase, as ownership itself becomes more social, the spiritual regeneration of the employer is only a question of time. When every workshop is a potential school, the problem of industrial education is solved. And in every such workshop there will

appear as its very flower some art craft, some kind of work in which a workman may express himself as maker, as teacher and as artist.

I am speaking here of the Arts and Crafts Movement as a phase of our general industrial development, as a potential ideal conditioning such development. The movement is not, therefore, measured numerically—by the number of Arts and Crafts societies which exist, by the number of faddists drawn in its train, by the number of clubs which make it an issue in their programs, or even by the number of actual workers who strive to realize its principles. In all the country there may be a score of workshops which figure somewhat commercially where its principles are more or less operative. These, of course, are all significant signs of the vitality with which the movement maintains itself objectively. These objective signs will doubtless multiply and new features will constantly appear. The movement itself, however, is to be regarded as an impulse, an ideal gradually drawing the world to its standards. What is perhaps the latest concrete illustration of the movement is a small workshop in a Western city. A workshop association has been formed by a group of families in a neighborhood, composed largely of teachers and professional men. The members meet regularly for the study and discussion of the life and work of William Morris. The association maintains the workshop, which is equipped with tools for wood working, book binding and other crafts, and is used by the members in common, who may work either as professionals or amateurs. An expert cabinet maker is employed, who has control of the workshop, gives instruction in his craft, and makes furniture at the order of any member or outsider, the proceeds of his work returning to the association. In other crafts members who desire instruction secure a teacher from the outside, paying fees according to the number of workers and the expense of the instruction.

Probably no particular industrial problem is solved by this workshop. Nevertheless it is an illustration of the social control of industry and represents a desire on the part of an intellectualized community to participate in some small

way in the industrial process. It proves also the point that persons of conventional culture, if they work at all, will engage in the cultural crafts and will modify the conditions of work to correspond to their educational needs. Morris did not submit for a moment to the limitations of organized industry. He created his own conditions and developed his own methods. If, through some economic revolution, poets, preachers, teachers, and all others who follow socialized pursuits, should join the ranks of labor professionally, in all probability the conditions of labor would be speedily changed. Poets, preachers and teachers together would either, by their power of thought, transform industry altogether, or, by their power of application, create an industry of their own within the organized system—a leaven in the lump working for higher social results. In any case it is quite clear that the transition from the professions to the industries—a tendency very marked in the last fifty years—will be effected by way of the "Arts and Crafts."

Certain economic questions always arise in any discussion of the new industrialism. A sympathetic critic will observe: "I approve your ideas, but I cannot purchase your products on account of their great expense. I admire the Morris fabrics, but I must do so at a distance. Your new industrialism is apparently for the rich and well to do." How shall this man be answered?—for answered he must be if the movement is to develop in the future and become the democratic incident that Morris intended. The greater money cost of the products of the new workshops must be conceded. The machine-product may undersell the art-product a half or two thirds; in some cases, as with Macmillan's and Morris's edition of Chaucer, there will be no proportionate relationship between them. Shall we then advise the art-lover to secure the cheaper product? I would prefer to persuade him to pay the higher price, if only to illustrate a possible change in economic ideals and to suggest another standard of living. Up to the present time, under competition, industrial economy is based upon cheapness. "Buy in the cheapest market" represents everywhere the spirit of modern free trade. After various external

economies have been effected there is but one way to secure cheapness in a product—that is, by sacrificing the quality. Carlyle's scornful phrase, "cheap and nasty," describes quite accurately the character of nearly all competitive products. Quality enters into products only through the expenditure of thought and experience and labor. The greater cost of the new fabrics is due to the fact that they represent a greater expense of "life." "Life," it will be remembered, was the standard which Ruskin established for what he properly termed the true political economy. The mistake of our economy is in calculating cost simply in terms of money. We leave out the element of pleasure and satisfaction and the sentiments attaching to use. If we pay more we get more. In most cases the cheaper product is actually the more expensive. Quality, furthermore, outwears quantity and in the end gives greater satisfaction. Will it not also come about that, with the increase in the world's wealth and its more even distribution, cheapness will lose the importance now attached to it? Those who enjoy economic freedom do not at the present time seek the inferior product. Ideally the future belongs to the artist craftsman.

Doubtless also in the future the principle of ownership will change. Art, the human element in production, is something not exactly to be possessed. Quality modifies ownership by introducing an element which is in reality social. A perfect product, one not wholly conditioned by use, has a social relationship, recognized whenever an exhibition of such products is held in a community, the mere exhibition giving pleasure to the spectator. The humanization of production carries with it the socialization of ownership. But with social ownership cheapness will have lost its meaning.

I believe that the true solution of the labor problem is found, not in higher wages or shorter hours, or in anything which can be measured materially, but in the spiritualization of labor itself. This spiritualization is effected by combining with labor as ordinarily understood that element known as art. The term Arts and Crafts implies just this association of art and labor. The advocates of this principle claim that it furnishes a true basis for future growths and tendencies and point to the changes already taking place in educational and social theory and practice as proof of the vitality of the movement.

CHICAGO, ILL.

Concerning Church-Going

BY MARGARET DELAND

AUTHOR OF "JOHN WARD, PREACHER," "OLD CHESTER TALES," ETC.

IT is not so very long ago that church-going and character were synonymous; not that everybody who went to church was good, but everybody who was good went to church. Only the scoffer and the very black sheep stayed away. To say of a man that he was not a church-goer was equivalent to saying that he was to be looked upon with suspicion, or, at any rate, with grave disapproval. Christian people, in those days, had clear and simple judgment in such matters. Salvation, they said, depended upon the knowledge of God, and knowledge of God depended upon the Church. The logical deduction from the premise was

that everybody ought to go to church.

One looks back upon the simple and uncomplicated frame of mind which could make such a statement, almost with envy. It belonged to a period of definite ethical outlines and plain, elemental laws; to a time when people said "this is right;" "that is wrong;" when, for instance, with clean-cut certainty they declared that cards were the devil's prayer book; and added that if one used the devil's litany one was in a fair way to go to the devil, for ever and ever. But how differently we put such things to ourselves, we complex sinners of 1903! We hesitate to pronounce anything en-

tirely good or entirely bad; we, for example, know the relation of recreation to character, and believe in the card table accordingly; yet we have an uneasy consciousness of the devil in relation to Bridge. Our fathers, or certainly our grandfathers, had no such uneasiness. They saw things simply—right or wrong; black or white. We, unsimple folk, are bewildered by a multitude of shades of gray.

There are many of these gray questions; dingy white some of them are, or plaid, or check; there are apparently very few unmistakably black ones, on which we can come out with a whole-souled reference to the devil and all his works! And this question of the duty of going to church is one of the gray ones.

There are, of course, a multitude of foolish and conceited things said by people who do not go. "The Church has done its work," these people say, carelessly, "its day is over; it is obsolete; it is a remnant of the dark ages and the childhood of the race." Such statements are so obviously absurd that they do not give us much concern, but they do make clear to us that the time has passed when church-going was the highest expression of the moral life of the community, and hence, a matter of course with respectable people. It has ceased to be a matter of course. It has become a matter of effort on the part of the pastor to "get people to come," as the phrase is; a matter of reluctant duty on the part of some of the people who do come, and no matter at all to the people who stay away. Yet, in spite of the effort in the pulpit, in spite of the sense of duty in the pews, a comparison of church attendance today with that of thirty or forty years ago presents an astonishing difference. The scattered congregation seems to be made up of two classes: old, anxious, conservative souls, who scold the empty pews; young, rebellious, careless souls, who come because parental authority requires it, but who promise themselves freedom at the earliest possible moment. And between these two classes, which sprinkle themselves over the half-empty church, there is a great gulf fixed—a gulf of misunderstanding and lack of sympathy. The older people are bitter and hark back to some elemental law

of their youth as to the "duty" of going to church; the younger people are contemptuous and declare that they are a law unto themselves. . . . But where are the people who are missed? (We are not just now asking about the people who do not go to church anyhow or anywhere; the reckless, selfish, dissolute people; such persons from the beginning have been non-church-goers, and so do not come into the present puzzle.) But where are the people who, a generation ago, would have been as regular in their attendance at church as their pastor himself? The people who are neither young nor old, bitter nor contemptuous, conservative nor impatient? Where are they, these people of intelligence and conscientiousness, of upright life, of responsibility, or even of mere harmless, pleasant living?

They can be found easily enough; they are reading their papers on Sunday morning, or writing letters, or playing golf, or perhaps lying in their beds half asleep over a novel. They are studying, they are deep in some professional work, they are doing anything and everything—except going to church. In the churches on Sunday morning the preachers upbraid them; the old-fashioned folk reprobate them for their bad example, and the young people envy them.

What does it all mean, this golf playing, novel reading, letter writing, state of things? How may it be met? Where is the law that can be applied to it, which will define our duty—a primitive, simple law, obedience to which will set everything right?

In regard to the young people, some of us think that the law is obvious enough. Church-going, we say, may have become a matter of opinion and choice, but no opinion can be of much value which is not based upon experience; hence, before the children begin to make experiences for themselves, before they can possibly be able to have an opinion and make a choice about church-going, they ought to be educated in ways which human experience has proved to be helpful to the spiritual life. So, those of us who find the bread of life in the church must certainly take the children there. This is the elemental and simple law in regard to youth. But in regard

to grown people such a law is not so obvious. If we found that decadence in church-going meant a decadence of character, it would be different. But it does not mean a decadence in character. Some of these people who do not go to church are not bad people. On the contrary, we admit (if we are candid) that among those that stay away to play golf or write letters, or even to read novels, are some of the noblest and best men and women that we know. We have to acknowledge that the man who has made the most superb fight for civic righteousness is a non-church-goer. We have to grant that the woman whose purse and heart are at the service of poor, bad, broken humanity spends her Sunday morning in her garden. Yes, they are good people; it is their goodness that makes them so perplexing,—especially as our young people, longing for tennis on Sunday mornings, do not hesitate to point out to us, with the candor peculiar to their engaging generation, that some of these non-church-goers are of very much more value to the community than are certain folk whom (possibly) respect forbids them to name. In fact, some of these non-church-goers practice Christian virtues in a way that puts the Christian church-goer to shame; they force upon us the conclusion that attendance at church is not a necessity, but an adjunct to character. When this comes home to us we find no elemental and primitive repartee about the devil to fall back upon. We have to face the complexity of the situation by asking ourselves certain questions:

First, Why do we go to church?

Secondly, What do we mean by church?

As for why we go—perhaps there are two reasons: we go for instruction, and we go for worship.

In the matter of receiving instruction, there is a marked difference between the older and the younger generation. In these days doctrinal instruction is not desired by the large mass of people who might be church-goers. Indeed, indifference to such teaching is part of that strange change of standards which just now is so perplexing, and, indeed, so sobering. Yet, if we will look deeply enough into this antipathy to instruction in matters

of personal belief, we will find that it is not all discouraging, because it has its root in the *ideal of personal liberty*. See what this ideal means in the matter of instruction in relation to church-going:

We are willing to have our ministers say to us—"Do your duty,"—but we are not willing to have them tell us what our duty is; that we will decide for ourselves! In other words, the ideal of personal liberty demands that each individual receive his God for himself; each individual evolve his own ideal of righteousness. Never any more may authority stand for truth! That is what it all means, this clash and clamor, this outbreak of individualism, with its foolishness, and obstinacy and conceit; these, we dare to believe, are the unlovely and terrifying accompaniments of a divine process of evolution, which has for its end the personal relation with God. And part of the process seems to be the rejection of instruction from the Church, as an institution. The moment we realize the spirit of the age, in this demand for an entirely individual revelation of the soul to spiritual law, a demand that is not made with flippancy or conceit, but with sober sincerity, we find one reason for a definite statement that "everybody ought to go to church" withdrawn. We can no longer say it is a duty to go "because we shall be taught what to believe;"—because we know that we shall believe not what we ought, but what we must, or else lose our intellectual integrity.

There remains, then, the other reason for going to church,—*Worship*. And that brings one at once to the other question—"What is meant by church?"

Do we mean the four walls wherein human creatures gather to worship the Eternal—those four sacred and venerable walls, which for generations have been to other human creatures the House of God, the very Gate of Heaven? Certainly we cannot feel that worship is dependent upon these four walls. No reverent or sensitive mind can contemplate the august temples, even of the pagan past, without spiritual emotion; but equally no reverent mind can deny the worship of the Eternal far outside the walls of any church. Does not McAndrew worship in the engine room of his steamer? "I cannot," he says—

"I cannot get my sleep to-night; old bones are
hard to please;
I'll stand the middle watch up here—alone
wi' God an' these;
My engines, after ninety days o' race an' rack
an' strain
Through all the seas of all Thy world, slam-
bangin' home again."

Alone with God and his engines! Here is worship which does not need the four walls. Yes, altho human experience has proved to us that the assembling of ourselves together, to unite in some outward and visible sign of inward and spiritual aspiration, is helpful to many souls, and contributes to that growth in grace which is man's chief end, and which we may believe does indeed glorify God, yet we know that the blessed company of all faithful people has never limited itself to four walls. For encouragement, and joy, and help in living, we may meet together in what we call a church, and unite in what we call worship; but such meeting together is only a means, not an end. The end is the fullest, deepest, richest relation of the individual soul to its God. And as soon as we realize this we must admit that tho' we go to church to worship, some may worship without going to church. Grant that, and another reason for declaring that "everybody ought to go to church" is withdrawn.

So the matter of going to church comes down to a personal choice as to what is *best for each soul*, and the question "Ought I go to church?" changes its form: "Shall I—who may hope, humbly and reverently, that I belong to that company of all faithful people—that company which is made up of every man and woman, belonging to any church, or to no church—every human creature who tries to do justly, to love mercy, and walk humbly before the Lord his God—shall I, belonging to this company, get help and courage for daily life, and shall I lift up my heart unto the Lord, best, by going to church every Sunday? If so, I go! Or shall I, perhaps, get such courage for living, best, by looking in silence up into the sky from under some leafy shelter on a Sunday morning? Can I lift up my heart with greater fervor among my fellows in a church, or do I worship more deeply in the solitude of books, or in the service of humanity, or,

possibly, in mere luxurious, well-earned, physical rest?

Does all this put church-going down on the basis of individual expediency:

What is best for my soul?

But is there any other basis of conduct? Is not expediency, in its noblest sense, that elemental law of life, both material and spiritual, of which we felt the need in all these gray questions which confront us? Expediency was the basis of that primitive expression of the difference between right and wrong—"Be good or be damned." It is the highest suggestion of spirituality in: "This is eternal life—that ye shall know the Father." One saying seems to us ignoble, and the other divine—yet both grow out of this despised word *expediency*—the recognition of what is best. When the soul recognizes its own best, the "ought" can be answered easily enough; it cannot lay down a rule for other people, but it reaches an elemental law for itself.

How complicated, beside this law, are the arguments that are urged upon people as to the duty of going to church! One is, that people ought to go to church to set a good example.

Here we come upon a strange survival of fetishism—the suggestion that church-going, *per se*, is of moral significance; such fetishism must lead to a very subtle spiritual hypocrisy, because it advocates the letter, whether the spirit be there or no; and certainly it is a question whether insincerity is ever a good example.

Again: People should go to church because it encourages the minister. But would the minister be encouraged by the presence of a congregation gathered to encourage him? Such "encouragement" is false spiritual economics, and the true priest is the first to tell us so. For there is one thing we must face, that the only excuse for supply, is demand.

And, again: We ought to go to church to make church-going the habit of our lives. For, it is added, artlessly, a course of conduct which becomes a habit cannot be easily broken. True; but those of us who have seen emotion,—divine, delicate, the breathing of the Eternal within us—those who have seen such emotion harden into a meaningless formula will

not dare to advocate the habit of the expression of emotion.

We ought to go to church to keep holy the Sabbath day. Here we trespass at once upon personality. For each soul of us must decide what is holiness to us;—and no man can decide what is holiness for any other man.

But one need not rehearse the multitude of reasons why people "ought" to go to church;—instead is it not easier and simpler and truer, to fall back upon the old divine and human law of expediency? A law that seems to hold all the little reasons in its own great reasonableness; a law which makes for the preservation of the Church,—for, by individual obedience to it, the Church must survive as long as human beings need it! . . . If we obey this law, we will trust a little more. We will trust

the purpose of the Eternal; we will trust the individual soul; we will so trust in the divine principle which has created the Church that we shall be able to believe in the continuance of the principle without the Church;—we shall believe in the *permanence of the soul's relation to God!* In trusting the principle of the Church even to the point of contemplating the ending of the Church as an institution, we only trust the sunrise to fade into high and splendid noon. And trusting, we wait; without dogmatism, only with hope. We look at the solemn verdict of human experience that the Church is necessary; and we look also at the demand of the individual for personal experience and judgment—and we wait:

—"my faith is large in Time,
And that which shapes it to some perfect end."

BOSTON, MASS.

Laodicea, Colossae and Hierapolis

BY RUFUS B. RICHARDSON, PH.D.

[Professor Richardson has just returned to this country after having spent ten years in Greece as director of the American Classical School at Athens. He published last month through the Scribners "Vacation Days in Greece," some chapters of which were articles originally published in THE INDEPENDENT like the following.—EDITOR.]

THE sites of the seven churches of the Revelation are now, with the exception of Pergamon, approachable by railroad; and so, altho it was not the primary object of our journey, we visited all of them. It is to be noted that the order in which they are named is geographical, following a straight line drawn northward along the coast from Ephesus through Smyrna to Pergamon, and thence a somewhat crooked line to the south and southeast, through Thyatira, Sardis and Philadelphia to Laodicea.

Before the recent construction of the network of railroads in Asia Minor the journey to Laodicea was a long journey into the interior, and seemed rather formidable. But now one leaves Smyrna at 7 A.M., passes through Ephesus some two hours later, and shortly after the middle of the afternoon arrives at Laodicea.

Nearly all the way up from the shore we followed the valley of the Maeander, the great thoroughfare into the interior, from which Miletos drew its wealth.

But about an hour before reaching Laodicea the railroad turned up a side valley, that of the Lykos (Wolf River), broader than that of the Maeander, the latter river here coming down in a narrow bed through mountains.

At half past four we arrived. The station had no village very near it, but close by was a small one-story house which bore the name "Hotel Laodicea and Hierapolis." This unpretentious hotel, with its striking name and rather high prices, is probably the most attractive, most comfortable, in short, the most homelike hotel in Asia Minor, surpassing the very good one at Ephesus. Its soul is a tidy, energetic, Greek woman, who knows how to keep a hotel.

Colossae and Hierapolis were each about eight miles away, and reserving them for the next day, we addressed ourselves immediately to Laodicea, which lay close by the station, on some hills to the south. Without a guide we easily found a great theater backed into one of the hills, and the enjoyment began. Our

Murray said that the ruins had suffered much from the laying out of a branch line of railroad to Denizli, a few miles to the south. But this damage is entirely in the mind of the writer. That railroad simply skirts the foot of the hills on which stood that majestic city, founded by one of the Seleucid kings on the site of an older city, and named after Laodice, one of the many women who in that family played such important rôles. When we reached the top of the ridge the sight of the ruins was overpowering. They are not like the ruins of Delphi, Olympia and Corinth, which required excavations to bring them to the light. They have simply fallen, and in the lapse of time some earth has accumulated about them, but they have never left the light of day. Two large theaters, one of them the largest Greek theater that I have ever seen, an odeum, a station, many porches, streets and gates, make only a part of the inventory. An aqueduct came down from the snow-covered Mt. Cadmos to the south, and after crossing a valley rose again into the city, showing that hydraulics were somewhat advanced when the system was laid out. Water was delivered by pressure in the same way at Pergamon.

Altho it was nearly mid-summer, and the daylight lasted until almost eight o'clock, night fell upon us while we were reveling in this wealth of ruins, which was such a surprise to us. I resolved not to leave the spot until I had found traces of some Christian church, in which these Laodiceans might have held their "lukewarm prayer meetings;" and at last by the fading light I came upon the foundations of a building which was clearly marked by its apse as a Christian church.

It was a time and place for reverie. In this great and wealthy city was the church (perhaps wont to assemble within this very building) which was with some reason tempted to say, "I am rich and increased with goods, and have need of nothing." In that grand and awful imagery of the Apocalypse praise and blame are meted out to the seven churches with careful discrimination. The contrast in the tone in which the last two are addressed is most striking. To Philadelphia alone there is no censure, but only words of love, encouragement

and praise, so tender that they put us in the melting mood, when we read them nearly two thousand years after they were penned. But what a different tone is used when the writer comes to the Laodiceans. They are branded for all time as "lukewarm." What scorn in the words! "Thou art neither cold nor hot. I would that thou wert either cold or hot. So, then, because thou art lukewarm, and neither cold nor hot, I will spue thee out of my mouth." Then scorn is changed to pity, in which there is still some severity, in the following words: "Because thou sayest, I am rich, and increased with goods, and have need of nothing, and knowest not that thou art wretched, and miserable, and poor, and blind, and naked: I counsel thee to buy of me gold tried in the fire, that thou mayest be rich; and white raiment, that thou mayest be clothed, and that the shame of thy nakedness do not appear; and anoint thine eyes with eyesalve, that thou mayest see." Philadelphia was the best beloved, and Laodicea the well nigh hopeless renegade.

We were so absorbed in our observations and reveries that we, four in all, came down to the hotel in three detachments after dark, the first arrived sending out scouts to bring in the others. The dinner tasted good that night even if it had been kept lukewarm for two hours.

The next morning, being a bad sleeper, I was up before five, and spent nearly two hours more by myself at the ruins getting better acquainted with details and taking some rough measurements. The magnitude of the city and its grand scale impressed itself more deeply on this second view. The theaters need but a little clearing at the bottom to come out impressively. In one of them I came face to face with a fox, which was as much startled as I was. At first he seemed to be inclined to stand his ground, but when I yelled at him he started and never stopped until he got out of sight.

The view by morning light was superb. To the south lay the snow-capped mountains; from east to west ran the rich valley of the Lykos, and across it to the northwest was Hierapolis gleaming in the morning sun. At about the same distance to the east lay Colossae among

the hills, but the exact spot I was not able to discern.

One fact came over me with great force from the actual vision, which much reading might never have brought home, and that is the nearness of the three places, which the great apostle several times groups together in his epistles. Epaphras is mentioned in the epistle to the Colossians (Col. iv, 12) as having come to Paul in Rome with good tidings from these three churches, and as sending back by Paul his greeting to his fellow townsmen who had become Christians. "Epaphras, who is one of you, a servant of Christ, saluteth you, always laboring for you fervently in prayers. . . . For I bear him record that he hath a great zeal for you, and them that are at Laodicea, and them in Hierapolis." In the same passage Paul himself says, "Salute the brethren which are in Laodicea and Nymphas, and the church which is in his house." Then he makes the request: "And when this epistle is read among you cause that it be read also in the church of the Laodiceans and that ye likewise read the epistle from Laodicea." Both letters were intended for both churches, and Hierapolis also would probably come in for its share of both. As these places lay close together and almost all in sight of one another, the idea of a circular letter to the three neighbor churches might naturally suggest itself. The question whether the so-called epistle to the Ephesians is not this identical letter to the Laodiceans was at one time much mooted. The argument in the affirmative that it was unlikely that any inspired epistle should be lost is weakened by the consideration that one letter of Paul to the Corinthians was probably not preserved.

It would be interesting to know whether Paul thought so badly of the Laodiceans as did the writer of the Apocalypse. We find in his writings no trace of any such feeling.

We had planned to give the forenoon of the next day to Hierapolis and the afternoon to Colossae, scant time for each. Yet if we could get back from Hierapolis at one o'clock we could take a train for Colossae a half hour later. But the horses did not arrive at seven o'clock, as ordered, and after waiting

nearly an hour, and seeing our carefully laid program going to pieces, we started off for Hierapolis on foot, with one horse for one of the older members of our party, and the owner of the horse to show us the shortest and best way through the marshy ground near the Lykos. We still had hopes of getting back in season to take the train for Colossae; and so left orders to have the horses go on to the station of Colossae to take us to the ruins, about three miles distant, and thence back to Laodicea before nightfall. But on account of our delay in getting off and the further delay in getting through the marshes, since our guide did not take the right path after all, it was already after ten o'clock when we had mounted the great plateau on which stands Hierapolis. And here we were confronted by a dilemma. We must either give up Colossae altogether or limit our survey of these gigantic ruins to one hour at the very longest, which was equivalent to giving them up. Hierapolis was with us, and it refused to be slighted. Colossae, we had been told, was little more than a site, and our choice was soon made. With every additional hour we felt that it would have been a crime to slight what we had before us; and had not the pangs of hunger and thirst driven us down we should have stayed all day on that wonderful plateau.

Hierapolis, the birthplace of Epictetus, would be worth visiting simply as a bit of natural scenery. A copious flow of hot water through the city down over the cliff has left a great accretion of travertine in fantastic shapes. It reminds one of the Rhone glacier, and since the stream is still dashing over the accretion it recalls Niagara, altho it is on a smaller scale. The ancient writers were much impressed by this accretion, Pliny mentioning the water as having the property of turning brick into stone. It has covered many of the walls of the old city with its accretion, and formed among the ruins strange looking basins, small and large, some still filled with water and others discarded by the streams which have preferred other courses. Everywhere grow most luxuriant oleanders, which are apparently fertilized by the deposit. He who has not seen the

oleanders of Asia Minor does not know how splendid the oleander can be. The hot sulphur baths of Hierapolis enjoyed great celebrity in antiquity, and imparted a sanctity to the city, which was famed for its worship of Cybele.

The ruins here have been even less covered up than those of Laodicea. The great theater is almost absolutely preserved. It only requires the removal and replacing of a few fallen stones to make it as good as new. Among these fallen stones were several reliefs of creditable workmanship. People of the region do not seem to have learned that they are worth stealing. On the slope of the high hill behind the city are hundreds of tombs, many of them practically intact, altho their contents have been rifled. An enormous bath was also preserved in many parts to nearly or quite its original height. But the best preserved buildings were two large early Christian basilicas, one of which could be restored by putting in the missing interior. The destruction both here and at Laodicea is to be ascribed in about equal shares to earthquakes and to that demon of death and destruction, Tamerlane, who took a malicious pleasure in destroying Sardis also.

What prosperity this region enjoyed under the Seleucids, and how it contributed to fill the coffers of avaricious Rome! Laodicea and Hierapolis, to judge by their extent and their great buildings, may well have had a population of half a million apiece. Colossae, which had been a great city in the times of Herodotus and Xenophon, was then on the decline. Without war or the fear of war these valleys might again have a splendid bloom. The effect of the railroads is already felt. But there is no such security as that which was enjoyed under the Seleucids and Rome. There is a general feeling that the question of the permanent mastery of Asia Minor has not yet been settled.

Shortly after two o'clock the most en-

thusiastic of us yielded to the call of appetite. Proceeding to the hovel of a Turk in the wretched hamlet at the foot of the cliff, we partook of a primitive meal. When the table, a round board on the earth floor, was declared to be ready, all that I saw on it was water, green onions, and what appeared to be coarse napkins. But at the sight of these "napkins" Professor Seymour raised a cry of joy, recognizing in them the primitive Homeric bread. This chief component of our meal was a sort of flapjack of tough fiber, capable of being stored and kept for some time. This primitiveness, combined with our condition bordering on starvation, gave a zest to the meal; and while we did not "eat up the table," we left little trace of the supposed napkins. Since we ate squatting around the board we were a little stiff in the knees when we got up to take our coffee standing. In time knees get used to the squatting posture. When the Turkish peasant gets into a train the first thing he does is to get his feet up under him on the seat. How he can like it is beyond our comprehension. Our attempts to imitate it were not successful.

The railroads in Asia Minor have different schedules for different days of the week. On Thursday the train for Smyrna was made up at Denizli instead of coming down the valley past Colossae, as it had done on Wednesday. Had the schedule of Wednesday obtained for Thursday also we should have been able by starting at daylight to walk out to Colossae and spend one or two hours on the site before taking the train back via Laodicea to Smyrna. But the remainder of our journey being blocked out with no day to spare, Colossae had to be abandoned. To get as near as possible to it I walked in the early morning hours about two-thirds of the distance to it, coming back in season to take a hasty breakfast and catch the train.

LAODICEA, May 28, 1903

The Theory of Ions

BY H. W. FOOTE, PH.D.

INSTRUCTOR IN CHEMISTRY AT YALE UNIVERSITY

TO obtain a clear idea of the theory of ions, it will be best to discuss briefly the reasons leading to the adoption of the theory.

In 1885, J. H. van't Hoff, a Dutch chemist, showed that when a chemical compound dissolves in water it exerts an osmotic pressure equal to the pressure the compound would exert if it were present as a gas alone in the same volume and at the same temperature. The osmotic pressure is the pressure exerted in a liquid by the dissolved substance. To illustrate van't Hoff's conception, let us imagine a quantity of chlorine gas in a closed vessel at a definite temperature. The gas exerts a certain pressure. If water is slowly introduced until all the chlorine gas is absorbed and the vessel is filled with water, the chlorine in solution has an osmotic pressure equal to the pressure it exerted before as a gas. When a compound does not form a gas, it is a simple matter to calculate what its pressure would be in case it could exist as such, and this value van't Hoff found in general to be equal to the osmotic pressure of the compound in solution.

Certain compounds, however, he found did not give the osmotic pressures which would be expected, but values that were much too high. For instance, common salt, if dissolved in water, creates an osmotic pressure nearly double the calculated pressure. The acid known as muriatic or hydrochloric acid acts similarly. Sulphuric acid, if diluted largely with water, creates more than double the osmotic pressure which it should theoretically. In general, all salts, the strong acids like oil of vitriol, and strong alkalies like caustic soda, were found to give values for the osmotic pressure higher than the calculated. Van't Hoff was unable to explain these facts.

Two years later, in 1887, the Swedish chemist Arrhenius took up the matter

and proposed a theory to account for the abnormal values of the osmotic pressure.

He pointed out that compounds which create abnormally high osmotic pressures are all electrolytes—that is, when dissolved in water their solutions become conductors of the electric current. On the other hand, the substances which give normal osmotic pressures do not conduct electricity when dissolved, or do so very poorly. He found no exceptions to this rule. There appeared to be, then, some connection between the electric conductivity of a compound in solution and the abnormal osmotic pressure which it created. It is a generally accepted fact that the pressure of a gas or the osmotic pressure of a dissolved substance is proportional to the number of molecules or ultimate physical particles present in the gas or solution. Arrhenius reasoned that if there is a greater osmotic pressure than is to be expected, it must be because the molecules in the solution have dissociated or split up into a larger number of simpler bodies, thus making a larger number of molecules or ultimate particles. Each of these would exercise its own pressure in the solution, and the result would be an increase of the total osmotic pressure. These particles in solution, resulting from the dissociation of the molecules, were called ions. (Greek *ἰόν*, *going*). The name had been proposed years before by Faraday, the English physicist, for the same bodies, but Faraday did not assume that ions could exist uncombined in solution.

Each of the molecules of hydrochloric acid is composed of hydrogen and chlorine. If these molecules dissociate in solution, it can therefore only be into hydrogen ions and chlorine ions. That these ions must be different from hydrogen and chlorine in the free state is

evident to any one familiar with the properties of these elements, for both are gases, hydrogen being but very slightly soluble in water, and chlorine having a yellow color and disagreeable odor. Hence, in the free state, both would be immediately detected. The fact that the solutions conducted electricity offered an explanation of this difficulty. If the electric current passes through the solution of the acid, hydrogen will appear at the negative pole and chlorine at the positive. Arrhenius made the assumption that the ions were electrically charged; one kind of ion, the cation (pronounced *kat'-i-on*, Greek *κατιον*, *going down*), being charged with positive electricity, and the other, called the anion (pronounced *an'-i-on*, Greek *ανιον*, *going up*), with an equivalent charge of negative electricity. When a current passes through the solution the negative pole attracts the cation, or ion charged with positive electricity, and the positive pole attracts the anion with its negative charge. In the case of hydrochloric acid, the hydrogen ion would be the cation and the chlorine ion the anion. When the ions reach the poles their charges of electricity are unloaded and the ions become ordinary hydrogen and chlorine and appear as gases. This theory of ions is commonly called the ionic hypothesis, or the theory of electrolytic dissociation.

One prime difference between the ions thus far considered and the elements of which they are composed is that the ions are charged positively or negatively, and the elements are electrically neutral. Ions, moreover, do not necessarily consist of one element each. For example, sulfuric acid dissociates or ionizes into cations consisting of hydrogen alone and anions containing sulfur and oxygen combined. On the passage of the electric current the hydrogen cations, as before, go to the negative pole and the anions containing sulphur and oxygen pass to the positive pole. The anions, after losing their negative charge, are no longer capable of existing, but react with water to form more sulfuric acid and liberate oxygen. The result is that hydrogen and oxygen are liber-

ated at the two poles, while the amount of sulfuric acid remains unchanged. The statement is sometimes made that while pure water does not conduct electricity, it becomes a good conductor when acidified with an acid like sulfuric acid. From what has been said, it is evident that the acid is the real conductor, and the water serves merely to dissociate it.

One point should be particularly emphasized. The cations carry a charge of positive electricity exactly equivalent to the negative electricity of the anions, so that the solution is electrically neutral. In the case of hydrochloric acid, for instance, the amount of positive electricity carried by the hydrogen cations is equivalent to the negative electricity carried by the chlorine anions.

It must be borne in mind that electrolytic dissociation takes place when the substance dissolves. On separating from solution the positive and negative ions combine, and an electrically neutral compound results. Up to the present time water has been found to be the greatest dissociating agent. A salt like sodium iodide, which conducts the electric current very readily when dissolved in water and creates an abnormally high osmotic pressure, becomes a comparatively poor conductor when dissolved in alcohol, and its osmotic pressure becomes more nearly normal. We have no good explanation why water or any other liquid should act in this manner.

With one or two exceptions, all salts may be dissociated to a very large extent in water. The commonest salt which does not dissociate largely is corrosive sublimate, or mercuric chloride. With acids, the tendency to dissociate varies greatly. Strong acids, like hydrochloric and sulfuric, dissociate very largely. Acetic acid, however, which is the acid occurring in vinegar, dissociates only to a slight extent in a moderately dilute solution. So it is possible to distinguish between a weak and a strong acid better than could be done without the ionic hypothesis. A strong acid is one with a strong tendency to dissociate, while a weak acid is one which dissociates but slightly.

The chemical activity of a substance depends to a great extent on its ionization. The ions appear to be free to act directly with other bodies, while unionized or undissociated molecules are not. This explains why hydrochloric acid is a more active acid than acetic. All salts in solution, too, when they react with other salts, do so very rapidly. Most organic compounds, whether occurring in nature or made in the laboratory, dissociate but very slightly. As a result, reactions between organic bodies take place more slowly. For instance, digestion is a comparatively slow action, because the compounds occurring in food, mostly organic, are dissociated but little or not at all.

Dissociation or ionization always increases as the solution becomes more dilute. One example will illustrate this. Concentrated sulfuric acid is so little dissociated that its chemical activity is very slight. It may be kept in iron vessels without attacking them appreciably. If diluted with water the acid acts very energetically on the metal, indicating ionization. The concentrated acid, too, conducts electricity very poorly, but when diluted it becomes a good conductor.

The common reactions employed in chemical analyses are readily explained by the ionic theory. Thus, all simple chlorides when dissolved in water form a precipitate of silver chloride if treated with a solution of silver nitrate. It would be difficult to explain why all chlorides should behave exactly alike in this respect, if there were no dissociation. We should rather expect that in some salts the chlorine would be more firmly united than in others, so that it would not act upon silver nitrate. By assuming dissociation, however, the chlorine ion has no connection with the other ion making up the salt, and all chlorine ions should behave alike, as they do. The chlorine in potassium chlorate, or chlorate of potash, does not react with a solution of silver nitrate. Here the chlorine ion is not present, but an ion composed of chlorine and oxygen, which behaves quite differently.

The solutions of certain colored salts

furnish an interesting application of the ionic hypothesis. If quantities of different copper salts—for instance the sulfate and chloride—are dissolved in equal volumes of water, so that the same amount of copper is present in both cases, the solutions will be found to have the same blue color, tho the solid salts are not alike in color. Crystallized copper sulfate is deep blue, while copper chloride has an equally intense green color. The explanation is perfectly simple. Each salt dissociates into the blue copper cation and a colorless anion, so that the color is due to the copper cation only, which is the same in both cases.

The ordinary electric batteries have had their mechanism explained chiefly by means of the ion theory. Only one very simple type of battery will be mentioned, the crowfoot battery, or the Daniell cell, as it is sometimes called. The cell is commonly made by placing a sheet of copper in the bottom of a jar containing a solution of copper sulfate or blue vitriol. A zinc bar is hung in the upper part of the solution. On connecting the zinc and copper by means of a wire, a current passes through it from the copper to the zinc. At the same time, metallic copper is precipitated on the sheet of copper, while the zinc bar is partly dissolved, forming zinc sulfate. To explain the action, it is necessary to consider that zinc has a greater tendency to form zinc compounds than copper has to form copper compounds. For instance, zinc will, in general, corrode or oxidize more readily than copper. At the same time, the osmotic pressure of the copper ions in the solution of copper sulfate tends to force copper ions from solution and precipitate them as metallic copper. The action is then as follows: Copper ions, with their positive charge, are precipitated on the copper electrode. The ions give up their charge as they are converted into metal and the copper plate becomes charged positively. At the same time, that the solution may remain electrically neutral, zinc dissolves from the zinc bar, forming a positively charged zinc ion, and the bar becomes negatively charged. These are the conditions re-

quired to produce a current, and accordingly we have the positive current moving from the copper pole through the wire to the zinc pole.

Electric discharges through rarefied gases in Crookes tubes have lately attracted much attention. It is possible that ionization takes place here, tho of a somewhat different kind from ionization in solution. A Crookes tubes consists essentially of a small hollow glass vessel, with metallic electrodes at either end, containing a gas under very low pressure and sealed air tight. When an electric discharge takes place between the electrodes the so-called cathode rays are formed at the cathode or negative pole inside the tube. These are not to be confused with the Röntgen rays, which are outside the tube and are generated at the point where the cathode rays stop. The cathode rays are apparently not due to a disturbance of the ether, as are light waves, for if a magnet be placed near the tube the rays are deflected. Light waves, on the other hand, are not affected by the magnet. The rays are also deflected when passed between two plates, one charged positively and the other negatively, and if they are received in a hollow conductor they impart a negative charge to it. They behave exactly as if caused by material particles carrying a negative charge from the cathode. These negatively charged particles have been called corpuscles, and we shall use this term. It has been possible to determine the ratio of the electric charge to the mass of the corpuscles by several different methods. The methods all give substantially the same value, which is nearly a thousand times as great as the ratio of the electric charge to the mass of the hydrogen ion. Now it is not unreasonable to assume that the actual electric charge of these particles is equal to the charge of the hydrogen ion or the chlorine ion. Certain experimental results by J. J. Thompson tend to confirm this assumption. Then it must follow that *the mass of the corpuscle is only a thousandth part as great as the mass of the atom of hydrogen*. Hitherto the hydrogen atom has been assumed to be the lightest

particle which could exist. But here is evidence that particles may exist which have but a thousandth part of the mass of the hydrogen atom. There is another point. If the Crookes tube has an opening cut in the glass, which is then closed air tight by an aluminum window, the cathode rays pass through the aluminum and they have been observed in this manner outside the tube. Inside the tube, too, the rays will pass through thin metallic foil placed between the electrodes. It appears, then, that the corpuscles are able to pass through metals which are absolutely impervious to gas molecules, another good reason for believing that corpuscles are smaller than the ordinary atoms or molecules.

It appears to make no difference what gas is present in the tube, the corpuscles from each behave exactly alike, and they have the same mass or weight.

It cannot be said that the theory of corpuscles is very firmly founded at present. It is far too new for that. And what significance corpuscles may have in the constitution of matter is pure speculation. It has been suggested that the different elements are made up of different aggregates of the same kind of corpuscles. This seems a little like a reversion to alchemy. Again, the idea has been brought forward that different elements have corpuscles of the same kind united to them. When the electric current passes, the negatively charged corpuscles leave some of the molecules, which thus become positively charged, and pass to others which they charge negatively. As the corpuscles are so light, no change in weight or mass of the elements could be observed. However this may be, the most important point is that it seems extremely probable that corpuscles exist which are perhaps a thousand times lighter than the atom of hydrogen.

The theory has been advanced that cathode rays may be due purely to electrical charges without assuming the existence of material particles. There are certain objections to this view, and on the whole, physicists incline to the theory of corpuscles.

Literature

Kipling's New Verse

WE of the English tongue are not much given, like the French, to writing in schools or sects; we care too little for discipline and esteem originality too highly for that. It is, therefore, no small thing that Kipling has accomplished in so impressing himself on the minds of a generation that it is nearly impossible to write verse on certain themes without imitating his style and rhythm—and “the gods,” it is said, “love imitation more than sacrifice.” Have the early success and multiplied laudations that have deservedly fallen to Mr. Kipling turned his head just a little, so that in place of the sacrifice of honest work he is himself offering to his muse the honeyed mead of imitation? The question is unkind, but is wrung from us by a perusal of his new book of poetry, *The Five Nations*.*

It is simple truth that a very considerable portion of this recent verse reads like a mere imitation, or somewhat clumsy *rifacimento*, of his “Seven Seas.” The themes are the same, only with less variety; the rhythms are the same, only with less swing; the language is the same, even to its peculiarities and archaisms, only with less vigor. It is the Song of the English over again,—the trumpet voice of the Empire, uttering the secret call that summons the people to overrun the world, speaking the restraint of the Law that keeps the people strong to rule; but the voice has grown a little overstale and a little overwise from artificial insistence. One might fairly compare the two volumes page by page. In “The Seven Seas” we read in the Introductory lines:

“Hold ye the Faith—the Faith our Fathers
sealed us;
Whoring not with visions—overwise and over-
stale.

Except ye pay the Lord
Single heart and single sword,
Of your children in their bondage shall He
ask them treble-tale.”

That is the strong note of a poet over whom the inspiration of empire and the tremendous reality of the Law have swept with the kindling enthusiasm of the ancient Hebrew prophets. The imitation in the Dedication of *The Five Nations* rises not much higher than the daily newspaper:

“Yet instant to foreshadowed need
The eternal balance swings;
That winged men the Fates may breed
So soon as Fate hath wings.
These shall possess
Our littleness,

And in the imperial task (as worthy) lay
Up our lives’ all to piece one giant day.”

In “A Song of the English” we read of that haunting whisper that calls the home lad out into the broad world, and the voice wakened strange half-smothered stirrings in the hearts of us all:

“Came the Whisper, came the Vision, came
the Power with the Need.
Till the Soul that is not man’s soul was lent
us to lead.
As the deer breaks—as the steer breaks—from
the herd where they graze,
In the faith of little children we went on our
ways.”

It is ungenerous, but salutary, to quote the imitation from the later volume:

“Unto each the voice and vision: unto each
his spoor and sign—
Lonely mountain in the Northland, misty
sweat-bath ’neath the Line—
And to each a man that knows his naked
soul!”

There is in the older book this superb exhortation to the “Sons of the Blood”:

“Go to your work and be strong, halting not
in your ways,
Baulking the end half-won for an instant dole
of praise.
Stand to your work and be wise—certain of
sword and pen,
Who are neither children nor Gods, but men
in a world of men!”

Does it not make this conclusion of the later poem to Australia sound somewhat thin?

“Tempered, august, abiding, reluctant of
prayers or vows,

* THE FIVE NATIONS. By Rudyard Kipling.
New York: Doubleday, Page & Co. \$1.40 net.

Eager in face of peril as thine for thy mother's house.
 God requite thee, my Sister, through the wonderful years to be,
 And make thy people to love thee as thou hast loved me!"

There are also in the new book a sheaf of songs for Tommy Atkins (now "The Service Man"), and some of them,—such, for example, as the "Chant Pagan,"—quite in the old, stirring spirit. But it does not appear why verses such as these—written and well designed for "the instant need of things"—should be garnered between board covers:

"We're foot—slog—slog—slog—sloggin' over Africa!
 Foot—foot—foot—foot—sloggin' over Africa—
 (Boots—boots—boots—boots, movin' up and down again!)
 There's no discharge in the war!"

The fact is that in a large part of this volume Mr. Kipling's politics remain, but his poetics are forgotten. The jealous instant need of things has caught him in its mesh and the freedom of the New Romance is nearly lost. Yet at times he is the same poet that stirred the English-speaking world as before. There are one or two poems in the book which give again the swing and mystery and bitter savor of the sea—notably the lay of "The White Horses":

*"Who holds the rein upon you?
 The latest gale let free.
 What meat is in your mangers?
 The glut of all the sea.
 'Twixt tide and tide's returning
 Great store of newly dead,—
 The bones of those that faced us,
 And the hearts of those that fled."*

There are verses that call up with terrible vividness the life of the waste and the castaway, "The Broken Men" and "The Old Men." And there is, above all and more than redeeming all, "The Recessional." One closes the volume feeling that he would like to inscribe over the door of Kipling's study his own great words:

*"If, drunk with sight of power, we loose
 Wild tongues that have not Thee in awe,
 Such boastings as the Gentiles use,
 Or lesser breeds without the Law—
 Lord God of Hosts, be with us yet,
 Lest we forget—lest we forget!"*

Captain George Elers

THESE memoirs,* apart from being very curious and interesting in themselves, have a decided documentary value because of the side-lights they throw on military and social life in England and India at the close of the eighteenth and at the beginning of the nineteenth century. Like Boswell, Captain Elers has one quality that cannot be esteemed too highly in a writer of memoirs; while he does not possess the faintest tincture of humor himself, he is very often unconsciously humorous. Some of the situations in which he is the central figure are deliciously comical, and would never have been revealed, even to a nephew—his reminiscences were written for the edification of a nephew—except by an uncle who was perfectly satisfied that he was a credit to human nature and to his family. He notes his impressions day by day and hour by hour, passes quickly over his own doings, is never astonished at anything, does not boast of anything, and is not ashamed of anything. He is neither an artist nor a literary person—would no doubt have scorned the imputation—and so he records his view of the world simply like a man of the world, in brief, downright, precise strokes which render the profile without the color. But his pictures, even when reduced to their essential features, are vigorous and expressive, and stand out boldly from the canvas, somewhat like the very characteristic silhouette of the honest Captain which forms the frontispiece.

Captain Elers, when little more than a child, was sent to a fashionable academy at Chiswick, and his account of his school life bears out fully the impressions which a reader of the romances of the period gathers of the brutality characteristic of such institutions. His career in the army, which he entered when eighteen years of age, was as full of gambling, drinking, horse racing and duelling as one of Lever's novels. He spent nearly ten years of this period in the East, and his descriptions of life in India when India was still India and not a poor copy of England will be found

* MEMOIRS OF GEORGE ELERS, CAPTAIN IN THE 12TH REGIMENT OF FOOT (1777-1842). Edited by Lord Monson and George Leveson Gower. New York: D. Appleton & Co. \$3.00 net.

very enjoyable. Here he became for a time the bosom friend of Wellington (then plain Colonel Arthur Wellesley). But while Wellington rose to dazzling greatness, poor Elers remained stationary, and the affection of the conqueror of Napoleon for a person who could no longer be useful to him quickly vanished. The progressive coolness on the one side and warmth on the other—for the worthy captain continued to worship the illustrious commander to the end—is re-

vealed by the tone of the letters. "My dear Elers" soon changes to "Dear Sir," and then "The Duke of Wellington presents his compliments to Mr. Elers, etc." It is all very pathetic, and, alas! very laughable. The perseverance of Captain Elers deserved a better fate, at least in the case of the Newfoundland dog. A clerical cousin had left the captain his universal legatee, but when the defunct parson's debts were paid all that remained to the heir was a Newfoundland dog. To get rid of the animal Captain Elers made incredible efforts. He offered it as a memento, but in vain, to a lady who had jilted his deceased friend. Then the happy thought struck him that the Duke of Wellington might like to have it, and this was the result:

"LONDON, June 28th, 1836.

"The Duke of Wellington presents his compliments . . . and has no occasion for a Newfoundland dog, and will not deprive Mr. Elers of him."

Well might the rebuffed officer exclaim: "Has he a heart!"

Not the least interesting portion of the work is the appendix, which contains

CAPTAIN GEORGE ELMERS

a dozen letters addressed by Miss Edgeworth to Captain Elers, among whose innumerable cousins was the author of "Castle Rackrent." They are spontaneous, sprightly, warm-hearted, it might be said even *jolly*, but that the epithet would sound sacrilegious in connection with the staid Maria. Like all her correspondence, they show that it was in her to have attained a very high position, to have stood almost on the same level as Sir Walter—or, rather, as Thackeray—if she had

not been, from her very cradle, inextricably entangled in the meshes of utilitarianism by her most pernicious father. In these letters she does not, as she is accused of doing by Lord Lytton, "regulate her watch and her heart to the precise moment for the one to strike and the other to throb."

A Good Kentucky Story

DIALECT fiction is not so popular as it was a number of years ago, when Mr. Page wrote his delightful Virginia sketches. This is accounted for by the fact that so many writers of little real ability have attempted to conceal the worthlessness of their stories under this picturesque perversity in the use of words. But in a new country like our own, where original wit is often united with ignorance, and where there are not yet a sufficient number of schoolmasters greatly to affect the naturalness of speech, dialect fiction is an essential part of literature. There are portions of New England, of the South and of the West

where life cannot be dramatized with academic pronunciation, or in classical sentences. And it is a class of literature that deserves consideration because it portrays a passing phase of existence. Not only is the schoolmaster invading the mountain fastnesses with his grammar and dictionary, but the commercial fever of the times is drawing the poor from these remote places into the cities and factories. And with them a change of scene means a change of language, so that the dialect of the next generation will be less poetic and more blasphemous. It will portray the squalor and morals of the tenement districts, and there will be no poetic idioms in it of woods and fields and green mountain caves.

In view of these facts we ought to value a good dialect story such as Mr. Fox has given us in *The Little Shepherd of Kingdom Come*.^{*} This is a book with all the natural scenery put in so refreshingly that it is like traveling along the mountain tops to follow "Chad" in and out of "Kingdom Come." All the characters stand for that particular mood of nature which brings them forth. The "Bufords" and "Deans" represent the opulence, pride and refinement of the blue grass regions; the "Turners" and "Dillons" stand like long, gaunt, shadow sentinels for the mountains, while in "Chad," the little shepherd, the spirits of mountains and plains meet to make an admirable hero. He is destined to live in literature along with "Huckleberry Finn" and "Sentimental Tommie," without being in the least like either of those gifted young vagrants.

All Kentucky novelists are sentimentalists, and it goes without saying that this romance of the little "wood colt" of "Kingdom Come" is a sentimental interpretation of the situation. But no one can charge Mr. Fox with making an illegitimate use of his or the reader's emotions. There is not a charlatan sentence in the book; and, altho the scenes take us through the Civil War and through all that the Civil War meant in Kentucky, there is not a single maudlin appeal to prejudice.

Evolution of the Japanese

MR. GULICK offers a very elaborate analysis of the national character of the Japanese^{*} in explanation of his theory that the recent and rapid rise of Japan to power and reputation is to be found not in the externals of her civilization, nor yet in the influence of foreign governments, but in inherited mental and temperamental characteristics, reacting on the new and stimulating environment and working along the lines of true evolution. All these characteristics he finds not to be inherent traits of the race nature, but to depend upon the social order. Even moral traits, he holds, are due to that order and are changing with it. Broadly generalizing, he concludes that the features distinguishing not merely the Japanese but all Oriental peoples and civilizations from their Occidental congeners are differences of social evolution, and rest on social and not on biological heredity.

Mr. Gulick is a missionary of the American Board in Japan; his residence in the country has been long, and his knowledge of the people is extensive and minute. He discusses in detail the problems and method of progress, and then such characteristics as hero worship, marital love, industry, jealousy, revenge, humanity, patriotism, stoicism, æsthetics, intellectuality and religion. His book can be read and studied with profit, and will serve as a useful corrective for the highly imaginative and poetic conceptions of the Japanese people, which Sir Edwin Arnold and Mr. Lafcadio Hearn have led many to believe are the real ones. But the reader will need patience, for its prolixity is great, its repetitions frequent, and much space is given to discussions in abstract psychology, which might well have been omitted. Wherever Mr. Gulick draws upon his personal acquaintance with the Japanese and narrates incident and customs, he is interesting, informative and clear, but between oases of this kind there are many deserts which keep one jumping over them, so to speak, until the exercise gets exhausting. This is a not

^{*} THE LITTLE SHEPHERD OF KINGDOM COME. By John Fox, Jr. New York: Charles Scribner's Sons. \$1.50.

uncommon fault of books constructed as this is, from "addresses delivered by the writer" and published despite the recognized need for further elaboration because of "the urgency of friends, who deem it wise that he delay no longer in laying his thought before the wider public." The "wider public" has some rights in the matter, one of which is a claim to conciseness and consequent economy of the reader's energy and time.

Hephæstus. By Arthur Stringer. Toronto Methodist Book and Publishing House

The dedication alone would be enough to convince even the casual reader that Mr. Stringer knows a good deal about the making of verse, and the impression is deepened decidedly by a perusal of the volume itself. The following passage occurs in a speech of Sappho's to Phaon in the course of the third poem, "Sappho in Leucadia:"

"As waters come whence reeds may never see,

So men have wider missions than we know.
'Tis not thro' all their moods they hunger for
Our poor pale faces; as a flame at sea
They seek us in the gloom and then forget.
'Tis when by dusk the battle-sweat has dried;
'Tis when the port is won, and wind and storm
Are past; 'tis when the heart for solace aches;
'Tis when the road is lost in darkling woods,
Or under alien stars the fire is lit
And when strange dreams make deep the
idle hour;
Then would I have my name sing throbbingly
Thro some belovèd heart, soft as a bird—
And swing with it—swing sweet as silver
bells!"

Excellent as this is in point of meter and diction—and we have taken as favorable a specimen of his verse as we could find—it still lacks something. With the exception of the first five lines it lacks what we can call only genuine poetic rhythm. The poetic significance of things is not in themselves, but in the emotion of the spectator at once impassioned and speculative; and this emotional pulse of his both controls and is subtly reproduced by the rhythm. This is the reason that good poetry transfigures its subject beyond the possibility of prose; it both represents the object and inspires the feeling, whereas prose furnishes only the

former and leaves the reader to supply the latter for himself. And this is the reason also that Mr. Stringer's poetry, for all its merits, leaves us rather cold. This view of his inspiration would seem to be borne out by his style, which lacks the intense compression of high poetry and is discursive rather than intuitive—in other words, is essentially a rich prose style adapted to the exigencies of verse. While if any further confirmation were wanting, it might be found in the themes of his pieces, which are all three—the Vulcan, the Persephone and the Sappho—themes of renunciation, the positive motive of the poem in each case consisting in an attempt to make the best of a bad bargain by sentimentalizing, as it were, the purely negative advantages of dis-possession, which it must honestly be confessed are often considerable. But we would not disparage Mr. Stringer's poems; we would point out what in stock phrase it is usual to call their promise, and at the same time the one thing wanting, in our opinion, to make them poetry of a very high order.

The Silver Poppy. By Arthur Stringer. New York: D. Appleton & Co., \$1.50.

Considered from the standpoint of literary merit, the first half of this book far exceeds the latter. The scenes are laid in New York, and the author has that touch which changes all the highways of a great city into starways, into refreshing life currents and gardens of enchantment:

"The city lay beneath them, a garden of glimmering lights—pearl, opal and amethyst—with a flickering ruby or two in the remote, velvety darkness. . . . That is Broadway. . . . still looking like a Milky Way of lights. . . . And those golden crowns of light are the roof gardens: and there is Fifth avenue, spangled with its twin rows of white electric globes, for all the world like a double thread of pearls hanging down the breast of the city. Those crawling snakes with the golden scales are the 'L' trains. That cobweb of light is the Brooklyn Bridge, and those little ruby fire-flies are the ferries on the North River. . . . That disorderly, happy-go-lucky tangle and snarl of lights to your left is East Side, and that sinister scar of brighter light across like a sword-gash is the Bowery itself."

All of which is a little too artificial, of

course, to be in the best literary form; but it is an ingenious description of the city, not without its charm. But Mr. Stringer is concerned with hypnotizing the reader into the more dangerous details of his story. Apparently there is a vaudeville instinct in artistic human nature which accounts for the fact that so many men and women of talent love the Bohemian life. And in this book we have a very good representation of some of the worst features. It is wickedness illuminated by wit, passion refined by sensibility and decency seduced by cleverness. On the whole it is an exceedingly well conceived and carefully developed story, and it is a pity, therefore, that it belongs to the class of decadent literature.

Monsigny. By Justus Miles Farman. New York: Doubleday, Page & Co., \$1.50.

This novel should have appeared in yellow paper covers. It is of the sort read with delight by maid servants and coachmen. The scenes are laid in a château of France, with enough fountains and marble staircases about to give the proper romantic atmosphere. There is an innocent, beautiful girl, a sinister widow and a lot of peacock gentlemen who figure in the most dramatic rôles, and there are intrigues, of course, with women in their lace draperies falling down in fits of hysterics,—all the time-worn stage features, in fact, that usually make up a tale of this kind. But the illustrations are beautiful and worthy of a better cause.

Literary Notes

THE "Just So Stories" and "The Five Nations" are included in Scribner's Outward Bound Edition of Kipling's Works.

....The Temple Edition now includes "Verba Christi," Howell's "Letters" in three volumes, and "Pippa Passes and Other Dramatic Poems," by Robert Browning. (The Macmillan Company, 50 cents each.)

....The Arthur H. Clarke Company announce that the scope of "The Philippine Islands," while not exceeding the number of volumes, fifty-five, as planned, will be enlarged so as to cover the entire period of Spanish domination down to 1898.

....Doubleday, Page & Co. are publishing the Memoirs of Henri de Blowitz, the famous

correspondent of the London *Times*, who was an intimate friend of King Edward and of all the political rulers of Europe. The Memoirs are full of dramatic interest.

....There are a number of important books among the Fall Publications of Charles Scribner's Sons. The following may be particularized: "Autobiography of Seventy Years," by Senator George F. Hoar; "A Literary History of Ireland," by J. H. Millar; "Poets and Dreamers," by Lady Gregory; "Rossetti Papers: 1862 to 1870;" "The Makers of Hellas," by E. E. G.

Pebbles

TOM never ate a "tomater,"
Kate loved them while Tom was a hater.
Yet Kate often said
Such a man she'd not wed,
So to mate her Tom ate a "tomater."
—Chaparral.

...."Doctor," said the sweet young thing, "I've been told that eating cucumbers will remove freckles." "So it will, under one condition," replied Dr. Gruff. "And what is that?" "That the freckles are on the cucumbers."—*Philadelphia Press*.

....Mrs. Smith (rushing in): "Doctor, doctor dear! my little son has swallowed a mouse. What in the world is to be done?" Doctor (gruffly): "Swallowed a mouse, has he? Well, go home and tell him to swallow a cat."—*Medical Journal*.

....I never wrote a speech in my life, and never but once used one that another man had written. I envy the man who can sit down in cold blood and achieve a thought, then dress it—put clothes on it, pants, coat, vest, shoes and collar, and turn it out in full attire, as Minerva sprouted from the brain of Jupiter.—*Speaker Cannon at the Hamilton Club Banquet in Chicago*.

....Since Mr. Joseph Chamberlain began to advocate his "Preferential Plan," the following "ad." has been appearing almost daily in the "Agony Column" of the *London Times*:

"He that withholdeth corn, the people shall curse him; but blessing shall be upon the head of him that selleth it."—Proverbs xi., 26.

"And the Scripture cannot be broken."—St. John x., 25.

....St. Peter: "Who are you?" Applicant: "A resident of Wallasey." St. Peter: "Did you subscribe to the *Parish Magazine*?" Applicant: "Yes." St. Peter: "Did you pay your subscription?" Applicant: "I forgot." St. Peter: —*Wallasey Parish Church Magazine*.

Editorials

Is Prosperity to Stay?

To some observing minds the alternation of general prosperity and depression has seemed to resemble the movement of a pendulum. In the United States we have been enjoying a period of unprecedented prosperity, prolonged beyond the term allowed for it by the theories of some economists. Has now the pendulum begun to move downward?

This question is suggested by the prolonged and remarkable decline of securities, as well as by signs of decreasing demand for consumption in the iron and steel trade, affecting an industry always in recent years regarded as a barometer, and now attracting more attention than ever before, on account of the prominence of its securities in the Exchange market.

Our prosperity has been menaced by the excesses of the organizers of capital and the folly of organized labor. But the foundations of it were never more firm and broad. The crops are abundant, railroads are congested with traffic, the national currency is no longer exposed to the threat of depreciation, and the Treasury's gold holdings exceed those of any other country in the world.

The continuous and prolonged decline of marketable securities has cut away a mushroom growth of fictitious values. If it be true that artificial pressure was at first applied by powerful interests, it is also true that after a time no such pressure was needed to accelerate the downward movement. Owing to the excesses of wild inflation, chiefly in forming industrial combinations and selling them to a confiding public, the speculative financial structure was in a highly vulnerable condition. As the decline proceeded, one weak spot after another was reached, one interest after another became embarrassed, first-class securities were thrown overboard for the preservation of undigested or indigestible ones, and the movement became one of general liquidation. It is a most encouraging sign that it has been accompanied by a surprisingly short list of failures.

How does this affect the condition of trade and industry throughout the country? Does it foreshadow depression as a result of underlying conditions, or must depression be caused by it? Underlying conditions, not including those created by the speculator and promoter, are sound. But this fall of securities tends to affect the general situation, in several ways and for reasons which we shall point out.

It has impaired public confidence in the leaders of American finance. By embarrassing some capitalists and making others extremely cautious, it tends to check investment in industrial additions and improvements.

Confidence in some of our financial captains, who are in these days closely related to our captains of industry, has been impaired, to say the least, by recent disclosures as to the methods of Trust-makers and underwriting syndicates. The receding tide of promotion water and froth has laid bare many jagged reefs of sharp practice and much slime of selfishness, together with the gaping ribs of more than one wreck. At high water all these were concealed under the smooth surface of elevated and more or less patriotic finance. We have in mind the latest revelations as to the negotiations attending the promotion of the Shipbuilding Company and the sale of the Bethlehem Steel Works to that combination. As to these transactions there has been some sensational exaggeration in the press. Mr. Schwab, President of the Steel Corporation, had bought the Bethlehem Works for a little more than \$7,000,000. The property passed under the control of the Steel Corporation Syndicate, an organization that made a profit of more than \$50,000,000 upon a paid-in capital of \$25,000,000. It was not deemed expedient for President Schwab or the Corporation to own these Works and thus openly to monopolize the supply of steel armor plates for war ships. To the budding Shipbuilding Company they were sold by the syndicate or Mr. Schwab for \$10,000,000 in bonds (which had share

voting power), \$10,000,000 of preferred stock and \$10,000,000 of common shares. This may fairly be criticised as a somewhat flagrant example of overcapitalization, but it should be borne in mind that for the stock a market and a value were yet to be made. In fact, the stock has had very little value in cash. Three-quarters of this stock was delivered to Mr. Schwab and one-quarter to the managers of the Syndicate, J. P. Morgan & Co. Of the remaining \$25,000,000 of stock only a small portion had been distributed to the vendors of the subsidiary properties combined in the Shipbuilding Trust.

A formal agreement was at once drawn up, and signed by Mr. Schwab, the purchasing parties, and a firm of brokers, providing that all the remaining stock not yet distributed should be withheld from the market and that no part of it should be sold or otherwise disposed of until the \$15,000,000 delivered to Mr. Schwab and the \$5,000,000 delivered to Morgan & Co. should have been marketed. The brokers were bound to sell this stock "as expeditiously and advantageously as possible." They were to sell it at \$65 and \$25 per share (preferred and common), or at higher prices, if they could. It appears that the market would not absorb the shares. Few, if any, were sold. At some date not mentioned the \$5,000,000 in stock which had been delivered to J. P. Morgan & Co. was sold to Mr. Schwab for \$75,000, and this sum became a part of the Steel Syndicate's profit. The firm of Morgan & Co. says to the public that it was not a party to any agreement for selling these shares.

While the apparently large gains of those who sold the Bethlehem Works existed merely on paper and have never been materialized, the methods revealed by this lifting of the curtain, together with the amusing record of the attempt of the Shipbuilding Company's promotion agents to procure the underwriting of bonds in Paris by persons on the ragged edge of financial circles, excite the disapproval and hostility of the average investor. The publication of such a chapter of finance may compel the adoption of more acceptable methods of promotion.

As we have said, the decline of securities has embarrassed a considerable

number of capitalists of the middle class and made others cautious. Thus the demand for consumption must be affected in some measure. At the base of the iron and steel industry the output has probably been excessive; it is now to be reduced by about one-fifth. But the consumption of iron and steel has been unnaturally cut down by the folly of the labor unions in the building trades. They have chosen for their unwise and hostile action the very time when, in their own interest and in the interest of all workingmen, they ought to sustain the consumptive demand for steel, because of the sentimental as well as the direct effect of declining demand upon that public confidence that sustains wage schedules and keeps labor employed. In accounting for the restriction of iron and steel output we must not overlook the long suspension of work upon \$90,000,000 worth of large buildings in New York, the recent withdrawal of \$50,000,000 from intended investment in other similar buildings there, and the partial paralysis of building work in other cities where the unions have shown an equal lack of good common sense. The entire fabric of industry and credit is sensitive to changes in the condition of the industry that produces iron and steel. If the organizers of capital, by their excesses, have threatened and endangered the life of the goose that lays golden eggs, organized labor may fairly be accused of the same folly.

But we can find in fundamental conditions no warrant for a belief that the pendulum has started, or is about to start, on its downward sweep. The "boom" period of excessive speculation and promotion is ended. A period of industrial conservatism is probably at hand. There may be some reduction of output and prices. Further increase of wages cannot reasonably be expected. But for a prediction of approaching depression there is no support in conditions that exist or can be foreseen.

The Life of Gladstone

To most readers Mr. Morley's "Life of Gladstone," long expected and now at last published, will be decidedly the book of the year. Some idea of the magnitude of the historian's task may be obtained from his own statement in the preface.

During his life Gladstone's accumulation of letters and other documents became so enormous that he was obliged to build out a room—the famous Octagon chamber—at Hawarden to hold them. This great mass of papers Mr. Morley undertook to examine, besides “several thousands of other pieces from the legion of Mr. Gladstone's correspondents.” Altogether, he says with what sounds not unlike a sigh of relief, he examined “between two and three hundred thousand written papers of one sort or another.” The result is a biography somewhat alarming in its proportions—three large volumes, forsooth, of more than six hundred pages each.

So formidable a work might stagger even a veteran reader of books, were it not for two things. In the first place, Mr. Morley is one of the few living writers who is always interesting without being superficial, and dignified without being dull, a scholar and a master of English. And then the life of Gladstone becomes of necessity almost a history of the long and crowded Victorian era, with which his activity is practically synchronous. Not only was he intimately connected with the political growth of that period, but in one way or another he touched on most of the intellectual movements that made the reign of Victoria so significant. He was an ardent Churchman and did not hesitate to tilt a lance at Huxley and the other champions of science; he was a classical scholar who threw himself heartily into the terrible battle of the Homeric *ids*; he was interested in modern literature and for many years a word from him was sufficient to make or mar the fortune of a book; he was a renowned talker who met and conversed with all the world. Indeed, there are those uncharitable enough to assert that the upshot of his superhuman activities was chiefly words—and still words. Certainly his encounter with Huxley does not today redound particularly to his credit, nor is his scholarship taken very seriously, nor was his commendation of books—Marie Bashkirtseff, for example—always quite wise. Yet, withal, he stands, to friend and foe alike, one of the colossal figures of the past century—and there were giants in those days.

Mr. Morley in his biography has concerned himself chiefly with the statesman, and has undoubtedly shown his customary good judgment in so doing; for our opinion of Gladstone must, of course, rest finally on our estimate of the man as a leader of parties and a minister of government. Mr. Morley, it is well known, was a friend and follower of Gladstone and writes frankly as a partisan, yet without glozing his hero's errors and from no petty outlook. While engaged in his task, Queen Victoria—who, as well as King Edward, did all in her power to facilitate the historian's labors—begged him not to treat his great theme “in the narrow way of party;” and, if we may judge from a hasty glance through the volumes, he has succeeded in avoiding “the narrow way,” while not hesitating to express pointedly his own convictions. He has written one of the books that must be dealt with in any future study of the Victorian era.

A more extended account of Mr. Morley's work will be given in *THE INDEPENDENT* in due time by a distinguished scholar and writer.

A Change of Seasons

IN the great cities a change of seasons is a mere matter of weather, a question of food and shelter for some, of top-coats and amusements for others. Nowhere is there a comradeship with nature for summer favors, nor a hand to hand conflict with her for winter stores. Even in the spring, when there is a new sensation abroad in the tree tops and every inch of untrodden ground grows a green tuft of grass, the people in the streets are not aware of what is going on except by the signs in the shop windows or by a bunch of violets on my lady's bonnet. Yet, for a month even before the snows melted, every sparrow in the city has been discussing household economy under stately eaves and in cosy roof corners. Whatever was wrong or vicious in his winter life on the pavements has been forgiven him in these upper regions of sunshine, and belongs now to a past consciousness that was discarded with his bedraggled winter feathers. He is no longer a bushwhacker of his kind, a rogue

of the garbage gutters and dustbins; he is the knight errant of love, or a respectable citizen, converted by an impulse of nature, by a sweet breath of fresh sods and hawthorn hedges that has somehow reached him through the grime and smoke of innumerable flues and chimneys. All his rakish affections center about one virtuous nest mate, and what was formerly a marauding instinct becomes a noble paternal ambition to provide crumbs for his young.

But the men and women who fared with him through winter months failed to take the cue. They misunderstood the sensation that stretched *his* vagabond wings for flight into cleaner air for a sentimentality that might be expressed in muslin and a vacation upon the seashore. Otherwise they were preoccupied with the handmaking of their own affairs, asking no odds of heaven in their steam-heated, gas-lit city, and despising the absurdity of changing life and occupation to suit the season—all of which is as it must be!—else we should have no cities, no great industries, no Fifth Avenues, nor tenement districts.

But far out in the country, where sun and earth furnish support upon nature's installment plan, a different order prevails. From the smallest creature to the richest farmer, all are dependent upon her for inspiration, hope and harvest. Each must make provision during her plentiful moods for the barren time when she strips the world, seals the ground and covers all with the white silence of snow.

And so it happens that now while some people in the cities are passing from the hardships of heat to the severities of cold with dull improvidence, and others are exchanging the surf and summer opera for the gayeties of the winter season, those who live in the country according to Nature's oracles are far otherwise employed. For there is a crown of golden-rod upon every hill, a yellow harvest light in the valleys, and the odor of corn in the air. The leaves are falling in the forest, and the gray squirrels are making acorn barns of every hollow tree. The birds no longer fluff and flirt and sing, but every little dandy robin has his feathers smoothed close ready for the Southward flight. Everywhere there are

the evidences of excitement over the change. Staid farm horses that have sweated their way clumsily through many a furrow during the summer season are sniffing coltishly at the frosty wind, and every creature is growing a thicker coat of hair. Thus it happens that there are noisy preparations in the barn yard. And within the house crickets are already chirruping under warm hearth stones. After the long days of blossom and sunshine the housewife sits before the fire sorting her seeds; prince feathers and dahlias, zinnias and hollyhocks are labeled; tulip bulbs, hyacinths and daffodils are ready for planting in the brown beds outside. And somewhere in a warm, dark closet, mysteriously potent packages of herbs are tied in medicine rows along the wall. There are bags of beans and damsons dried, and, tier above tier, jellies and preserves rise in orderly precision,—clear golden on the first shelf, wine-red to blackberry after that,—with tall jars of pickles to flank and divide the best from the "second best." In the attic every chest has been rifled of camphor scented shawls and blankets, and passers by may see a family procession of log cabin quilts, varying in size from the baby's crib to the "company bed," "airing" on the privet hedge. The everlasting, never-fading rag carpet has been put down in the living room. And the questioning of lengthening Bessie's last winter's frock, or of making John's top-coat out of father's old one, is a problem that faces every female member of the family; for when people live next door to Nature, however prosperous, they learn the virtue of economy, the wit of outlasting their clothes. With them neatly sewed patches are the fine decorations of industry that harmonize decently with those little squares of color that Nature often sets a blooming in the midst of a gray landscape. This conformity, by the way, really explains why a country boy's trousers become a misfit only when he ventures to the city in them. They were designed for hillside farming and husking bees, therefore they do not contrast properly with the architecture of city scenery as do the delicate, inane legs of the haberdasher's dummies in the shop windows.

One other difference in the effect of

seasons, in town and out, should not be overlooked. The value of a man in the city is the same the year around. His social and commercial importance does not fluctuate equinoctially. But in the country this is not the case. As winter approaches, economy ceases to be agricultural and become entirely domestic. The woman is then the prime factor, since the peace and comfort of the household depend largely upon her thrift and ingenuity,—while the man, with his harvest gathered and no land to till, is often a kind of dead beat who may be relegated to tasks about the barn, or set to sorting turnips, or even coaxed into winding thread sheepishly of evenings when nothing else offers. Still, he is the one winter superfluity that an industrious woman tolerates with becoming grace. And he is docile, grateful or ungrateful according to the law and disposition of his own mind.

But when all is said, he can better afford to endure the petticoat dynasty of these few months than other men, since he is the only one of them who follows successfully three vocations during the remainder of the year. For the business of preparing and planting is different from that of tending and keeping; and both vary from the care of the harvester. Nor is the man who sows in the quickening silence of the young spring the same who reaps his share from the autumn fullness of the earth. One is different, an anxious speculator in heaven's favors, who follows nature's great moods with fear and trembling. He is lifted up by her sunshine, cast down by her shadows. But at the end of the year with his barns filled, he has the consciousness of one whom the earth has made a favorite of fortune. Thus is he finished at last like a weather beaten oak that has survived the sweetness and madness of many seasons.

As for the man in the city who treads the pavements to and from his office, forever blind to the miracle that changes the snows of winter into the blossoms of spring,—Ah! well, he is a commercial abstraction of humanity, a mere product of civilization and finances who does not really belong to any natural order of life.

The Right to Be Courted

SOME weeks ago we discussed the curious experiment in education now being carried on in this country by which the task of the training of young people of both sexes is being given almost exclusively into the hands of female celibates, and called attention to the rules adopted by many school boards according to which marriage is considered a sufficient cause for summary dismissal. In Kansas they have been carrying this a little further than anywhere else, as is the custom of that State in most matters. It was found that even the threat of disgraceful discharge was not sufficient in all cases to prevent the schoolma'ams from occasionally dropping off into matrimony. The State lost every year many of its best teachers that way; teachers who were qualified to do good work after having spoiled several roomfuls of children in learning their profession. It was realized that it must be nipped in the bud, and that it was too late to stop a woman from getting married when she had already found her affinity, or "he had found her," as the modest woman prefers to put it. Following out the idea of which we hear so much nowadays, that political economy is only civic housekeeping, the school boards adopted the rule which housewives have so long enforced, "No followers allowed." The candidates for positions were required to sign not only a pledge against marriage, but an agreement that they would not even allow themselves to be approached with a view to matrimony. The rules in some cases were almost as explicit in regard to the permissible limits of the attentions allowed as those famous orders promulgated by General Booth to check the matrimonial tendencies of the Hallelujah lads and lasses.

Now the laws of New York will not allow a couple to get acquainted, at least by correspondence initiated through a newspaper, except with an open and avowed matrimonial object; a curious attempt to reverse the ordinary laws of nature and the mode of courtship procedure in vogue since the days of primordial protoplasm. Fortunately the law was no better obeyed than the other laws of that State; otherwise the realistic novelists of

New York would have had to write their romances backward, beginning with a proposal and ending with a talk about the weather and a cold salutation. In Kansas the opposite policy was followed. Teachers could conduct any kind of correspondence except one leading to marriage, and could receive any callers except suitors. That is what makes American politics so interesting; its variety. One State will require all saloons to be screened; another requires them all to be opened to view from the street. One pure food law will proscribe the use of hops in beer; another will prescribe it. One legislature will demand bedrooms as adjuncts to saloons, another will compel their separation. The only thing that all legislatures are agreed upon is that it is their duty to make the people do something that they do not want to do, no matter what. Like cowboys in a snowstorm their object is to keep the herd on the move, no matter where they drive it.

The efforts of the school boards to prevent their teachers getting married might have been as effective in Kansas as in some other States, except for one thing. The men of that State in a moment of inadvertence many years ago when the State was young granted the right of suffrage in school matters to the women. The politicians realized that there was not much in the school elections for them anyway, and if the women would take that and be satisfied, it would be better than to have to grant the whole ballot; at any rate it was a harmless experiment. And so it proved. The creature thus partially unchained from the hearthstone did not run ravaging through the streets, as some feared she would. The women voted about as regularly as the men and used about the same amount of sagacity and asininity in the operation, but they did not show any marked desire to run for office, and very few women were on the school boards. Both the friends and the enemies of woman suffrage came to despair of the Kansas experiment, since it was good for nothing as an example, either as a warning or as a model.

But in this crisis it proved not to be a negligible factor. The Kansas people have ceased to be frightened at the words "paternal government," but the government as a chaperone was too much for

them. The women rose in defense of the right to be courted, of which their sisters who conducted the shooting galleries for young ideas were being deprived, and by a secret but well concerted movement they elected a majority of the country school boards in the 2,000 districts of the State. The men were in many cases busy with the harvesting and did not realize that anything unusual was happening until the women began to come to the polls in mass late in the afternoon. Most of the newly elected school boards are pledged to rescind the obnoxious rules. This incident certainly favors the argument that is generally used by the advocates of the extension of the suffrage in any direction, that while it may be of no apparent value to any particular class under ordinary circumstances, as an emergency weapon and a check against tyranny it is very useful.

But it is our duty to point out certain dangers in this new movement. That is considered the main duty of editors nowadays; to point out possible disastrous consequences to the most promising endeavors, and to turn the fairest garment inside out lest we forget that it has a seamy side. In some places where the new school boards are entirely composed of women it is proposed to retaliate by cutting down the salaries of the male teachers who smoke. We hope this will not be done. We recommend a spirit of conciliation rather than of revenge. Let the rival sexes in Kansas bury the hatchet. A man suddenly deprived of his tobacco gets cross, just as a woman does who is too long deprived of a husband, and there are too many cross teachers as it is.

Another warning. It is well the women have vindicated their right to be courted, but let them not go too far in the exercise of their power. A few years ago, when people began to talk about the "right to work," it sounded so pleasant that almost every one agreed to it, until they found that some of those who were using the phrase meant by it the right to prevent other men from working except as they wanted them to, and involved the right to use any means, from epithets to dynamite, to make them mind. Now, women are always inclined to go to extremes, just as men are, and we shudder

to contemplate the results if this newly discovered natural right should be developed as other rights have been. The first step would be, of course, to establish a minimum number of suitors for each schoolma'am, for it is repugnant to one's sense of justice to see some girls without lovers while one girl has four or five, simply because she happens to be "pretty to walk with and witty to talk with." The republic cannot endure if such a state of social inequality exists. A little regulation would secure at least one proposal in five years to each schoolma'am. Then, since the number of eligible young men is limited, it would be found necessary to prescribe the number of calls per week and the length of each, and vigorous boycott instituted against any girl who kept "open house," or worked overtime on matrimonial negotiations. If feeling became so aroused as to threaten public riots, it would be necessary to establish courts of arbitration, of which the precedent and the models would be found in the "Courts of Love" which ruled in sunny Provence in the Middle Ages. And finally—or at least this is as far as our editorial foresight will carry—a young man would not be allowed to pay attention to any particular young lady of his own selection, but would have to apply to the union and have a sweetheart assigned to him. Nor would he be allowed to cease his devotions in that abrupt way which has broken so many maiden hearts under the old *régime*, but he would be obliged to continue the courting as long as the union required, and according to the rules regulating the gifts, visits, favors, endearments and caresses, under the eye of the walking delegate. Any indication of a tendency on the part of the young man to drop any girl from the payroll of his attentions or to call on scab girls on off nights would call for the severest penalties. On the whole this state of things might not be any improvement on the tyranny which prevailed before women had vindicated the right to be courted. We no sooner get rid of one Cæsar than we find ourselves under the domination of another. However, if affairs in Kansas do not turn out so bad as we have prognosticated, let no one say that it is not because we did not say that they would not.

Presbyterians in Church Unions

WE mentioned the fact last week that the everlasting negro question bobbed up in the negotiations for union of the committees of the Northern Presbyterians and the Cumberland Presbyterian Church. The trouble comes over the rule of the Northern Church that two presbyteries shall not be organized in the same territory, which means that there shall not be one English and one German, or one white and one colored presbytery occupying the same ground, but that all Presbyterian churches shall meet together on equal terms. This rule is different from that of the Methodists, who have allowed, by vote of General Conference, their white and colored churches to meet in separate conferences when they should so desire. In the South the white churches did so desire, and the colored churches finally yielded unwillingly.

Now the Cumberland Presbyterians are strong in the South, but not among the negroes, and they hesitate about joining with a denomination in which they might meet in presbytery with tinted Christians. So they will wait until the next meeting of the General Assembly, when a committee is to report on a proposition to rescind the rule forbidding two presbyteries to occupy the same territory. There are quite a number of colored Presbyterian Churches in the South belonging to the Northern Church, but none in the Southern Church, as they have been directed to form a denomination of their own. The negro Presbyterians belonging to the Northern Church are quite stirred up over the proposition to set them off in separate presbyteries and are protesting that in that case they might as well withdraw entirely. The Presbytery of Catawba, N. C., mainly colored, has unanimously adopted an overture of protest declaring that the proposed separation is "un-Presbyterian," that it "would tend to eliminate life-long members from their beloved Church," and that it would be "unchristian and in direct opposition to the life and teachings of Jesus." This proposition, which originated in an overture from the Synod of Tennessee, involves a principle of the highest importance and will offer a test of the character of the denomination.

This week we report from the antipodes another meeting of committees that were appointed to consider the union of Presbyterians and Methodists in Australia. This preliminary meeting was a very hopeful one. They have published a comparative statement of their system of Church government, from which it appears that there is no essential difference between them. Like the English Wesleyans, the Methodists of Australia have no bishops, and their quarterly conference is much like a presbytery. The main difference that can be discovered is in their ways of appointing their ministers. It is very curious that there, as here, the doctrinal difficulty seems to have vanished. High Calvinism, whether sublapsarian or supralapsarian, plays no part, and few people now can retain in memory the meaning of the words. It looks as if the union might be accomplished, but it will take time to reconcile the old men on both sides to it. Yet there are fewer of them in so young a country.

Russian Bad Faith The 8th of October has come and gone, and Russia has taken no step to evacuate Manchuria. On the contrary, she took that day for a spectacular parade of troops at Newchwang, singing national airs. It is difficult, and perhaps not necessary, to use the language of courtesy in speaking of Russia's contempt for her solemn promises made to the United States, and by treaty with China. Our State Department has Russia's written promise to evacuate, and so definite was it that Secretary Hay was forced to accept it as genuine and profess to believe it. The securing of that promise was one of Secretary Hay's triumphs. There may well be great indignation in Washington and throughout our country. Evidently Russia's idea of diplomacy is that it is a way of deceiving nations. That Russia never intended to keep her promise has seemed likely to most who know her ambitions and her character for truthfulness. She regards truth as no part of the Christian ethics. It was with the deliberate intention of falsehood that she has hastily sent all of her available vessels of war to the East, so that she was able last Saturday to send from Chifuh a fleet of

ninety vessels of all sorts. The only need of them was to protect herself, in case of bad faith, against the indignation of Japan, a non-Christian Power, which has the curious pagan notion that international obligations should be sacred.

The Waterbury Election Those who recall the history of the street railway strike in Waterbury, Conn., can easily understand why that Democratic city elected a Republican Mayor last week by a large majority. The strike was marked by much violence. A policeman on guard in a car in which there were at the time no passengers was murdered by a party of masked men, no one of whom has been brought to justice. The strikers had the support of organized labor. When the unions exhibited their control of the Democratic party by causing the nomination for Mayor of a man who represented them and their attitude during the strike, party lines could not restrain many Democrats from voting for his opponent, who stood for law and order. Mr. Lynch was beaten not because he was the candidate of labor unions, but because he appeared to represent that spirit of opposition to law and authority which had been shown during the strike. The present Mayor of Hartford was very clearly the candidate of labor unions, but this did not prevent his election.

Washington in London One of the recollections of almost every American schoolboy is the picture of a patriot band pulling down the statue of George III in the New York Bowling Green. There was something of exultation, probably, in the hearts of most boys who regarded that picture in their Histories, and they liked to read that the statue was melted and cast into bullets for fighting the wicked King's soldiers. Of all such royal images and insignia nothing now remains in New York (indeed, we recall nothing in the country) save the three plumes of the Prince of Wales with his motto, *Ich dien*, which still stand over the pulpit of old St. Paul's. There were no statues of

Americans in London then to be overthrown or mutilated, but the proposal to raise a monument to one of the rebellious leaders would have sounded somewhat odd to the commission, for instance, which listened to Wedderburn's scathing denunciation of Franklin. We think of these things when we read of the design to erect a statue of Washington in the British capital. Certainly the times have altered, *et nos mutamur in illis*. England and America have been growing closer together for many years, but this great change is due immediately to our Spanish War and the English South African War. The first brought to this country a certain respect from England, which perhaps need not have been withheld so long, and the latter forced upon England a knowledge of her own isolation and the profit of a closer understanding between the two great English-speaking Powers. It is another illustration of the strange way in which peace grows out of violence, honey out of the lion's carcase. And, after all, a statue of George Washington in London would not be an innovation without a forecast. Hanging together in the cabin of H. M. S. "Renown," Admiral Barker's flagship, may be seen, or might be seen not long ago, three pictures—Queen Victoria, Nelson and Washington. It is a good work these Englishmen are planning, and every American must wish them success.

An American Firman At last, after much waiting, and doubtless by the help of our fleet at Beirût, the firman long desired has been granted for another American expedition to excavate one of the mounds of Babylonia. Dr. Banks, formerly American Consul at Baghdad, has been for some two years in Constantinople trying to get this firman for an organization in this city, the chief promoter of which was the late President Morton, of Stevens Institute, Hoboken. But the Porte promised and delayed until Dr. Morton died, and the subscription made was exhausted and the committee in charge disbanded. Then, in the nick of time, President Harper, of Chicago University, secured a handsome sum to devote to Babylonian excavation, and went

to Constantinople and received encouragement that a firman would be granted. This was announced in the papers some two months ago, but we hesitated to announce it until the promise had been fulfilled. President Harper has just received word that the firman has been granted for Bismya, in southern Babylonia. This is a large mound of clay, about three-quarters of a mile in circumference and forty feet high, with walls and what looks like an ancient ziggurat, or tower, and it doubtless belongs to the oldest civilization. No digging has ever been done there, and the ancient name is not even known. It was reported on by Dr. Ward, of the Wolfe Expedition, and by Dr. Peters for the University of Pennsylvania's Expedition to Niffer. There are doubtless very important historical treasures buried under it. President Harper's brother, Dr. Robert F. Harper, Professor of Semitic Languages in Chicago University, who was Assyriologist of the Niffer Expedition and has had much experience in reading the tablets, will be in charge, with Dr. Banks as field director. We anticipate important results, as the work will be continued for years with no lack of funds. We confess a wish that a firman might be made for excavation at Anbar, on the Euphrates, the largest mound not yet opened, quite accessible, probably the seat of the Elder Sargon, who reigned at Agade more than 3,000 B. C. The other most desirable site is Abu-Shahreïn, at the extreme south, difficult of access, and probably the very oldest settlement of civilized people in Babylonia.

Bishops and Primates We are not sure but those who object to the regularity of the election of Dr. Greer as associate and successor to Bishop Potter are right in their contention that it is unconstitutional. Under the canons of the Episcopal Church the permission of the other dioceses of the country must be secured before such an election can take place, except in case of the sickness and incapacity of the bishop. It does not seem to have been claimed or proved that Bishop Potter's health was infirm; he simply was overwhelmed with the work. The objection raised does not seem to be based at all on any prejudice against Dr.

Greer, who obtained the votes of High Churchmen and Low Churchmen alike. Another matter of much interest in the Episcopal Church is the report of the commission appointed to consider the advisability of dividing the dioceses into provinces under a chief bishop, as in the Catholic Church. The commission will recommend the creation of seven provinces, and that the bishops of each province elect one of their number as Primate. That looks to us reasonable, only the designation of Archbishop would seem more natural; and, to put the capstone on the column, the Primates should elect one of their number to be Archprimate, Patriarch, Exarch or Pope. It would complete a stately organization, supplying it with dignity and dignities.

It is evident that Circuit Attorney Folk is doing altogether too well in St. Louis. Through his efforts nineteen boodlers have been convicted, but not one of them is in prison. In every case the verdict is stayed by the State Supreme Court, composed of six Democrats and one Republican. Mr. Folk has been impartial, Democrat that he is, in securing the conviction of villains of both parties, but the Democrats, being most in office, get the most chances for boodling, and so have suffered the worst from the efforts of Mr. Folk. The party managers evidently do not like his energy, and do not wish to see their friends in prison. If the Missouri Democrats knew their opportunity they would make him Governor of the State.

The Massachusetts Democratic platform does not follow that of Maryland in demanding that ours be a white man's government. On the other hand, it really condemns lynchings in the following words, which show that it is concerned more with the Philippines than with this country:

"We should condemn lynchings in the South or in the North as we condemn massacres in Russia or murders in the Philippines. Hence we favor an early declaration of our purpose in the Philippines, and oppose the repeal of the Fourteenth or Fifteenth Amendment."

The definite condemnation of the proposition to repeal the Amendments is decidedly refreshing, as it is unexpected.

It looks as if Columbia University might expect to receive from her friends the ten millions which her President asked for. At the last commencement one man gave \$300,000 for a dormitory. A few weeks ago another liberal friend gave a million dollars and promised a million more for a building and endowment for a department of Journalism. Now we are informed that a two million dollar purchase of land, which was held by a syndicate, has been made by the University and a fifth of the sum paid down. Our metropolis begins to appreciate the honor of giving to its principal educational institution.

In the San Francisco election the other day 14,481 people voted that the city should take over the Geary Street cable line and 10,745 voted against it. Thus, altho a majority voted for municipal ownership, it was not the necessary two-thirds, and the proposition failed. Municipal ownership will eventually prevail throughout the country unless all present signs are misleading, and it will not be rash to predict that within the next few years some progressive city will undertake the experiment of owning and operating its own street railway system.

William E. Dodge made no charitable bequests in his will. He gave the sufficient reason that he believed it better to make such gifts during his life-time, and those gifts were generous. That is a good rule for those who can observe it; it avoids lawsuits and taxes, and it allows the giver the pleasure of seeing the fruit of his benevolence. But there are those who cannot, or will not, give while alive, and it is well that they should do by bequest what they could not do by gift.

That Professor Langley's flying machine has failed again is unfortunate, but should not be discouraging. If an albatross or a condor can fly with infinite ease, and without a balloon, a man can, give him time to study the way of it. It will be done before long, and we hope Professor Langley or Dr. Alexander Bell is the man to do it.

Financial

National Bank of Commerce, in New York

THE most important event in the financial world in New York last week was the consolidation of the Western National Bank and the National Bank of Commerce.

The Western National was organized in 1887 by the late Henry B. Hyde and interests identified with the Equitable Life Assurance Society. Its capital was ten million, and surplus two and one-half million dollars, and its growth has been phenomenal.

The Bank of Commerce was organized in 1839 with an authorized capital of five million dollars, and has always maintained a position of great strength and usefulness. Its Presidents have been: Samuel Ward, John Austin Stevens, Charles H. Russell, Robert Lenox Kennedy, Henry F. Vail, Richard King, William W. Sherman and Joseph C. Hendrix, all men of high standing and character.

In 1841 the Bank of Commerce was for a short time the sole depository of the Government in New York City. It loaned the United States a million of dollars, which it increased in 1843 to a million and a half. Especially noteworthy was the bank's attitude toward the Government during the Civil War. At the close of December in 1860 the interest due January 1st on the stocks of the United States was unprovided for, but the Bank of Commerce

assumed a large share of an immediate advance of five million dollars upon the condition of the payment of interest by the Government. Other temporary advances were made by the bank to the Government during the war.

Up to 1866 the bank had made subscriptions in United States securities of more than sixteen and three-quarter million dollars. In 1865 the bank became a National Bank. A clause was introduced in the National Bank act providing that share holders in National Banks with at least five million capital and a surplus of one million should be exempt from the liability of double the amount of the stock, which pertains to banks with smaller capitals. With a single exception the Bank of Commerce was the only Bank in the United States affected by the clause above referred to.

In the refunding schemes of the Government since the war the Bank of Commerce has been most prominent. J. P. Morgan has for many years been Vice-President of the Bank; his predecessors being A. A. Low, the father of Mayor Low; and John Jacob Astor, the father of Wm. Waldorf Astor. Theodore Roosevelt, the father of President Roosevelt, was a Director from 1874 to 1877. Robert B. Minturn, Peter Stuyvesant, Edwin D. Morgan, the War Governor of New York, have also been Directors. The new President, Valentine P. Snyder, is one of the youngest bank presidents in town. After a connection with the Hud-

of Men, New York.

son River Bank of Hudson, the First National Bank of Fishkill, the Chatham National and Third National Banks of New York, Mr. Snyder became Chief Clerk in the office of the United States Treasury, and afterward Deputy Controller of the Currency. He subsequently became a National Bank Examiner and Assistant Cashier of the First National Bank, and in 1890 was elected Vice-President of the Western National Bank; in January, 1899, he succeeded to the Presidency of the Western National. H. A. Smith, Vice-President of the Western National, has been elected Vice-President of the Bank of Commerce. J. Pierpont Morgan continues as the other Vice-President. William C. Duval remains Cashier of the combined bank.

The capital of the bank is now 25 million dollars and its deposits approximate 120 million.

All the old Directors of the bank remain. They are: Frederick Sturges, Charles Lanier, Chas. H. Russell, Alexander E. Orr, John S. Kennedy, Woodbury Langdon, John Clafflin, A. D. Juilliard, Joseph C. Hendrix, G. G. Haven, James N. Jarvie, Richard A. McCurdy, Frederic Cromwell, William C. Whitney, H. McK. Twombly, Daniel S. Lamont and F. P. Olcott.

The new Directors are: James W. Alexander, George F. Baker, Charles T. Barney, E. J. Berwind, C. Ledyard Blair, H. C. Deming, Chauncey M. Depew, John F. Dryden, James B. Duke, George J. Gould,

Daniel Guggenheim, Thomas H. Hubbard, James H. Hyde, Adrian Iselin, Jr., Brayton Ives, Otto H. Kahn, Luther Kountze, William H. McIntyre, A. W. Mellon, David H. Moffat, Levi P. Morton, Walter G. Oakman, James H. Parker, Elihu Root, Thomas F. Ryan, Jacob H. Schiff, Valentine P. Snyder, H. H. Vreeland and George W. Young.

THE Northern Securities Company, of which E. T. Nichols is Secretary, has declared a quarterly dividend of $1\frac{1}{8}$ per cent., payable November 3d. The annual meeting will be held November 9th.

National Bank of Commerce Building, Northwest Corner of Nassau and Cedar Streets

Insurance

Insurance Course at Yale College

ANNOUNCEMENT of the subjects to be included in the insurance course at Yale has recently been made. The various subjects will have consideration at the hands of the best obtainable authorities. As now arranged, a lecture is to be given on Monday of each week during the college year, subject matter examinations following each Friday. The initial lecture in the course was given on September 28th. John M. Holcombe, Vice-President of the Phoenix Mutual Life Insurance Company, was the lecturer. His subject was "Observations on the History of Life Insurance." He was followed on October 5th by Mr. John K. Gore, actuary of the Prudential Insurance Company, on the theory of life insurance and annuities. Mr. Gore will upon successive dates consider the calculation of rates, varieties of contracts and the different branches of life insurance. Mr. Walter S. Nichols, editor of the *Insurance Monitor* and *Law Journal*, follows with a lecture on "Fraternal Insurance." The first term will close with three lectures by John B. Lunger, Vice-President of the Travelers Insurance Company. Mr. Lunger will have as themes, office and agency organization and investments in life insurance.

Fire insurance has an important place during the second term. In fact, nothing else will be considered. The lecturers on fire insurance thus far selected will be Mr. R. M. Bissel, Vice-President of the Hartford Fire Insurance Company; Mr. A. A. Raven, President of the Atlantic Mutual Marine Insurance Company, and Mr. J. M. Allen, of the Hartford Steam Boiler Insurance Company. Employers' liability and accident insurance will be taken up during the third term. The lecturers will be Mr. S. C. Dunham, President of the Travelers Insurance Company; Hon. Charles E. Gross, of Hartford, and Presidents Dryden, McCall and Alexander.

Arrangements have been made to quizz and examine the classes. Among those who will lend themselves to this feature

of the Yale course are Mr. John M. Gaines, of the Actuary's Department of the New York Life Insurance Company, and Mr. Archibald A. Welch, actuary of the Phoenix Mutual Life Insurance Company.

The course is to be limited to seniors. Members of the lower classes will be permitted to attend, but will not receive marks therefor. The lectures will also be open to the public.

The object of the course will be to provide a clear exposition of the principles and practice of insurance. Strong efforts will be made to impart an intelligent knowledge of life insurance.

Appendicitis Insurance

A MAN was recently found unconscious in the streets of a large European city and carried to the hospital. An examination was quickly made, for appendicitis was suspected. When placed upon the operating table the patient was found to have tattooed upon his bosom, "Do not operate upon me for appendicitis, as three operations for this have already been performed." This story indicates in a measure the increasing extent of appendicitis, and in view of the danger that lurks in operations on this account it is not strange that insurance against appendicitis should have been undertaken by an English company. The Royal Exchange Assurance Company of England is apparently a pioneer in this field. This company, according to European dispatches, issues policies covering appendicitis risks at the rate of \$1.25 a year for every \$500. The holder is guaranteed all the expenses of a medical, surgical and nursing character up to the face of the policy in force at the time of treatment. The interesting question arises in this connection, whether our European brothers will find American imitators, and if so how proper answers will be made to the insurance examiners' question: "Have you or any of your family ever suffered from appendicitis, or from any of the symptoms pertaining to it?"

NEW YORK, THURSDAY, OCTOBER 22, 1903

No. 2864

Survey of the World

The Alaskan Boundary Decision

It was announced on Sunday morning that the Alaskan Boundary Commission at the close of its session on Saturday had reached a decision that sustains all the claims of the United States except the one relating to the Portland Channel. All that remained to be done, it was said, was to affix the signatures of the Commissioners to the decision, and to complete the map on which the boundary line is to be drawn. Altho no official announcement had been made, there were many indications that the statement given to the public by the Associated Press was correct, and the correctness of it was admitted at Washington. Our Government had expected or hoped that the strength of its case would be recognized by at least one of the three Commissioners representing Great Britain and Canada. It was recognized by the English Commissioner, Lord Chief Justice Alverstone, who was convinced that all of the claims of the United States were well founded, except the one concerning the southern extremity of the boundary line, which follows the course of the Portland Channel. This point was yielded by the Commissioners of the United States, the result being that four of the six members of the tribunal were in complete agreement. At last accounts it was not known whether the two Canadian Commissioners would consent to sign the report. That part of the controversy which related to the Portland Channel had been regarded as of no importance. Canada's right to use the Channel had been admitted; the decision gives her the whole of the Channel, instead of half of it, together with two or three small islands which command Port

Simpson, the terminus of the projected transcontinental railway. The really important claims related to the northern inlets, and especially to the Lynn Canal, the cities (Skaguay and Dyea) at the head of it, and this tidewater terminus of the overland route to the Klondike. With respect to all these claims our Government's position has been approved and sustained. The boundary as fixed by the Commission is the boundary that our Government insisted upon, the Portland Channel excepted. In Canada there is much disappointment. A member from Nova Scotia angrily remarked in the House that the last two generations of Englishmen had been degenerates and cowards, and that if this country should claim the whole of Canada it would be successful by boastfulness and dishonest effort. Mr. Goldwin Smith, saying that doubtless the investigation was thorough and the judgment impartial, added that if the British Government had not obtained for Canada all that she was entitled to, it had got more than Canada herself could have obtained. The people of Great Britain would never consent to a war against the United States "for anything on this side of the Atlantic."

Politics and Washington Topics

Republican leaders have reported to the President that the resolution or bill in support of the treaty of reciprocity with Cuba will be passed easily, much of the opposition heretofore shown having been withdrawn. It is predicted in Washington that the coming regular session of Congress will be marked by no important legislation outside of the supply bills. Mr. Cannon's influence will be exerted

in favor of rigid economy, especially with respect to appropriations for rivers and harbors and public buildings. There will be no attempt on the part of the majority, it is said, to pass a bill affecting the currency.—The President has caused to be published the following statement with reference to "recent intimations" that he was "dissatisfied with those to whom he has looked for advice in the matter of appointments in the South: "

"The President is much gratified over the result of his efforts through his advisers in the Southern States to give the people clean, competent officers and the best possible service in all the departments. It is his intention to sustain these advisers fully in the future, as he has done in the past."

Senator Gorman asserts that the President has interfered by means of Federal officers in the politics of Maryland, where there is a factional contest in the Republican party between the friends and the opponents of Mr. McComas, a candidate for re-election to the Senate. The authoritative announcement is made, however, that the President favors neither faction, but only desires such harmony as will insure victory for the party at the polls.—Certain passages in ex-Secretary Long's published reminiscences of the navy during the late war have excited much comment. They relate to Mr. Roosevelt's activity and suggestions while he was Assistant Secretary:

"His ardor sometimes went faster than the President or the Department approved. Just before the war he, as well as some naval officers, was anxious to send a squadron across the ocean to sink the ships and torpedo-boat destroyers of the Spanish fleet while we were yet at peace with Spain."

The President has given to the public no statement as to this assertion. Many have thought that Mr. Long desired it to be understood that Mr. Roosevelt advised the sinking of the Spanish ships—and not merely the sending of a squadron to Spanish waters—"while we were yet at peace with Spain." But the President's friends (so Washington dispatches say) explain that while it is true that he desired to send a squadron to Spain before the declaration of war, he did

not advise or have in mind any attack upon the Spanish ships before the declaration. He thought, they say, that a squadron ought to be in or near Spanish waters at the time of the declaration in order that Spain might thus be prevented from reinforcing her troops in Cuba or making a naval raid upon our coast.—Mr. Bryan, in answer to an inquiry from Massachusetts, expresses his opposition to the nomination of "Mr. Olney or any other person who did not openly and actively indorse the platform and the ticket in both 1896 and 1900."—According to the published reports of one of Senator Hanna's recent speeches in the Ohio campaign, he accounted as follows for the present condition of business and manufacturing industries:

"Just now there is a lull in business and industries all over the land, due to the slight uncertainty as to the result of the election in Ohio. If this remote contingency has such a depressing effect upon the business of the country, think what a quietus would be put upon the industrial relations of the nation if on the morning of November 4th it should be announced that Johnson had captured the Ohio Legislature."

—The President has removed from office United States Marshal Field, of Vermont, who is charged with having by neglect or error of judgment permitted the escape of three Chinese immigrants who had entered the country unlawfully and had been intrusted to him for deportation.—It is regarded as a victory for Senator Thomas C. Platt that Chairman Hanna has appointed, on his recommendation, George R. Sheldon to represent the State of New York in the Republican National Committee. Mr. Sheldon is a banker. The appointment is said to have been opposed by Governor Odell, who prevented the nomination of Mr. Sheldon for the office of Lieutenant Governor before the last State election, for the reason, it was explained at the time, that Mr. Sheldon had been engaged in the making and the reorganization of Trust combinations.—A Chicago weekly non-partisan paper of wide circulation, especially in the agricultural districts, asked its subscribers to express their preferences with respect to Presidential candidates. Nearly all of the

Republicans named Mr. Roosevelt. The Democrats voted as follows: Cleveland, 12,833; Bryan, 4,921; Parker, 4,352; Johnson, 4,245; Hill, 2,133; Hearst, 1,445; Gorman, 179.—Señor Arciniegas, who has just arrived in this country from Colombia, bearing dispatches from the Colombian Government to its Minister at Washington concerning the basis of negotiations for a new canal treaty, says that Colombia will insist upon a payment of \$25,000,000 by the United States, because she needs the money. If this country should refuse, he adds, Colombia will wait, and will gain by waiting, because the French company's franchise and works, for which the United States is now willing to pay \$40,000,000, will revert to her at the end of six years.

Postal Service Frauds

In the first trial of persons indicted in connection with the postal service frauds, the jury disagreed. The defendants were Daniel V. Miller (formerly one of Tyner's assistants in the law office of the Department) and Joseph M. Johns, a lawyer practicing in Washington. This is the case in which John J. Ryan, head of a turf investment or "get-rich-quick" company, testified that he had paid \$4,500 to Johns, expecting thus to buy from Miller and the Department a favorable decision as to his use of the mails. The trial took place in Cincinnati.—It is said in dispatches from Washington that the report of Charles J. Bonaparte and Holmes Conrad (counsel for the Government) upon the Tulloch charges sustains them and severely criticises certain responsible auditing and accounting officers. The Tulloch charges affect some well-known Republicans not now in office. As to the justice of the report's criticism of auditing officers now in the service, there is said to be a difference of opinion in influential political circles. Among the persons mentioned in the report, it is said, is Thomas W. Gilmer, formerly a clerk in the Comptroller's office, who was engaged for a time in investigating the acts referred to in the Tulloch charges and then was transferred to other work with a reduction of salary. It is as-

serted that the report recommends that Gilmer be restored to his old place.

The Indianapolis Election

In Indianapolis, last week, John W. Holtzman, Democrat, was elected Mayor by a plurality of 938 over Charles A. Bookwalter (who has held the office for the last two years), altho there is in the city a normal Republican majority of 4,000. For Mr. Hitz, running as an Independent and Prohibitionist, 5,470 votes were cast. His candidacy appears to have been a part of the protest against the re-election of Bookwalter, whose administration has been quite satisfactory to all who desired a "wide-open" city, resembling Tammany governments in New York. The revolt against Bookwalter was stimulated and directed by a non-partisan organization called the Citizens' League. Of the seven members of the League's Executive Committee, five were Republicans, and one, a Democrat, was the pastor of the largest Roman Catholic church in the city. The League's published appeals to voters asked whether the city's taxpayers should be "plundered for the benefit of corrupt rings and grafters, while her police force and court officials dispense favors to law-breakers in return for corrupt contributions of money and political influence." The present Police Court Judge, a Republican, was beaten at the polls by a Democrat. It is estimated that 2,000 Democrats voted for the Republican Mayor because they liked his kind of government, but a much larger number of Republicans voted for the Democratic candidate. They could not be restrained even by the speeches of Senator Fairbanks, Senator Beveridge and Representative Overstreet, who urged them to support Bookwalter.

Labor Controversies

The employing builders in New York have been assisted in their controversy with the building trades unions by President Gompers and Vice-President Duncan of the Federation of Labor, who came to the city and sought to end the factional contest caused by the influence of Samuel J. Parks, the walking delegate recently convicted of extortion. Parks and his followers

have opposed the arbitration agreement offered by the associated employers and now accepted by a majority of the unions. After studying the situation, Mr. Gompers addressed to the unions a letter advising all of them to accept the employers' plan of arbitration. This plan, the letter says, "provides for union establishments, the maintenance of wages and hours of labor, and eliminates the purely sympathetic strike." Mr. Gompers did not regard it as perfect, and he suggested some changes.—Henry Farley, a walking delegate who was arrested for committing perjury in testifying for the defense at the trial of Parks, has confessed his guilt and given to District Attorney Jerome an account of the unlawful operations of Parks and others of his kind during the last two years. This confession, if true, makes Parks guilty of perjury, and the Grand Jury will be asked to indict him again. One of the stories told by Farley relates to the payment of \$50,000 by the owner and builder of the new Ansonia Hotel, who was able in this way to put an end to strikes on the property and to finish the construction of the building.—The employees of the Pacific Express Company are on strike for an increase of 10 per cent. in wages. In Texas the company has procured an injunction to restrain the strikers, alleging that by violence they have closed its offices in several cities.—A contracting builder in Indiana has recovered damages in a suit against a local union of carpenters that placed him on the "unfair" list for employing non-union men, the court holding that the union as an organization was liable because as an organization it had taken the action as to which complaint was made.—By a practically unanimous vote the engineers or motormen of the New York elevated roads have decided to resist a recent order of the company that each one of them shall undergo a physical examination as to his eyesight, his hearing and the condition of his heart. The company asserts that the order was issued for the protection of its passengers and property. Officers of the union of which the men are members contend that the company seeks to get rid of a considerable number of the present motormen

and to substitute non-union men at lower wages. The pay of motormen is higher on these roads than on any other electric roads in the world. The men are willing to submit once a year to practical tests which do not involve physical examination by a surgeon.

The Philippine Islands

The piratical career of Johnson and Hermann, two officers of the constabulary, who stole \$6,000 of public funds in Mindanao, seized a small steamer, and set out to roam the seas, ended last week with the death of one and the capture of the other. Having lost their first boat, they hired another near Iloilo and started for the group of small islands known as the Cagayanes. Coveting their money, the crew of six turned upon them and killed Johnson. But Hermann slew four of these natives, put to flight the remaining two, and then abandoned the vessel, going ashore on the island of Negros. After the bodies of Johnson and the four Filipinos had been found, Hermann was caught in the forest, where he was suffering from wounds that may prove fatal. These two men enlisted in Pennsylvania, and when transferred from the infantry to the constabulary their records were excellent.—A constabulary force of 30 men was attacked by 500 head-hunters in Nueva Viscaya last week. In killing 53 of the savages the constables lost two of their own number.—At Manila eight ladrones have been sentenced to be hanged. A party of these bandits recently fell upon the village of Ibajay, in Panay, and killed thirteen natives. Toledo, the bandit leader in Albay province, has surrendered with 30 of his followers.—The proposed enforcement of our coastwise navigation laws in July next is the cause of some anxiety. Nearly all the inter-island trade is now carried on in foreign vessels manned by English, Spanish, Chinese and German sailors, and 90 per cent. of the exports to the States is said to be shipped in British craft. Of 50 steam trading vessels clearing at Manila in August 33 were British and only one was American. To enforce the coastwise navigation laws might for a time cause a withdrawal of at least 90 per cent. of the commercial transportation facilities between the archipelago and the States, etc.

**Cuba and
Porto Rico**

Members of the Cuban Loan Commission who have returned to Havana express confidence that the proposed loan of \$35,000,000 will be negotiated in New York during the coming winter. They were told by bankers, however, that the security should be enlarged by a lien on the customs receipts, and that conditions in New York were unfavorable at the present time.—Two companies of United States artillery have sailed for home from Cienfuegos. Two remain at Havana and two at Santiago. The departure of the troops was marked by a pleasant exchange of courtesies, including a farewell breakfast given by the Cuban commander at Havana.—In Porto Rico, the new railroad from Ponce to Aguadilla was opened last week, with banquets and suitable ceremonies.—On the 12th, the Federation of Labor made a disagreeable demonstration at San Juan, parading under black flags and carrying the flag of the United States draped in mourning. There was much disorder, and forty of those taking part in the parade were arrested. Seven were sent to prison for six months. The disorder was ascribed to Anarchists.—The editor of the *San Juan News* and his correspondent in Mayaguez have been fined and sent to jail for contempt of court in comments upon the recent trial of the deposed Mayor of the last named city.

**British
Politics**

The one subject of universal interest in Great Britain is, of course, Mr. Chamberlain's policy of protection and Premier Balfour's curious advocacy of the same. Mr. Chamberlain, however, the champion of this war of words, is resting himself at Highbury, his Birmingham residence, and nursing an attack of the gout. There is, indeed, an impression abroad that his health may not be sufficiently strong to stand the wear and tear of a long political campaign. It is known that he is fond of high living and his most violent bodily exercise does not go beyond walking upstairs. In the meanwhile the enemies of protection are busy. To the great disappointment of the protectionists Lord Rosebery, who had hitherto been rather non-committal on the subject, came out

in a strong speech at Sheffield, October 13th, against Mr. Chamberlain's policy. He said he doubted whether the Ministry had really made any fiscal inquiry at all or had really done anything more than consult the constituencies. Their policy of retaliation, he declared, would land the Empire in a contest with the civilized world, which might be compared to the battle of Armageddon. Free trade had not been a failure, but a great success, and if the country wished to better itself, it ought to cultivate a scientific spirit in its universities, so as to prepare men to compete with the better trained students of Germany and America. The subject of scientific and commercial education is the hobby which Lord Rosebery rides on all occasions. The Duke of Devonshire, whose resignation from the Cabinet, together with Mr. Balfour's taunting letter, raised such a commotion, has permitted himself to be elected President of the Unionist Free Food League. This league is an organization formed by Conservative and Liberal-Unionist members of Parliament for the purpose of opposing Mr. Chamberlain's policy. A number of prominent statesmen, including Mr. Ritchie, Sir Michael Hicks-Beach, Lord Goschen, Sir John Gorst and Winston Churchill, belong to the league, and it has begun an active campaign of pamphlets and speeches. In his reply to a vote of congratulation from his Parliamentary constituency, J. Austen Chamberlain, the new Chancellor of the Exchequer, has announced that the Government will not dissolve until the War Office has been reorganized and the recommendations of the South African War Commission have been applied.

**France, England
and Italy**

The arbitration treaty between France and Great Britain was actually signed in London, October 14th, by Lord Lansdowne and M. Cambon. The text of the treaty is as follows:

The government of the French Republic and the government of his Britannic Majesty, signatories of the convention concluded at The Hague July 29th, 1899, for the peaceful settlement of international disputes, considering that by Article XIX of that treaty the contracting parties reserve to themselves the right of concluding agreements with the view to have re-

course to arbitration in all cases in which they shall consider it possible to submit thereto, have authorized the undersigned to agree to the following provisions:

Article I—Differences of a judicial order, of such as relate to the interpretation of treaties existing between the two contracting parties, which may arise between them and which it may not be possible to settle by means of diplomacy, shall be submitted to the Permanent Court of Arbitration established at The Hague by the convention of July 29th, 1899, on condition, however, that they do not involve either vital interests or the independence or honor of the two contracting states, and that they do not affect the interests of a third Power.

Article II—In each particular case the high contracting parties, before addressing themselves to the Permanent Court of Arbitration, shall sign a special arbitration bond setting forth clearly the subject under dispute, the extent of the powers of the arbitrators and the details to be observed as regards the constitution of the arbitral tribunal and the procedure.

Article III—The present arrangement is concluded for a term of five years from the date of the signature.

CAMBON.

LANSDOWNE.

It was remarked as significant that on the very day on which this treaty was signed in London the King of Italy entered Paris. King Victor Emmanuel and Queen Helena reached the city early in the afternoon and were welcomed at the station by President and Mme. Loubet. On their drive through the streets to the Elysée Palace the King was everywhere received with enthusiastic shouts. In the evening a formal dinner was given at the Palace, at which 144 guests were present. In his toast to the King President Loubet declared that France realized the significance of his Majesty's visit to the President of the Republic, and saw therein a striking demonstration of the close agreement that had been established between the two governments. To this toast the King made a suitable response. In the following days there have been the usual visits and ceremonies attendant on royal visits, including among other things a hunt at Rambouillet.—Owing to the closing of the congregation schools the State schools in France are vastly overcrowded, and many children are unprovided for. Until July, 1902, when the Associations Law went into effect, there were in Paris alone more than 150 free schools, of which sixty-four were

kept by the Brothers of Christian Doctrine and fifty-seven by the Sisters of Charity of St. Vincent de Paul. Twenty-one of these establishments have closed their doors, throwing between 4,000 and 5,000 children on the State schools. Every kind of device, even to using the recreation grounds for classes, is adopted to accommodate the surplus scholars.

Golden Convention of German Catholics The largest and most enthusiastic convention ever held of the "Catholic Union" of Germany has just completed its work in the historically Catholic city of Cologne. It was the fiftieth convention of the united organizations that represent the strength of the Catholic Church in the land of Luther. A special building with a seating capacity of 8,000 had been erected on the banks of the Rhine, and at each of the eight general meetings held this immense auditorium was crowded to the last seat, and overflow meetings, often to the number of half a dozen, were held elsewhere. Special meetings also took place of the various societies that together constitute the body, such as the Bonifacius Verein, which labors chiefly in predominantly Protestant neighborhoods; the Society of Catholic Rectors and Secondary School Teachers, the Mission Societies, etc. For the first time in the history of these conventions, which extend their influence over the political as well as the purely ecclesiastical field, cardinals were present in the persons of Ferrari, of Milan, and Fischer, of Metz. A special periodical, with almost hourly reports, appeared, making a total of 22 issues, covering 176 pages. A procession of Catholic laboring men and artisans, held during the first day, consisted of more than twenty thousand men. In the front of the big auditorium it dissolved into eight parts, each going to a separate convention. The work of the general convention was divided into four parts, each managed by a special committee to which the leading churchmen of Germany belonged; one dealing with the Pope, the Roman Question, Missions and Affiliated Societies; the second with Social Questions; the third with the Christian Caritas and the charity work of the Church; the fourth

with Science, the Schools, the Press, and Christian Art. Quite naturally, this convention, like all of its predecessors since 1871, protested against the deed of September 20th, 1870, the convention, however, declaring that it did not hate Italy, but that the genuine peace and prosperity of that land are dependent on the righting of this great wrong. It declared the guarantee law a farce. Again the demand was made that the German Government readmit the Jesuits, who have been excluded now for thirty years. The convention sent also a telegram of the sincerest devotion to the German Emperor, asking for the earnest co-operation of State and Church in the highest interests of society. Cardinal Fischer, evidently a favorite of the late Pope and of the German Emperor, brought the papal blessing from Rome. Not in the history of Catholic Germany has there ever been such a representative gathering of its best men as was seen in Cologne. Cardinal Ferrari in his enthusiasm asked his fellow Cardinal Fischer to give him the fraternal kiss in view of the assembled host, and he closed his address with the words: "*Germania docet! Germania docet!*" The President's closing address re-echoed the aggressive words: "*Nec terremus, nec timemus*"—We neither frighten nor fear—and the convention closed with a grand *Te Deum* by the assembled thousands.

The Balkans It is now felt pretty generally that no open rupture between Turkey and Bulgaria will take place this winter, but that there will be next spring the same disturbances, possibly eventuating in war, unless the Powers step in and right the evils of Macedonia. From Macedonia and the Valiyyet of Adrianople there are some 22,000 refugees in Bulgaria. These fugitives are for the most part old men, women and children, and their pitiable condition speaks eloquently of the state of affairs over the border. To the note of Prefect Burgas inviting the refugees of the Adrianople Valiyyet to return to their homes, they have replied that they can go back only on condition that the repatriation be carried out by an international commission, that a sum of

money be deposited in some European institution to its credit for the restoration of houses, churches and schools destroyed by Turkish troops, that full amnesty be granted to all, and that property, life and honor be guaranteed in the future, not by palliatives but by the introduction of radical reforms with a Christian Governor-General approved by the Powers and a permanent international commission. General Zontcheff, the Macedonian leader, has arrived at Sofia with about 200 men, and many others are expected to come in during the winter. Picked men, however, will maintain positions in the mountains. Boris Sarafoff, the most energetic of the Macedonian revolutionaries, is reported to have been killed in a skirmish at Pruva, near Florina, on October 12th.

The Far East

Secretary Hay, at Washington, has said that there are no immediate indications of war between Russia and Japan. So too the *Novoe Vremya*, of St. Petersburg, asserts that it is one of the Czar's chief aims to maintain peace in the Far East, and that this is, in fact, the fundamental basis of Russian policy. Other official reports of the same kind would lead one to suppose that the peril of war between Russia and Japan had passed away, if, indeed, it ever existed. Nevertheless there seem to be indications that both of these countries are uneasy, and feel it necessary to prepare for the worst. The Japanese workmen at Port Arthur have been discharged and the Japanese generally are flocking out of Manchuria. One correspondent to London writes that Japan has landed troops at Ping-Yang at the outlet of Korea Bay. Another correspondent says that 100,000 men have been concentrated at Hakodate in readiness for embarkation in the event of hostilities, and points out that Hakodate is the fort which Japan would naturally use in sending troops against Vladivostock. He adds that torpedoes are being laid in the ports of Western Japan. Russia also is active, and the report is current that additional troops to the number of 100,000 have been hurried to the Far East from the districts beyond Moscow, Tamhoff and Penza. A

special train not long since of 14 cars left St. Petersburg for the same destination, with a full load of surgical dressing materials and medicines. The War Office is said to have demanded extra credit to the sum of \$12,500,000, and has difficulty in raising money for the exigencies of the situation. From Yokloma comes the report that a Russian war ship and a transport with 500 troops left Port Arthur on October 4th for Korea.

Repatriation in South Africa A report by an officer in the South African Repatriation Department shows what has been done in this direction during the past year. It was, indeed, well into July, 1902, before any practical steps toward repatriation and restoration could be taken, but by that time the surrender of the various commandos had been carried out, and the sites for the repatriation depôts had been fixed. The labor necessary to take the Boers back to their homesteads was enormous. Each family required a wagon, and some of the ox wagons were drawn by 16 oxen, while mule wagons were drawn by 10 mules. Many of the conductors employed were Boers, and for the most part they did their work well and faithfully. Each family upon leaving was provided with a tent, bedding, and one month's supply of foodstuffs free of cost from the burgher camps. Other materials given them, such as implements, seed and the like, they were allowed to pay for in cash, or to have debited against their accounts. The Government schools which had been started in the burgher camps began to break up and were distributed over the country. The number of these schools and the children attending them increased continually until the end of June of this year, when there were 25,274 children receiving education in 874 Government schools. At that time the Government was still providing rations free to all children attending these schools. Altogether more than 70,000 persons returned in Government wagons to their homes, and it was noticeable that many of them left with reluctance the camps where they had been concen-

trated. A great difficulty now met the department, owing to the number of animals employed in taking the families back to their farms and in keeping them supplied with food stuffs. It seemed impossible to furnish the farmers with animals to enable them to take advantage of the existing plowing season. To remedy this difficulty the Government collected several available animals and vehicles, and started a plan of driving the country with plowing columns, which consisted of six plows and six teams of animals to draw them, with two natives to each plow. Each column was under the charge of a white conductor, and carried with it a quantity of seed mealies, so that the land might be sowed immediately after the plowing. The area to be plowed up on each farm was limited to five acres, so that every farmer might benefit by the scheme, and farms not yet reoccupied were plowed up and planted to the same extent. For this service a small charge was made, altho not nearly sufficient to cover the actual expenses. The columns drove from farm to farm without delay, and in about two months 23,000 acres were plowed up and sown in this way. Unfortunately a bad season following made a great deal of this work useless. Meanwhile animals, vehicles, harness, implements, cattle and the like were being collected for distribution among the Boers. The actual number of animals distributed throughout the Transvaal up to the end of June this year was as follows: Horses, 8,798; mules, 19,005; donkeys, 6,743; oxen, 31,815, and breeding cattle, 9,052—a total number of 75,413 head, representing a value of £1,549,674. Transport vehicles to the number of 4,238, representing a value of £107,092, were also distributed. The value of the foodstuffs, general stores, seeds and building material issued to the Boers up to the end of June this year amounted to a sum of £1,054,071. This sum was not secured by means of promissory notes, but the purchasers could either pay cash or have the amount debited against their names, with a view to a general adjustment upon the final allotment of the free gift of £3,000,000. The cost of administration up to the end of June has been publicly given as £1,400,038.

The Results of Reform in New York City

BY GUSTAVUS MYERS

AUTHOR OF "THE HISTORY OF TAMMANY HALL" ETC.

IN plan and performance the work of New York City's present administration has been of such an advanced quality that it fully deserves to rank as the best administration that the city has ever had. The scope and magnitude of its accomplishments are not yet appreciated in their entirety by the general body of the citizens. New York City, with its population of 3,800,000, covers a vast stretch of territory, and the functions of its governmental machinery are widely distributed. Unless one makes a special study of the continuous work of each branch of the city government, it is difficult to get a comprehensive, detailed knowledge of what has been done and what is being done. The city is not governed by a strictly centralized administration, as it was in 1898-1901. The Mayor is the executive of the whole city, and he has powers of appointment and removal of the heads of fifteen departments; but each of the five boroughs which constitute the city has an administration of its own, which in initiative and executive has almost independent control over matters of local improvements. The resident of one part of this huge city may have but the vaguest idea of a striking series of improvements wrought in other sections of the city, remote from the locality in which he lives. Each department or bureau of the city government embraces so large an organization, and its powers are so great, that mere fragmentary accounts of its work convey no adequate idea of the consecutive and full value of that work. Moreover, in point of impression upon the public, improvements may be divided into two classes. Many improvements are of such a nature that they can be carried into effect during the tenure of the administration which orders them. They are thus visible as distinct object-lessons and form an immediate record and standard upon which

to base judgment. The consummation of other improvements requires years of work, and while imagination may sometimes presuppose a vision of how these improvements will appear, their final, full effect is not seen until long after the administration which ordered them has gone out of power. Hence it is that many citizens judge an administration better in retrospect than during its existence.

Mayor Low's administration has effected so many conspicuous and immediate reforms and improvements that there is no reason why a belated verdict of approval should depend upon other vast improvements which it has ordered or approved and the completion of which will be a matter of the future.

When the present administration came into power on January 1st, 1902, it was forced, by virtue of conditions, to be not only a progressive but literally a reform administration. No administration can succeed Tammany rule without undertaking reformation. Under the four years of Mayor Van Wyck's administration a saturnalia of corruption prevailed which, in the city's history, has been surpassed only by that of the Tweed *régime*. At least \$12,000,000 in blackmail was extorted yearly from various sources. A "gambling house commission," composed of two State Senators—one of whom is now, in reality, the most powerful man in Tammany Hall—a representative of the poolroom keepers and the head of one of the city departments, collected yearly the sum of \$3,095,000 from gambling house keepers. This commission received and passed upon applications for immunity from police molestation; it established the tariff to be paid by the applicants and it supervised the collections. The officers of the police force licensed crime and vice in exchange for settled rates of payment. Nearly every inspector and captain and many sergeants

got rich in this way. Applicants for the positions of patrolmen had to pay \$300 each for appointment, and promotions cost from \$1,000 to \$12,000 each, according to the grade. The police force was demoralized; there was neither morale nor discipline. In the Health Department at least \$1,500,000 in blackmail was extorted from sources under the jurisdiction of that department, and a still larger amount was extorted by the Building Department. There was not a single city department or bureau in which "grafting" in some form or other was not carried on. Even in the Charities and Bridge Departments, which had fairly good commissioners, there were evidences of "graft." With few exceptions the heads of departments were either incompetent or corrupt, or both. The payrolls of every department and bureau were padded. Sinecures for Tammany heelers abounded. In 1898-1901 the sum of \$7,000,000 was spent in increasing the salaries of Tammany office holders or in providing superfluous positions for Tammany workers. The payrolls were so swollen that in many of the departments the exhaustion of the appropriation left no funds with which to do work which the city's duties and interests urgently required.

This is but the merest reference to the collective mal-administration of Tammany rule, but as a glancing outline it serves to recall some essential facts.

Of all the reforms expected when Mayor Low took office, the principal reform was that of the Police Department. The campaign of 1901 had been won mainly upon that issue, and a radical rehabilitation of the police force was popularly demanded. Unfortunately, Mayor Low erred in his choice of John N. Partridge as Police Commissioner. Colonel Partridge lacked proper understanding of the underlying conditions in the department and took no adequate means to acquaint himself with them. His administration was so puerile that he was the laughing stock of the "grafters" in the force, and his removal was generally demanded by public bodies and by the newspapers. Finally he resigned, and he was succeeded by General Francis V. Greene.

General Greene acted at once with vigor, and by detaching the precinct de-

tectives, popularly known as "wardmen," from captains with whom they had long been associated, he instantly broke up the system of blackmail as a system. The "wardmen" had been the agents of the captains in collecting the blackmail. When a captain was transferred from one precinct to another, he always took his "wardmen" with him. These confidential and corrupt relations were thoroughly broken up by Commissioner Greene's order remanding the 306 "wardmen" to patrol duty. By a single administrative order Commissioner Greene thus put an end to the long-continued, elaborate system of blackmail and extortion. Doubtless there are even now isolated individual cases of blackmail, but since that order was issued the system as a system has been suppressed. In less than a year Commissioner Greene has rooted out abuses which had existed in the force for many years. At least thirty-five superior officers who were known as hardened "grafters" have been got rid of by being dismissed or retired. There are some notorious "grafters" still in the police force, but they have contrived to cover their past acts so well that it is difficult to secure legal proof against them. So fearful are they under the present administration of the consequences of misconduct that, for the first time in years, they are doing efficient police duty. Commissioner Greene has reorganized the different bureaus of the Police Department. These bureaus had been fertile sources of "graft" under Tammany. In the complaint bureau, for instance, an officer, by a payment ranging from \$100 to \$1,000, according to his grade, could secure an alteration of the records, so that many days' fines would be effaced from his record, and his chances in the civil service examination would thus be greatly improved. If, under the present administration, any man has paid for appointment to the force, or any member of the force has paid for promotion, these payments have been made on false pretenses. Appointments and promotions have been made by Commissioner Greene upon their merits. A morale and a discipline has been injected into the police force which were utterly lacking before 1903. Commissioner Greene's administration has been of an unprecedentedly high standard

—in fact, the city has never had better. Mayor Low's promise to redeem the Police Department has been fulfilled.

The same notable efficiency has been shown in all the other city departments.

The Health Department has practically suppressed smallpox, which in certain localities was epidemic several years ago. It has exercised the closest scrutiny over the city's milk supply, and has promptly caused the arrest of every one selling impure milk. It has enlarged and systematized the city's facilities for treating infectious and contagious disease, and has succeeded in reducing the death rate from consumption. By reason of its insistence upon the execution of sanitary measures and precautions the total death rate has been reduced from 20 per thousand in 1901 to an indicated 18 per thousand in 1903. This means a saving for 1903 of 7,000 lives.

To this diminution of the death rate the Tenement House Department has contributed. This department has compelled every owner of a tenement house to make changes, as provided by law, giving light, air and decency to all tenants. As there are about 2,500,000 tenement dwellers in the city, the importance of the work of this department can readily be seen. No new tenement house has been built without the Tenement House Department being fully convinced that the law was complied with, and owners of old tenements have had to make necessary alterations. The dark, fetid, tenement house, with its lack of proper ventilation and its unhealthy rooms, is becoming a rarity in New York City.

Because of the extremely able administration of the Department of Charities the city's public hospitals and the almshouses have been raised to a superior state. Many old abuses, survivals of three and four decades ago, have been abolished. The inmates of all the city's institutions now receive an ample supply of good food. This has been done at reduced expense. In 1901, under Tammany, the beef contract cost \$146,000; in 1903, \$108,000. The hospitals have been renovated and equipped with comforts for the patients and full medical apparatus. The nursing in the men's wards has been greatly improved. The death rate of the children's hospitals on Ran-

dall's Island has been reduced to a marked degree, and a hospital for consumptives has been opened on Blackwell's Island.

The Street Cleaning Department has restored in its full efficiency the system introduced by Colonel Waring. It has kept the streets clean and it has given Brooklyn the first good system of street cleaning which that borough has had. It has kept the sea beaches free from inflowing garbage; it has made at Riker's Island, by fillings in of available city refuse, sixty-three acres of additional land worth \$10,000 an acre, and for the cremation of worthless house refuse it has devised an incinerator which pays 100 per cent. on its cost.

Through the discovery and stoppage of extensive meter frauds, the Department of Water Supply, Gas and Electricity has increased the income from water rates more than \$1,000,000 a year. It has stopped the daily waste of 12,000,000 gallons of water in the Borough of Manhattan. It has developed the distribution of water systematically in all the boroughs, and it has taken preliminary steps to secure an increase of the city's water supply. This department has objected to paying exorbitant prices demanded by the monopoly which controls electric lighting, and with singular progressiveness has proposed a municipal lighting plant as an alternative.

The Department of Parks has greatly improved the parks in all the boroughs. In thickly populated districts, where conditions at best are unhealthy, it has developed a system of small parks. One of its most important improvements—an improvement long suggested by those who have made a study of the hard environment of the children of the very poor—has been the establishment of children's playgrounds in nearly all the parks.

The new city prison, the building of which was practically suspended for two years under the Tammany administration, was promptly finished by the Department of Correction under the present administration. All the old buildings of the department, which for years had been neglected, have been thoroughly renovated. The Department of Correction has established on Hart's Island a school exclusively for boys committed to

its care. Hitherto the practice has been to commit boys and old offenders in one place. The separation of these two classes removes the presence of a hardening influence upon boys not yet inured to crime.

Altho the number of fires constantly increases as more buildings are put up, the Fire Department has reduced the average loss from each fire to \$804. In 1901, the last year of Mayor Van Wyck's administration, the average loss from each fire was \$1,046. The annual reports of the Board of Fire Underwriters for the last thirty-one years show that the percentage of fire losses on buildings and contents was lower for 1902 than for any year since 1872. During the Tammany administration of 1898-1901, the purchase of supplies for the Fire Department was often made at exorbitant rates; under this administration supplies have been bought at market rates.

The Dock Department has control of 350 miles of water front, which inalienably belongs to the city. It is important to the city's interests that leases of piers shall not be made to favored persons or corporations. The city has lost millions of dollars because of the corrupt granting of leases by Tammany administrations. The present administration of the Dock Department has been alert to safeguard the city's interests. It has reduced expenses and greatly increased its income. It has increased 23.17 per cent. the general wharfage collections without any increase in rates. It has proceeded to complete a great improvement planned many years ago, but long held in abeyance—the continuation of a series of great piers from Gansevoort Market to Twenty-third Street. It has brought about the adoption of a municipal ferry for Staten Island, and has obtained for the city from the Land Commissioners of the State of New York the right at any time to condemn land under water, upon payment to the owner of the price he or his predecessors paid the State, together with the actual cost of improvements.

In the four years of the Tammany administration the sum of \$8,904,242 was appropriated for new schools; in one and a half years of Mayor Low's administration the sum of \$14,900,000 was appropriated. The building of many schools

in 1902-03 has been delayed because of labor strikes. The neglect of Tammany administrations to give adequate appropriations for new schools has kept thousands of children out of school and has been a great hindrance to the plans of the present Board of Education to provide room for all pupils. Not only must the board make up for past neglect, but it must face an annual increase in school children, estimated at 36,000.

Under Tammany the Law Department showed a deficiency of \$140,000 a year in point of comparison between its collections and the cost of maintenance. Under Mayor Low's administration this deficiency has been changed to a profit of \$400,000 a year. In the whole four years of the Tammany administration the total collections from those in arrears for personal taxes were \$157,316. In the single year of 1902 the present administration of the Law Department collected \$385,032. Under Tammany the Law Department made no serious efforts to compel the street railway corporations to pay arrears of taxes and franchise payments to the city. The total of these arrears is estimated to be not less than \$18,000,000, and a great part of this sum has been accumulating for fully fifty years. The city has never abandoned its claim, but Tammany administrations let it lie in suspense and allowed the corporations to shirk payments. Doubtless this is one of the reasons why corporations holding public franchises always contribute so heavily to the Tammany campaign fund. Mayor Low's administration, with great vigor and determination, has carried the whole question of these arrears to the courts.

The administration of the Bridge Department has been the most progressive and capable the city has ever had. Because of the geographical distribution of the different sections of New York City, separated by wide rivers and by other streams, bridges are a highly essential part of the city's primary activities. The Bridge Department has acted with energy, skill and progressiveness. For the first time in the history of any American city an architect has been employed to work in conjunction with the department's engineers in the designing and completion of bridges. Certain artistic

features have been added to the great Williamsburg bridge over the East River. This bridge was planned in 1896 and will be open to vehicles and pedestrians on about December 1st of this year. Its building was too far advanced to permit of serious changes under the present administration. But the great new Manhattan and Blackwell's Island bridges over the East River will be the most æsthetic in America, if not in the world, if the plans of the present administration are fully carried out. Each of these bridges is designed not only to accommodate an immense traffic, four times as much as that of the Brooklyn bridge, but it will be a structure of imposing dignity and distinguished architectural beauty. Many other bridges to cross various streams are being constructed or have been planned by the present administration of the Bridge Department. A vast terminal for the Manhattan end of the Brooklyn bridge has been planned, and as soon as the necessary funds are appropriated will be begun. This terminal building would doubtless be the greatest in the world. It would be of strikingly chaste design and would be more than sufficient to relieve the present appalling crush at the Brooklyn bridge terminal. The three lower floors of the proposed terminal would be used for passenger traffic for the bridge, the elevated and the surface cars. The five floors above would be used for municipal offices. Each floor of the terminal (not including the car sheds, which would have 30,000 square feet) would contain 68,000 square feet; each of the office floors would have an area of about 40,000 square feet. This means that the office area of the proposed terminal building would be equal to the entire office capacity of the Empire Building, at Broadway and Rector Street, or a little more than that of the American Surety Building at Pine Street and Broadway. The abolition of many superfluous positions in the Bridge Department, created formerly "to care for" Tammany henchmen, has saved the city \$44,548.50 a year.

It is an historical fact that nearly every public franchise given to corporations, which either pay little for their immensely valuable privileges or which are practically exempt from payments to the city,

has been given by Tammany administrations. Mayor Low's administration has acted with extreme vigilance and has given no public franchise without adequate compensation to the city. In giving the franchises for the great Pennsylvania tunnel, for the New York Central Railroad improvements and for new trolley lines in the Borough of the Bronx, the Administration has secured for the city the sum of \$250,000 for each of the twenty-five years' duration of the franchise. The franchises provide that at the end of that period there is to be a readjustment of payments, based upon the increase in the value of the franchises and the growth of business and population. The sum of \$250,000 a year which Mayor Low's administration has secured from these three franchises is 60 per cent. of the total amount which the city now receives from all other grants for franchises for railways in the city.

Mayor Low's administration has removed the inequalities of real estate assessment by assessing real estate at its full value. The law required this, but Tammany had made it a powerful instrument of blackmail and favoritism. The Tammany's most persistent pretension is that it is "a friend of the poor," its abuse of the assessment system fell altogether upon the poor. Rich property holders found it easy to have their assessments reduced upon "seeing the proper parties." Mayor Low's administration secured the passage of a new act the stringent provisions of which tend to make the full-value system sure and permanent. Such was the incompetence and extravagance of the Tammany administration of 1898-1901 that the city for a long time was perilously near the debt limit fixed by law. The present administration in less than two years has increased the borrowing capacity of the city to \$142,000,000. This may well be regarded as one of the most extraordinary and unprecedented achievements in the municipal history of any city.

Of the borough administrations that of Brooklyn deserves particular mention. The Borough of Brooklyn has a population of 1,270,450. Before 1898, as an independent city, it was poorly governed. From 1898, the date of consolidation, to 1902, it was under centralized

Tammany administration. Brooklyn has more mileage of streets than the Boroughs of Manhattan and the Bronx combined. Continuous inefficient administrations had reduced the street paving in Brooklyn to a condition perhaps as bad as could exist in any civilized city. Long after other cities had discarded the archaic cobble-stone, administrations in Brooklyn still used it. Such asphalt paving as was done was done at exorbitant prices. Some of the streets presented a motley patch-work, a section in cobble-stone ending abruptly in asphalt, and that as abruptly in granite block. The sewers were in appalling condition and the sewerage system had never been extended properly.

During the four years of the Tammany administration only 27.19 miles of streets were paved with asphalt, and the asphalt trust was allowed to charge \$2.83 per square yard. In the single year of 1902, under the present administration, the asphaltting of 30.01 miles of streets was contracted for, and 22.27 miles were completed in that year. From January 1st, 1903, to August 1st, 1903, contracts for the asphaltting of 65.58 miles of streets were made. The average price paid by the Reform administration for asphaltting has been \$1.79 per square yard. The difference between the price paid in 1898-1901 and that paid in 1902-03 represents a saving to the city of over \$1,200,000. Nearly nineteen miles of streets have been laid with granite blocks, and all streets have been repaired and kept in good condition. Under the Tammany administration 100,000 people in Brooklyn were without sewerage facilities. For months at a time sewage disposal works were not in operation, and no adequate steps were taken to extend the sewers. So bad were these conditions that in many parts of Brooklyn the health of the residents was continuously menaced. The present administration has repaired sewers and all the disposal works, it has built many miles of new sewers, and it

has contracted for the building of sewers wherever they have been found necessary.

This review of the work of the Reform administrations is, by the limitations of space, necessarily of the briefest nature and gives only indications of the entire collective work of the administration. The writer has prepared separate reports of the work of the different departments, and each of these reports fills as much space as is contained in four or five numbers of THE INDEPENDENT.

In an impartial estimate, the work of Mayor Low's administration cannot be charged with errors of administration, except in the case of Police Commissioner Partridge, and this defect has been more than rectified by the work of Colonel Partridge's successor, Commissioner Greene. The administration might have taken broader steps leading to municipal ownership if not operation of many public utilities now monopolized by private corporations. If the municipal ownership of these utilities did nothing else, it would remove from politics a notoriously corrupt and sinister influence. But the consent of the legislature must first be obtained before the city can enlarge its sphere in the direction of municipal ownership; and the legislature is controlled by corporate influences.

If, after this splendid record of Mayor Low's administration, a plurality of voters return Tammany Hall to power it will be one of those perverse revolutions in municipal politics which have occurred in New York City before. But no matter what the issue of the pending election is, Mayor Low's administration has set a high standard which will take rank as something approaching an ideal municipal government. If Tammany, by illegal registration and illegal voting, or even by fair means, contrives to carry the election, it cannot deviate far from this lofty standard without inevitably being again hurled out of power.

The White House of the Twentieth Century

BY ABBY G. BAKER

WHEN President Roosevelt and his family returned to the White House at Washington two weeks ago they found it in complete order and freed from the presence of builders and artisans for the first time since the remodeling of the mansion was begun, more than eighteen months ago. When the process of renovation was started, a year ago last June, it was to have been completed by the following October,

but so extensively were the original plans broadened that the work has continued through all of these intervening months.

Beside the four walls which inclose the main building of this, the most historic house in our country, there is scarcely a foot of it that was not changed in the process of remodeling last year, and while many of its time honored landmarks were thus swept away, there can be no denying that it is now a much more comfortable house in

The President's Desk in His Private Office in the Executive Building

The East Colonnade and Main Entrance to the White House

which to live than at any time since its first distinguished tenants occupied it, more than a century ago. When John and Abigail Adams, that December day in 1800, took possession of the stately mansion, which stood practically alone "in a wilderness of trees," they found it a "palace" of generous proportions, but with few of the conveniences which make a modern dwelling habitable. It was built after the style of the Italian Renaissance, so popular at that day in England as well as on the Continent, yet there can be no doubt but that the young Irish architect, James Hoban, had also in mind one of the castles of his homeland, that of the Earl of Leinster's, at Dublin, as he drew the plans of the President's house. The original drawings of Hoban, with those of Latrobe, who succeeded him, are at the Library of Congress at Washington, and from one of those, made by the latter artist in 1807, it can be seen that the colonnades, which were built during the recent renovations, were at that time designed with the house, although there is little real probability that the original design in regard to them was ever carried out until now. Incidentally this drawing is of interest also in showing that at that date it was intended to flank the President's house at east and west with large buildings for the offices of the Chief Executive and the four departments which then comprised the Government.

This plan of Latrobe's, probably from

a lack of means, was never put into execution. The departments were officed in small temporary buildings in the neighborhood, and the President's residence had only been completed a few years when it was burned by the British in 1814. The torch of the British made a total wreck of the interior, with the exception of the substantial brick foundation walls. These were four feet in width and seemingly built with a solidity to withstand the wreckage of time itself. It was nearly five years before the mansion could be used again, and then, as a matter of expediency in all likelihood, the President began having his Cabinet meet with him in the "President's house." Undoubtedly its use for office purposes came about by gradual development, but it was not until the troublous days of the war of the sixties that President Lincoln formally set aside all of the second story of the east wing for the transaction of executive business.

From that day until now the White House has never had sufficient room for any President's family to live in it comfortably. True, it contained thirty-one apartments, but when it is recalled that all of the main floor, with the single exception of the family dining room, is given up for state purposes and that, until the recent erection of the President's office building, nearly one-half of the second was used as executive offices, it can readily be understood why the mistress of the Executive Mansion had to

South Front of the White House

Remodeled East Room. J. F. Jarvis, Photographer

convert the west hall of the second story into a sitting room. And as there were, for both her family and their guests, but five sleeping chambers, it explains further why it sometimes happened that young men visiting in the household slept on improvised beds made up on the tables in the billiard room, or more distinguished guests were entertained at the hotels of the capital city. It was this same lack of room which converted the center corridor, and later the east room into a banqueting hall, and was the cause of the absurd expediency of using a window for egress at the large official receptions. This state of affairs led Congress during its fifty-seventh session to provide an appropriation, with amendments, of over \$600,000 for the erection of an executive office building and renovations of the White House. The office building, on which \$65,000 was expended, was hurried through in order to be ready for occupancy. It is a small one storied affair, with a basement and garret, and

stands at the end of the west colonnade. By skillfully placing it on ground lower than the driveway it fits in fairly harmoniously with its environment and does not mar the general effect of the house and grounds. It is furnished handsomely and will supply a pressing need of the present, but its limited size will hopelessly handicap its usefulness within a very few years, and it may be added that the sooner it does so the better, as it is anything but a satisfactory building for the office of the Chief Executive of our great nation, and is a reproach to us in the eyes of every foreigner of the better class who enters it.

In the alterations which were made the architect—Mr. McKim—endeavored to “restore” the mansion to a typical, well built residence of the eighteenth century, and while there was but little real restoration in the changes—and for that reason they are to be regretted—yet he has succeeded in making a more convenient and slightly dwelling of the President’s house.

The colonnades each measure one hundred and fifty feet, thus giving a total frontage to the mansion of four hundred and seventy feet. They are of brick, one story in height, stuccoed with cement and painted white. They are built on the ground level and form a continuation of the basement. Their flat roofs opening out directly from the center of the east room and the state dining room, constitute the picturesque terraces. They are paved with cement and enclosed by stone parapets about two and a half feet high. The parapets bear electric light standards alternating with hardy palms and the Holland evergreens. The beauty of these additions can easily be imagined.

The east colonnade is now the official and main entry to the White House. A hundred years ago a gateway with a high and ornate arch summounting it marked the entrance here. On each side of it were two tall weeping willows, whose sombre, drooping branches led a disappointed President's wife to remark that life in the President's house was not so much to be desired, after all, as he entered by the iron gate and went out by the weeping one. The ornate gate and willows were, however, swept away long

ago, and a lily fountain, with a double set of steps behind it, took their places; but in the recent remodeling a circular drive does away with the steps, and an imposing porte cochère faced with twelve Doric stone pillars marks the entrance. It is just opposite the main transverse axis of the Treasury building, and the wide drive accommodates three carriages at once. A stone sidewalk spans the driveway, and at the south end of the colonnade is a small building, corresponding somewhat to the executive offices on the west, where guests may wait for their carriages. The approach and porte cochère lend an air of stateliness to this entrance, but it is rather rudely dispelled on entering the colonnade to find its entire length lined with hat boxes. This adaptation was found necessary in order to provide places for the wraps of the three thousand guests who attend the official receptions of the winter seasons.

A broad hall runs through the basement, or ground floor, as it is preferably called, of the mansion from east to west. Formerly the billiard room, servants' quarters and laundries lined this hall. In the remodeling they were transferred to the west colonnade and the room con-

verted into commodious dressing and toilet apartments. The hall and storage room under the blue parlor were thrown into one and transformed into an oval shaped apartment, which was handsomely finished and furnished, and is now reserved for exclusive use as a waiting chamber for the diplomats and other high dignitaries when they come to the White House. One of the disadvantages of the President's house which the recent renovations could not overcome is the lack of space in it for an art gallery. Heretofore the historic portraits have hung on the walls of the state parlors, but as the present decorations now preclude this, with the exception of the red and green parlors, where the paintings of a few of the Presidents are hung, the rest of the collection of the portraits of the Chief Executives has been taken to the second floor, and those of the mistresses of the White House have been hung on the walls of the ground floor corridor. This is somewhat unfortunate for the latter, as they must be displayed under electric light, but it has its advantage for the tourists who always throng Washington,

in that this hall is almost invariably open to visitors.

The most notable change on the ground floor of the mansion is in connection with the original kitchen and the broad stone staircase which takes the place of the servants' stairway on the east side of the house. The spacious old kitchen directly under the center of the building, with its mammoth brick ovens, where the Christmas dinners of Abigail Adams and succeeding Presidents' wives were baked for more than a half century, has now become only a memory. In the renovation its overhanging rafters were covered with a close fitting ceiling; its floor was taken up, and down deep underneath it was inserted the huge steam heating apparatus. Its brick ovens and time honored fire places were removed to make place for electrical appliances. Historical associations had small consideration in these utilitarian changes, but the heating and electrical arrangements which were placed in the old kitchen are as perfect as modern science can make them.

The remodeling of the main floor of

the mansion has, without doubt, made it far more attractive and harmonious as a whole than it has ever been before. The north door, through which the statesmen of a century have passed in going up to the executive offices, has now become what it originally was—the family entrance. The hall has been restored to its colonial proportions by the removal of the Tiffany screen which had disfigured it since President Arthur's administration. Three massive stone columns, which from the foundation of the house stood at the intersection of the hall and corridor in the rear, were taken out and three pairs of coupled Doric pillars took their place. The floor of the hall and corridor, like those of the basement and stairs, is paved in Joliet stone. The walls are finished in ivory, white and yellow and are elaborately ornamented. Through the center of the ceiling and at varying intervals on the walls are decorated panels. The cornice is Doric, bearing the familiar triglyphs, trophies, shields and numerous pilasters in the

prevailing enameled white. Inserted in the east and west walls of the main hall are long mirrors in heavy gilt molding reaching from the cornice to the floor. In the spaces south of them are the recently purchased portrait paintings of Presidents McKinley and Roosevelt.

The changes in the decorations of the east room have been most happy. Its nondescript pillars and beams were all taken out, and a chaste Corinthian style now dominates the entire apartment. The room is finished in enameled white. Corinthian pilasters with carved capitals grace the walls. The ceiling is in three long panels, with decorated centers and moldings in stucco. The gigantic chandeliers, whose size seemed to fairly make the east room topheavy, which were put in last year, were taken out this summer and replaced with smaller ones. They are made of loops and festoons of cut glass crystals and are suspended from the center of each of the panels. There are sculptured figures of mythological subjects in low relief over the doors and

The Red Parlor, Showing Some of the Historical Paintings and the Case of Japanese Dolls presented by the Japanese Minister

windows. Two large fire places have been introduced on each side of the room, with handsome mantles of Nubian and Grecian marbles in mottled red. In its furnishing this spacious state parlor is severely plain. The wall decoration for-

otic in its wall covering of blue corded silk embroidered in gold, and its frieze of gold stars. At the dismantling of the mansion all of the mantels were discarded with the exception of two in the old state dining room, known as "the Adams'

The Old Cabinet Room, Now President Roosevelt's Private Study. The Table is the One Formerly Used by the Cabinet. On it is the President's Fencing Outfit. From Photograph by J. F. Jarvis

bids any picture hanging. The highly polished parquetry floor is uncarpeted. Aside from the magnificent gold leaf covered piano, the tall Roman standard lights, the thirteen Colonial seats upholstered in a light shade of yellow, and the long yellow silk curtains, white lined, and hanging before each of the windows, there is no other furniture in this classic apartment.

The three state parlors, the historical red, blue and green, still take their names from their prevailing colors. The ceilings and cornices are decorated in stucco, and each room is banded with a white egg-shell polished wainscoting. The walls of the red and green parlors are covered with plain Genoese velvet, but the blue room has a suggestion of the patri-

mantels," and which had been there beyond the memory of any one now connected with the house. These were saved and put back in the red and green parlors. An exquisite new one of white Italian marble, with bronze gold columns and caps, was built in the blue room. The furniture throughout the house was largely eliminated at the time of the renovations and replaced with substitute pieces made especially for each room and matching them in tints and colors. The floors in the state parlors are covered with velvet rugs, and long velvet curtains form the window draperies. Some of the bric-a-brac of known authenticity was retained to embellish these rooms, and some exquisite new pieces have been added by Mrs. Roosevelt. One of the

most notable of the additions is a cabinet of Japanese dolls in the red room, which was presented to the White House by the present Japanese Minister, Mr. Takahira.

The small waiting room at the right of the north hall, in which Lincoln's messengers used to gather to tell stories while waiting for those ominous war dispatches, was cut in half and a space made between it and the family dining room for the electrical elevator. At the side of it is a narrow flight of white marble stairs, reaching from the basement to the garret, and these are a restoration in that they stand in the place where the quaint spiral wooden one originally was. The appearance of the family dining room was materially changed in the alteration of its ceiling. It was lowered at the corners and brought up into a groined arch in the center, with a decoration of stars, fret border and ornamental corners. Over the doors and windows are designs in stucco, and over the cream colored marble mantel is the American eagle in a wreath. The chandelier, hanging from the ornamented center of the ceiling, is a sun

at the windows, while the dining table, sideboards and the frames of the leather covered chairs are of mahogany. A glass cabinet displays some of the historical china, and a Chippendale side table also bears a number of the pieces of time worn plate which have been in the President's house since the days of John Quincy Adams. The much admired Sevres dancing girls which the President of France sent to the White House with the Rochambeau Statue Commission are kept in a velvet lined cabinet in this room.

The recent renovations of the White House were originally undertaken in order to secure a large state dining room, and to attain this end very radical changes were made in the west wing. The wide sweeping stairs, down which at the official functions of the past the eagerly watched Presidential party descended in full view of the long corridor and east room, were removed. The west hall, leading into the discarded conservatories, was done away with by taking out the wall between it and the old state dining room, and the space thus obtained was turned into the remodeled apartment.

Exterior of President's Office

burst, and there are several miniature wall lamps of Colonial patterns, but holding electric bulbs rather than candles. There is a rug of red and blue colors on the hard wood floor, heavy red curtains

The removal of this wall, which was a part of the brick foundations, was an irreparable blow to the original proportions of the mansion, but it was the only way in which the room could be enlarged. To

take its place Mr. McKim had the upper floors supported by swinging steel bars suspended from the roof. The remodeled room measures forty by fifty feet, and is a magnificent baronial banquetting hall. The tinted French gray ceiling is in an oblong panel, elaborately decorated in stucco, with molding of acorns and

hung in the original dining room. Two exquisite console tables, each supported by an outspread eagle, stand on the east side of the apartment, while at the north is a massive one of the same design. The table for an ordinary dinner party is a rounded oblong of mahogany, the one for the larger affairs is an immense crescent,

Cabinet Room in the New Executive Office at Washington

fruit in relief. Two large American eagles form the head and foot of the panel. The walls are entirely of English oak, done in panels, and Corinthian pilasters reaching from a carved frieze to a narrow foot board of mottled green marble. A roomy fire place with a handsome granite mantel fills part of the west wall. Over it and on the north wall also are two interesting old German tapestries. Thirteen deer, moose and bear heads hang below the frieze. The floor is oak parquetry. The rugs and draperies are in green, a color which predominates in the tapestry upholstery of the chairs. The furniture of red mahogany matches the doors, which are the same ones that

improvised for the occasion to any length necessary.

On the second floor the former offices of the east wing have been converted into commodious sleeping chambers, with luxurious bath and toilet compartments attached. The long corridor, running the full length of the building, is finished in dark green burlap wall covering, and the east end of it—the erstwhile lobby of the President's office—has been fitted up most attractively by Miss Alice Roosevelt as her own particular sitting room. The walls of the oval shaped library have been papered in green tints, and the furniture which was in it before the renovations was re-upholstered and returned to

it. Mrs. Roosevelt's desk stands at one of its south windows, and it is in this room that she meets the ladies of the Cabinet each Tuesday morning. The President's sleeping chamber, at the southwest corner of the house, is papered in light tan, and the upholstering of the furniture is of the same shade. This room contains the famous "Prince Albert set," a dark walnut bedstead and dresser, table and washstand, richly carved in fruit and leaves. A short hall leads from this room into the children's nursery, which used to

grandmothers' day, only these are of cut glass.

The President retains the former Cabinet room as his "study," but all official business is, as far as possible, transacted in the office building, and he uses this as his "den." The door which led from Mr. Cortelyou's office into this apartment has been walled over, but several distinctive features have been left to identify the historical chamber. Over the outside doorway is the American seal. The plain white marble mantel is supported on each

The President's Sleeping Chamber. The Bedroom Furniture Shown is the Historical Prince Albert Set

be called the red bedroom, but which now might well be termed the green one from its prevailing color. Miss Alice occupies the rooms which were Mrs. McKinley's, on the north of the corridor, and beyond it is Theodore, junior, and Kermit's bedroom. The west end of the corridor is still used as the family sitting room. Sunburst chandeliers and miniature Colonial lamps are also employed on this floor, and all of the door knobs are like the old-fashioned glass ones of our

side by the symbolic mace. In its center is a tablet bearing the following legend: "This room was first used for meetings of the Cabinet during the administration of President Johnson. It continued to be so used until the year MCMII. Here the Treaty of Peace with Spain was signed." The President has lined the walls of the room with book shelves filled with reference volumes and his favorite reading matter. He has retained in it the desk which Queen Victoria presented

The White House Kitchen, not Remodeled in the Recent Changes. (Copyright, Bell)

to the White House and the old cabinet table which antedates President Lincoln.

It is hard to realize all of the changes which were made in the historical mansion. Every bit of the interior wood work, floors, ceilings, walls, windows and doors was removed. Steel beams and fire proof constructions were run in the walls and under every floor. All of the pipes for hot water, plumbing and electricity were taken out and replaced with new. The electrician brought to pass the magician's dream in what he did with the tiny wire. By its enchanted touch the mansion can be made a blaze of light from garret to basement; another touch and the President can speak not only to any room in the house or his office, or to any friend in the city, but to any city half way across the continent. The magic wire runs the elevator, gives an automatic alarm of fire at its first intimation, turns the annunciators, slides the dumbwaiters, heats or cools the huge plate warmer in the butler's pantry, and rings a burglar's alarm if a window is raised at the extreme end of either colonnade or office.

By the remodeling the White House

has been made as convenient and as modern as an old house could be made, but now that it is finished, the fact remains that it is still an old house, and far too small for its purpose. And when it is recalled that from the day its foundation stone was laid up to the present time it has cost more than two millions of dollars, it cannot but be regretted that the Congress of the United States has not pursued a more far sighted and generous policy toward it. If, instead of simply providing for the present unsightly executive office building and the repairs to the mansion last year, it had made a sufficient appropriation to have erected a residence for the permanent home of the Presidents commensurate with our dignity as the world's greatest republic, it surely would have been vastly wiser. Had this been done the White House would have remained unchanged, the building intact as it was when all of our Chief Executives lived in it (with the single exception of Washington) during the first century of our history. As such it would have been preserved as Mount Vernon is preserved—a shrine for the American people.

WASHINGTON, D. C.

The Outlook for the Flying Machine

BY PROF. SIMON NEWCOMB, LL.D.

MR. SECRETARY LANGLEY'S trial of his flying machine, which seems to have come to an abortive issue last week, strikes a sympathetic chord in the constitution of our race. Are we not the lords of creation? Have we not girdled the earth with wires through which we speak to our antipodes? Do we not journey from continent to continent over oceans that no animal can cross, and with a speed of which our ancestors would never have dreamed? Is not all the rest of the animal creation so far inferior to us in every point that the best thing it can do is to become completely subservient to our needs, dying, if need be, that its flesh may become a toothsome dish on our tables? And yet here is an insignificant little bird, from whose mind, if mind it has, all conceptions of natural law are excluded, applying the rules of aerodynamics in an application of mechanical force to an end we have never been able to reach, and this with entire ease and absence of consciousness that it is doing an extraordinary thing. Surely our knowledge of natural laws, and that inventive genius which has enabled us to subordinate all nature to our needs, ought also to enable us to do anything that the bird can do. Therefore we must fly. If we cannot yet do it, it is only because we have not got to the bottom of the subject. Our successors of the not distant future will surely succeed.

This is at first sight a very natural and plausible view of the case. And yet there are a number of circumstances of which we should take account before attempting a confident forecast. Our hope for the future is based on what we have done in the past. But when we draw conclusions from past successes we should not lose sight of the conditions on which success has depended. There is no advantage which has not its attendant drawbacks; no strength which has not its concomitant weakness. Wealth has its trials and health its dangers. We must expect our great superiority to the

bird to be associated with conditions which would give it an advantage at some point. A little study will make these conditions clear.

We may look on the bird as a sort of flying machine complete in itself, of which a brain and nervous system are fundamentally necessary parts. No such machine can navigate the air unless guided by something having life. Apart from this, it could be of little use to us unless it carried human beings on its wings. We thus meet with a difficulty at the first step—we cannot give a brain and nervous system to our machine. These necessary adjuncts must be supplied by a man, who is no part of the machine, but something carried by it. The bird is a complete machine in itself. Our aerial machine must be ship plus man. Now, a man is, I believe, heavier than any bird that flies. The limit which the rarity of the air places upon its power of supporting wings, taken in connection with the combined weight of a man and a machine, make a drawback which we should not too hastily assume our ability to overcome. The example of the bird does not prove that man can fly. The hundred and fifty pounds of dead weight which the manager of the machine must add to it over and above that necessary in the bird may well prove an insurmountable obstacle to success.

I need hardly remark that the advantage possessed by the bird has its attendant drawbacks when we consider other movements than flying. Its wings are simply one pair of its legs, and the human race could not afford to abandon its arms for the most effective wings that nature or art could supply.

Another point to be considered is that the bird operates by the application of a kind of force which is peculiar to the animal creation, and no approach to which has ever been made in any mechanism. This force is that which gives rise to muscular action, of which the necessary condition is the direct action of a nervous system. We cannot have

Two Fanciful Flying Machines. One Twice the Lineal Dimensions of the Other. It has eight times the weight but only four times the carrying capacity, its own weight included.

muscles or nerves for our flying machine. We have to replace them by such crude and clumsy adjuncts as steam engines and electric batteries. It may certainly seem singular if man is never to discover any combination of substances which, under the influence of some such agency as an electric current, shall expand and contract like a muscle. But, if he is ever to do so, the time is still in the future. We do not see the dawn of the age in which such a result will be brought forth.

Another consideration of a general character may be introduced. As a rule it is the unexpected that happens in invention as well as discovery. There are many problems which have fascinated mankind ever since civilization began which we have made little or no advance in solving. The only satisfaction we can feel in our treatment of the great geometrical problems of antiquity is that we have shown their solution to be impossible. The mathematician of to-day admits that he can neither square the circle,

duplicate the cube or trisect the angle. May not our mechanicians, in like manner, be ultimately forced to admit that aerial flight is one of that great class of problems with which man can never cope, and give up all attempts to grapple with it?

I do not claim that this is a necessary conclusion from any past experience. But I do think that success must await progress of a different kind from that of invention. It is an unfortunate fact that we do not always appreciate the distinction between progress in scientific discovery and ingenious application of discovery to the wants of civilization. The name of Marconi is familiar to every ear; the names of Maxwell and Herz, who made the discoveries which rendered wireless telegraphy possible, are rarely recalled. Modern progress is the result of two factors: Discoveries of the laws of nature and of actions or possibilities in nature, and the application of such discoveries to practical purposes. The first

is the work of the scientific investigator, the second that of the inventor.

In view of the scientific discoveries of the past ten years, which, after bringing about results that would have been chimerical if predicted, leading on to the extraction of a substance which seems to set the laws and limits of nature at defiance by radiating a flood of heat, even when cooled to the lowest point that science can reach—a substance, a few specks of which contain power enough to start a railway train, and seems to embody perpetual motion itself, he would be a bold prophet who would set any limit to possible discoveries in the realm of nature. We are binding the universe together by agencies which pass from sun to planet and from star to star. We are peering into the law of gravitation itself with the full hope of discovering something in its origin which may enable us to evade its action. We are determined to find out all we can about the mysterious ethereal medium which seems to fill all space, and which conveys light and heat from one heavenly body to another, but which yet evades all direct investigation. Quite likely the twentieth century is destined to see the natural forces which will enable us to fly from continent to continent with a speed far exceeding that of the bird.

But when we inquire whether aerial flight is possible in the present state of our knowledge; whether, with such materials as we possess, a combination of steel, cloth and wire can be made which, moved by the power of electricity or steam, shall form a successful flying machine, the outlook may be altogether different. To judge it sanely, let us bear in mind the difficulties which are encountered in any flying machine. The basic principle on which any such machine must be constructed is that of the aeroplane. This, by itself, would be the simplest of all flyers, and, therefore, the best if it could be put into operation. The principle involved may be readily comprehended by the accompanying figure. A M is the section of a flat plane surface, say, a thin sheet of metal or a cloth supported by wires. It moves through the air, the latter being represented by the horizontal rows of dots. The direction of the motion is that of the horizontal line, A P.

The aeroplane has a slight inclination measured by the proportion between the perpendicular M P and the length, A P.

We may raise the edge M up or lower it at pleasure. Now the interesting point, and that on which the hopes of inventors are based, is that if we give the plane any given inclination, even one so small that the perpendicular M P is only two or three per cent of the length A M, we can also calculate a certain speed of motion through the air which, if given to the plane, will enable it to bear any required weight. A plane ten feet square, for example, would not need any great inclination, nor would it require a speed higher than a few hundred feet a second to bear a man. What is of yet more importance, the higher the speed the less the inclination required, and, if we leave out of consideration the friction of the air and the resistance arising from any object which the machine may carry, the less the horse-power expended in driving the plane.

Maxim exemplified this by experiment several years ago. He found that, with a small inclination, he could readily give his aeroplane, when it slid forward upon ways, such a speed that it would rise from the ways of itself. The whole problem of the successful flying machine is, therefore, that of arranging an aeroplane that shall move through the air with the requisite speed.

The practical difficulties in the way of realizing the movement of such an object are obvious. The aeroplane must have its propellers. These must be driven by an engine with a source of power. Weight is an essential quality of every engine. • The propellers must be made of metal, which has its weakness, and which is liable to give way when its speed attains a certain limit. And, granting complete success, imagine the proud possessor of the aeroplane darting through the air at a speed of several hundred feet per second! It is the speed alone that sustains him. How is he ever going to stop? Once he slackens his speed, down he begins to fall. He may, indeed, increase the inclination of

his aeroplane. Then he increases the resistance necessary to move it. Once he stops he falls a dead mass. How shall he reach the ground without destroying his delicate machinery? I do not think the most imaginative inventor has yet even put upon paper a demonstrative, successful way of meeting this difficulty. The only ray of hope is afforded by the bird. The latter does succeed in stopping and reaching the ground safely after its flight. But we have already mentioned the great advantages which the bird possesses in the power of applying force to its wings, which, in its case, form the aeroplanes. But we have already seen that there is no mechanical combination, and no way of applying force, which will give to the aeroplanes the flexibility and rapidity of movement belonging to the wings of a bird. That this difficulty is insurmountable would seem to be a very fair deduction, not only from the failure of all attempts to surmount, but from the fact that Maxim has never, so far as we are aware, followed up his seemingly successful experiment.

It may be surmounted in a way which may, at first sight, seem plausible. In order that the aeroplane may have its full sustaining power, there is no need that this motion be continuously forward. A nearly horizontal surface, swinging around in a circle, on a vertical axis, like the wings of a windmill moving horizontally, will fulfill all the conditions. In fact, we have a machine on this simple principle in the familiar toy which, set rapidly whirling, rises in the air. Why more attempts have not been made to apply this system I do not know. Were there any hopeful possibility of making any flying machine whatever, it would seem that we should look in this direction.

The difficulties which I have pointed out are only preliminary ones, patent on the surface. A more fundamental one still, which the writer feels may prove insurmountable, is based on a law of nature which we are bound to accept. It is that when we increase the size of such a machine without changing its model we increase the weight in proportion to the cube of the linear dimensions, while the effectiveness of the supporting power of the air increases only as the square of those dimensions. For exam-

ple, suppose that an inventor succeeds, as well he may, in making a machine which would go into a match case, yet complete in all its parts, able to fly around the room. It may carry a button, but nothing heavier. Elated by his success, he makes one on the same model twice as large in every dimension. The parts of the first, which are one inch in length, he increases to two inches. Every part is twice as long, twice as broad and twice as thick. The result is that his machine is eight times as heavy as before. But the sustaining surface is only four times as great. As compared with the smaller machine, its ratio of effectiveness is reduced to one-half. It may carry two or three buttons, but will not carry over four, because the total weight, machine plus buttons, can only be quadrupled, and if he more than quadruples the weight of the machine, he must less than quadruple that of the load. How many such enlargements must he make before his machine will cease to sustain itself, before it will fall as an inert mass when we seek to make it fly through the air? Is there any size at which it will be able to support a human being? We may well hesitate before we answer this question in the affirmative.

Dr. Graham Bell, with a cheery optimism very pleasant to contemplate, has pointed out that the law I have just cited may be evaded by not making a larger machine on the same model, but changing the latter in a way tantamount to increasing the number of small machines. This is quite true, and I wish it understood that, in laying down the law I have cited, I limit it to two machines of different sizes on the same model throughout. Quite likely the most effective flying machine would be one carried by a vast number of little birds. The voracious chronicler who escaped from a cloud of mosquitoes by crawling into an immense metal pot and then amused himself by clinching the antennæ of the insects which bored through the pot until to his horror they became so numerous as to fly off with the covering, was more scientific than he supposed. Yes, a sufficient number of humming birds, if we could combine their forces, would carry an aerial excursion party of human beings through the air. If the watchmaker can make a machine which will

fly through the room with a button, then, by combining ten thousand such machines he may be able to carry a man. But how shall the combined forces be supplied?

It is of interest to notice that the law is reversed in the case of a body which is not supported by the resistance of a fluid in which it is immersed, but floats in it, the ship or balloon, for example. When we double the linear dimensions of a steamship in all its parts, we increase not only her weight, but her floating power, her carrying capacity and her engine capacity eight-fold. But the resistance which she meets with when passing through the water at a given speed is only multiplied four times. Hence, the larger we build the steamship the more economical the application of the power necessary to drive it. The proportionately diminishing resistance which, in the flying machine, represents the floating power is, in the ship, something to be overcome. Thus there is a complete reversal of the law in its practical application to the two cases.

The balloon is in the same class with the ship. Practical difficulties aside, the larger it is built the more effective it will be, and the more advantageous will be the ratio of the power which is necessary to drive it and the resistance to be overcome.

If, therefore, we are ever to have aerial navigation with our present knowledge of natural capabilities, it is to the airship floating in the air, rather than the flying machine resting on the air, to which we are to look. In the light of the law which I have laid down, the subject, while not at all promising, seems worthy of more attention than it has received. It is not at all unlikely that if a skillful and experienced naval constructor, aided by an able corps of assistants, should de-

sign an airship of a diameter of not less than two hundred feet, and a length at least four or five times as great, constructed, possibly, of a textile substance impervious to gas and borne by a light framework, but, more likely, of exceedingly thin plates of steel carried by a frame fitted to secure the greatest combination of strength and lightness, he might find the result to be, ideally at least, a ship which would be driven through the air by a steam engine with a velocity far exceeding that of the fleetest Atlantic liner. Then would come the practical problem of realizing the ship by overcoming the mechanical difficulties involved in the construction of such a huge and light framework. I would not be at all surprised if the result of the exact calculation necessary to determine the question should lead to an affirmative conclusion, but I am quite unable to judge whether steel could be rolled into parts of the size and form which would be required in the mechanism.

I may, in conclusion, caution the reader on one point. I should be very sorry if this suggestion leads to the subject being taken up by any other than skillful engineers or constructors, able to grapple with all problems relating to the strength and resistance of materials. As a single example of what is to be avoided I may mention the project, which sometimes has been mooted, of making a balloon by pumping the air from a very thin, hollow receptacle. Such a project is as futile as can well be imagined; no known substance would begin to resist the necessary pressure. Our aerial ship must be filled with some substance lighter than air. Whether heated air could be made to answer the purpose, or whether we should have to use a gas, is the question for a designer.

WASHINGTON, D. C.

The Reflection

BY SUSIE M. BEST.

HE held a crystal in his hand;
I looked therein to see,
When lo! there rose at his command
A Thing that frightened me.

"Oh, drive it back!" I cried in dread,
"Seal it in its abode!"
"Why dost thou fear?" (to me he said),
"Twas but thy Soul I showed."

CINCINNATI, OHIO.

Popular Universities in France

BY THEODORE STEEG

[Professor Steeg is a son of Julius Steeg, one of the great leaders in French education, now deceased, and is an active leader in the movement described in the following article. He is himself a professor in Paris.—EDITOR.]

DURING the recent troubles in France, occasioned by the Dreyfus affair, the most varied and unexpected scenes were enacted. What outbreaks of wild and brutal fanaticism among men hitherto tolerant, tho perhaps skeptical! But one might also see scientists and men of great literary eminence leaving their laboratories and their books, abandoning their cherished projects and without ostentation or bravado mingling in this agitation. Amid vociferations, insults and calumnies, they affirmed their convictions, and calmly and heroically strove to convince a misguided populace.

One day in the winter of 1898 in a hall where professional politicians were accustomed to assemble, one could see members of the French Academy, like Anatole France; members of the Academy of Science, like Duclaux, the eminent successor of Pasteur; professors of the Sorbonne and of the medical faculty, Havel, Buisson, Séailles, Reclus, Gley, etc. At their side were other workers, who, tho few in number, were striving to resist the anti-Semitic and violent tendencies of the Parisian populace. Duclaux presided. When he arose, as calm as tho he was directing the affairs of a congress of scientists, a thrill of enthusiasm was felt throughout the hall and the entire audience, the majority of them workingmen and students, were profoundly impressed with a consciousness of something very great.

This glow of enthusiasm among men of high literary and scientific culture could not remain a mere incident. On the contrary, it made more profound that impulse which organized and gave birth to a much-needed work. In these troubled hours the necessity became clearly apparent to liberal men of awakening in France a public spirit, substituting, to quote the very happy expression of Professor Séailles, "For the blind impulse of the crowd, the deliberate judgment of the people."

How should this public spirit be awakened? The hope of success lay in the founding of the popular university. The first organization of the series, and thus far the most successful, entitled "The Co-operation of Ideas," was established in the old revolutionary district of St. Antoine. Soon after a number of universities were successfully founded, whose titles clearly show their spirit and purpose. In the first district was formed the "Réveil;" in the Fifth District, where the influence of the Normal High School is especially felt, was organized the "Union Mouffetard;" in the Tenth the "Ideal Spirit;" in other districts "Solidarite," the "Popular Union," the "Emancipation," the "Aurore," the "Foyer du Peuple." In the Eighteenth District, which is densely populated, there are no less than three popular universities; the "Enseignement Mutual," the "Education Social de Montmartre," the "Conférence Michelet."

Especially noteworthy also is the "Fondation Université," of Belleville. The work here has a character of its own, recalling in many respects Toynbee Hall of London. Certain young men, students for the most part, and belonging to the well-to-do classes, are established in an extremely populous and squalid quarter. Here they live in close contact with the workmen, acquainting themselves with their aspirations and their needs, organizing courses of study and familiar talks and conducting evenings of recreation, both literary and musical. The relations thus established are not those of patron and *protégé*; students and workmen are comrades, together seeking the truth, cultivating the perception of the beautiful, and thus breaking down the barriers which arise, especially in large cities, among men of different social position.

This movement has extended from Paris to the suburbs and to the provinces. Time would fail to cite all the popular universities actually existing and those,

more numerous still, in process of formation. They are found in the large cities like Toulouse, Marseilles, Lyon, Rennes, and in cities less important like Alais, Annecy Lorient, and sometimes in modest villages.

It was only in 1899 that the first Popular University was founded, the "Co-operation of Ideas." It numbers to-day four or five thousand members. In less than a year similar institutions have multiplied with surprising rapidity.

The fact is significant that these universities are not attached directly or indirectly to the state. They receive from it no material aid. It is doubtful if the Government accords to them even a moral support. Neither are they committed to any religious confession or allied to any political party. In a country so centralized as France there are but two powers capable, apparently, of exercising an influence over its entire territory. These are, on one hand, the state and its administrative machinery; and on the other, the Catholic Church with its traditions, its great wealth, and its admirably disciplined priesthood. Does the development of the popular university mark the coming of another power, which shall hold its influence solely from the development of free thought and from the active strength of sincere ideas? We may well ask the question.

These popular universities, born of the free initiative of kindly disposed men, are not all copies of a single model. They vary with the material and intellectual resources which are at their disposal; with their moral, social and economic environment; with the temperament, character and the ideals of those who have founded them. If they have arisen in such great numbers and in so short a period without legislative intervention, without religious proselyting, it is because they respond to a need, the intensity of which has been made clear by the Dreyfus affair.

A highly intellectual and social education is indispensable to the free citizens of a democracy. What means have they of securing it?

Without doubt, the Third Republic did not hesitate to make sacrifices in organizing primary education. But the child of the people leaves school at the age of eleven or twelve, and with a mere

elementary knowledge is left at the mercy of his environment, delivered over to the prejudiced suggestions of the journal which he by chance reads, and which very likely he does not understand. Attaining his majority, yet remaining a child in intellect, he is compelled to decide upon complex, and often most obscure questions. How shall he be fitted to answer them? Societies like the Philotechnic and Polytechnic associations have formed courses of studies for adults, but they are of an elementary and technical character, their object being first of all to recall to mind and to develop the ideas acquired at school and to give the young people useful suggestions for perfecting themselves in their various trades. That this is a useful work cannot be denied. Popular universities do not attempt to make the workman more skillful or even better instructed. Their aim is rather to train the mind to reflect, to judge more fairly, to enlighten the conscience; in a word, to make men more free, to make citizens who shall not be passive or violent; echoes of a journal or blind instruments of a party, sect, coterie or of an individual. To emancipate the man, to develop in him patient reflection and scrupulous sincerity—such it seems to me is the aim of the popular university.

Their members belong to social classes widely separated and to opposite political parties. Liberals of the well-to-do class, workmen who are socialists, and even anarchists, are found together. In spite of all that separates them they are united in a common cult of liberal thought, in a fixed determination to realize that which mutual reflection demonstrates to be the better way. Such is the aim of this movement. What now are the means employed to realize it?

These differ with the university; but all are associations of the laity, seeking for the mutual education of citizens of all conditions. Places of meeting are selected where the workmen may come when the day's work is over and find rest, instruction and entertainment. Some of the universities have modest quarters, always open to their members, comprising libraries, reading rooms, play rooms and rooms for conversation or lectures. Others less prosperous rent some public hall two or three times a week for lec-

tures, musical or literary entertainments. Members of the institute, professors, teachers, journalists, even workmen, act as lecturers. All speak simply of what they know, answer questions and direct the debate which follows. Nothing could be less formal or more instructive than these familiar talks. The most diverse subjects are treated, science, literature, politics, art, sociology. Widely different opinions are expressed without giving offense. Free and courteous discussion is thus made a preparation for firm and deliberate judgment. On the literary and musical evenings, artists, sometimes of great talent, render the finest works of literature and music. Refined pleasures of thought and of art are thus made accessible to the workmen, who hitherto have had to content themselves with the stupid songs of the *café* concerts.

Co-operative societies are sometimes connected with the universities or are organized in groups of syndicates. Their financial resources are derived from

modest but obligatory subscriptions of ten cents a month. The system places all, rich and poor, learned and ignorant, on the same footing. It is not a question of philanthropy or of charity, but of mutual education. If the members of the popular universities seek to render their actual life more beautiful, they hope, above all, to prepare through the co-operation of ideas a better state of society.

Without entering into details, I have simply wished to explain to the American people the spirit and method of this new movement. This coming together of science and democracy, of the educated classes and the common people, constitutes truly a new phenomenon.

What will be the outcome? It would be unwise to predict. Why not admire and welcome this close union of men so dissimilar, strangers to all thought of personal interest, indifferent to all political ambition, who seem to have for their motto: The realization of social justice by the discovery of the truth.

PARIS, FRANCE.

Employees' Welfare Work

BY GERTRUDE BEEKS

[Miss Beeks is probably the most practical expert in the employees' welfare work in the country. She met with especial success in her efforts for the 15,000 employees of the McCormick and Deering divisions of the International Harvester Company. While employed by the McCormick Harvesting Machine Company she investigated the efforts along this line of nearly all the concerns of importance in the United States. She is to take active charge of the Department on Employees' Welfare Work of the Civic Federation, which is now being organized.—EDITOR.]

GRANTING that the man whose business sagacity enables him successfully to meet the problems of commercial life and provide steady work is the greatest benefactor; and that, with this assured, the first essentials are an equitable wage scale and reasonable hours, the question arises as to whether the employer has no moral obligation further to consider the welfare of his employees. Thrusting aside the idea much advocated, and, doubtless true, that efforts on the part of the employer to contribute to the physical comfort and mental elevation of the employees would enhance their commercial value, it is,

from the humanitarian standpoint, purely his duty to make such use of his superior talents and opportunities.

To give especial thought to the well-being of the employees may savor of "paternalism," it is true, but it is not necessary to call into play that variety which robs the workman of independence and self-respect.

"Oh, no; we are not engaged in welfare work!" emphatically said a prominent manufacturer: "in fact, we do not believe in paternalism!" But he took no little pride in guiding a tour which disclosed scrupulously clean, light, well-ventilated work rooms; individual baths for

molders; excellent wash rooms; a class room for apprentices and a final—which came as an additional shock—regret that there was no luncheon room.

A reasonably comfortable place to work should constitute the first consideration. Such shops as those of the "Westinghouse," "Walker & Pratt" and "Brown & Sharpe" companies present unusual examples of modernly equipped structures in which all the sanitary features—including a good system for plentifully supplying pure drinking water—are provided as a matter of course; while often the overlooking of such needs in the construction of a new building necessitates a heavy expenditure for comforts which could have been installed at very little additional cost at the time of erection.

An insurmountable stumbling block to many employers desirous of undertaking efforts to better the conditions of the employed is represented in the query, "What to do and how to do it." A special study of the individual institution on the part of one possessing a fair share of common sense and a practical turn of mind will soon reveal the pressing needs. Among other things, close contact with the men in a foundry will show that something more than ordinary facilities for washing-up are requisite, and that nothing short of a complete bath will avail; a trip through the blacksmith shop where the walls form a background for hats, coats and even shoes hanging in the dust and smoke on stray nails will suggest lockers or dressing rooms; and a glance at the men lined up on the curbstones or in the shadow of the board fence which supplies a support for the back as well, will determine the need of a luncheon room and a comfortable place to relax—and smoke—at the noontime. In this luncheon room the heavy meal required by the laboring man will be very different from that which will appeal to the clerical force, and the price which may be charged must be set to conform to the possibilities which the envelope received on pay day will permit. Or a unique opportunity may be presented in the rolling mill and even the open hearth furnace, where the men "keel over" from time to time; where a system of piping may be arranged to throw fresh air in the faces

of the men working over the molten metal. The first cost will soon be met by the saving in time represented in the steady work of the operatives. And, then, there is the need of elevator service for the women, stools where the machinery will permit, and a matron. One or two accidents, with the sufferers, perchance, lying on the floor awaiting the arrival of the physician summoned from outside, will conspicuously exhibit the need for an emergency hospital room with an attendant trained to administer first aid at least.

Honesty of purpose on the one hand, begetting confidence on the other, will secure the successful installation of such features as meet the needs of the employees. A manufacturer who installed a luncheon room one day and cut the operatives' wages the next should not have felt surprise or disappointment when they refused to patronize it. It goes without saying that this honesty of purpose carries with it a close attention to essential accessories. "But why," the superintendent of a large factory was asked, "do not the employees avail themselves of the opportunity to use the gymnasium in your club house?" "Well," he replied, "we had an instructor who received a better offer, and we've not had one since." In a large department store, elaborately equipped with rest rooms, luncheon rooms, shower baths and two gymnasiums for the women and men, the attendant vouchsafed that the latter "were seldom used." An inquiry as to whether there was an instructor brought a negative reply. On being interrogated as to whether the shower baths were ever used, the reply came that the only opportunity afforded being the luncheon time, it was impossible, employees not even being allowed to remain after hours for the purpose. Another institution, with a system of assignments allowing twenty minutes a week on the company's time, reveals the baths in constant use and much appreciated by those who have no hot water connections in their homes. And a striking contrast is the modest manufacturer discovered with a gymnasium where has been installed the most efficient instructor to be secured. Here alternating classes of 60 entirely fill the two evenings weekly devoted to this fea-

ture, with 120 dressing rooms and shower baths to accommodate an entire class simultaneously, the instructor controlling the lever to regulate the varying temperature.

The business may be so located that the municipality furnishes adequate educational facilities and that comfortable living quarters are attainable, but there will be other opportunities for the employer to demonstrate a wholesome interest. What employer can escape the responsibility to protect the much maligned "factory girl," as chary of her reputation as her sister in the so-called upper world. In one instance, an enterprising individual, realizing that the announcement of an entertainment under the name of the employees of a certain company would insure its success, circulated handbills informing the recipients that "A Masquerade and Grand Ball would be given by the 'Smith' mill girls." The young women's appeal to the matron that "It's bad enough to have to live down the reputation that we get working in the factory without having our names associated with an affair at that tough dance hall where a party always ends with a fight," secured such prompt action on the part of the employer as to blast this pernicious scheme. If the nature of the business renders it impossible to dismiss the women employees a few moments before the men, a discharge now and then from the rougher element of the masculine type may demonstrate that no indignity will be tolerated, and, even in the work room, a firm stand will convince the swearing overseer that his end must be gained by the use of milder language.

Can he overlook an appeal from the men who have formed a band, furnishing their own instruments, for a place to rehearse as a substitute for the free use of the rear of a saloon!

And the money shark evil! Where is the place which does not disclose the borrower, in time of unusual stress brought on oftentimes by illness in the ever large family—which exists a noted authority to the contrary notwithstanding—desperately driven to the ten to twenty-five per cent. a month usurer, whose timely aid remunerates him with several times the amount borrowed, and, indeed, his client may never be able to escape his

clutches. In a few instances mutual plans for lending money in worthy cases have been successfully adopted, and the wonder is that more attention is not given to this exigency.

After the monotony of the day there comes the demand for recreation. There is nothing to take the place of the dancing party with the vast majority. The saloon dance hall more often than not affords the only available place. The employer who had provided ample space and a good floor, as well as requisite coat and dressing rooms, in a convenient neighborhood for his large force of employees, expressed gratification at the result by stating that "it is engaged every night from early fall till late in the spring by different elements."

Witness the surprise of one employer, who, to force similar ventures up to its standard and thus raise the moral tone of the village, fathered an enterprise limited to pool rooms and bowling alleys at local rates; the startling profits very soon occasioned him no little concern as to how they might be disposed of in the further interest of the employees. Good evidence of the pleasure seeking propensities of the human race.

But the general recreation time comes at the end of the week's work—the Saturday night dance will extend well into Sunday morning; and what of Sunday, particularly in the heated season? The progressive employer who could once sit on his own cool veranda and forget the demands of the operatives for something better than the front step or ever present saloon will yield his opposition to Sunday entertainments. When he learns that the people must be given what they want and not always what he desires them to have, he may find them dancing with his consent in the good fresh air on the deck of a steamer. But, as all elements must be taken into consideration, why should not the church-going operative be given the Sunday lecture, *al fresco*, or a sacred concert in an inviting grove, with, perchance, a trolley car ride as an additional attraction?

Who can gainsay that "all work and no play makes Jack a dull boy," or that there is no responsibility to provide recreative features with the proper environment?

The term "welfare work," as viewed by certain sociologists, seems to embrace every conceivable idea from the building of homes in a previously uninhabited district by the venturing manufacturer (who is forced to provide dwellings, and will, if of keen foresight, include kindergartens, schoolhouses, amusement halls, and the church among the attractions to secure a good class of operatives); or the introduction of compulsory baths and daily change of clothes where necessary in the paint shop for the prevention of illness and loss of life, to the tinting of the factory walls. Generally speaking, it is any effort to better the conditions of employees. Technically, home building in a newly established factory town does not come under this category. Yet a view of Vandergrift, set in among some of Pennsylvania's most beautiful hills, must commend the brain who conceived the system for saving and lending money which has enabled a large majority of the employees to erect and own unencumbered, in a period of seven years most attractive homes of their own. The first case of typhoid fever, it is claimed, is yet to be met in this town designed by Mr. Olmsted, where the drainage system, piping for gas, paving, curbing and pure water supply were installed before a lot was sold or the shop completed. This young municipality, with a population of six thousand, boasts of a single policeman to maintain law and order. The eight churches, each with its pipe organ, schoolhouses, hotels and retail stores, as well as the recreation center—the casino—and athletic fields, complete this pic-

ture. A less considerate employer might have provided a few shacks, at the outset, and allowed his employees eventually to shift for themselves.

So a new factory town presents a different problem from a city of homes like Philadelphia. But the early efforts of some of the old New England factory towns have outlived their days of usefulness. The Lowell "corporation houses," for instance, built originally for the purpose of controlling the price of board, are being displaced by the electric car, which has encouraged the building of homes in the country.

Problematical features such as profit-sharing, insurance associations and the co-operative store find their advocates, but what may be undertaken must be determined as the result of a careful study of the needs of each institution. In the department store much of the same line of effort devoted to the factory is practicable. In lumber and mining districts particular needs are comfortable, sanitary habitations, the circulating library and the club house or place of amusement. An interesting experiment is now being made by one mining company, which has incorporated the bar, with certain restrictions, in the club houses for its employees.

Whatever is done must be regarded as an experiment, more or less, by each employer as the effort is made to meet the especial exigencies; but, if undertaken tactfully and without ostentation, from a sense of right and justice, the results will be both gratifying to the employer and beneficial to the employed.

NEW YORK CITY

South American Impressions—Brazil

BY CHARLES M. PEPPER

SPECIAL COMMISSIONER FOR THE SECOND INTERNATIONAL CONFERENCE OF AMERICAN STATES

THE Atlantic Coast countries have been called the European fringe of South America. That is a better description than to designate them as European colonies, for such they are not. But on the coast the old world is most apparent in the incoming and outgoing ships, with their passengers from

Italy, Spain, Germany, France, Portugal and England, about in the order named.

By the chart it is a shorter run across from Rio de Janeiro to the European ports than to those of North America. Buenos Ayres is two days nearer to Cape Town, South Africa, than to New York. Montevideo is a midway station for the

big steamers plying between Liverpool and New Zealand. Few of the cargo ships from New York get beyond the Brazilian ports. Geographical knowledge therefore is necessary to an understanding of some of the causes which have kept the North and the South American continents in ignorance of each other.

Of all the Southern republics Brazil has the best conception of ideal, and perhaps idealized, North American institutions and at the same time the least practical contact with them. The constitution of the country of Washington was the theoretical perfection at which her statesmen aimed even under the Empire. While not entirely free from the distrust of the United States which at times has been so marked in South America, and which to us has seemed so unwarranted, Brazil has given fewer evidences of that feeling than her neighbors. She has moved in her own orbit without much concern for other political spheres in space; but with respect to the United States her attitude has been that of respectful and benignant observation of another planetary body moving in a different orbit and with no likelihood of interference or collision. It is a fair characterization to say that as a result of this telescopic contemplation the institutions of the United States are better known than the American people.

It takes a stay in Brazil to realize that the objection of Brazilians to being called Spanish-Americans and to their country being called a Spanish-American country is just. I have been told with courteous frankness that they prefer to be known simply as Brazilians; but if they are to be hyphenated, they are Portuguese-Americans by their blood and traditions. It is a blood difference. Superficially the Portuguese language is much like the Spanish, but a little study of it shows marked divergences, and the divergences in the national character are just as pronounced. Brazil has many inheritances from Portugal; she has none from Spain.

The Portuguese colony in Rio de Janeiro is what the Spanish colony is in Havana, Mexico, Montevideo or Buenos Ayres. It is strong in trade, but adds little to agriculture or the enterprises which develop national wealth. If the

Portuguese took to the land instead of being sea-roamers and traders, Brazil would have made more progress toward peopling its vast regions.

The Brazilian negro does not appear to be an unsolved problem as in the States. He seems to work about as hard as his white neighbor does, but no harder, and extreme physical exertion is not the rule with any class. The Italian immigrants labor hardest, yet only for a short period. They earn enough in a few years to enable them to return to Italy, and the enervation of the climate is not a factor in their calculations. The blacks are cohesive, but peaceful, and apparently contented. When so much is said in the States against the negro "aspiring" beyond his sphere, it is a pleasure to hear the praises everywhere recorded of the American Consul at Bahia, who is a negro. He is eulogized as "sober and a gentleman" with a frequency which leads one to wonder if any of the consuls at the Atlantic ports are not sober and are not gentlemen.

Yellow fever epidemics in the past and the torrid heat of Rio de Janeiro have produced a peculiar condition with reference to the diplomatic representatives of the foreign countries. The members of the diplomatic corps live throughout the year at Petropolis, 25 miles away. The ferry boat takes an hour across the bay and then there is another hour climbing the mountain on the cog railway. Many Brazilian families also have their summer homes at Petropolis, yet the diplomatic corps is in a state of almost complete isolation from the people of Rio de Janeiro, socially and in every other way. Probably in no nation in the world is there so little contact with the national life of the country to which they are accredited.

This is not good either for the countries they represent or for Brazil, which should have closer acquaintance with them. The fault is not of the foreign ministers, but some of them exaggerate their troubles and speak of their residence in Brazil as an exile to the Botany Bay of diplomatic life. This does not strengthen their influence in the country to which they are accredited. If in the official sense they are *personæ gratae* to the Government, as they must be, never-

theless they appear to the Brazilians generally as ungrateful persons. No country likes to be depreciated by those who come to it in official positions and who, perforce, must be accorded the courtesy to which foreign officialdom is entitled. Brazil is a vast country with a proportionate political influence in South America and with unlimited commercial possibilities for all the world. It is not therefore the best diplomacy to slight her and to send ministers who the day after their arrival begin talking of their martyrdom and speculating on how long they will have to wait for a transfer.

The United States is fortunate in being an exception to this rule. Mr. Bryan, the former minister, enjoyed great social popularity. Mr. Thompson, the present minister, in a few months' residence, has won the respect of all classes. Liking the Brazilian people and the officials of the Government with whom he is thrown into association, he has not been afraid to say so. In consequence the isolation which results from the residence in Petropolis is felt less by him than by his colleagues and he is more in touch with the Government and the people. The United States and Brazil have so many points in which they should be more closely associated and should understand each other better that it is a decided advantage to have the diplomatic intercourse established on this mutually sympathetic basis.

The philosophical English business man is seen at his best in Rio. Like the diplomats, he lives in Petropolis, or a good many of his class do. Usually he is in coffee. Four hours going to business and returning, with the better part of another hour lost in the city itself, seems a large share of the day. It would give a Chicago man the hysterics. But the Englishman, on taking the train in the morning at Petropolis, calmly pulls out his pocket chess board, nods to his opponent, and the two settle to the game. It may be the conclusion of one begun on the ferry the evening before or it may be the beginning of a new one. The moves are made with ample deliberation, silence obtains, and the players never show irritation. Their comment is re-

served till the game is over and then it is brief. If an interval of a half hour occurs the weekly edition of the *Times* is leisurely perused. The American coffee brokers, who also live at Petropolis, do not occupy themselves so readily. They have joined with their English associates in adapting the hours of business to the needs of the travel necessary going and coming, but they have not yet learned how to fill in the time. A valise full of newspapers and magazines will be read with feverish haste and thrown aside, pocket memoranda will be consulted, notes jotted down, and then an hour of nervous irritation passed.

Another impress of English habits is noticeable in the morning when the business men begin to pour in from the suburbs. This is the large number of high hats and frock coats. A section of London seems transplanted to Rio de Janeiro. But the wearers of the high hats and frock coats are not Englishmen. They are Brazilian business men.

Lovers of traditions in journalism would be gratified by the Brazilian press. Much cable news is printed, and the editorial article has weight. It is usually a discriminating literary essay on political or semi-political topics, with incidental digressions on economic subjects. Literary and scientific reviews are numerous and European correspondence fills a large space, that from Paris having the preference, except in the newspapers devoted especially to the Portuguese colony. The blanket form is retained. The *Jornal do Commercio* is an enormous sheet, which prints 8 pages except on Mondays, when it limits itself to six. Very full information is given about Government matters and the debates in the two branches of the Congress often are published verbatim. Addresses before scientific and literary societies, public speeches and essays are printed in full, a single one sometimes filling a page to a page and a half. Dr. Rodriguez, the editor of the *Jornal do Commercio*, lived for many years in the United States. He aims to approximate rather than to imitate American journalism, but sometimes finds he is too far in advance of the Brazilian newspaper reading public.

RIO DE JANEIRO, BRAZIL

Literature

The Principles of Money

WE mean no disparagement when we say that this book * can be useful to but a limited class of readers. A single volume, which should state clearly and concisely the principles governing the use of money, might indeed be, in the best sense of the word, popular. This book makes no such attempt. It is one of a proposed series of six, the succeeding volumes dealing with metallic money and its history in the United States, with paper money, here and abroad, and with banking. This treatise is therefore like a part of an encyclopedia; some things are discussed fully, while the treatment of others is postponed. Among the latter is included the definition of money—a difficult task, certainly, but one that might better be grappled with at the outset. The word bristles with ambiguities, and a clear statement of these would greatly assist the student. The author devotes much space to the examination of these ambiguities as he proceeds; but it would have saved labor to have had the explanation at the beginning.

The selection of topics seems to have been made somewhat at random. Something is said of coinage, and then the standard question is taken up. Next comes a discussion of credit, which is followed by a chapter on deposit currency, and another on tables of prices. After this comes an elaborate examination of the quantity theory, then a chapter on prices and the international movement of specie, succeeded by chapters on the amount of money needed by a country, Gresham's law, legal tender and token currency. Repetition is unavoidable with such a plan; and, indeed, there seems to be no particular plan in the arrangement. The writing is sometimes careless, as in the sentence: "The substitution of an expensive gold circulation by paper was a saving to the community." Less excusable is the repeated misstatement that the Issue Department of the Bank of England can issue notes unsecured by gold only to the amount

of about £16 ²/₃ millions. The figures should be £18,175,000. Nor does it give quite the correct idea to say that these notes can be issued on deposit of Government securities only. Most of the depositing was done long ago.

It is obvious that in any study of prices, and of the quantity and currency theories, the amount of gold used is a fundamental element. It is, however, notorious that our information on this point is seriously imperfect. We have had for many years fairly accurate figures for the production of gold. Since 1850 the amount expressed in dollars is 7,000,000,000; and what was then in existence is estimated at 2,000,000,000, altho this is thought by some to be but two-thirds of the true amount. Now, it is known that only a little more than one-half of this gold has been absorbed by the monetary demand of all countries. Professor Laughlin remarks: "It is a real statistical difficulty to discover a demand for the remainder." If we suppose \$3,000,000,000 to have been consumed in the arts, there is still a deficiency of \$1,500,000,000 to be accounted for. To account for it is essential to accuracy in our conclusions about prices; it is too large a factor to be neglected. We turned eagerly to the pages where this point was treated, hoping to find at least some adequate explanation of the mystery—the slurring over of which has made the conclusions of our mint reports, as well as many other documents, ridiculous. All we learn here, however, is that if the author were to hazard a guess, he would suggest that the missing gold lies in the reserves of private bankers. To have a vital point dismissed in this summary way is disappointing.

The chief motive of this work appears to be the overthrow of the quantity theory, with which the name of Ricardo is commonly associated. The author assures us that "only after years of hesitation and after a long inability to make the old doctrines explain the modern phenomena," could he have had the temerity to wrestle with so large a problem. The word "wrestle" well describes the process here exhibited. The

* THE PRINCIPLES OF MONEY. By J. Lawrence Laughlin. New York: Charles Scribner's Sons. \$3.00 net.

criticism is painfully involved and labored; the same objections are raised over and over again; the same dogmatic assertions are offered as arguments. From time to time we get a gleam of the central truth; that "the simple conception of price is that it is the exchange ratio between goods and the standard, not between goods and the media of exchange." By holding to this clue we can follow the author through the maze of controversy; but the strain on our attention is severe. It is necessary, for the author's position, to deny that the total quantity of goods to be exchanged constitutes the demand for money. This denial is supported by asserting that

"the demand for the money commodity arises from both non-monetary and monetary wants; and the monetary demand for it as a medium of exchange has almost no connection whatever with the total mass of transactions."

The adherents of the quantity theory would meet this assertion by denying it.

In dealing with a subject of so intricate a nature some uncertainty is pardonable; but the author allows himself too much latitude. Thus we read, on page 136, that deposit currency has only an inconsiderable effect on the value of gold. On page 139 we are told that credit devices employed as currency save gold from being used as a medium of exchange, and thus tend to lower its value and cause a rise of prices; but, in fact, these devices have increased the demand for gold. These propositions can be reconciled, but their consistency is not apparent. In spite, however, of its defects, the book will be found highly stimulating and suggestive; but its conclusions will, of course, meet with sharp criticism.

The Arts in Early England

ALTHO the author of *The Arts in Early England** states modestly that his book is by no means to be considered as an exhaustive history of the decorative arts or of the architecture of the Anglo-Saxons, but rather as a storehouse of material for the use of future historians, he has written not only an exceedingly

valuable work on his subject, but also a very learned one.

The architectural monuments naturally form the largest part of the material at the disposal of antiquarians, but, interesting as these are, the lesser decorative arts of the primitive Celts and Anglo-Saxons were superior to them from an artistic standpoint. The Irish illuminated MSS. are famous for their beauty. The carved ornamentation of stone crosses is a branch of work which belonged to Ireland, Scotland, Wales, Cornwall and the Isle of Man, and these, with Irish metal work and English embroidery, won a European reputation. All of the arts of Britain were, of course, much influenced by the Roman conquest, but underneath this imposed Latin civilization one finds an unconquered barbarian culture. Indeed, Mr. Brown feels strongly that too much importance has been ascribed to direct Roman influence both in the conversion of the Anglo-Saxons and in the development of their architecture and minor arts. Christianity exercised an enormous influence on the character of their buildings, and from Ireland came the power which molded the Church of early England. The author is therefore justified in devoting much space to tracing, step by step, the origin and growth of Anglo-Saxon churches and monasteries. The seventh century was the great period in Irish literature and religion, and this culture was felt far outside of its own centers. Gentle and simple flocked from Britain to Erin for the sake of learning or a devotional life. At that time the Church of Ireland was a learned, organized and liberal Church, and was the means of converting England north of the Thames. The remains of the monuments of this early civilization are extremely interesting, showing, as they do, the successive influence of Celt, Roman, Saxon and Norman. Their architecture is a quaint mixture of the law of necessity on one side and of spontaneous impulse on the other; so that the mind rests in pleasant contemplation of the broad masses of the serviceable structure and delights in the intricacies of the original and piquant detail.

The stone mounds of Ireland, full of bee-hive cells, where hermits lived in solitude and nursed the mystic fervor

* THE ARTS IN EARLY ENGLAND. By G. Baldwin Brown. Two vols. New York: E. P. Dutton & Co. \$8.00, net.

which was to move England, were the small beginnings from which were evolved those elaborate monasteries with their magnificent churches which are the glory of the Middle Ages.

Mr. Brown has given us a careful study of the remains of this long line of monuments, assisted by his wife, who has made admirable sketches of churches, monuments and fragments. Hardly too much can be said in praise of the artistic beauty of these line drawings. In this day of half-tones and photogravures it is a delight to the eye to see a page where illustration and letterpress combine to form an harmonious whole.

A characteristic example of these drawings is here reproduced. It represents the Tower of Earls Barton, which is one of the most interesting of Anglo-Saxon monuments. It shows decided

German influence, while the use of the pilaster strips and certain forms of carved ornament, with the absence of angle and soffit shafts or developed roll moldings, such as are common in the advanced Romanesque of every land, place the date of the tower at about the end of the tenth century.

The Sherrods

As the author of "Castle Crancycrow" and other stories, Mr. McCutcheon is already well known, and his latest novel is likely to attract more than usual attention. The pristine charm of his lovers, the clever humor with which he portrays bucolic types, the reality of his summer and winter weather and the dramatic power with which he develops the tale, are sure to please every reader of fiction. But the book is especially important because at bottom it is an attempt to demonstrate the inevitable process by which under certain conditions innocence is changed to guilt. This is a bold proposition and the author does not shrink from the conclusions, however monstrous they appear.

The scenes shift from a remote township in Indiana, where life is merely objective and every expression of it limited by ignorance and prejudice, to Chicago, where the swifter movement of affairs, the intensity of all emotions and the merciless pressure of environment threaten the morality and sanity of every victim caught in the whirl. But the story begins brightly with the marriage of an archaic young couple. And the author shows rare discernment in setting forth the invincible innocence of a woman like Justine, who grows up simply, not so much by rote of customs and the restraint of conventionalities as by that happy faculty of nature which keeps the lily's stalk straight, the bloom white and the heart golden. But according to Mr. McCutcheon men do not acquire lasting virtues after the same manner, for "Jud," the young husband, brought up under similar conditions, from a youth singularly pure becomes a monster of crime and selfishness. The fact is this character is likely to challenge the psy-

chic wit of those who understand it, and many will decline to accept the development of it as normal or possible.

There are fixed stars in our moral system which no responsible human being can lose sight of; and even if this were not so, there are certain sensations, revulsions, registered in physical consciousness, that render it impossible for a man (until this time sanely good) to remain faithful to his wife, yet come to love another woman purely, marry her without a qualm, live with her ardently,—and all the time long for his real wife's presence!

The polygamous instinct of the male creature, whether man or beast, is generally conceded, but heretofore few have been bold enough to contend that such an instinct is pure. Yet Mr. McCutcheon represents that his hero has no personal sense of guilt, feels, indeed, that he could be supremely happy if he might live with two virtuous women at the same time, unmolested by the law and uncondemned by their sense of outraged sanctity. Brigham Young once gave as his excuse for having so many marriages that "his taste changed" as he grew older—a brutal, but a most reasonable, reason for an additional wife. And it is certain that the poetic, rose-lipped mate of a man's immature youth often fails as the companion of his hard-featured middle age. But Jud had no such excuse to offer. He longed for Justine as much as he delighted in Celeste. He was hagridden by terrors not because he repented of his crime, but because he feared one wife or the other would discover it and hate him accordingly. And from this possibility he recoiled so far that he was ready to murder one to save the other.

The story ends tragically for Jud, of course, but one cannot help thinking that the author means to convey the impression that his hero was a victim rather than a criminal. And it is immoral to that extent.

Greater Russia

THIS handsomely made volume* of 350 pages is a pleasure to read, and, one might say, a treasure to possess. The author is nothing if not sprightly, and yet his easy narrative includes a multi-

tude of memorable details that would appall an ordinary traveler, and bury in literary oblivion a naturally less clever man. The book is almost "extra-illustrated," containing nearly one hundred inserted pictures, often two on the page, and closing with an excellent large map and a useful index. It is a book of observation and not of travelers' convention, "made during different visits, but mainly while twice crossing the empire in 1901," "drawn mostly from my own experience and that of persons whom I met," supplemented by statistics and plentiful suggestive comment, and deliberately adopting anecdote as the author's method of suggesting his impressions. The writer is equipped by natural endowment as well as previous experience, by an adaptability and tact invaluable to the traveler; endurance of the disagreeable and inevitable, and that "polite insistence" upon one's purpose that goes so far in Russia. He sees in turn, with the eye of the naturalist and the ethnographer, depicting flora and fauna, psychology and politics, the structure and resources of the country, and the character and customs of the people. The story loses nothing in the telling, and we may say of him as he says of Siberia: "There is nothing mean about some of the stories current in Siberia." He enjoys the now unique distinction of never having visited a Russian prison. It is the country, and the industrial and commercial future, of Russia in Asia, or "Greater Russia," that he describes.

It is difficult to compress, or to select from, this full and flowing narrative, where the eye is continually lighting upon good things; but there are certain topics that stand out prominently in the treatment, commanding our attention. These are the geographical framework of the picture; the freer character of the Siberian as contrasted with the Russian; the inferiority of both Russian and Siberian to the Chinese and Japanese, as colonist and agriculturist—indeed, as artisan, trader and man, and the consequent weakness of the Government as a permanent world Power, through failure to nationalize and assimilate its possessions. Further, the false methods of the Government in colonization, which pauperize the peasant and develop in him the habit of dependence, and even

* GREATER RUSSIA. By Wirt Gerrard. New York: The Macmillan Co. \$3.00 net.

prodigality with possessions too freely given or not permanently his own. Again, the paternalism of the Empire is noteworthy; its policy of protection to home industries, now proved efficient, and even the forced abstention from politics of its subjects can be considered by our author a gain to business and material civilization, through concentration of energy and limitation of aim.

The policy of Russia is interestingly presented; upon the one hand, Slavophilism, with its cry of "Russia for the Russians," and its creed, "faith in the natural abilities of the Slav peoples," and the absorption of Asia, a missionary idealism of "manifest destiny," and ever departing from this when advantageous, a practical program, favored by the military, "chiefly, if not wholly, concerned with the *material benefit* of Russia," "in extending the limits of Empire toward the South, toward ice-free ports and tropical produce" (the raw material for manufacturers), "toward the East and new markets;" on the whole, an opportunist, fatalistic policy of diplomatic "bluff," and inert following of the line of least resistance, with an instinctive determination to reach the sea, or border line of some established civilization. The author's arraignment of Great Britain is especially vehement for her ignorant, negligent, dilatory and deviating diplomacy, and absence of business enterprise and forethought in the East; and he makes frequent suggestions as regards commercial opportunities and consular appointments, with indications of the changing conditions of the Russian market, and restrictive legislation which prohibits an alien development of the country, perpetually unable to develop itself.

Flora of the Southeastern United States.
By John Kunkel Small, Ph.D. New York:
Published by the Author, \$3.60.

This is an immense work, when compared with Chapman's old Flora of the Southern States, or with the familiar school of Floras of the Northern States. There are nearly 1,400 close printed wide pages. The bulk of the book compares, without pictures, with the three volumes of Brittan and Brown's Flora. The author is associated with Dr. Brittan as Curator of the Museums and

Herbarian of the New York Botanical Garden, and has all the assistance of Dr. Brittan and his able corps of botanists. It would hardly seem possible that so ambitious a work, which must have cost so much labor, can find a lucrative market, and we are not surprised that it is published by the author at the New York Botanical Gardens. It is abundantly supplied with the needed help of analytical keys, and the descriptions of plants are full and useful. Those used to the older manuals will notice the newer terminology. The orders end in *ales*, as *Rosales*, while the sub-families end in *aceæ*. There is a surprising number of changes in specific or generic names, required by the late rule that the first name given shall stand. Besides this there are many new species, and all these, with information as to the location of type-specimens, are given in the appendix. The volume will be a necessity to Southern botanists.

Platonism in English Poetry of the Sixteenth and Seventeenth Centuries. By John Smith Harrison. New York: The Macmillan Co., \$2.00

The English Heroic Play. By Lewis Nathaniel Chase. New York: The Macmillan Co., \$2.00.

Both of these volumes from "The Columbia University Press" have attractive titles and both are distinctly disappointing. Some of these monographs, "presented in partial fulfilment of the requirements for the degree of Doctor of Philosophy at Columbia University," have been valuable studies, but they were studies depending more on research than on maturity of literary judgment. Such, for instance, was Spingarn's "History of Literary Criticism in the Renaissance." A perusal of the present volumes leads one to ask whether such doctorate theses are worthy of printing in this substantial form; whether, indeed, it does not approach a waste of time to set a student at a task of literary criticism which requires above all things ripeness of judgment. Both of these books show only too plainly that the authors have read up their matter diligently and conscientiously, but that they have come to the task as something *new*, and not as something forced upon them by mature reflection.

Platonism in English Poetry was composed apparently in this way: Select the two or three principal elements of Renaissance Platonism, read the English poets, and run together with some disjointed comment a long series of quotations. The result is not illuminating. The writer on the *English Heroic Play* also lets an admirable theme slip through his fingers almost untouched. Here are some of the questions this topic would naturally raise, but which are not considered at all or are most inadequately answered by the present candidate: The connection of heroic love and honor with chivalry; how the court of Charles II could enjoy the heroic drama; distinction from French heroic drama; relation of "Almanzor" to Marlowe's "Tamburlaine;" element of surprise in the rimed couplet and the general effect of this meter; what is the value and significance of Dryden's heroic dramas as a whole. There is a good deal of material in both volumes which may be useful to some future writer on these topics, but further than that commendation cannot honestly go.

The American Revision of the English Bible has previously been reviewed by us at length, and with warm approval, both for the improvements in the text over that of the English revisers. The latter were quite too strictly held by their conservative rules and ideas, altho their better scholars, and the world of scholarship generally, sided with the Americans. The most noticeable difference is in the use of the name *Jehovah* in place of "the Lord," wherever it appears in the Old Testament. We also approved it for the admirable style in which it was published by Thomas Nelson & Sons. We have received a new form of the Standard Edition of the Teachers' Bible style, limp cover and red edges, and with an admirably compact Bible Dictionary, concordance and maps. We should select this Bible for teachers' use, and for gifts. There is none better. Already most of those who took part in the Review have passed to the other world; but one of them still surviving enjoys telling one of his experiences while the work was going on. Standing in the Allegheny City station, we think it was, one day he over-

heard a man say to his companion, "There is one of the men who are reversing the Bible. He does not look it, does he?"

ANCIENT GRECIAN JOKES ON PHYSICIANS.—Among the jests of the ancient Greek humorists are many on the physician. Some of them are characterized by an almost American extravagance. The following are from a popular Greek Anthology: "Diophantus dreamed that he saw Hermogenes, the physician; and he never awoke again, even tho he wore an amulet." "Marcus, the doctor, called yesterday on the marble Jupiter; but tho he was Jupiter, and tho he was marble, his funeral takes place to-day." Pausanias, the Spartan general, when asked why he spoke evil of a doctor whom he had never consulted, said: "If I had consulted him I shouldn't now."—*Archeological Review.*

AFTER READING A POPULAR NOVEL.

NOTE.—Any one supplying the correct answers to these questions will be given a trip to the North Pole.

Why did the town nestle among the hills?

How did it happen that a strange sense of unrest swept over him?

Why did she never look more strangely beautiful than upon that evening?

What made him flick the ashes from his cigarette?

Why did the cold wind that fanned their cheeks feel so good?

Why did it seem to her as if all the life had gone out of her young life?

What made the house stiller than death that night?

When confronted by the lawyers why was he visibly affected?

Why was she the life of the whole gathering when her heart told her that all was lost?

Why did the dog look up at that moment and wag his tail, as if he, too, understood her?

What made her look back on that day all the rest of her life?

What made her feel intuitively?

Why did his voice have a ring of triumph as he spoke?

And why was her face, though pale, so radiantly beautiful?—*Life.*

Editorials

The Alaskan Boundary Decision

WHILE it is true that an evenly divided Commission of six persons was appointed to consider the Alaskan Boundary controversy, the case was really tried before the highest British judicial authority, the Lord Chief Justice of England. He has decided it in favor of the United States. That is what it all comes to. And it is of great importance that the decision was shaped and determined by so eminent a judicial officer of the nation whose claims are by that decision rejected. If the vote cast by Lord Alverstone had been the vote of some English legislator or some officer of the British Government, the Commissioner casting it would still deserve the respect of both parties to this dispute, but in Canada some would say that he had been influenced by considerations of international comity, or by the question of a possible alliance with the United States in the future, or by some argument not properly applicable to the case. But the vote and the opinion are those of the Lord Chief Justice of England. They cannot be assailed by any colonist who holds in respect the judicial institutions of the Imperial mother country.

The decision, so far as we can learn from the unofficial reports, virtually sustains the entire contention of our Government; for the exception relating to the Portland Channel is of so little importance that it may almost be overlooked. This exception does not give Canada an outlet to the ocean at the southern extremity of our Alaskan territory; she already had the free and practically undisputed use of one-half of that Channel throughout its length, and the decision merely gives her the other half. From that Channel northward to a junction with the fixed eastern boundary of the great peninsula, the line which our Government has always regarded as clearly established by treaty—and which, until a few years ago, it was never required to defend—has been accepted and confirmed by this decision. At a distance

of ten marine leagues from the coast of the mainland, it lies parallel to the "sinuosities" (the old treaty's word) of that coast, and therefore gives Canada no foothold at tide-water on the banks of the great inlet known as Lynn Canal, or along the tributaries of that inlet.

At the head of Lynn Canal, where are situated the new towns of Skaguay and Dyea, begin the overland routes from the sea to the Canadian Klondike. It was not until the Klondike's gold was discovered that the location of our boundary at that point (and southward) was attacked. The *modus vivendi* adopted temporarily by the two Governments, and now in force, is distinctly more favorable to Canada than the terms of this decision, which interposes between Canadian territory and tide-water at least thirty miles of land. The line claimed by Canada would have given to her the greater part of Lynn Canal and a wide strip of the mainland southward to Portland Channel. If that line had been confirmed, Skaguay and Dyea, about 20 miles east of it, would have become Canadian ports, and large tracts of gold-bearing land would have been transferred to the Dominion.

In this controversy, Canada never "had a case." There is no proof that she ever thought of having one until after the discovery of gold along the Klondike creeks, when it became known that the only feasible or really available overland route to Dawson was through the passes at the head of Lynn Canal. It was in 1898 that this boundary claim was laid before the Anglo-American Joint High Commission, and the controversy over it prevented that Commission from reaching an agreement upon any of the other questions which it was required to consider. Up to that time, or until the riches of the Klondike began to draw gold-diggers from all parts of the world, the boundary which Lord Alverstone's decision now confirms had not been disputed. For fifty years it had been on the world's maps. Even in 1898 it was on the charts of the British Admiralty. It can be seen on the official

maps of Canada. We held undisputed possession, maintaining custom houses, post offices and schools in the territory which Canada afterward claimed. The location of the line rests upon the provisions of the Anglo-Russian treaty of 1825, which were cited in our treaty of purchase in 1867. It was the intention of Russia in 1825 to prevent the British Hudson Bay Company from gaining a foothold on the coast, with easy access to tide-water, at Lynn Canal or at any other place in the territory which she sold to us in 1867. This was for the benefit and protection of the Russian-American Fur Company. It was to carry out this intention and accomplish this purpose that the treaty of 1825 called for a line parallel to the sinuosities of the coast and ten leagues from it. If it had been intended that the line should cross Lynn Canal a few miles from its mouth (which has been a part of Canada's contention), the Hudson Bay Company would have had posts on the shore of the Canal and would have controlled the navigation of it. But that company and Great Britain did not dispute Russia's possession of the entire tract which is inclosed by the boundary line insisted upon by our Government and now confirmed in its location by the judgment of Lord Alverstone and the Commission.

What ought the United States to do now? Canada is sorely disappointed. A large majority of her people believe, we think, that her claim was a just one. It has been rejected, and finally, by a decision that leaves her thirty miles from tide-water and from the sea terminus of the overland route to the Klondike. Great Britain once offered to accept our boundary line in consideration of a proposed gift from us to Canada of Pyramid Harbor, on Lynn Canal, with a narrow international pathway from it to Canadian territory. Our rights having been established beyond question, why should we not grant now to Canada that harbor, with free access to it? What have we to gain by withholding from our neighbor a free path to and from the sea at that point, when the reasonable conditions attached to such a grant would be wholly under our control? In the last few years this controversy has prevented the settlement of several questions that

have arisen between this country and Canada. It has tended to embitter international relations that ought to be most friendly. Let us see to it that the memory of this decision shall not be a cause of further estrangement. Such a grant as we have suggested might be included in a treaty dealing also with other questions. In some way and under reasonable conditions we ought to open the door for Canada at Lynn Canal. We cannot afford now to insist upon all our established rights and keep it closed.

What is Dowie?

WE confess that we are not of those who believe Dr. Dowie to be an absolute conscious fraud. We have for years studied his *Leaves of Healing*, which contains his sermons, and we have watched the growth of his Church and institutions. We have recognized the canny shrewdness of his financial operations, and we do not forget some incidents in his career which came before the courts and which indicated a failure to recognize the full force of the eighth commandment. And yet we do not agree with those who declare that he is a willful hypocrite, playing the part of a prophet to deceive the people and gobble their wealth.

To us it seems more credible that he is honest in making the claim for himself which he presents to the people of Chicago and New York, extravagant and fantastic as it is. There has been a gradual growth in his preposterous self-delusion. When he was simply a believer in divine healing, deceived by his literalistic treatment of Scripture, he claimed no more than a plenty of people in the Christian Church have claimed or believed. But Dr. Dowie has a peculiar faculty of positiveness, which is the chief element in what we call the power of personal magnetism or hypnotism. He asserts so stoutly that other people think he must know. We have seen a multitude persuaded by Christian Science people, even that they did not ache when they did. Dr. Dowie told people that they would get well by his prayers, and they did get well, and he felt that he had a peculiar divine power. That made him speak with more and more authority. He

confused his own self-assertion with the commands of God. His success developed his delusion. His conceit deceived himself while it deceived others. Then he grew arrogant, dictatorial, almost blasphemous. His was a "strong delusion," which led him to "believe a lie," the supreme lie being that he was the promised "Restorer," the new "Elijah," the prophesied one who should establish Zion on earth and usher in the victorious kingdom of God. Of that kingdom he is the present viceroy. By an extraordinary combination of worldliness with piety, not wholly unexampled, he has gathered the wealth of his theocracy into institutions owned by himself, because it was necessary that they should be controlled by the vicegerent of the Most High. The theocracy, the rule of God, means to himself and his people the rule of Dowie. So he has built up a personal government, a religious state, which has no parallel except that of the Latter Day Saints; only that with a superb courage and confidence in himself and his mission, he has not, like Joseph Smith, fled to the desert, but has laid siege to our biggest cities, to Chicago and New York, and in them he gathers his hosts.

It is his glory that he preaches the strictest morality. There is not a sterner, a bolder preacher of morals in the American pulpit. He minces no words. He talks plainly of sins which other preachers are silent about. And he lengthens the catalog, and expands the decalog. Alcohol and tobacco and oysters and swine's flesh and physicians' drugs and secret societies are equally forbidden to his people; they are all filthy works of the Devil, and theologically he inclines to the stricter view and would be generally classed with the most orthodox. Indeed, it is his strict construction of Scripture out of which his divine healing and his theocracy have been born, and, later, his prophetic claim. And yet he does not hesitate to go sometimes to lengths that would ally him to the critical school. In his last published sermon he thus utters himself as to certain Bible characters:

"I believe that Moses was perfectly sincere when he said, 'An eye for an eye, and a tooth for a tooth.' . . . Moses, you thought God

said that, but he did not. . . . Abraham said that God Almighty told him to go up to the top of that mountain and murder his son. God never told him any such thing as that. Abraham went to live among the Philistines, and I do not wonder that he had bad dreams. The man who wrote the Epistle to the Hebrews took it all as Abraham said it, but I do not. . . . I believe that Moses blundered terrifically about a great many things. I believe that Abraham blundered terrifically. . . . I will not follow Moses and Abraham, for that would get me into difficulty. I would not tell a lie by saying that my wife was my sister, and thus hide behind her petticoats to save my own skin. I would not do what Moses did in order to help my brother. If any one oppressed you, I would not kill a man and bury his body in the sand, for that would be murder. I will follow Christ and then I know that I will be right."

Of course such language is quite inconsistent with the literalism on which his teaching and claims are based.

Most noticeable of all is the example he gives of forceful preaching. He speaks as one having authority; and he speaks with a directness and pungency and easy familiarity that keep him constantly *en rapport* with his audience. He asks their approval of what he says, and he makes them respond to him. The reading of his sermons would be a lesson in homiletics to most preachers. And yet they are hardly what one would call sensational. They do not wander far from the appropriate themes of the pulpit. They abound in invective; they expose falsehoods about himself invented by those who are paid for sensational stories. They excoriate tobacco chewers and Masonic Methodists, and dispensers of drugs and the works of the Devil generally, and whatever he says the Saints gape and swallow.

When the daily papers of the country published, as a matter of current news, the story of the public chastisement which Dowie gave to his son on the ball ground for the offense of using a profane word, we perhaps hastily accepted it as substantially true and printed a humorous brief report of it. It is impossible to verify everything by correspondence. But we did not sufficiently consider the vicious pleasure which some Chicago journals take in inventing falsehoods about the new Elijah. We have received from the younger Dr. Dowie a long article on this and other inventions,

from which it is but just that we quote these words:

"The General Overseer and Dr. A. J. Gladstone Dowie had been at Ben Mac Dhui, near Montague, Mich., 240 miles by rail from Zion City, for over a week, and hence there was not the slightest shadow of foundation for the story."

We regret that we gave credit to an amusing but contemptible invention.

Thus far Dr. Dowie's mission in Chicago has been a great success. It may grow to much larger proportions. The indiscriminating, who are so constituted that they must believe positive assertions, are many. If they are healed, if their acceptance of the teaching makes them consciously purer and truer and more religious, they take that effect on themselves as sufficient evidence of the truth of the doctrine. Thus earnestness convinces. Thus Mormons and Babists gain and keep converts. But the end will come. There are in Dr. Dowie's organization peculiar seeds of weakness. He stands in the public gaze. He poses in vast dignity of carriage and dress and authority. He insists on strict obedience, which will not always be given. He so eagerly grasps financial results, with his great schemes, that he is liable to transgress the claims of justice and the statutes of law, and here may be his fall. At best he is mortal, and already old, and a fourth Elijah can find no biblical countenance. There will arise dissensions within his phalanstery when its creator and master loses his grip. Meanwhile it is worth study, and demands some respect for what is good in it; and it supplies a striking example of how far astray faith and righteousness overmuch can lead credulity which craves to be led.

October.

NATURE likes compensations; and it has gone into a proverb that a cold summer brings a sunny October. It is here. May bursting her sides with laughter would not have been worth half so much just now as this contemplative month of soft sunshine and universal peace. The mood of nature is just adapted to our own mood; for we are preparing to lay

away the tools of the year, while we count up the profits of the months of labor. How curiously all sounds change, as well as all sights, and for that matter all smells. The rumble of the wagon in the valley that carries home Indian corn is wholly unlike that of the same wagon in summer, carrying corn to the cannery. The steam whistle comes up out of the village, and through the orchard, playing on the apples that hang thick all over the trees, as on a keyboard; while the birds sing only in monotones. Dogs bark to each other from farm home to farm home, and the cocks crow through the morning fog, a social, rather than defiant challenge. There is a ripe smell everywhere—a blending of quinces and Spitzenbergs and beech leaves—not a stimulant, like the fragrance of lilacs or of roses, but a sedative. We do not care to hurry. We lie in hammocks, and the huge leaves come down and cover us.

The most wonderful thing about October is that the most modest and overlooked things of summer now are most gifted. The poke weed becomes a miracle of color, and the chick weed creeps over the ground, like a kindergarten let loose to play in the garden. There really is nothing left insignificant in the world. The highest achievement of human intellect is to find out the utilities and the adjustabilities of things. Perhaps with some of them the only object of existence is to be beautiful. The poke weed, however, wrote one of Thoreau's finest pages. There are things about this October that must wait for a poet—perhaps they will wait till next October; but by and by every weed shall not only have its purple robe, its sumblimed mission, its duty to perform, but also its poet to see that mission, and its scientist to record it. So far we have hardly touched the frontier of the wilderness of God. There are centuries enough ahead to produce a thousand Shakespeares and ten thousand Emersons.

During the summer can anything be more tame and uninteresting than an old-fashioned zig-zag fence; where bushes compete with weeds, in the corners, and wild vines straggle about—sometimes climbing trees, and again dropping to the ground to crawl over piles of stones. Everything is elbowing

its way with its neighbor, and all together constitute a picture of neglect, suggestive of shiftlessness over in that farm house half hid behind the orchard. But in October the wild grape suddenly becomes long lines of gold; the clematis hangs in brilliant festoons of flossy fruit; the Virginia creeper flashes in touches of scarlet and crimson in the tops of trees and in the fence corners; while the wild blackberry, as if envious of its neighbors, gives us not only scarlet but royal purple. All up and down this line of neglected vegetation there is a continuous succession of glorious beauty that will waken all the artistic conceptions that nature has planted in our souls. But an orchard! Ah, an orchard of Spitzenbergs, Spies, Baldwins! who can ever see one without becoming a poet? One may wander up and down these orchard avenues, as if in an enchanted land. The red cheeked fruit is the sublimation of art, the ideal of beauty, as well as the essential of utility. These greenings have hung this way for two hundred years—generation after generation. These pippins were danced about in Yorkshire, by our sires as long ago as 1600. Who knows how much the apple has contributed to Saxon brain, blood and character?

It is hard to say which is most beautiful, a water maple or a Norway maple. The latter in October is a glowing sunset, all yellow; the other is a blaze of scarlet, forty feet high. The sugar maple and the soft maple are close competitors, and yet, for sweetness and modest beauty combined, there is nothing in America quite equal to a beech grove. If all this glory of color came about at once nature would be less interesting. You must note the delicate work that goes on day by day; the growth of color. It comes line after line, and precept after precept. It is the inspired Bible of the soil. May spends all her forces on shrubbery. Everything is in blossom; ozone fills the valley; lilacs and syringas blossom themselves into our characters. Who can be mean in May? June is a sort of half-way house. It is then that we see that the corn is swinging out its tassels, and the grass is ready for the reaper. July and August are the yellow months; yellow is the color of growth. Indian corn

grows all night, and in the morning challenges you to stand up and measure height with it. September and October are the crimson months. Red is the color of ripeness; the year's work is done. So it is that the year has been an art gallery, for the poor as well as the rich. The little cottages that are hidden down the lane among the orchards are more glorified with purpled woodbines than costliest palaces. By the brook that runs tumbling over the cobbles, near the sumach grove, the cider press is at work—a New England institution, where the juices of the orchard are pressed into a drink that Puritans honored.

Nature has a tidy way of strewing beautiful leaves all over the earth—her most delicately woven summer fabrics. Folk—some folk—know no better than to scratch all day to get these leaves off the grass. Nature laughs at the fools, and shakes down more, or she catches up handfuls, with a chuckling gust of wind and tosses them all about the slickened lawn. Other idiots burn piles of leaves and so send back into the air the gift of the skies. There is not one other provision of nature more beautiful and beneficent than this gift of leaves, to lawn and field. They cover the sod from winter's freezing; and by and by they become humus, and then soil. Without them it would be impossible to keep up earth fertility. Leaves are not litter, unless trodden under foot and ground into mud; then they are soil. So goes the year. October is the golden gateway that will soon be swung open for winter. The wise man keeps even pace with the months, and is prepared to change with its changes. He also has his moods and his seasons.

Criticism and Traduction

"So assured is the South's place in literature," says *The Southern Woman*, "that an attack on it passes criticism and becomes traduction."

The Southern Woman is the organ of the Georgia Federation of Women's Clubs. This federation is composed of the clubs of the Daughters of the Confederacy, the Daughters of the American Revolution and some school and alumnæ associations; but the

women's clubs are for the most part Daughters of the Confederacy. It is very largely through these clubs of women that the sectional feeling is cultivated and maintained where the men might be ready to forget the alienations of a previous generation. It is unfortunate that the women's clubs have been so directed. They are doing a good work in opposing child labor in factories, but it is spiced with the effort to build monuments to men or women whose claim to honor rests on their Confederate record. Let the old soldiers of the Confederacy celebrate all they will, but let the young women cease to glorify the lost cause.

It is from the organ of such a Federation of Women's Clubs that we might expect so extravagant a statement as that above quoted. Its occasion was two articles, one in THE INDEPENDENT, and one in *The Critic*, by Mrs. L. H. Harris, in which she indulged in some characterizations not so complimentary as the local taste seems to require in Southern fiction. She had said in THE INDEPENDENT, speaking of the output of novels for the year past:

"The ambition of most Southern writers is to maintain a defunct ideal of aristocracy, and to preserve in the hero the mind, manners and spirit of an ante-bellum past."

She mentioned three Southern novels of this sort, and contrasted with them a fourth, whose bucolic hero she considered far more interesting than "many of the strutting dandies who figure in Southern novels."

The above is the worst of her offending in THE INDEPENDENT. In *The Critic* Mrs. Harris said very much the same, but more at length about "the never-ending variation of ante-bellum ladies and gentlemen mincing and strutting through novels," and noted that the "sentimentality which harks back to some fair illusion of the past has taken the place of spiritual power in Southern fiction." What she seemed to wish was that Southern writers of fiction would wake up and join the procession of current life.

Ah! but this has greatly provoked, not the men, but the Daughters of the Confederacy. Two of the Atlanta club women have written most severe

letters to *The Atlanta Journal*, and now *The Southern Woman* indorses their attacks and adds its own, a word of which is quoted at the head of this article. We do not mind it that THE INDEPENDENT is characterized by its "acid antagonism toward all things Southern," but what we do not understand is why Mrs. Harris should be blamed for telling, in Northern journals, what she thought the truth. They accuse her of "slaps at her own section," of "carping criticism," "unjust articles" "worth their weight in gall."

A correspondent of THE INDEPENDENT has declared that freedom of speech on certain subjects is resented in the South, and others have denied the assertion. It would seem, from Mrs. Harris's experience, that it contains some truth. When she thought she discovered too many strutting figures in Southern novels, it would have been fair to argue the question, or prove her wrong, but nothing more; for it is a very innocent and harmless expression of opinion. There was no occasion for adding personal abuse and insinuating bad motives. Has not a body a right to see more geese than swans? Here we find the whole feminine battery, forgetting for the moment the Winnie Davis monument, directed to crush with shotted columns of rebuke a sister woman who has ventured to say something other than the customary words that flatter sectional pride. It is a literary bigotry which breeds persecution and would enforce the suppression of free thought.

But neither the South nor the West nor the East has arrived at any such state of literary perfection that "criticism" has become "traduction." Mrs. Harris distributed her criticism very impartially. We will not balance section against section, but grant that within the last twenty years the South has produced some fiction writers of recognized worth, such as Richard Malcolm Johnston, Miss Murfree and Mrs. Burton Harrison. Yet the number is not so overwhelmingly great nor the average quality so transcendent that "criticism" becomes "traduction," unless one traduces who

criticises his own people away from home. We suspect that was the color of Mrs. Harris's offending.

The National Civic Federation

THE fourth convention of the National Civic Federation was held last week in Chicago. In point of numbers, in distinguished delegates present, in manifestations of good will evident and expressed between the representatives of capital and labor, and in the maintenance of the discussion on a high plane, the conference was the most successful yet held. Indeed, it is not too much to say that it was the most significant earnest of the future relations of capital and labor that has been shown the country.

It is not our purpose to laud the National Civic Federation, which has beyond doubt already more than justified its existence, or to review the individual papers read during the three days' session. We wish, however, to point out a few general conclusions that would have been forced upon any unprejudiced observer listening to the discussions.

Perhaps the most significant fact of all is that the labor leaders to a man are committed to the union shop. The union shop is the keystone of trade unionism and the leaders declare it will never be abandoned short of the union's utter annihilation. As the unions, however, have done much more during their existence than all other agencies combined to improve the material welfare of the workingman, it is inconceivable to think that society will ever permit their extinction. Indeed, the whole trend is just the other way, and without prophesying that all the principal industries will eventually be unionized, it is certain that the unions will yet develop enormously in strength and in numbers. In view of these circumstances, should not the employers acknowledge the fact and accordingly change their policy of aloofness toward the labor movement? Let them recognize the unions and deal with the union's accredited leaders. These leaders are, on the whole, earnest, honest men, amenable to reason, grateful for consideration and generally willing to turn half way out of the road to avoid collision. Up

to the present time they have been forced to lead the labor movement as a militant organization; but recognize them as business associates and the pugnacious and suspicious labor general will disappear and the more conservative men in the ranks will assume the leadership.

If, then, the unions have come to stay, the corollary follows that "trade agreements" will naturally supersede individual bargaining. Trade agreements can, of course, only be effective where the shop is unionized. And altho the employer under such circumstances will probably have to pay higher wages than he would in a non-union shop, he will doubtless be compensated by a supply of more competent labor, peace will be maintained in his factory, and he will be assured that his men will not take advantage of any scarcity in the labor market to raise wages beyond the standard rate. Moreover, if the union shop prevails in the entire industry he cannot be underbid in the matter of labor hire by any of his competitors.

On the other hand, there was no doubt at the conference, both from the charges of the employers and the admissions of the labor leaders, that the limitation of individual output is quite generally practiced throughout the country. This is a new evil and there can be no excuse for it unless on the ground of health. The unions, however, will probably drop this practice just as soon as they can obtain from employers by trade agreements guaranties that wages will not be lowered when the employers find that all the men are increasing their output. At any rate limitation of output means impairment of efficiency, dishonesty to the employer and eventual loss of industrial supremacy, and the employers are justified in opposing it in all legitimate ways.

The discussions of the conference were in no sense academic. Indeed, from the academic standpoint they contributed little to the "dismal science." They were, however, invaluable to the economist and sociologist as showing what the men who are creating the wealth of the nation think about themselves, their work and their rights. The paramount value of the conference, was, beyond question, in bringing the leaders of capital and the leaders of labor into friendly personal

relations. Each side learned that there was another way of looking at the same problem quite as sincere as its own, and as John Mitchell in substance said: If a number of men can only get together around a table with their feet under it they can settle anything amicably and satisfactorily.

A New Treaty of Arbitration

Another victory has been secured for The Hague Tribunal. France and Great Britain have engaged that they will refer to The Hague for settlement any differences that may arise between the two nations relating to the interpretation of treaties, provided they do not affect territorial rights or national honor. Of course, these are very elastic exceptions and can be interpreted as either party pleases. Yet it means something, and a good deal. It is the first case in which two European Powers have agreed to refer their differences to this new court, and it sets a precedent which is a matter of great importance. We may call this new treaty the fruit of the campaign for arbitration carried on especially by French statesmen, and supported by a large number of legislators of both countries. The Hague Tribunal looms larger and larger. The United States, to whose insistence its establishment was due, was the first to give it work, and it should be our duty to keep it busy. It is not at all pleasant to be compelled to see Great Britain turning to France for the first arbitration treaty of the kind, after our own Senate had rejected a general arbitration treaty with Great Britain. Encouraged by what France has done, we hope to see our Department of State once more present a similar treaty, which no one-third of our Senate will dare to reject.

Divorce in the Episcopal Church

Here is a concrete case that deserves attention. Bishop Paret, of the Protestant Episcopal Diocese of Maryland, gave letters to the Rev. George F. Kettell, transferring him to the Diocese of New Jersey, that he might become rector of a church in Palmyra, N. J.; but Bishop Scarborough refuses to accept his brother bishop's letter of transfer, or to

admit Mr. Kettell to his diocese, on the ground that Mr. Kettell is married to a woman who secured a divorce from her first husband on the ground of his unfaithfulness to marriage vows. Bishop Scarborough has no right, canonical, moral, or religious, to reject a man for that cause. Divorce for infidelity is a chief protection of the family and of the chastity of married life. The only State in the Union that refuses divorce on this ground, South Carolina, provides by its statutes how large a portion of his estate a man may leave to his mistress. The Episcopal Church has no canon against such divorce. The attempt to enact one has thus far failed, and ought to fail. In his Sermon on the Mount our Lord distinctly permits divorce in case of unfaithfulness, and remarriage to the innocent party; while St. Paul goes further, and says that when deserted "a brother or a sister is not under bondage in such cases." What St. Paul and our Lord permit, Bishop Scarborough forbids. It is a case of "fencing" the Law, after the manner of the old Pharisees, who, when the Law allowed but forty strokes, reduced it to thirty-nine. It is what we call being more papal than the Pope. Where the Bible allows only one or two exceptions they will not allow any, determined to be more righteous than Jesus Christ. And to do it they forbid to marry, which is tantamount to encouraging looseness of life. That woman had the right to protect her good name by marriage, and that Episcopal minister had the right to marry her, and the bishop who forbids it is a Pharisee, by which we do not mean a hypocrite, for he is honest enough. We trust that the congregation at Palmyra will not submit, but will insist on their rights. The State courts may have something to say.

Professor Mommsen on Germany and England

An article by Professor Mommsen, of Berlin, in the first number of a new English magazine, *The Independent Review*, has attracted no little attention in the press of England, Germany and France. Those who recollect the bitter girding of the eminent

historian against all things British, and more particularly against the British army during the South African War, will be astonished to hear him now speaking so softly as a reconciler of the two great Teutonic nations. He who believed that British soldiers protected themselves by fighting behind the cover of Boer women now declares that Germans feel themselves "more nearly akin, and in every respect more intimately allied," to the people of these same brutal soldiers "than to any other nation." And the article concludes with these emphatic words:

"I look back over a long life; of what I hoped for my own nation and for the world at large, only a small part has been fulfilled. But the holy alliance of the nations has been the aim of my young days, and is still the leading star of my old age. And still I hold the creed that Germans and Englishmen are destined to go forward hand-in-hand."

It is not to be wondered that the press of Europe exclaims over the belated goodwill of the old scholar. The French, more especially, have found a covert attack on their country in his professions of peace. "After annexing the English language and William Shakespeare," says the *Paris Temps*, "Professor Mommsen concludes by offering with one hand an olive branch to Mr. Joseph Chamberlain and by pointing with the other toward Waterloo and the French frontier." And the *Débats*, after maintaining that France deserves more credit than Germany for appreciating Shakespeare (this from the land of Voltaire!) because the French and English languages are not akin, prophesies that when the terrible struggle of the future comes England and France will not find themselves in conflict. And "it is not the same with England and Germany. Waterloo is a long way behind, Napoleon is dead, and the world has changed."—It is all a curious illustration of the way national hatreds are concealed in the anxious foreboding of the hour. To an American, who looks at these things a little apart, there is something almost ludicrous in this wild flattery that passes from country to country. Shall we take up our Shakespeare again (for we, too, claim the man. Did he not write in our mother tongue? And

does not Justice Shallow live in New York?) and read him not as a great dramatist, but as an eminent statesman, an upholder of the trembling concert of the Powers?

What was expected has happened, the acquittal of ex-Lieutenant-Governor Tillman, of South Carolina, who murdered Editor Gonzales on sight in the streets of Columbia, S. C. Mr. Gonzales was not armed, but Mr. Tillman said he thought he was, because he had his hand in his pocket, evidence which convinced the jury that Tillman supposed he was defending his life. Killing and acquittal are the rule thereabouts. Tillman's father killed his man in a gambling room before the war. Johnstone, one of Tillman's attorneys, killed a fellow lawyer in a courtroom in Newberry a few years ago. He was acquitted, as usual. The prosecuting attorney killed a young merchant in Saluda a few years ago, and Tillman was his lawyer and helped get the man acquitted who was now compelled to prosecute him. His own acquittal was what every one expected, but it will make the life of editors ever more interesting and exciting than ever.

The American Board, the oldest of our foreign missionary societies, did an unusual thing at its meeting in Manchester, N. H., last week. It passed a resolution asking the United States Government to insist that Turkey should grant the same rights to American citizens and American institutions that it grants to the French, Russians, Germans, Italians and English, and that all legitimate means be used to secure these rights, even to retaining our fleet in Turkish waters. It is a self-respecting position that was taken and proper even for a missionary body. Another pleasant act, which meant more than appears on the surface, was the election of Mr. H. J. Heinz, a well-known business man of Pittsburgh, as a corporate member. The point of it is that he is a Methodist Protestant, and has lately returned from a trip abroad, in which he visited many of the missions of the Board.

With the appointment of a new Secretary of the Peabody Fund, to succeed Dr. Curry, there ought to be a reconsideration of the plan to devote a large part of the Fund to the endowment of a college for teachers in Nashville. It is to be a regular college, with full classical and scientific departments, but with special provision for teaching pedagogy in all its higher branches to those who have received special preparation. It is designed for teachers of a superior grade, such as principals of white high schools and college professors. We doubt if that is what the Peabody Fund was given for. It was rather intended, in the blackness of want and ignorance after the War, to help the common education of all, and to put it in the reach of all the people of all the Southern States. This has been, in good part, the aim of the benefactions of the Fund as hitherto administered.

There is a man named George B. King, who has no more honorable means of livelihood than the position of janitor of the court house in Lawrence, Mass., which he has held for seventeen years, but who is the chief authority in this country on scale insects. And his writings on the subject are known to entomologists all over the world, he having discovered new species. Conditions could hardly be more discouraging, for who wants or cares for a scientific janitor? Certainly they do not in Massachusetts, for his position has lately been given to a political favorite, and he reduced to the position and salary of assistant janitor, which is likely to make it impossible for him to continue his work in science.

We are glad to hear straight common sense from a white officeholder, Mr. J. J. Jefferys, in Memphis, Tenn. He declares that the Republican Party in Tennessee wants the negro vote; it does not consent to its suppression—no Lily Whites for him. He says:

"When a man is in business he wants dollars. When he is in politics he wants votes. There is nothing else to it."

If the object of some people is to suppress the negro vote, the determination

of others should be that it shall not be suppressed. And all who have the legal right to vote ought to insist on their right. To tell white people or black anything else is bad political morals.

We have the testimony of B. B. Tyler, D. D., a prominent pastor of the Disciple Church, that in Denver the Mormon missionaries openly and constantly defend polygamy. They declare that plural marriage is no longer practiced because forbidden by the United States Government, but that polygamy is taught in the Bible and is right. Some of them declare, he tells us, that the time is coming when it will be practiced in this country. It is to be expected that they will defend polygamy in theory; if they give it up in practice we can wait for the rest. It takes some time for old men and old errors to die off.

Archbishop Ireland says that in the last five years there has been a wonderful improvement in the Catholic theological seminaries of the United States. It was needed badly enough, and the improvement was bound to come after the low quality of the work done in them had been so exposed seven years ago by Dr. John Talbot Smith. But what could be expected where every diocese was required to support a seminary?

The policy of the Methodist General Conference, which twenty-five years ago, against the protest of Bishop Gilbert Haven, permitted the Southern Methodist conferences to divide on the color line, does not seem to be very profitable. There are twelve such white conferences, and their membership has fallen in five years from 91,360 to 89,887, a loss of 1,473.

Now that the Irish novelist, George Moore, has seceded from the Catholic Church because Archbishop Walsh and the authorities of Maynooth were courteous to King Edward when he visited Ireland, it is suggested that things might be balanced by the Irish poet Yeats becoming a Catholic, because the Protestant Archbishop of Dublin does not believe in fairies.

Insurance

Identification of Deceased Royal Arcanumites

AN important communication upon the above subject from the Hon. John Haskell Butler, examiner of claims for the Royal Arcanum, has lately been made public. The identification of deceased members of Royal Arcanum lodges is becoming more and more of a perplexing question with the officers of the Supreme and Subordinate councils of the order. Many members attend meetings so infrequently that the active officers of the various councils do not become acquainted with them. When such members die it is often very difficult, especially in the large cities, to find members or officers of the council who knew the deceased personally, so as to be able to make the needful affidavits as to the identification of the remains. In this connection the subjoined letter from Mr. Butler, examiner of claims, to the Supreme Secretary is most important, and members of the order may well take to heart what he says, and see to it that an acquaintance is maintained sufficient to cover the necessary identification in case of death. Mr. Butler's letter is in part as follows:

"BOSTON, MASS., August 5th, 1903.

"W. O. ROBSON, ESQ.,

"Supreme Secretary, Royal Arcanum,

"DEAR SIR AND BRO.:

"The change in the affidavit of the Identifying Committee in the proofs of death, wherein the basis of identification, 'vouched for by officers of the Council' is eliminated and not hereafter to be regarded, seems to be required in the interests of prudence and certainty of identification. It is true that for a considerable period we have given that latitude. Experience, however, has demonstrated the necessity of being more particular. Reflection will make it clear that this basis of connection between a person deceased and a member of a Council is insufficient. We must have positive evidence of the fact that the remains viewed were actually those of a member of the Council. If the knowledge of the two members who identify the remains and make the affidavit is derived from officers of the Council who did not see the remains, then there is no connection established whatsoever upon affirmative evidence. Those who declare that the deceased was a member of the Council should have positive and personal knowledge of the fact, by seeing him in the Council or in some other way that would

be equally adequate. It is, therefore, of the greatest importance, in the interest of prompt payment of our claims, that members should take especial pains once in a while to show themselves in the Council in order that some members of the Council who attend its meetings may see them there, and thus be able to serve as members of the Identifying Committee. The cases are becoming too frequent where no member of the Council has knowledge that the deceased person was a member—never having seen him in the Council or had any such association with him outside of it as to give them warrant for taking their solemn oaths as to such membership. . . .

"Very fraternally in V. M. C.,

"JOHN HASKELL BUTLER,

"Examiner of Claims."

Sprinklers in Westminster Abbey

AUTOMATIC sprinklers have been introduced into Westminster Abbey. This will appear surprising to many, since the outer walls of the famous abbey are built of solid masonry. Some of the rooms are divided, however, by wooden partitions, and timber enters otherwise very extensively into the construction of the building. Wood panels also enter into many of the ceilings, and there are many passages and corners by no means fire proof. The fire hazard is especially pronounced in the deanery attached to the abbey, especially in the rooms known as the Jerusalem and Jericho chambers. It was because of this that it was decided to protect the deanery and the above mentioned rooms by installing automatic sprinklers. The sprinklers have also been put in the approaches from these buildings to the main abbey. The water supply is obtained from fire mains, and the sprinkler pipe is covered in part with a neat wooden molding, in order to relieve its unsightly character. *

THE accident hazard from automobiles is becoming very great. Trade journals published in Europe are responsible for the statement that there were 8 persons killed and 224 injured on railroad passenger trains in England during the year, while during the same period 411 were killed and 2,991 persons were injured by automobiles.

Financial

Railroad Retrenchment

WHILE the approaching discharge of shop employees and track laborers by several great railroad companies must not be overlooked by those who desire to know the condition and prospects of business, the causes of such reductions of force should be carefully noted. These men are not to be laid off because of a present depression, nor wholly on account of a depression that is expected. It is predicted that from 15,000 to 20,000 men employed in the shops or on the tracks will be dismissed before January 1st. Traffic continues to be heavy, and the forces engaged in actual transportation are not to be disturbed. But it is expected that within a short time the Vanderbilt companies will discharge 2,500 men, the Harriman roads as many, and that the movement will affect possibly 20,000 employees. In the Lake Shore shops the change has taken the form of a reduction of hours.

These dismissals will be due in some measure to the approach of the cold season. This cause accounts in part for the discharge of 3,500 men employed in the Lake iron ore mines. On the railroads many costly improvements have recently been made, and in some instances these permit, and were designed to cause, a reduction of the number of employees. Expenditures on the Harriman roads for equipment and various betterments during the last three years were \$104,000,000. The Pennsylvania Company, however, has recently called a halt on improvement contracts involving \$10,000,000. It may be that similar action by a considerable number of roads will make thousands of men idle, in addition to those to be dismissed from the shops.

Such action, together with the reported canceling of orders for rails, which is said to have caused a suspension of work last week in the Youngstown mills, does indicate retrenchment. And undoubtedly the reduction of shop forces is due in part to a desire to reduce expenses in view of expected dullness. Railroad traffic is large now, as we have said, but some railroad officers are looking forward to a decline and are getting ready for it. Demand has already fallen

off in the iron trade, owing partly to the folly of some labor unions and partly to the embarrassment of investors. The effect is seen at the ore mines and the furnaces, and in the prediction that wages at the Homestead Works will be reduced. Continued decline in the iron trade must affect railroad traffic.

It is true that one cause, and probably the most influential of all causes, of the reduction of the railroad companies' forces and of the suspension of improvement work, is not only an expectation of some general depression, but also a few signs of the beginning of it. If such depression shall come, it will be due chiefly to the quarrels of powerful capitalists, the wild financiering of the organizers of capital, and the folly of some labor organizations.

ACCORDING to the Government's latest estimate, the corn crop is 2,307,860,000 bushels, a quantity exceeded only once, in 1902.

....Seats on the New York Stock Exchange have recently been sold at \$51,000. Last year's high record was \$82,000.

....A sale of United States Steel Corporation first mortgage 5 per cent. bonds was made last week at 100. They were quoted at 114½ soon after the Corporation was formed. The entire issue amounts to \$304,000,000, and Mr. Carnegie received the greater part of it, or about \$200,000,000.

....James S. Fearon, who has been agent of the International Banking Corporation at Shanghai, China, has been elected director and vice-president. Mr. Fearon has lived in China for nearly 34 years as partner of the house of Fearon, Daniel & Co. As the delegate of the United States on the Commission of Bankers, appointed under the Peking Protocol, he took an active part in the discussion and settlement of the payment of installments of the Chinese indemnity. The capital of the International Banking Corporation is \$3,947,200; the surplus and undivided profits are \$4,044,973. Wm. L. Moyer continues as president.

NEW YORK, THURSDAY, OCTOBER 29, 1903

No. 2865

Survey of the World

Politics and Washington Topics

The President's proclamation convening the Fifty-eighth

Congress in extraordinary session on November 9th mentions no subject of legislation except the treaty of reciprocity with Cuba, which has been ratified by the Senate, but can be made effective only by the approval of both branches of Congress.—Senator Gorman has not been accustomed to make political speeches in Maryland campaigns. For this reason, and because of his attack upon the President in connection with his discussion of the race issue, his address on Saturday last, at a meeting held near his home, has attracted much attention. Parts of this speech have been reported as follows:

"I regret that the race issue has been raised, but it was not raised by the Democratic party. The slaves were elevated and educated by being the slaves of a white race, and all over the inhabited globe the negroes, when they are under subjugation and guidance of white men, are honest and thrifty, but otherwise they are degenerate and unprogressive. The greatest man of this race to-day, that same Booker Washington with whom the President had the honor of dining, tells his people that they are thrust into politics and inflated with ideas of ruling in a white man's country by designing politicians, who drive them like cattle to the polls. And when I refer to the President of the United States I speak of him as he should always be spoken of, with respect, for he occupies a place of great power, and his slightest word goes from one end of the land to the other, and his command puts armies and navies into motion. He, knowing that all thoughtful men in the South, except a few politicians, and every thoughtful man in the North have arrived at the conclusion that no greater crime has ever been committed against the business interests of the South and the safety and honor of the women of the South than the enfranchisement of the negroes by Constitutional amendment,

he, I say, has brought the matter to the front and has incited them to demand not only the right to vote, but social equality as well. With an impetuosity that would do for a youth in some small community, altho he is a man of rare education and has an ease of expression that has become dangerous to the business interests of the country, he one morning takes in hand this question which the people were settling quietly and has brought it to the front. To run a Maryland campaign from the Executive Mansion is to strike at the foundation of State control. We have now in Washington an Emperor, a Czar, who sends for his leaders and orders them to do as he says. He tells them, 'Bring your men into line, wheel up your thousands of colored voters and support me in my policy of social equality for the negro, both North and South.' He knows that colored men are being brought into West Virginia, Maryland and Delaware to give the Republicans control of these States. West Virginia is almost beyond redemption, and Delaware, that gas ridden State, has gone down."

—The campaign in Ohio is one of great vigor and some bitterness. It is said that the Democrats do not expect to elect their candidate for Governor (Mayor Tom L. Johnson), but do hope to gain control of the Legislature and thus to prevent the re-election of Senator Hanna. This is the aim of Mayor Johnson, but he has to contend with the defection of the McLean faction in the southern part of the State. Mr. Hanna has the aid of many prominent Republican speakers from other States. Mr. Johnson displays much energy, moving rapidly from place to place by automobile and special train and taking with him two circus tents, in which meetings are held.—In reply to the protest of the Boston Patriotic Association against a reported intention of the State Department to invite the See of Rome to be represented at the St. Louis Exposition as European nations will be, Acting

Secretary Loomis says that there is to be no such invitation.—Civil Service Commissioner Cooley recently asserted, after an inspection of Federal offices in Philadelphia, that civil service regulations had been ignored there, many employees in the classified service having been removed for new men, who were appointed as laborers and afterward promoted. Some of these new men will now be removed and others who were dismissed will be reinstated.—John Turner, well known in England as an Anarchist, arrived in this country a few days ago, having evaded the immigration officers, who were waiting to intercept him. On Friday evening, after he had delivered a lecture at a public hall in New York, he was arrested by immigration inspectors on a warrant sworn out by Secretary Cortelyou, and he is to be deported at once, under the statute enacted in March last.

Canada and the Boundary Decision

The decision reached by four of the six members of the Alaskan Boundary Commission was signed by them on the 20th. Messrs. Aylesworth and Jette, the Canadian members, refused to sign, and emphasized their refusal by walking out of the Cabinet room of the Foreign Office in London, where the meeting took place. They have published a statement in which they say that Chief Justice Alverstone was at first in favor of giving Canada all of the four islands lying in or near the mouth of the Portland Channel, and that he afterward decided to give the United States two of them (Kannaphunut and Sitkian), the possession of which by this country destroys the strategic value of the remaining two, Wales and Pearse, because Kannaphunut and Sitkian command the Channel entrance and the ocean passage to Port Simpson. This division of the four islands, they assert, was never suggested by counsel, and they say that the finding of the Commission with respect to these islands and the boundary northward was not a judicial one. They were compelled, they add, to witness a sacrifice of Canada's interests. One of them remarked to the agent of the Associated Press that in its effect upon the relations between Canada and the mother country

the award almost marked "a parting of the ways, at least so far as leaving any such question to England for a decision." Commissioner Aylesworth predicted that Canada would ask for larger powers of self-government. The opinions thus expressed appear to be held quite generally by the Canadian press. There has been bitter talk in the Canadian Parliament, where the leader of the Opposition said Canada should have withdrawn as soon as it was known that she could have only two Commissioners, instead of three. Mr. Bourassa remarked that Canada should deal, not with the award, but "with the British politicians like Chamberlain, who sacrificed the best interests of the Dominion while Canada's sons were shedding their blood in South Africa." Premier Laurier, deprecating adverse criticism of Lord Alverstone, said he had often regretted that the people of Canada were living beside a great neighbor which, he thought he could say without being regarded as unfriendly to it, was very grasping in national acts and determined upon every occasion to get the best of any agreement which it consented to make. He also regretted that Canada had not the treaty-making power that would enable it to dispose of its own affairs. Canada's hands were tied. So long as Canada remained a dependency of the British Crown, its powers, "as they are at present," would not be sufficient to maintain Canadian rights. "It is important," he continued, "that we should ask the British Parliament for more extensive power, so that if ever again we have to deal with matters of a similar nature we may deal with them in our own way according to the best light we have." He suggested the construction of a Canadian railway to the Yukon.—It is said that the marking of the boundary, which will be done by agents and surveyors representing the two countries, may not be completed in less than a year. The boundary northward from the Portland Channel is not thirty miles from the coast, but for a large part of the distance lies about midway between the line claimed by Canada and the line believed by our Government to be indicated by the old treaty. The Commission sought to follow the summit of the watershed and such high peaks as were

available. At Lynn Canal the line lies along the summit and is near that of the existing *modus vivendi*. But throughout the entire tract it is far enough from the coast to clear all bays, inlets and other means of access to the sea.

Colombia and the Canal

The present session of the Colombian Congress will end on the 31st inst.

It is not expected that any action concerning the canal treaty will be taken before adjournment. Señor Arciniegas, of the Colombian diplomatic service, who recently came to Washington from Bogota, appears to have brought no instructions to Minister Herran, who is said to be much disappointed because this messenger came empty-handed. The Colombian Government has not deigned to inform our Government that the treaty was not ratified before September 22d, the last day on which ratifications could be exchanged. Concerning Señor Arciniegas's assertion that Colombia will demand \$25,000,000 from the United States, it is said in Washington that the President would oppose any increase of the sum (\$10,000,000) named in the treaty. One story in circulation is that Colombia intends to demand \$10,000,000 from the French Company, will declare the extension of the company's concession to be void if this sum is not paid, and will then take possession of the canal property and be ready to deal with all bidders. European capitalists, it is also said, can be induced to advance money for completing the canal. The question will probably be taken up by the Senate at the approaching session in Washington, when Senator Morgan will insist that the President should now turn to the Nicaragua route.—Recent dispatches report serious political unrest at Bogota. President Marroquin is at variance with the Senate, and a majority of the members of Congress are said to support the Presidential aspirations of Joaquin Velez, who has always opposed the negotiation of any canal treaty with the United States. A revolutionary movement in Cauca has been suppressed by the arrest of the leaders. On the Atlantic Coast, near the begin-

ning of the isthmus, a small revolutionary force landed a few days ago, but it appears to have no support among the Liberals of Panama.

Postal Service and Other Frauds

As to published rumors about a serious difference of opinion in the Cabinet concerning the severe criticism of Comptroller Tracewell in the Bonaparte-Conrad report upon the Tulloch charges, a statement from the White House says that there is no disagreement between the President and Secretary Shaw with respect to this matter. It is said that the President accepts Mr. Shaw's view that Comptroller Tracewell is an efficient and conscientious officer. The report deals with the offenses of some persons no longer in the Government service, who are protected by the statute of limitations.—Several prominent subordinate officers of the Post Office Department were dismissed last week. These were Michael W. Louis, Superintendent of the Division of Supplies, because he had influenced the awarding of contracts to favored bidders, had been extravagant and wasteful, and had paid excessive prices to favored contractors; Louis Kempner, Superintendent of the Registry System, for incompetent and negligent administration, reckless extravagance in sending expensive manifold registration books to many small post offices, and for violating the revenue laws by petty smuggling; C. B. Terry, a clerk, for making a false affidavit and attempting to obtain money from clerks by saying he could procure their promotion, and Otto Weis, a clerk in the New York office, for collecting money from clerks to influence legislation and to procure promotions. At a later date William H. Landvoigt, Chief of the Classified Division (until recently Chief of the Registry Division), resigned at the request of Postmaster-General Payne, owing to the result of an investigation as to the employment of his son by the General Manifold Company, of Franklin, Pa., a corporation which had the contract for manifold books and is controlled by Congressman Sibley. Large quantities of the books were bought and stored in cellars, where many of them became worthless. Louis was an intimate friend

of First Assistant Heath. Weis was involved in what was called the "promotion syndicate." Fourth Assistant Bristol's report has been completed. It contains 110,000 words and has an appendix of nearly 1,000,000 words.—Congressman Littauer is not to be prosecuted on account of his alleged interest in contracts for gloves. The Attorney-General in his report does not undertake to determine whether Mr. Littauer violated the law, saying that such determination could serve no useful purpose, because the statute of limitations more than a year ago became a bar against prosecution.—For some months agents of the Interior Department and the Secret Service have been collecting evidence as to very extensive land frauds in the Pacific Coast States. The proofs are now ready to be used. These frauds, which are said to involve \$15,000,000 worth of public land, were made possible by the assistance of Federal officers in the States and of employees of the Land Office at Washington, and much of the land in question was unlawfully acquired in connection with the establishment of forest reserves. It is understood that several Senators and Representatives are affected by the results of the inquiry, chiefly on account of their attempts to protect the guilty.—In Arizona Hugh H. Price (recently removed from the office of Surveyor-General, and formerly a Representative from Wisconsin), and W. E. Murphy, chief clerk of the Land Office, have been indicted for accepting bribes and conspiring to defraud the Government.

Porto Rico Interest in the smuggling cases that were before the courts last spring has been revived by the action of the Grand Jury of the Federal Court at San Juan. It will be remembered that prosecution was prevented by the orders of Attorney-General Knox, several of the persons accused at that time being officers of the army or the navy. It was charged that large quantities of liquors and other goods had been brought to San Juan from St. Thomas in naval vessels. Last week the Grand Jury found indictments, for smuggling and for receiving smuggled goods, against Alonzo Cruzen, Collector of Customs; Capt. Andrew Dunlap, commander

of the naval station at San Juan, and Robert Giles, formerly a contractor, who is now in Europe. District-Attorney Pettengill at once filed a *nolle prosequi* with the indictment against Collector Cruzen, accompanied by the following explanation:

"The United States District-Attorney, not having been advised of the finding of this indictment, and being fully convinced that the testimony produced before the grand jury, upon which this indictment was based, was false, corruptly fabricated, and instigated for purposes of spite and revenge, considers that justice requires a prompt dismissal of the indictment, with a record and a statement of the methods employed to mislead the grand jury. The District-Attorney fully believing in the innocence of the defendant, a *nolle prosequi* is therefore entered."

In the other two cases no action has been taken. The principal witness against the Collector is said to be a discharged employee of the custom house.—Hobart S. Bird, editor of the *San Juan News*, who was recently sentenced to be imprisoned for contempt of court, in connection with the trial of the former Mayor of Mayaguez, has now been sentenced to be confined for two months more, for libeling Judge Rames.

The Philippine Islands

A resolution asking for the appointment of a business man from the States to fill the vacancy in the Commission that will be caused by the retirement of Governor Taft and the promotion of Judge Wright, has been forwarded to the President by the American Chamber of Commerce at Manila. It is reported that the Commission is in favor of the appointment of General George W. Davis.—The findings of the board that has been making an investigation as to the charges against Major Howze have been forwarded to Washington, and it is said that they exonerate the accused officer. He was charged with causing the deaths of two Filipino prisoners at Laoag by punishment and torture, and the case is one to which some prominence was given by the report of General Miles. Owing to that report Major Howze demanded an investigation, altho the matter had previously been the subject of official inquiry with results favorable to him-

self.—Hemp, the chief product exported from the islands, has heretofore been shipped to our North Atlantic ports by way of the Suez Canal. By making a through rate to Chicago, by way of Tacoma, as low as the rate to that city by way of Suez, the Northern Pacific and Great Northern Railroad companies are seeking to obtain this traffic for the Pacific route, and a large cargo has been shipped from Manila to Tacoma in a steamship controlled by these railway companies.—It is said that the War Department and the Department of Commerce and Labor will ask for a modification of the statute that virtually provides for an application of our coastwise navigation laws, after July 1st, 1904, to commerce between the islands and the States, as well as to commerce between one island port and another. The enforcement of these laws at that time, it is asserted, would deprive the islands of 95 per cent. of the existing facilities for transportation from one island to another, and seriously restrict trade with the States, nine-tenths of which is now carried on in foreign vessels. Moreover, our treaty of peace with Spain permits Spanish ships to take part in all this trade for ten years on equal terms with our own; and the closing of the door of trade in the Philippines to foreign vessels would not assist us in keeping the trade door open at Chinese ports. Congress may be asked to defer the application of the coastwise navigation laws until July 1st, 1909, a date subsequent to the expiration of the term agreed upon in the treaty with Spain.

British Politics The war of words over Mr. Chamberlain's proposals continues unabated. Mr. Chamberlain himself has sufficiently recovered from his attack of the gout to take the platform once more. At Newcastle, October 20th, he addressed an enthusiastic audience of some 4,000 persons and replied to the criticisms of his policy. He poured a good deal of ridicule on Lord Rosebery, Sir Henry Campbell-Bannerman and Earl Spencer, saying that, in view of the fact that he had been termed an "electioneering quack," whose arguments were not worth answering, he was

surprised at the amount of popular interest and newspaper comment his proposals had called forth. In reply to the charge that he had based his whole system on the boom year of 1872, he asserted that if his opponents would take the five-year periods working back from 1875, they would find that these showed still more strongly for his side of the case. He had not said that the Empire would break up immediately if his plan was not adopted, but that there was a tendency toward cleavage and that commercial preference was the only way of binding the colonies to the mother country. The colonies contained 11,000,000 whites who had offered to make sacrifices, if necessary, to build up such an empire as the world had never before seen, and the United Kingdom should not turn a deaf ear to such an offer. On the other side, Mr. John Morley, formerly Liberal Chief Secretary for Ireland, has come forth from his long retirement, due to the labor of writing his *Life of Gladstone*, and taken an active part in the campaign against protection. At Manchester he made a spirited attack on the new policy, calling the proposals so crude, raw and unthought-out that men of both parties, Liberals and Conservatives, were united in opposition to them. As for the fear that the United States would dump its iron and steel on the country, no "dumping," he said, was so dangerous as the "dumping" of customs officers on British shores. Mr. George Wyndham, the present Chief Secretary for Ireland, has come out in favor of Mr. Balfour and Mr. Chamberlain. He called himself, not a protectionist, but a champion of free trade. Only, he thought, to discard the armor of retaliation at the present time was to "enter the contest in a night-gown." A futile attempt has been made to draw the King into the controversy. The statement appeared in print to the effect that his Majesty was a free trader and that he would dislike to see any tax placed on foods. To a letter asking whether this statement really expressed the sentiments of the King, this reply has come from Buckingham Palace:

"The private secretary is commanded to say that the King never expresses any opinion on political matters, except on the advice of his responsible Ministers, and therefore the statement must be inaccurate."

—King Edward has approved of the appointment of Sir Henry Mortimer Durand to the post at Washington left vacant by the death of Sir Michael Herbert. Sir Henry at present holds the position of Ambassador to Spain, and has left London for Madrid, where he will personally announce his promotion. He was educated for a lawyer and was called to the bar in 1872, but never practiced, since he went at once into public life. His first appointment was in the Bengal Civil Service. From 1884 to 1894 he was Foreign Secretary in India. From India he went to Teheran, where he remained until 1900, when he was appointed Ambassador and Consul-General at Madrid. He was married in 1875 to Miss Ella Sandys, daughter of a barrister of Lincoln's Inn. This is the first time a man already holding the rank of Ambassador has been sent to the United States, as hitherto the post at Washington has stood at the foot of the Embassies.

The Congo Free State

Just before going to Vienna to visit the Emperor Francis Joseph, King Leopold of Belgium issued a reply to the British Note which exposed the mal-administration of the Congo Free State. This reply takes up the British charges point by point, and answers them in a most diplomatic manner, beginning with the statement that the Anti-Congo Campaign coincides with the commercial expansion of the Free State. To the charge of acts of cruelty upon the natives King Leopold declares that the Government has never denied the existence of crimes and illegal acts, such as have happened in every other country or colony, but that such acts have been referred to the proper tribunals, which have punished the authors. In regard to forced labor the reply asserts that no State can exist without resources; every State must exact taxes from its subjects, and where there is no money for payment this tax must take the form of enforced labor. In many cases the natives have refused to give the labor required, and force was necessary to make them submit to the law. As for the violent recruiting of men for military services, the reply declares that levies are made in each district, the local commissioner arranging by common

accord with the native chief the mode of recruiting. Voluntary engagements and re-enlistments keep up the effective strength without difficulty—which, indeed, hardly reaches to 15,000 men. There is no ground for comparing such enlistments with the slave trade. The British Note says that no effort was made to establish any proper administration among the natives. To this the King replies flatly that such an administration has been established, and that since 1898 there has been a progressive improvement in the general condition of the natives. Commissioners of hygiene have been established; the number of schools and workshops has been increased; the native is better lodged, clothed and nourished than he was; and a better building suited to the climate has been substituted for his hut. The new facilities of transport have brought a supply of necessities to him, and made his life easier in every respect. The King also maintains that the economic system instituted is in no wise contrary to the Act of Berlin, and that commercial freedom has not been violated. In conclusion the reply holds that the British Note must be made null and void.

Commerce Between France and Spain

The Cortes of Spain are considering a bill which creates a number of free ports, including, in especial, Barcelona. This bill has a larger scope than the mere attempt to conciliate the Catalonians. It falls in with the policy of France and Spain, conducted chiefly by M. Delcassé, the French Minister of Foreign Affairs, to strengthen the commercial relations between these two countries. The commercial *régime* of Spain is based mainly on a series of conventions, dating from 1892, with Switzerland, Norway and Sweden, Denmark and Holland; on royal decrees of the same year, and on the *modus vivendi* with France of 1893. The conventions were all based on the idea of abolishing the most-favored-nation clause, whereas the Franco-Spanish *modus vivendi* was established on just the contrary principle. As a consequence the commercial relations of Spain are in a state of chaos, and the Spanish Government is trying to bring these relations into order. By

a convention of April, 1894, the Governments of France and Spain agreed to construct, simultaneously, two lines through the center of the Pyrenees; one of these lines has already reached Jaca, and the visit of the Spanish king to that place is supposed to indicate that this road will be pushed forward. A more important line of connection has, however, just been determined at a meeting of high officials of the Ministers of Public Works of France and Spain with the engineers and managers of the interested railway companies. This line, passing through some of the richest mining regions of Catalonia, would connect Barcelona and Toulouse, and would have an important effect on French export trade, making Barcelona a rival port to Marseilles.

Russia and Armenia The attempt to confiscate all the property of the Armenian Church continues to excite the hostility of the Armenian people, and this has led the *Novoe Vremya*, of St. Petersburg, to rebuke their unruly demonstrations. This journal, which expresses the opinion of the Government, declares that the law must be enforced, and adds that the Catholicos of all the Armenians who resides at Etchmiadzin should not remain silent, and thus encourage the creators of the disturbances. Unless she controls the people and prevents the clergy from organizing resistance to the Government, Russia will be obliged to place the direction of the Gregorian-Armenian Church in firmer hands. The people of Armenia, says the *Novoe Vremya*, should recollect that Russia has given shelter to many thousands of their nationality who emigrated from Turkey, and not provoke their Russian rulers to treat them as they were treated by the Turks. This movement to take the property of the Church out of the hands of the priests began as far back as the year 1897, when the schools of the Armenian Ecclesiastical Parishes were placed under the control of the Ministry of Public Instruction, who also took charge of the property attached to the schools. Since then the Armenian clergy have set up legal claims, showing that this property belongs not to the schools but to the churches and monasteries. As a result of these contentions Prince

Galitzin raised the question whether the property of the Church itself should not be transferred into the treasury. This question was disputed among the Ministers, and the plan of the Minister of Agriculture was adopted, which proposed that the property of the Church should be placed under the system of control like that obtaining in the case of the estates in Bessarabia belonging to Greek Monasteries abroad. It was found, however, that the enforcement of these measures was so unpopular that M. Sipiaguine agreed to leave them inoperative, altho Prince Galitzin still thought they might be carried through. The present proposal to confiscate the property of the Church was laid before the committee of Ministers by M. de Plehve, who explained that the measure was entirely opportune, and would limit the excessive autonomous powers of the Armenian Church. He also pointed out that the transfer to the Government of the control over the property of the Armenian clergy would force the clergy to make legal use of their income. He also thought that the measure would be beneficial for the Armenian clergy themselves, since at the present time they make use of the land in their possession in a most unskillful manner.

The Far East The relations between Russia and Japan stand as they were, with rumors and counter-rumors, so that no one can say what the outcome will be. The activity of the Russians along the Korean frontier continues the same; and, on the other hand, the appointment of Vice-Admiral Toga, known as a fighting admiral, to command the Japanese standing squadron, looks as if Japan were preparing for trouble. A Russian newspaper of St. Petersburg, in summing up the strength of the Japanese army, says that its weakest point is the cavalry, the development of which has been hindered by the lack of horses and of suitable place for exercise. The paper estimates the Russian cavalry as seven times more numerous than the Japanese. It criticises the Japanese infantry more favorably, admitting that the moral qualities of this branch of the army are very high, but adding that its physical qualities are on a lower level.

It believes that Japanese infantrymen would not show much endurance in a cold climate. Another Russian paper, the *Novykrain*, of Port Arthur, maintains that without considerable support from Great Britain and America, Japan could not attack Russia with any prospect of success, and that Russia was never so well prepared as now. It asserts that Russia might fight Japan and, at the same time, conduct a vigorous campaign in India, while Germany and Austria covered Russia in the West and against Turkey. The merchants of Russia are declared to be in a state of great apprehension. The present peace footing of Russia supports infantry alone to the number of 1,100,000, and, of these, 185,000 are now either in the Far East or on the way thither. The same *Novykrain*, of Port Arthur, the principal organ of Admiral Alexieff, the Russian Viceroy of the Far East, attacks the commercial treaty between the United States and China, asserting that Article XII, which opens ports in Manchuria to United States trade, is inimical to Russian interests in that Province. Russia already had rights in Manchuria given by China, with the guaranty that such privileges would not be granted to any other country. In this connection, there is significance in the fact that the *Novoe Vremya*, of St. Petersburg, contains an article on the relation of the United States to the countries of Europe and Asia. It says that American statesmen realize the approaching danger of collision with Powers across the ocean, and are preparing rapidly to enlarge the navy. At present, the American navy is so small, so the St. Petersburg paper thinks, that American demands and threats need not particularly alarm either Europe or Asia.

The Foreign Trade of China

Some interesting facts regarding the foreign trade of China for 1902 appear in a rather elaborate report on the subject by J. W. Jamieson, Commercial *Attaché* to the British Legation at Peking, just issued by the English Foreign Office. According to this report the apprehensions felt in official circles that heavy additional taxation

and the effect of declining exchange on payment in respect of the indemnity and of debt charges would seriously affect the purchasing capacity of the Celestial Kingdom, have thus far proved without foundation. The customs returns for the year again demonstrated the great recuperative powers of the country. There was a rise of nearly £3,000,000 in the value of native produce exported, or an expansion in 12 months of over 10 per cent. This, in view of the fact that the average rate of exchange ruling throughout the year was lower by about 12 per cent. than the average rate of 1901, must be considered a very satisfactory showing. The total value of China's imports during the 12 months covered by Mr. Jamieson's report was £39,118,115, and the value of the exports for the same period was £30,693,946. The excess of imports over exports, together with the interest on the Chinese debt, the payments made on account of the indemnity and the payments in redemption of foreign loans, reached a total of £13,584,037, all of which China was able to pay, in spite of the fall in exchange which has been noted. In connection with the increasing Chinese obligations the home remittances from Chinese abroad are factors of great importance. Such remittances are very much greater than is generally supposed. Those from the Pacific Coast alone are roughly estimated at £5,000,000. Remittances to China from Manchuria are said to have returned from £1,500,000 to £2,000,000 during the year. The Australian contributions cannot fall far short of the same amount, and those from other countries vastly swell the receipts. Figures as to imports are in part as follows:

Value of cotton products.....	£16,580,890
Value of opium.....	4,609,365
Value of rice.....	3,069,446
Value of sugar.....	2,692,497
Value of kerosene.....	1,503,300
Value of metals.....	1,374,740

Chinese exports, including the great staple, tea, have for the most part greatly increased. The export of iron ore to Japan was less than in 1901, but the export of antimony ore from Hunan rose to 10,313 tons, of which 19 per cent. was shipped to the United States. Other figures are encouraging as to the increasing value of the Chinese foreign trade.

The Right of Appeal

BY DAVID J. BREWER, LL.D.

JUSTICE OF THE SUPREME COURT OF THE UNITED STATES

[As Justice Brewer says, his recent suggestion that the right of appeal be taken away provoked very severe criticism throughout the country. This suggestion was made during the course of a recent speech. The following article is, we believe, the first full defense of his position that has been given to the country.—EDITOR.]

A SHORT time ago I suggested the taking away of the right of appeal as one means of checking the fearful habit of lynching. The suggestion provoked severe criticism. More than one in an outburst of rhetoric declared that so long as corporations had a right to take all their cases to an Appellate Court, it would be an outrage to deny such right to one convicted of crime. This rhetoric would lose its force if the right of appeal in civil cases was also taken away. Doubtless the suggestion does not commend itself to many of the legal profession; perhaps not to the majority. Some delight in the continuance of litigation, for thereby their pecuniary interests are subserved, and those interests are deemed more important than the public welfare. Again, there are some persons who are associated, politically or in a business way, with those engaged in wrongdoing, and to all such the idea of prompt punishment—indeed, of any punishment—is abhorrent. But beyond these it is undoubtedly true that to many of our best citizens, those who have no interest in staying the punishment of crime, and who sincerely desire the public welfare, the taking away of the right of appeal seems a grievous wrong. To them I wish to say a few words.

I have hitherto called attention to the fact that in England and in our Federal Courts up to the last few years there was no right of appeal in criminal cases. So I am suggesting nothing new, but merely a return to that which has been well tried, and, I may add, not found wanting in justice to the individual or the public.

What is meant by the right of appeal? It is the claim that every one defeated in a trial in one court may, if he wishes, compel a review of that trial before there is a final judgment against him. Practically, it is a claim of a right

to two trials. It is not a right guaranteed by the Constitution of the United States, as has been repeatedly held by the Supreme Court. Mr. Justice Harlan, speaking for that court, said in *McKane v. Durston*, 153 U. S. 684, 687:

“An appeal from a judgment of conviction is not a matter of absolute right, independently of constitutional or statutory provisions allowing such appeal. A review by an appellate court of the final judgment in a criminal case, however grave the offense of which the accused is convicted, was not at common law, and is not now, a necessary element of due process of law. It is wholly within the discretion of the State to allow or not to allow such a review.”

To like effect are *Pittsburg, etc., Railroad Company v. Backus*, 154 U. S. 421; *Andrews v. Swartz*, 156 U. S. 272; *Reetz v. Michigan*, 188 U. S. 505.

Neither is it a natural right. It is true that in case of a supposed crime the State owes to the public and the accused the duty of providing one impartial and competent tribunal to determine the question of alleged guilt, as also to every individual who insists that some right of his has been denied, a like tribunal to protect or enforce such right. But upon what principle of natural justice can it be said that the State also owes in these cases the duty of providing a second tribunal to inquire whether the first has erred? If it does owe any such duty, why may it not also be contended that it owes the further one of providing a third tribunal to inquire whether the second did not make a mistake? And where is the limit?

If it is neither a constitutional nor a natural right, what is it? Simply a statutory privilege; one which the State may give and which it may take away. If given, then every individual may justly call it a right and insist upon it. If not given, then no such right exists.

Whether or no it shall be given is, as

held by the Supreme Court, a question of policy, and I use the word policy in its best sense. Public policy requires, in the language of the Constitution, that we "establish justice." But justice contemplates both parties to the litigation and is "established" only when the rights of each are enforced. There is clearly no justice when one party obtains that to which he is not entitled, and the other loses that which he has a right to have. In every law suit there are two parties—the plaintiff and the defendant. In civil cases both parties are generally individuals. In criminal the public is the party on the one side, and if the accused is guilty of the crime charged, justice is established by his conviction and punishment, as also by his discharge if not guilty. The public weal, the best policy, require that result.

Let us notice some of the effects of the unrestricted right of appeal, especially in criminal cases. In the first place it tends to prevent the punishment of crime. This fact has become so notorious as hardly to need illustration or comment. Only the other day, according to the papers, in Kentucky, when a man convicted of murder was sentenced to be hung, one of his counsel publicly said to the court, "it will be a long day before that sentence is carried into effect." And that statement only expresses what all know to be a common fact. No matter how aggravated the offense, how clear the guilt, the convicted party, by simply insisting on an appeal, postpones further action until a hearing can be had in the Appellate Court, and that often means a long delay. Astute counsel have been busy during the trial seeking to introduce some error into the proceedings and thus lay the foundations for a successful appeal. In the Appellate Court the question is not one of the guilt or innocence of the convicted party, but, Was he found guilty in a legal way? In other words, What errors, if any, were committed by the trial court? If testimony was improperly admitted, or if in the instructions there was any mistake of omission or commission, or if in any respect there has been a departure from the rules respecting trials, then ordinarily the judgment is reversed. There is said to be a presumption of injury from the fact of

error. And when one recalls the multitude of rules which have been laid down in respect to trials, it is not strange that the Appellate Court finds that there has been error, and awards a new trial. By the time the new trial is held some of the witnesses may be gone, the memory of those who remain has become uncertain, a general indifference prevails, and the belief is nearly universal that because a new trial has been granted the defendant is going to be acquitted. Such belief is always an important factor in securing an acquittal. In case of a homicide, the dead man is forgotten, and the sympathies are with the living defendant. All these matters combine in favor of the defendant and against the public, and, as experience shows, too often result in a guilty man's escaping punishment. Such result is a tacit admission that there is something radically wrong in our present modes of criminal procedure. It encourages crime, for if the evil disposed believe that there is little probability of punishment, what is there to deter them from crime? We shall check the increase of crime only when the would-be wrongdoer feels that there is a moral certainty that his crime will be promptly punished. Is it strange that a community incensed by some atrocious offense, aware of the common experience of criminal proceedings, takes the law into its own hands and summarily punishes the offender?

But this is not the only result. The stress of the litigation is transferred from the trial to the Appellate Court. The work done in the former, and this is true in both civil and criminal cases, is largely in laying the foundations for the real contest in the latter court. Corporations and other suitors with much litigation send to look after the nominal trial in the trial courts young men of little experience, with instructions to object to everything offered by the other side, to offer all possible testimony, and to except to all adverse rulings. Stenographers are present, and the whole proceedings are taken down. The case is transferred at the will of the defeated party to the Appellate Court, and the real litigation begins. Counsel upon whom the corporations rely prepare to fight over the questions presented to, but, in fact, not

litigated in, the trial court. Thus great injustice is done to both the trial and Appellate Courts, and through that injustice the community as a whole suffers. The position of the former is belittled. It is conscious that it is doing only preparatory work. This tends to create a feeling of indifference in both judge and jury. They more willingly yield to prejudice and local feeling because of the belief that an Appellate Court will review their action, and, assuming that it is free from both prejudice and local feeling, trust it to do that which they themselves ought to do. There is thus an unconscious shirking of responsibility. It is so easy for one whose force of character is not of the strongest to bend a little to local feeling, when he knows that that feeling may determine his re-election or his social standing, and to ease his conscience by the reflection that an Appellate Court (whose continuance in office is longer, perhaps for life, and at any rate whose constituency may extend through the State) will see that absolute justice is done. Not only is this true, but the community, fully aware of this, becomes less careful in respect to the character and ability of the trial judges, and the jury standard is steadily lowered.

It is also an injustice to the Appellate Courts. Their dockets are crowded beyond measure. One great complaint throughout the country to-day is of the delay in proceedings in the Appellate Courts, a delay consequent upon the fact that there are so many cases unnecessarily brought to them. Tho a defeated party has no expectation of securing a reversal, he exercises his right of appeal, "running for luck," as the expression is, or in the hope of making a profitable compromise. I was assured by one in a position to know that in a single State one of the great railroad corporations, by appealing every judgment against it to the Supreme Court of the State—that court having a crowded docket—made enough in compromising the judgments rendered against it in the trial courts to pay the entire cost of its legal department. How simple this is. A party recovers a judgment against the corporation for, say, \$5,000. The case is appealed. He knows that a review in the Supreme Court is not possible for two,

three or four years. Some technical error may cause a reversal, and then after a second trial there is the same long delay. He is offered \$3,000 to settle the judgment. How strong the temptation of such an offer! Yet one cannot but inquire whether this is the best result of judicial proceedings.

Further, the very multitude of cases taken to the Appellate Courts so burden them that they are unable to give that full consideration to each case which it deserves. The judges work under constant pressure. They see before them a great volume of litigation and know that the parties thereto desire and have a right to a speedy determination of their cases, and so are constantly tempted to hasten them through without that careful study and consideration which many cases demand. The general character of Appellate decisions would be improved and thus the public would be benefited if half the present number of cases were not taken to such courts.

But, it may be said, if there is no right of appeal what is the use of Appellate Courts; would not my suggestion do away with all necessity or excuse for such courts? Parties who make that argument misunderstand my position. I believe in granting full power to Appellate Courts to review the judgments of trial courts, but what I object to is the right of the party defeated in the one court to compel such review in the other. I have no doubt there are cases that require review, but whether there be a review with the consequent delay should be determined by the Appellate Court in the exercise of a sound discretion, upon fixed rules, and not upon the will of the beaten party. In other words, the judgment of a trial court should remain final unless on application to the Appellate Court, or some judge thereof, it or he shall certify that there is probable reason to believe that injustice has been done. No appeal on a mere certificate of probable error. So far as possible limit the application of the rule of the presumption of injury from the fact of error. Let me illustrate by an oft-told story: A witness, having testified on a trial that at a certain transaction another party named Mary was present, was asked what Mary said. The question was objected to. After a long

argument the court ruled that the question might be answered, and the answer was, Mary said nothing. Now suppose the court had ruled the question improper and no answer had been given; if the Appellate Court, on careful examination, should find that it was proper and clearly admitted of an answer relative to the issues and favorable to the party making it, it would order a reversal in favor of such party, because from the fact of error there is a presumption of injury. In such a case the rule should be that whenever testimony is offered and ruled out it must be taken down, not in the presence of the jury, but so that it could be incorporated into the record and the Appellate Court enabled to say whether it would have brought about a different conclusion.

Especially should the trial court, or any judge of equal rank, be debarred from allowing an appeal or stay of proceedings. The former should not be permitted to seek relief from responsibility by sending the case to an Appellate Court. Neither should one who has had nothing to do with the trial and will have nothing to do with the further consideration of the case be allowed to stay the proceedings and compel an Appellate Court to examine a case which no member of that court may consider worthy of review. The whole control of appellate proceedings ought to be in the Appellate Court and no case brought to that court unless in the judgment of the court or some member thereof there is reason to believe that injustice has been done. We ought to emphasize the truth that results are more important than procedure, that substance is greater than form. Under such a rule parties would know that in the trial court must be the stress of litigation. Its judges and jurors would feel that upon them was the real responsibility.

It may be urged that without the right of appeal an innocent man would often

be punished, but surely there is very little danger of such a result. Experience in those jurisdictions in which there is no right of appeal affirms this. The conditions of a criminal trial all favor the defendant. He may be a witness in his own behalf, and thus show what connection, if any, he had with the alleged crime. The burden of proof is on the State. The defendant is presumed innocent, and he can be convicted only when his guilt is established beyond a reasonable doubt. He is entitled to counsel and the attendance of witnesses. He has every opportunity which the ingenuity of man has yet been able to suggest to defend himself against the charge. If it be said that popular prejudice or temporary feeling may influence a jury to ignore all guaranties of protection to innocence, and in face of the testimony do grievous wrong, especially when the defendant is some non-resident or unpopular citizen, it must be borne in mind that no conscientious judge will let a verdict stand of whose justice he is not satisfied. In addition, the power of review would be a guaranty that no injustice was accomplished. It may also be added that the responsibility of a locality for the administration of justice as well as the management of its fiscal affairs is a great desideratum. The principle of home rule is applicable not merely to administrative affairs, but equally to judicial matters, for a community will soon find that if injustice prevails it is cursed thereby. Capital will avoid it, business will keep away from it, and its wrong will be its own undoing.

One thing is clear and should always be borne in mind. Whatever the sifting process of successive appeals may accomplish in ascertaining the exact truth, justice delayed is often justice denied. The early end of every litigation should be one of the great objects of all judicial proceedings.

WASHINGTON, D. C.

Training Wild Beasts

BY HERNANN BOGER

[Mr. Boger is the animal trainer for Carl Hagenbeck in this country. He speaks fair English, but was assisted in his exposition of the trainer's art by Manager Williams, who has had a long and varied experience in his present position.—EDITOR.]

Untrained Young Polar Bear. Once the Property of Thomas W. Lawson, Esq. From Photograph Taken at Bartel's Wild Animal Farm, Jersey City, N. J.

I HAVE always been fond of animals and I never saw the creature that I was afraid to handle. When, therefore, I found myself attached to Hagenbeck's Menagerie at Hamburg, in Germany, I was much pleased. It is the great wholesale emporium for wild beasts in the world. The Hagenbecks have been in the business for four generations, and in their Zoological Gardens all the denizens of the jungle are gathered, not by scores but by hundreds. I went to Hagenbeck's as a landscape gardener, but I could not stay away from the cages. I was all the time working around them, helping the keepers and feeding or attending to the beasts. It was in me to be a trainer.

After I had been with the Hagenbecks for two years I got an opportunity to go to Singapore for a cargo of fresh caught wild beasts, and of course I jumped at the chance. Orders come to the firm from all over Europe and America for tigers, bears, buffaloes, camels,

lions, elephants, pythons, leopards and great apes, and a telegram to an agent at Singapore sets the machinery going. He sends an expedition into the jungle, and the men collect the tigers, pythons, elephants and orang outrangs that are wanted and ship them to headquarters, whence they are distributed to the purchasers.

On the voyage to Europe these emigrants always suffer considerably and therefore they need sympathetic medical attendance, which, by this time, I was prepared to give. It is not every doctor who feels competent to undertake charge of a tiger with a bad

stomach ache or a leopard with a thorn in his paw, or an elephant or orang outang with fever or pneumonia, or a python suffering from homesickness. Somehow the average physician does not seem able to establish in the mind of the patient that confidence in his skill which is so necessary to successful treatment. I, however, had had a large and extensive practice in our home gardens, and tho I cannot say that I achieved general popularity by means of the doses and pills that I distributed, nevertheless I was at least as much of a favorite with my patients as any other man engaged in the same business.

Elephants, and in fact all the hay eating animals, are good patients. The elephant suffers chiefly from colds and fevers, and the dose for him generally consists of a pail of hot whisky, which he absorbs with equanimity. Bears will take anything at all in the shape of medicine, provided it is sweetened. If it is pills that are to be administered, we give

them in an apple or a banana, and the bear bolts the dose without suspecting it.

Not so with the cat animals. It is an awful job to get them to take bitter medicine or anything the smell of which they dislike. I was on exceedingly good terms with a leopard, who caught cold, and I tried to give him medicine that was to be taken at the rate of a teaspoonful every two hours. He took the first teaspoonful after a deal of coaxing and just to please me, but when I came to give him another dose he made a slap that knocked me and the bottle flying. Poor fellow, he afterward died with his head on my shoulder.

The lions, tigers and leopards have a very keen sense of smell, and the only way to have them take their medicine is thoroughly to disguise the odor.

Every young animal from the jungle suffers from climatic fever, and at from twelve to fourteen months of age all the cat animals change their teeth and are

sick in consequence. They need careful attention or they will go off very quickly—sometimes in twenty-four hours from the apparent beginning of their sickness. On one transport alone we lost seventeen out of thirty elephants. As the animals in greatest demand for menageries are far from cheap, it will be seen that it is good policy to give them the best of care and attention. The following table will give an idea of fair prices for these beasts and average length of life in menageries:

	Average life in Menagerie. Years.	Value.
Elephant	20	\$5,000.00
Grizzly Bear.....	15	1,500.00
Black Bear.....	12	200.00
Lion	12	1,000.00
Tiger (Indian).....	12	2,500.00
Siberian Tiger.....	12	4,000.00
White Bear.....	20	1,000.00

Of course these prices are only averages and do not apply to trained animals. A well trained lion is worth about \$5,000, and is not on the market at that price. I have the very best tiger in all the world—I can sleep with him, and he knows everything. I would not take \$10,000 for him. On the other hand, there are lions that can be bought for \$100. Some tigers, also, are very cheap. Those are the ones born in captivity. They are not much good, being degenerates in every respect. Their bones are soft and their brains are poor. The great manageries of the world won't take them at all.

Some of the white bears are worth a good deal more than I have stated. Singularly enough, in spite of their violent change of climate, they are seldom sick. A tank of water and plenty of fish is about all that the white bear needs to keep him in good order.

The price I name for the Siberian tiger is also low. I doubt that orders for good Siberian tigers could be filled at that price. They are rare beasts, tremendous in size and having coats of hair five or six inches

The Trick Elephant

long. There is a fine specimen in Bronx Park.

So having, after a fashion, graduated as physician in ordinary to all sorts of wild beasts, I was sent to Singapore to help escort a cargo of them home.

They catch the elephants in inclosures by means of other elephants, and they catch the lions and leopards and tigers in traps and pits. The python is jailed by a somewhat mean trick. When his whereabouts has been ascertained a house for the python is built of bamboo and in this a kid is tied. A small hole is left for entrance. By and by the python comes on the scene and smiles. Then he appropriates the kid and afterward attempts to seek the seclusion of his cave. To his astonishment he finds that the hole that was large enough for entrance is not large enough for egress. Being a philosopher, however, he takes this discovery calmly and coils up to sleep on the matter. When the men come back they bag the python's head and trundle him into a bamboo cage on a cart and away he goes to Europe. Sometimes, tho, a twenty-foot python will make a great fight, hissing like an enraged *clacque* at a Parisian theater and struggling with great strength. But all the power in a twenty-foot python is in the first seven feet back from his nose, and if he has four men sitting on him in the neighborhood of his neck the lashing of his remaining length is quite harmless, except that the stroke of his tail across one's face certainly smarts. Pythons are often caught with the lasso, and so are lions, tigers and leopards.

We had a successful voyage, and when I returned to Hamburg I told Mr. Hagenbeck that I wanted to be a trainer, and he allowed me to go to work getting a group of animals ready for exhibition.

The first pair I selected of my group consisted of a lion and lioness. They were wild, just from the African desert, and accordingly were very intelligent. All the wild stock is bound to be good, because the animals have had to get their own living, and that makes them sharp.

The Dancing Bear

The first thing that I did was to get the lion and lioness used to having me about them. That was accomplished by going into their cage, feeding and attending on them. I carried a whip and used it when they were ugly. After a time I brought in a box, and having shut the lioness up in a compartment by herself, I told the lion to sit on the box. He understood what I meant, but he would not obey. So I put a rope around his neck and dragged him up on the box after a fight in which I had to use both ends of the whip. He cut me a little with his claws, but I dodged and whipped him, and when he came at me seriously I fired blank cartridges in his face from a pistol held in my left hand. The fire and noise frightened him and he made up his mind that I was a good person to leave alone. Then he mounted the box, but immediately got down again. So I whipped him, hauled him up again, and made him sit down and stay down.

Working eight hours a day at this lion

I soon taught him a few tricks, rewarding him when he was good and punishing him when he was bad. When I got him in pretty good working order I took up the training of the lioness, who was more excitable and vicious, and who left the marks of her claws on my face and hands on several occasions. I finally taught her ladyship that she must do as she was told, and when she thoroughly understood that we got along quite nicely together.

The lion is not such a bad fellow at all. He is rather lazy and has a vein of philosophy in his nature. The tiger, on the other hand, does not look at things in that way. He is very stubborn. If he makes up his mind that he will not do as he is told his trainer may kill him, but he will not yield.

After working steadfastly for several months I had at the end of that time a group of trained animals that was ready for exhibition. This consisted of 4 tigers, 3 lions, 1 lioness, 3 polar bears, 2 black bears, 3 leopards, 2 pumas, 1 cheetah, 5 boarhounds and a big queer looking hybrid, half lion, half tiger, the only one in the world. In selecting these animals I had the advantage of a very large choice, because, as I say, our establishment had them by wholesale. I tried many and selected the best material. It is only here and there that one finds an animal that can be well trained. Some never get the lesson through their heads, and we have to pass them back and try others in their places. It is not a question of viciousness. We have no objection to vicious lions and tigers; we like them to growl and snap during the performance. It shows well. But they must be intelligent and responsive.

As I increased my group by bringing in new animals, of course, there were troubles. The creatures would fight, at times, and I had to make peace with the whip and the pistol. I have never used any red hot irons and don't approve of them. Sometimes a beast was killed. One of my very best performers is a leopard that has killed a cheetah, two boarhounds, a tiger and a polar bear, I thrashed him each time till he could not stand, but periodically he seems to get filled up with spite that must burst out at one of

his messmates. It surprises some people to learn that a leopard can kill a tiger or a polar bear, but the leopard has teeth like razors, and he uses them on the throat in every instance. His attack is so sudden that he has the other animal by the windpipe before it can do anything. He is away in a minute, each time leaving his victim dying. One of my performing tigers killed a brown bear a short time ago, but, taken on the whole, the family gets along very well.

I look upon the bears as the most dangerous members of the group, because they don't give any warning when they are in a bad temper. I can tell when any of my lions or tigers are angry by the look in their eyes and the motion of their tails, but the bear keeps his head down and the trainer does not know that there is anything the matter till the bear has him.

I don't like bears very much. We say in Germany that the bear has seven senses; four silly and three crazy, and tho this is something of a slander, nevertheless the bear is a somewhat stupid beast and it takes a lot of cudgelling to get the knowledge of the necessary tricks through his thick head.

The puma, too, is a stupid beast. All pumas are crazy. They can't keep their seats during the performances, and the male always wants to jump at the throat of a lion or tiger. They give me a deal of trouble.

On the other hand, a good lion or tiger knows almost as much as a human being. My clown lion watches my eyes and knows perfectly well whether I am in fun or in earnest in the orders I give. If he sees that I am in fun he disobeys comically, while if I am in earnest he is all business at once.

Bears and pumas have little or no sense of humor, while lions and tigers have plenty, especially the tigers. In the mornings, when there is nobody about, I let my group play in the big arena. It is a sight to see the tigers then, especially the biggest and best, our great performer, who stands on his hind legs with his forepaws on my shoulders, and takes from my hand a small piece of meat held high above my head. He growls and rushes about, making tremendous leaps over the backs of his companions; his ears cocked

up, his tail stiffened straight, and a grin of genuine fun on his face. He stirs up one of his companions to box with him. They have a mock battle, and roll on the floor growling and pretending to claw and bite. Suddenly the tiger is away again, bounding about like lightning, mad with the joy of living and glorying in the exercise of his immense strength and activity. All the lions and tigers play like kittens or children, and they all enjoy practical jokes, concerning which

course when I find one of my lions or tigers out of temper I excuse some things, as one would excuse a man who is ill. But they must go through their act, because the audience expects it.

I am often asked how it is possible to train lions and tigers to leap through burning hoops. That does look puzzling to one on the outside, but it is not so wonderful after all. Fire terrifies the wild animal, it is true, and instinct would make him fear the burning hoop;

Group of Performing Lions with Trainer

they have their own ideas. Generally the point of the joke is to frighten or startle one another.

The big dogs so often seen in the arena are all German boarhounds. They have no special use. They merely make up the group. People think that they are there to overawe the lions and tigers, but that is nonsense. A lion or tiger could kill any dog with one blow.

It would hardly be fair to tell all the secrets of training, but without going too far I can reveal enough to inform the reader generally. First, then, we get good material; next we work eight hours a day for months on that material, having patience till the animal understands, and then when he does understand insisting on obedience. If they won't obey they get the whip, and they know it. Of

but he can be cornered, so that he has to jump through the hoop to escape being prodded. When he finds that the fire does not hurt him he gradually loses his fear of it, and after a time jumps at the word of command, and thus we get the tiger that rides on the back of an elephant and leaps through blazing hoops.

The lion that rides a bicycle, the lions that draw cars, and the black-maned lion that rode on the horse and jumped over sheets of cloth like any other circus performer, are, or were, the results of many months of hard work in the way of training. There are few traditions in our art. Most trainers make their own methods as they go along, and they keep them to themselves as far as they can.

Very absurd things often happen as a

result of contact of the jungle folk with the appurtenances of civilization. When first I hitched my pet tiger to a car he was panic stricken. No pussy cat with walnuts on his feet was ever more frightened. He flew around like mad, and finally reduced the car to splinters. He did not know what in the world it was that had him, but was quite sure the thing was uncanny. All the beasts are superstitious and in great fear of the unknown.

I laughed till the tears rolled down my cheeks to see the tiger's fright, but he spoiled a good car for me and his next lesson was with a rope. That also frightened him, but not so much as the car, and after a while he got used to the rope and gradually suffered me to impose something more, till I was able to hitch him to another car which he did not break.

Of all the big animals elephants are the most intelligent and the easiest to train. We have elephants performing that are only four months out of the jungle, yet have thoroughly adapted themselves to show life, and are healthy, contented and good natured—even full of jokes. Some people say that deep down in their hearts all elephants are malignant, but that isn't true of female elephants. All male elephants are dangerous at certain times, and shows all over this country are getting rid of them. I don't believe that there are more than three or four male elephants in the country, and those will soon be gone. They are no use for breeding, as their progeny is practically worthless. It lacks the jungle vim.

Dogs and horses come next to elephants in the matter of intelligence, and after them the seals and sea lions are reckoned. These latter certainly know a great deal, and can do wonders in spite of their ungainly shape.

The big sea lion that balances the ball on his nose in such a clever manner—catching it when thrown by the man and juggling it with unerring dexterity—does not much resemble a racehorse, but he can bound like a kangaroo and go faster than a sprinter. People think that he ought to be easy to train because he cannot catch his trainer, but that is a mistake. He could catch any man, and many times his trainer has to climb up the bars of the arena in order to es-

cape from him. He took a clean bite out of his trainer the other day, being angered about something. He would not have done that but that the man's back was turned—a carelessness that probably won't be repeated.

I think that trainers, like poets, are born. Hundreds try the business at our place in Hamburg, but soon demonstrate that they are not meant for it and give it up. They never go higher than cleaning cages. If a man is afraid of the beasts they know it instantly, and presume on it. A trainer must know no fear, and he must be inexorable. He must convince the animals that he is their master and will compel obedience. A man must, in the first place, be constitutionally equipped for the trainer's place, and then he ought to have served an apprenticeship around the cages. I was a keeper for two years before I became a trainer.

Many men who watch our performance here declare that handling lions and tigers is easy, and oftentimes a party of friends comes to the manager's office after the performance with the announcement:

"Here's a man who says that he is not afraid to go in with the lions and tigers. He says that he can make them do their act just as well as their trainer can."

The man who did the boasting always depends on our management saying, "No. You can't go in those cages. The beasts would eat you up."

But we have a different way of dealing with such cases. We tell the man that on account of the trouble made for us by the heirs of rash strangers who have gone in with the lions and tigers and have been devoured, we now find it necessary to have written agreements with men in which they themselves should expressly assume all responsibility for the consequences. We produce a printed agreement form, with ghastly blanks for particulars of death or mutilation, and quite often the boaster, pushed on by his friends, signs it, but he never reaches the cage. By the time he has signed the agreement his hair is standing up, and he is fairly sweating blood. If an opportunity is given him he generally bolts for home, tho now and then we have some frank fellow who, after signing the agreement

and going away to wait for the next performance, returns and blurts out:

"Say, boss, that doesn't go."

"What doesn't go?"

"That about me training the wild tigers and things."

"Why, we've made all the arrangements for you, and our announcer is going to tell the people about your act. They like something risky, and we expect a big attendance. The folks will be looking to see you eaten."

"Well, I won't be there. That's all there is about it. I was just bluffing, and I can't make good. D'ye see? I thought I could get that brag off and astonish my friends, but I never had any intention of trying to make those tigers do stunts."

And away he goes, temporarily cured of bragging. Of all the hundreds of strange men who since our show came to this country have offered to go in the cages and make the beasts perform, not one ever came back to keep his word.

And they were right to keep away from the business. Sooner or later the beasts kill nearly every trainer. I

don't know any who died of old age. The trainers are covered with marks of claws and teeth, and they earn their salaries.

I have, as I have said, the very best tiger in all the world. I know him well, and I believe that he is sincerely attached to me. He is the big fellow who is in the middle when all the animals of my group lie down together in a row facing the audience. As they are lying there I make a great spring, and throw myself full length across their backs. After remaining still for a few moments, I reach forward, putting my arm about my big tiger's neck, I open his mouth to its fullest extent and put my head in it.

Of course I believe that that good tiger would never hurt me. I am sure of it.

Still, other trainers have been equally sure, yet turned out to be mistaken.

And the tiger is not the only one from whom there is danger. Any one of the group might turn on me while

I am lying down across their backs, and I would not be able to escape.

But if there wasn't any danger the people would not care to see the performance and there would be no high salaries for the trainers.

NEW YORK CITY.

The Young Lion's First Lesson

The Blue Sky

BY JESSIE WALLACE HUGHAN

BLUE as the forest forget-me-not, pure as the eyes of a maiden,
Clear as the rays of the turquoise, calm as the coming of sleep,
Liquid as waters of ocean, living and changeful and tender,
Nearest and fairest of mysteries, heart-moving, soul-stirring deep.

Thine is the glory we see when we strive to pierce through the silence,
Looking away into emptiness, probing the dizzy unknown,
Facing the void and the vacancy, leaving the tried and familiar,
Sending the sight into space, from the world to wander alone.

Fair is the tender blue that the earth's white mists are enfolding,
Clearer and purer still the farther we gaze from the sod,
Deepest and dearest of all where the sight is lost in the wonder,—
This is the beauty of space. What must be the beauty of God!

BROOKLYN, N. Y.

Every Man His Own Reviewer

BY ANDREW LANG

THE journalistic idea for which I ask the attention of capitalists is, I think, an idea of Coleridge's. The plan of a literary journal in which every author should criticise his own book occurs, if I remember rightly, in the reply of Godwin to a letter, never seen by me, in which Coleridge moots his project. The virtuous father-in-law of Shelley would have nothing to do with the matter, as deeming it improper that a writer should express his opinion about his own work. Apparently Godwin feared that men would puff themselves, but Coleridge seems to have seen more deeply into the matter. If any capitalist in this more liberal and philosophic age starts *Every Man His Own Reviewer*, his great difficulty will still be to get good men to write in it. At first blush, but perhaps at first blush only, the notion does seem

ANDREW LANG

least he used to do so, just like those of other people.

Now, setting aside persons of mere empty vanity, who cannot see things as they are, it is my impression that authors and artists would be the best critics of their own works. The first time that a writer opens his own volume, after it has gone beyond his control, is usually a moment of bitter disenchantment. He is likely, at least I am likely, to perceive misprints, and clumsy sentences, awkward or obscure, which in some mysterious way escaped his notice when he read, time after time, his proof sheets. No hurried critic is half so likely to find out and censure these things as the author himself. He throws his book aside, and wants never to see it again. Give us my new literary journal and he will joyfully condemn his mistakes. Perhaps

his publisher may not enjoy this frankness; that is another question. Long ago I was asked by a newspaper editor to review, anonymously, a volume of the *Encyclopædia Britannica* to which I had contributed an article on Molière. Too late for correction I had discovered errors which only a person who had worked hard at the subject was likely to notice. These blunders I rebuked, but the editor of the *Encyclopædia* was not pleased by my candor. Perhaps publishers may agree with that editor.

Apart from little slips in dates and facts, an author is never so well fitted to write his book as just after he has let it

pass out of his hands. He now at last sees his topic steadily and sees it whole. Hitherto he has only seen it piecemeal. Now he knows that he ought to have handled it differently; that in one place he ought to have been more copious, in another more condensed. Perhaps, in a difficult historical problem he ought, as it were, to have given the judge's summing up, not the arguments and the minute investigation of evidence in detail, which it is the business of the advocates on either side of the question to produce. These might be relegated to an appendix, where scarce any one will read them. But just as few will read them where they stand, in the body of the work. The public will skip them, a bad thing for the book and its author.

That author, at all events, now sees all round his subject, as he never saw all round it before, and therefore he is most competent to criticise it, or he ought to be. My new invented periodical would give him his opportunity. In actual practice he is apt to say a little part of his say in a preface. Nobody reads it but reviewers, who often read no more of the book, and turn all the writer's admissions against him, without having more than a smattering of knowledge of the subject in hand. Many books on unfamiliar topics are practically not criticised at all, tho noticed in many journals, because specialists do not write reviews, and reviewers are very seldom specialists. To review Macaulay's History, a critic should have gone over the whole ground, studying the original documents. We can seldom find any reviewer, except the author himself, who will take this trouble.

It would thus appear that of serious books, of "non-fiction" (as the *Bulletin* of the New York Free Libraries puts it), the author, if an honest man, is the best critic. He has no chance, unless I find a capitalist to start *Every Man His Own Reviewer*. If an author could afford it, his best plan would be to write his book, to have it printed, to put it aside for six months, to re-read all his authorities, and then to re-write his book "from cover to cover." But want of time, and money, and the nervous desire to finish a task and be done with it, seldom permit authors to adopt these counsels of perfec-

tion. *Every Man His Own Reviewer* would give authors a place of repentance. Coleridge, in his idealistic way of looking at matters, must have perceived all of these things. But Godwin probably thought that the self-reviewing author would only draw attention to his own merits. Well, these also stand a great risk of being overlooked by critics, who, not having a full knowledge of the subject treated, do not know what the author's merits are; cannot appreciate his original and novel contributions to knowledge, and his dissipation of traditional errors. The author is one of the few men who is able to point out his own qualities as well as his defects. But this, unluckily, is just what the author, like Godwin, would probably feel unable to do, at least unless all other authors were doing it. Even now, when a number of authors are advertising themselves variously, *all* do not. In *belles lettres*, of course, for a writer to point out his own merits, would be especially difficult. Thackeray might say to himself, about a famous passage, "There's genius!" and say so with truth, but he would scarcely go so far in *Every Man His Own Reviewer*. The poet could not, in cold blood and in print, say, "There is a colossal passage!" "Please observe the charm of this stanza," and so forth.

The novelist, probably, when his tale is told, sees how he might have told it much better in all respects. If he has any measure of power of self-estimate, he must often be inclined to cry, like the repentant Master of Gray, "Would to God that I could get back by-gones." He might, in fact, be a most interesting and instructive self-reviewer, showing how he was prolix here and inconsistent there, and how much better his work could have been done. But he certainly would find it hard to do justice to his own successes and merits.

On the whole, then, tho all men would like to be their own reviewers; tho many would be their own best reviewers, my proposed journal could perhaps be no better than a place of repentance for authors, each erecting and standing in his own pillory. It may be that Godwin was right, and that, tho my sympathies are with the invention of Coleridge, Coleridge was wrong. The experiment,

however, is still to be tried by the capitalist. I do not mind editing *Every Man His Own Reviewer*, but I do not propose to be a contributor, at least to the

early numbers. One would rather wait to see how the public will take the enterprise.

LONDON, ENGLAND.

The Venezuelan Case at the Hague

BY WILLIAM L. PENFIELD

[Mr. Penfield is the Solicitor of the Department of State, and is now at The Hague with Mr. Bowen as counsel for the United States and Venezuela. Next week we shall print an article from Mr. W. T. Stead on the opening at The Hague from an Englishman's standpoint.—EDITOR.]

THE second Permanent Court of Arbitration convened at The Hague to-day. (October 1st, 1903). The Court consists of three arbitrators who were appointed by the Emperor of Russia pursuant to the protocols between the eleven arbitrating states. On the one side are the Allied Powers of Great Britain, Germany and Italy, and on the other Venezuela, the United States, Mexico, Belgium, Spain, France, Holland and Sweden and Norway. The question at issue arose in 1902-3 out of the warlike measures taken by the allies and the diplomatic action taken by other creditor states to secure the payment of their claims against Venezuela. This action resulted in the assignment by Venezuela of thirty per cent. of the customs revenues of the ports of La Guayra and Puerto Cabello for the purpose of satisfying such claims as were not paid in hand. The allies contend that their action led to the making of this assignment and the securing of the fund; and that, on principles of equity, their claims should be first paid out of the trust fund. The other creditor states contend that the claims of their citizens should be paid concurrently and rateably with those of the allies out of this fund, which was expressly assigned by Venezuela for the benefit of all the claimants. They contend that an award giving preference to the allies would encourage the resort to war for the collection of such claims.

Viewed superficially, the pecuniary importance of the issues involved does not appear to be great; but considered ethically, they are of higher import and their

decision may exert an important influence on international relations. For they involve the interesting question which is not unlikely to arise in the future out of demands concurrently made and pressed by several creditor states against a common debtor state. May one or more creditor states, declaring war against the debtor, rightfully demand the assignment by the latter of all, or a large portion, of its revenues to secure the payment of its claims to the exclusion of the claims of other creditor states? Must the latter hasten to declare war in order to secure equality of treatment in the payment of their claims?

By the protocols the Court was to have been organized on September 1st. But on account of unfortunate delays, not due to any neglect on the part of Venezuela, the United States, or the Emperor of Russia, only one of the arbitrators had been appointed. The representatives of the different states met in the court room on that day, and only one arbitrator, Count Mouravieff, appeared and announced that the remaining arbitrators would probably be appointed and the Court organized on October 1st. An adjournment was accordingly taken.

The opening session of the Court on October 1st presented an animating scene. Attracted by the interesting occasion, numerous spectators gathered in the court room, including many of the diplomatic representatives of the arbitrating states as well as their counsel and the members of the court. Count Mouravieff, the Russian Minister of Justice, was appointed President of the Tribunal, and in

brief but eloquent words declared the Court open. The other arbitrators are Prof. Henri Lammasch, a member of the Austrian Parliament, and Mr. De Martens, Privy Counsellor and permanent member of the Council of the Imperial Ministry of Foreign Affairs of Russia. The latter was President of the Tribunal of Arbitration of the Venezuelan boundary dispute, was one of the arbitrators in the "Pious Fund" case, and has a wide reputation as a publicist.

Great pains were taken by the Emperor of Russia in the selection of the arbitrators. This was expected of the author of The Hague Conference, and he met the expectation. This care was shown in the appointments first made of Count Mouravieff, Doctor Matzen, of Denmark, and Professor Lardy, of Italy. The last two turned out to be ineligible under the provisions of the protocols. The same care was shown in filling their vacant places by the appointment of Professor Lammasch and Mr. De Martens. In respect of tact, learning, ability and impartiality the second Hague Court has already given evidence of its high character.

In declaring the tribunal open, the President said:

"It seems almost superfluous at this solemn moment to draw the attention of this illustrious assembly to the deep significance of this new manifestation of the world's judicial action, which has become permanent and regular, since the nations of the civilized world, in promulgating the Hague Convention, have proclaimed equity as the supreme ideal arbiter of their differences, if not of their destinies. And what more, indeed, could one add to this superb evidence that we note with profound satisfaction the daily increasing sympathies of entire peoples and of the elite of human societies with the generous thought of international arbitration—that faithful organ and mighty rampart of peace; that we are happy to have been selected to take another step forward in the progressive march of this pregnant and living principle over a thorny and newly made way, in spite of the numerous obstacles scattered in its path. Nevertheless I should reproach myself were I to pass over in silence the peculiarly lofty significance of the present assembly. In the order of time it is the second one held under the convention of July 28th, 1899, but it is the first one which owes its creation to the assent and participation of the majority of the European Powers,

in general so slow to depart from ancient practice and traditional procedure. And that which displays and accentuates the exceptional importance of our arbitral mission is that for the first time it appears to-day in its most sublime perfection, in its most salutary application, that of checking and curbing the sanguinary calamities of war. Let us never forget it. The rumbling of cannon on the shores of a small and distant country was replaced by the pacific voice of the jurist; violence yielded and bowed—may she always do so!—before the law."

The counsel who represent Germany before the Court are Mr. Buenz, Consul-General at New York, and Dr. Zorn, professor of law at the University of Bonn. Belgium is represented by Mr. Woeste, Minister of State; Spain, by Marquis De Villasinda; France, by Mr. Louis Renault, Professor of Law at Paris, Legal Adviser of the Department of Foreign Affairs, and a member of the Permanent Court, and Mr. Clunet, former Vice-President of the Institute of International Law; Great Britain, by Mr. Arthur Larcom, of the Department of Foreign Affairs, Sir Robert B. Finlay, Member of Parliament and Attorney-General, Mr. Arthur Cohen, King's Counsel, and Mr. H. Erle Richards, Barrister; Italy, by Augusto Pierantoni, Senator and Professor of Law at the University of Rome, and Count A. De Bosdari, Secretary of the Italian Legation at The Hague; Holland, by Mr. De Weckherlin, Envoy Extraordinary and Minister Plenipotentiary; Sweden and Norway, by Mr. De Weckherlin; Mexico, by Mr. Pardo, Minister to Belgium and Holland; Venezuela and the United States, by Wayne MacVeagh, Herbert W. Bowen and William L. Penfield. In brief—or at length—eighteen lawyers are to plead, and Venezuela will be the object of their various interrogations, antipathies and sympathies.

The opening session was marked by no extraordinary incident or display. But again, as at the first Hague Court, a deep and universal interest is felt in the proceedings; and in this case, as in the former, the atmosphere of the Court is charged with the feeling of the high character it has to sustain and the grave issues it has to decide.

The preliminary question which the

Court had to decide was the question of language.

In the "Pious Fund" case the question of the language of the proceedings was left to the determination of the Court. It decided that the record of the proceedings should be in French, but that in the oral arguments the counsel might use their own language. After the trial was over an agitation was begun in favor of making French the exclusive language of the Hague Court. This effort, if successful, would have diminished the resort to the Court by English-speaking nations and would have done injury to the cause of arbitration. In order to obviate this question it was stipulated in the protocols in this case that

"the proceedings shall be carried on in the English language, but arguments may, with the permission of the Tribunal, be made in any other language also."

The counsel for France contended that the Court should determine the language of the proceedings, because the French Government, in adhering to the protocols, reserved this question for the decision of the Court.

The question was argued at length. The Court decided that the language of the proceedings should be English, but that, for the convenience of the Court and of the majority of the counsel who spoke French, the French should be the subsidiary language. It limited the use of languages in oral argument to English and French. This produced a lively but temperate expression from the Spanish and German counsel, the latter referring the matter to the consideration of his Government.

The question is one of considerable

difficulty before the Hague Court. Here are represented eleven nations, of whom two speak English, two French, one German, one Italian, one Swedish, one Dutch, and the rest Spanish; while of the members of the Court two speak Russian and one German. Two of the arbitrators speak English well, one of them not so readily. While the majority of the European counsel speak French, it is with a varying pronunciation. In the "Pious Fund" case the accomplished Parisian-French stenographer was unable to take notes of some of the speeches spoken in French with a foreign accent.

The question which was thus raised was not an easy one to decide. The decision was so ingeniously and fairly made that all the parties seemed pleased, except those whose native tongue was excluded. Their counsel happen to be able to speak English or French with ease.

It is gratifying to be able to record the general recognition of the activity and influence of the United States in promoting the cause of international arbitration and the increased resort to the Hague Court. The diplomatic correspondence in this case shows the repeated exertions of the President and of the secretary of State in this direction. There is a marked growth of popular sentiment on the Continent in favor of The Hague Tribunal, and one hears expressions of the most kindly feelings toward the United States Government for the salutary and effective influence it has exerted.

Notwithstanding imperfections inherent in all things, the Hague Court occupies a stronger position to-day than it ever has before.

THE HAGUE, HOLLAND

Leaders in the Fight for the City

SETH LOW

IF the ordinary New Yorker was asked to look about him and name the one man who stood higher than all others as a representative of good citizenship, he would probably name Seth Low, who is now Mayor and who almost certainly will be Mayor during the years 1904 and 1905.

Seth Low is not generally credited with being a brilliant man, but he is credited with being wise and safe, and there is no brilliant man in the country who has shown such ability to command results.

Seth Low was born in the year 1850, but is still a young man, having been blessed with a good constitution in the first place and having used his gifts carefully.

For more than twenty years Mr. Low has been in the public eye. In 1880, while he was living in Brooklyn, where he was known as the son of A. A. Low, the great tea merchant, he began his political career as the president of the Young Republican Club. An emergency came which necessitated his

SETH LOW

Copyrighted by Pach Bros.

also singular on account of the very many great improvements completed or begun. A wise policy prevailed throughout his

nomination for Mayor of Brooklyn, and he was elected in 1881 and re-elected in 1883. Young as he was, he proved to be one of the very best Mayors that Brooklyn ever had. His sole purpose was to serve the city. Tho a Republican, he was beyond the control of a party, and from that time to the present no one has accused Mr. Low of wearing the collar of any boss. Tho his reign was noted for its economy, it was

entire mayoralty. Brooklyn progressed. Her arrears problem was solved. Her South Brooklyn swamps were filled up; her rapid transit system extended; her schools were enlarged and improved; her Board of Health showed unusual energy and intelligence; her streets became better, and her water system more adequate. Low's government of Brooklyn was quoted as a model from one end of the country to the other. There was some complaint by

GEORGE B. McCLELLAN

Copyrighted by De Young's, N. Y.

the partisans that he was not enough of a partisan Republican, but there was no complaint to the effect that he was not heart and soul a lover of the city.

Low's lack of partisanship retired him from politics for a time, but he was always in the public eye. He became president of Columbia University in 1890. Later he was a member of the Rapid Transit Commission; one of the American Commissioners who founded the Hague International Peace Tribunal in accordance with the suggestion of the

WILLIAM TRAVERS JEROME
Vanderweyde, photographer.

Czar of Russia, and in 1896-7 he was one of the most active of the commissioners who drew up the charter of New York City. Ever since his school days, at the Polytechnic Institute, of Brooklyn, he has been a student of civics, and his services on the commission abundantly vindicated the wisdom of his choice.

R. FULTON CUTTING

EDWARD M. GROUT
Copyrighted by Rockwood, N. Y.

When events in New York in the year 1901 convinced good men of all parties that it was necessary to beat Tammany Hall and put in office a Mayor whose name would be a guarantee of fairness and good government, the name of Seth Low was one to conjure with. The Democrats put up a strong candidate against him—Edward M. Shepard—yet Mr. Low, running on the Fusion and Re-

publican tickets, carried Manhattan by over 5,000 majority and Brooklyn by nearly 26,000.

The dreadful conditions called to mind by the mere mention of Devryism and the red lights have all departed from the city. Mayor Low, by his own efforts, and by a wise selection of subordinates, has given the city the excel-

lent government his supporters promised. Lowered taxes, improved streets and schools, a clean police force and an absence of graft in the public service are some of the blessings he has dispensed. The two years that he has been in office have been notable for growth and improvement, and yet such a short time was hardly enough for a fair beginning.

Complaints against Low are to the effect that he is so cold that he will not show favor, but indications are that the people generally like that sort of disposition in a public servant, and that he will be re-elected by a larger majority than ever.

Physically, Mr. Low is a man of medium height. He is plump and placid, with round, rosy, cherubic face. He has a quiet voice and manner, keeps perfect control of himself at all times, and is courteous and smiling. Yet he can be glacial, and the finality of his manner in getting rid of a bore admits of no question. That his iciness is rather assumed than natural is proven by his treatment of servants. The old Low servants are all pensioned, and Brooklyn Fifth Ward people tell a very pretty story about an old nurse, to visit whom the Mayor of New York often crosses

HUGH McLAUGHLIN

the bridge and in whose presence he is once more the little boy she once held on her knee. For many years Mr. Low was superintendent of St. Ann's Protestant Episcopal Sunday school in Brooklyn, and he is still most active in church work. His secret private charities are very extensive, and the number of people whom he has quietly helped during an emergency must be very great.

GEORGE B.
M'CLELLAN

Tammany Hall has selected as its standard bearer George B. McClellan, son of the Union General of that name, and known in Tammany Hall as "Little Mac."

Mr. McClellan was born in Dresden, Germany, on November 23d, 1865. He

graduated from Princeton College and studied law at Columbia University. For several years thereafter he was a reporter on various New York papers, and about the year 1885 he made the acquaintance of Richard Croker, whose special *protégé* he became, and through whose influence he was appointed Treasurer of the Brooklyn Bridge in 1889.

McClellan advanced in the confidence of the Tammany organization, and in 1894 he was sent to Congress

CHARLES F. MURPHY

from the Twelfth District of Manhattan. He has represented that district ever since. His record in Congress shows his loyalty to the forces that put him there. At the command of Richard Croker he voted for free silver, altho believing the measure, if passed, would be harmful. He introduced bills looking to the purchase of the Erie Canal by the United States, and the reorganization of the army on a basis of 150,000 men.

Hugh McLaughlin, the veteran leader of the regular Brooklyn Democrats, strongly objected to the nomination of McClellan, on the ground of weakness, but Murphy, of Tammany, insisted, and McLaughlin yielded. There is nothing against McClellan except the fact that he seems to wear the Tammany collar, and that there's not enough of him. He's an amiable young man, his critics declare, but he has always taken orders, and he will continue to take orders, from Tammany. He is incapable of making a fight for principle, and he knows nothing of city government.

Brooklyn Democrats believed that some high-class man, who had character and principle, should have been put up. McClellan displeased them, and the nominations of Grout and Fornes filled them with disgust.

EDWARD M. GROUT

Like Mayor Low, Edward M. Grout is a Brooklyn man, and, like the Mayor, he has long been a reformer. He was originally a Democrat, but broke party lines on many issues. He is Judge Gaynor's law partner and his brother-in-law, and he took part in some of the judge's later campaigns for party purification, notably the attack on John Y. McKane, which sent the magnate of Gravesend to Sing Sing prison for stuffing ballot boxes. Mr. Grout was the Democratic candidate for Mayor of Brooklyn during the last year before consolidation. He was defeated, but was elected the first Borough President, and made a good record, distinguishing himself by his resistance to the attempted Ramapo water

steal. The Fusionists chose him to run for Controller on the Low ticket in 1901, and he was elected by a large majority. His conduct in office has pleased all his friends. He seems to have made an excellent Controller, and the fact that he is not again a running mate of Mayor Low is due to a most extraordinary series of circumstances. A short time ago he was on both Fusion and Republican tickets with Mr. Low and Mr. Fornes.

Then it occurred to Charles F. Murphy, Tammany Hall's leader, that it would be a good idea for Tammany to indorse Grout and Fornes. Mr. Murphy suggested this to Messrs. Grout and Fornes, and they agreed to accept.

This was a bombshell! in the Fusion and Republican camps. Republican leader Platt insisted on Grout and Fornes being dropped from the allies' tickets. Grout said nothing but murder would remove him. A very hot and acrimonious debate ensued, at the end of which Mr. Grout, who had apparently

Murphy's Home When He Went Into Politics

Photographed by Vanderweyde for THE INDEPENDENT

secured a unanimous nomination, was ejected from every place except Tammany, and is in a fair way to be buried under a Low landslide. Tammany delegates hissed his name at their convention, and Brooklyn regular Democrats say that they will cut him and Fornes.

His position is about as awkward as that of any man well could be. No man in politics denounced Tammany Hall more fiercely than Mr. Grout did. It was not a political organization at all, he said, but a pirates' nest. Tammanyites were all thieves and traitors. They were a disgrace to Democracy, and the stench of their iniquity offended heaven. He was not to be deceived by the change of a few leaders, and declared that Tammany of to-day is the Tammany of yesterday, and that Murphy is only another name for Croker. He had pledged himself to attack Tammany and to support Low, whose praises he has sung on many recent occasions. Now he finds his reform and nonpartisan record is ruined. He must fight for the success of the pirates whom he has denounced, and endeavor to destroy the good government which he has helped to build and which has been to him such a great source of pride.

Mr. Grout, who was born in the year 1861, and educated at Colgate University, is a slim, active man of medium height. His features are large and Hebraic in cast, and the Hebrew suggestion is enhanced by jet black hair and beard.

Mr. Grout is a man of great energy, and, as he himself expresses it, "a hard man to drive." The baiting that he has received from all quarters since he "looped the loop" and landed in Tammany Hall has made him desperate and furious, and he is raging through the city breathing threatenings and slaughter against his former allies.

WILLIAM TRAVERS JEROME

For five years past young William Travers Jerome has been the most picturesque figure in local politics. About four years ago he became one of the

Murphy's Present Residence

Photographed by Vanderweyde for THE INDEPENDENT

judges of the Court of Sessions. He began a war against gamblers and found that they were laughing at him, for they were always notified in abundant time to avoid raids. Then he adopted original methods. He led the raids himself, wielding an ax when necessary. He caught the gamblers and their patrons by scores, and, opening court right in the gambling houses, he held individuals for the Grand Jury and secured indictments. He got after "John Doe" and those higher up with such energy and earnestness that he made matters very uncomfortable for a great number of eminent law breakers, and the consequence was that the Fusionists nominated him for District Attorney in 1901.

The campaign that he conducted will long be remembered. In an automobile he rushed about from hall to hall, making headlong furious attacks on Tammany's alliance with vice and crime and degradation of the police. He called a spade a spade, and many good people thought that he spoke too plainly, especially before women, but when the votes

were counted Jerome was found to have led all his running mates, and no one now doubts that he greatly aided Low's election.

Jerome comes of a very good family, and, as his name indicates, he has French Huguenot blood in his veins. The Gallic strain shows in his impulsiveness and his supreme readiness for anything in the shape of a "ruction."

After coming back from his vacation this fall, he announced gratuitously, and apropos of nothing, that he could not love Mayor Low, and therefore thought that the Mayor should not run again, as he could not be re-elected. When the Mayor's friends, led by R. Fulton Cutting, assailed him, he produced a tremendous sensation by revealing Cutting's private secretary as the source of his information, that Republican district captains all over the city were against Low and that he could not be re-elected.

Having thus cracked a few heads, as it were, by way of practice, Mr. Jerome shied his beaver into the political arena and offered to fight any man who said that Low was not the greatest and best Mayor New York ever

FREDERIC W. HINRICHS

had. Since the opening of the campaign he has been doing great work for the Low ticket.

Mr. Jerome is tall, slim and wiry; he has gray eyes, and a long jaw, with protruding, pointed chin. His short cropped hair is crinkly and copper colored, while his mustache is almost red. He is a university man, but very democratic in his manner and direct in his speech. He talks freely to the press, and says what he means with such plainness and emphasis as would be disastrous to any

other; but the press, tho so fatal to others, seems powerless to harm this "terrible child" of the Fusionists. Mr. Jerome

is strenuous, tho it is hardly fair to call him "Roosevelt ad absurdum," as one of his critics wittily put it.

R. FULTON CUTTING

Hugh McLaughlin, of Brooklyn, who ought to know a boss when he sees one, declared the other day that R. Fulton Cutting, president of the Citizens' Union, is a boss.

"Mr. Cutting," said Mr. McLaughlin, "is the only boss in this town. He names the candidates, and when they write letters of acceptance they write

WILLIAM S. DEVERY

them to him. It is Cutting here and Cutting there, and when the convention comes off it will be found that he has named the ticket from top to bottom. I take off my hat to Mr. R. Fulton Cutting as a boss. I am really afraid of him."

A little over two years ago Mr. Cutting was a comparatively unknown citizen, but when the decent people of New York, revolting against Van Wyck, made their fight against Tammany Hall, he came to the front as president of the Citizens' Union and leader of the Fusionists. He displayed great energy during the ensuing campaign, and with a small, compact working committee as a nucleus he drew behind him a large nondescript force of men, of all parties and of none.

Mr. Cutting is a large, strong, bearded man. He looks and is forcible, and his sway is not light among his followers. His private Secretary, Fulton, who was found working against Low at the beginning of the campaign, suggested in his letters to Jerome that Cutting would be a good man to head the ticket if Low could be made to retire. The Secretary, who for a long time had had a close view of Cutting, spoke of him as Warwick the King Maker, expressing somewhat the same view as McLaughlin, but in different words.

No one imagines that the suggestion that Low retire came from Cutting himself, tho his suprising Secretary was found secretly urging it. The latter was made to take a hasty flight.

Mr. Cutting is one of Mayor Low's neighbors. He lives at 24 East Sixty-seventh Street, and is in business at 32 Nassau Street.

THE DEMOCRATIC LEADERS.

The regular Democratic leaders are Charles F. Murphy, of Manhattan, and Hugh McLaughlin, of Brooklyn. Murphy is new as a boss, while McLaughlin is very old. He has been at the head of the Brooklyn organization for forty years and has weathered many a storm and gained many a victory.

Previous to the consolidation of New York and Brooklyn McLaughlin was not celebrated for sweetness and light, and Bernard J. York, his police commissioner, was to a great extent responsible

for Devery. Yet Mr. McLaughlin, in 1901, fought Tammany on the Red Light and Devery issues and forced the nomination of Edward M. Shepard, a sworn, devoted and most reliable enemy of all sorts of misgovernment. Since that time he has on all occasions insisted on high-class candidates and clean principles, and his rebellion against McClellan, Grout and Fornes is consistent with all his recent actions.

By some Mr. McLaughlin's attitude is attributed to wise statesmanship, recognizing that Democracy in order to cure itself from present sickness must be purged; others declare that the old boss fights Tammany in order to force the better ticket.

There is a third explanation. Mr. McLaughlin is a devout Roman Catholic, and the Roman Catholic Church utterly revolted against Tammany on the vice issue two years ago, and has since seen no reason to suppose that Croker's successors have experienced any change of heart.

Murphy, before he attained his present position, was the leader of the "Gas House district," on the East Side, and one of Croker's trusted lieutenants. He had twenty years of plodding work keeping laborers in line for the Tammany ticket, and he knows the East Side as few men do. He is shrewd, silent, cunning, a typical machine politician.

His tactics in stealing Grout and Fornes threw the allies into confusion for a time and appeared advantageous to Tammany, but time has shown this appearance to be false. Grout and Fornes, branded as traitors and expelled from Fusion and Republican ranks, are now seen to be elements of weakness instead of strength.

Murphy showed foresight, but it did not extend far enough. He was cunning, but not wise. This campaign will probably end his leadership.

HINRICHS, FORNES AND DEVERY.

Frederic W. Hinrichs, the new Fusion candidate for controller, is a lawyer, with an office in Manhattan, and a residence in Brooklyn. He has long been a member of the notable little group of independent Democrats who stood up for high ideals during the past twenty years

in Brooklyn. Mr. Hinrichs, who is 45 years of age, was one of those who helped elect Low Mayor of Brooklyn in 1881. He has been a student of civics, and is an intelligent, high-minded citizen, whose experience in the Brooklyn Tax office, where he had charge of the Arrears Department, peculiarly fitted him to take charge of the controllership.

Charles V. Fornes, formerly President of the Catholic Club, has made a dignified and acceptable President of the Board of Aldermen, and no doubt would have been re-elected to fill that office again had he not been tangled up in the Tammany net. Mr. Fornes followed Mr. Grout's example in the matter, and many feel that he is more unfortunate than wrong. The Tammany nomination looked innocent enough, and as Mr. Fornes has always been a Democrat there was something pardonable in his failing to see that his duty to his allies required that he should not accept this particular Democratic nomination at this time.

Mr. Fornes is over 60 years of age, a tall, full bearded man. He was educated in the public schools and afterward taught school in Buffalo. For twenty-five years past he has been prominent in the woolen trade of New York City.

Wm. S. Devery is the man whom Mayor Van Wyck declared was the best Chief of Police New York ever had. He is a tall, fat, middle aged man, weighing about 300 pounds. He was the Tammany leader in the Ninth District when

the Low earthquake happened and shook him out of office. He announced then that he would still be chief of police and events of many months after showed that his boast was not an idle one. Somebody during the term of Commissioner Partridge was checkmating all attempts to reform the force. Only recently has Commissioner Greene, Partridge's energetic successor, been able to conquer this influence.

Tammany, during the Shepard-Low campaign, threw all the blame on the broad shoulders of Devery, and he was finally expelled from the Tammany organization. He set up as the Friend of the people with bundles of money to spend in buying coal and ice for the poor and taking children on excursions and to see shows. By lavish spending he has held a strong following in his district, and, like the Democratic rebels in Brooklyn, he contributes a certain amount of aid and comfort to the Fusion cause.

Nature, which is given to compensations, left morals out of the making of Devery, but made up for the omission by providing him with a peculiarly rich and varied vocabulary that is all his own. In times when interest in other matters is at an ebb the utterances of Devery leaning against his pump and passing judgment on men and things often set the whole dull town aroar.

In consequence of this, citizens of New York feel that they can almost forgive Devery for many things—even for living.

The Offering

BY JEAN KENYON MACKENZIE

My God, if Thou wert one to take
Delight in any craft of mine,
Straight I would fashion for Thy sake
A candlestick of rare design
Wrought out of gold, and set to light
Thine altar of a winter night.

Or, if it pleased Thee at all,
Then would I bring Thee, wet with dew,
The scented apple, and the small
Bright cherry, and the powdered blue
Of plum and grape,—these should be Thine
When first they paint the tree and vine.

But since Thy holy Will demands
Fruits of the Spirit—wo is me
Who may not serve Thee with my hands
Or make sweet sacrifice to Thee!
Christ, teach me that unfailing part,
The broken and the contrite heart.

NEW YORK CITY.

The Independent Catholic Church in the Philippines

BY ARCHBISHOP GREGORIO AGLIPAY

IN undertaking to describe some features of the religious questions now agitating the large majority of the inhabitants of these islands, I first of all disclaim being the author of this movement. The cause can be explained in one word—friars. The various religious orders that infested the Philippines had entirely forgotten the Gospel and the Law of God, and during the latter part of their three centuries' stay they also defied the law of man. They made and unmade governors by their wealth and power, and were the real rulers. Their thousands of unpunished crimes, including the taking of daughters forcibly from families for lust and having those deported or killed who opposed them, have burned into the souls of the people, who have not forgotten nor forgiven. Now the day of reckoning has come, and with the assurance of liberty of conscience, we have cast off the oppressive yoke of friars forever. This separation from Rome and the Pope is the climax of all the appeals and petitions vainly sent to the Vatican during the past thirty years, by pious Catholic people, to have their real grievances redressed.

It is an historical fact that on February 17, 1872, three Filipino priests—Burgos, Zamora, and Gomez—were publicly garroted in Manila; the friars had charged them with attempting to stir up an insurrection in Cavite, and demanded that they be executed, which was done. Back of this is the fact that in 1870 the Secretary of State for Spain, Señor Monet, sent an order to the Philippines that "no friar was to be priest of any church, but must confine his efforts to teaching and being a missionary." This was in response to a strong agitation. The friars made this order null by ignoring it. The opposition which had secured this order did not submit, but demanded its enforcement. The Filipino priests were naturally interested in the enforcement of that order, which meant that they would be in charge of all the churches,

a position that brought with it recognition from the Spanish Government. When the friars decided that it was necessary to stop the agitation they selected, as victims, three prominent Filipino priests, in order to intimidate others and stamp out the opposition. There have been over a score of our Filipino priests officially murdered, entirely on the false accusation of Spanish friars, from that beginning until 1896. The scope of this article will not allow one to detail each case, but God has not forgotten them, nor have the outraged Filipino people forgiven the real murderers.

At this point I state it as my conviction that owing to the marvelous spread of the separation from Rome—not strange to us, but unexpected in Rome, after the false reports sent in by the friars—the Papal Delegate, Guidi, deliberately changed the recently printed Papal promise to appoint four Filipino bishops by appointing American bishops in their stead. This was a crafty, Jesuit trick, to introduce the "ruling nation question" by making it appear that our opposition is to the Americans *instead of to the friar-ruled American bishops*. We resent the sending of French, Italian, Hottentot, American or any other friar-controlled priests to rule us. We have capable Filipino priests of our own, to govern our Church, and in the same manner as the American Civil Commission recognizes the ability of Filipinos to sit on the Supreme Court, be Governors of provinces, and even Commissioners, we demand recognition, and having been refused by the Church of the Italian Cardinals, we have established our Filipino Independent Catholic Church.

If asked concerning the stability of this movement, I answer it has sunk its roots deep; it has been watered by the blood of the martyrs; it has continued under fierce opposition for thirty years, and why should it not continue now under religious liberty? I most positively assert that the rule of the friar is forever ended

in these islands; Amen, Jesus! I am unable to declare positively the form this movement will take. The liberalizing influences at work among us make it certain that our religious progress will be upward, largely influenced by the Bible, and will be permanent.

In view of the deliberately false statements designedly or mistakenly circulated about me and my motives, I feel justified in setting forth certain facts of my history which might be of public interest. I was born in the pueblo of Batac, in the province of Ilocos Norte, on the 9th of May, 1860. My parents were agriculturists of medium position. My early life was spent without any remarkable incident. After passing through the schools of my native place I was sent to the College of San Juan de Leteran, in Manila, conducted by the Dominican friars. After graduating in arts and science I went to the Theological Seminary in Vigan, which was under the direction of the Recolecto friars. On completing the course I was ordained priest in Manila, and sang my first mass on New Year's Day, 1890, and served as directed, as assistant parish priest, and then in charge of parishes.

I took no part in the uprising in 1896 against Spain, under Don Emilio Aguinaldo. I held the confidence of the Filipino people and leaders as a priest of the Catholic Church. I continued my parish work until after Admiral Dewey sank the Spanish fleet on the morning of May 1, 1898, the significance of which was not understood then by any one. Fifteen days later I was sent for by a messenger from Governor-General Agustine, with a letter from the Archbishop of Manila, then Friar Bernardino Nozleda, calling me to their presence immediately for an important conference. I went; there was unfolded to me in minute details a plan to undertake a mission of great importance. I was to go to the Filipino insurgents, who were co-operating with the American soldiers who had landed at Cavite and had invested Manila on all sides. This siege was continued until Manila was captured by the American and Filipino soldiers on August 13, 1898. I was to offer, in the name of Spain, autonomy, or even independence, to the Filipinos and get them to renounce their

allegiance to the American cause, as by their uniting with the Spanish troops the American forces could be prevented from landing on the shores of these islands. The promises made to me as a reward were very flattering by both the Church and the State representatives.

I left immediately by train to see the leaders. We were halted at Bigaa by Filipino soldiers under General Gregorio del Pilar and prevented from going further. As we were friends, I broached this matter to him, but met with such vehement opposition, on the ground that all statements and promises of Spain and the friars were worthless, as faith had been broken by them for three centuries, that all other attempts to introduce the matter were fruitless. So I went on to Arayat by road, and was received there as a friend, until I mentioned my mission, when I was threatened with arrest as a friend of the Spaniards. As the revolt against Spain had succeeded in almost every part of the islands, and I was convinced that my mission was hopeless, I turned my attention to relieving the needs of the thousands of Spanish prisoners—priests, civil officials and military. The fact that every Spanish friar was a prisoner and in some cases they were compelled to work with pick and shovel on the roads, and were subjected to indignities, indicates the temper of the Filipino people toward their former priests. I am aware of no act of Rome or any other circumstance that has removed his hatred of the friars. A Catholic people who thus treated their clergy evidently have grievances. The fact that they remain Catholic under my leadership demonstrates that their demand is for clean church government. It is not true, as has been said by "*frialistas*" (friends of the friars), that four million Filipinos have become Protestants.

Among the Spanish prisoners was Bishop Hevia, of the see of Nueva Segovia, who urged upon me the importance of accepting the ecclesiastical charge of his diocese, which I did, filling, as far as possible, the places of the Spanish friars who were prisoners with the former assistant Filipino priests. This entailed journeys of hundreds of miles, over mountains, across rivers and rice paddies

on bad roads. As I had been appointed by President Emilio Aguinaldo "Capellan Mayor Castrense" (Chief Military Chaplain), I had every facility to accomplish the work of reconstructing the parishes.

In November, 1898, I conducted eight Spanish nuns, of the order of Santa Catalina, to Manila. They were Spanish prisoners, subjected to bad food, hardships, jeers and insults. I feared that they might even suffer worse treatment; so taking them and a letter from Bishop Hevia, whose release I could not effect, I reached Manila in safety, having done the best possible for transportation, food, etc., en route. I was received with open arms by Archbishop Nozeleda. Several days were spent in conference and in reviewing the situation. Archbishop Nozeleda stated in one of these conferences with me that it was certain that there would be a Filipino Republic, and that as I had the confidence of President Aguinaldo and had rendered invaluable services to the Church, and as it was certain beyond a doubt that Spain had forever lost these islands, I was to be the link to unite these islands to the Vatican. He gave me further directions to organize the provinces of Bulacan, Pampanga and Pangasinan in the manner I had already organized Ilocos Norte, Ilocos Sur, Union, Abra, Cagayan, Nueva Ejcita and Vizcaya. He approved of the transfer of the Episcopate by Bishop Hevia to me, and I returned cheerfully to the great task assigned to me.

Three months later, on February 4, 1899, the strife between the Filipinos and Americans began. I threw my sympathy and influence with my people. As there was no war in the provinces I went to, I continued in my religious work of organizing until the American army reached the north. It has come to my knowledge that American Catholic military officials prevailed on Archbishop Nozeleda publicly to renounce me, as otherwise the Roman Catholic Church would be identified with the insurrection. They said that, as America would never stop fighting until the Filipinos were beaten, there was no further use of my services. In short, I was to be publicly sacrificed, owing to a change in the political conditions, to make it appear that the Spanish

friars love America. Their every action from that day to this shows their base hypocrisy. They openly insult the American officials, civil and military, their institutions and intentions; they continue to oppose the marriage laws, and antagonize the public school system. Their official daily paper, called *Libertas*, got so defiant that it was brought to court on a charge of criminal libel by General J. F. Bell, and the editor was sentenced to six months in prison and a fine of \$2,000. There is more cunning displayed since, but no more respect for Americans. These are the people who on April 29, 1899, met in Manila in an Ecclesiastical Tribunal, where I was charged with "assuming exalted ecclesiastical powers" by issuing a circular to the clergy, and with other "violations of canonical rules," and the sentence of major excommunication was pronounced against me. All this friar farce was enacted in my absence. I immediately opposed this decision and appealed to the Pope, where my appeal still lies, and some of my bitterest enemies may yet be surprised to find me justified and vindicated by the Papal Secretary of State, but too late to bring me back to Italian slavery. By the power vested in me, according to Roman Catholic canonical law, I impugned Archbishop Nozeleda and was forced to excommunicate him. It is a significant fact that he was recalled by the Vatican from Manila. He is a friar, and has systematically and willfully misrepresented to the Pope the real conditions here, and has condoned and covered up the sins of the friars, which have since been shouted from the housetops. The showing of three centuries of friar rule shows over three million Catholics who have been driven to the desperate expedient of separating from Rome and renouncing the Pope. Does it need any further proof of the character of the friars? "By their fruits ye shall know them." There was certainly an uninterrupted opportunity here to perfect a Holy Church. And what have these tyrants left? Let present day history answer; if I answer as I feel, I will be charged with being severe.

There is no reason for omitting the fact that I did take up arms against America and did lead an armed force.

and for several years kept several American regiments unsuccessfully chasing me and my small band of patriots. The love of my country is my only defense. When the last hope of success vanished, I voluntarily came in to Laoag and surrendered to Colonel McCaskey, of the Twentieth Infantry, the officer commanding, and took the oath of allegiance to the United States of America, *and have kept it*. The war is past. I have no desire to enlarge on this chapter of my life. In the war records in Washington is my vindication from the groundless charges of cruelty and inhumanity made against me, with no other design but to harm my reputation and sow doubts in the minds of those who do not know the facts.
